Mr. PELLY. Mr. Speaker, I desire to discuss once again my bill, H.R. 10350, proposed legislation to repeal all agricultural price-support subsidies and to provide for the disposition of the Commodity Credit Corporation inventory without disrupting normal marketings.

First, I should say frankly that the Department of Agriculture opposes enactment of my bill. According to the Department, the elimination of all price support, as contemplated in H.R. 10350, is not in the best interests either of

farmers or the economy as a whole. The Department's report expressed concern for the magnitude of the Commodity Credit Corporation stocks and growing investment; but rather than advocate elimination of price-support activity, it viewed price support at realistic levels as valuable in helping facilitate orderly marketing and in stabilizing the economy.

As to the provision in my bill for use of proceeds of surplus sales for loans to help relocate small and inefficient farmers hurt by ending Federal farm subsidies, the Department preferred a program aimed at assisting such affected families stay in farming and as promoted now to widen off-farm job opportunities.

Mr. Speaker, the Department of Agriculture says that this year the United States will have another record or near-record production of crops. The Government survey shows that farmers will plant about as many acres of cropland this year as last. The prospect of this surplus-harassed industry is more overproduction, as was the case in 1959 and back in 1958. So, especially in grain, the surpluses accumulate year after year and go mostly into Government hands.

I asked for the best guess of the Department of Agriculture as to the price trend or level of wheat under conditions assuming removal of the present Government-held surplus from the domestic and foreign market as provided under my bill. All I could get in the way of an answer was that removal of the wheat surplus would have a stabilizing influence on market prices, but such a step was not believed to be in the interest of farmers or the economy.

Mr. Speaker, I have seen estimates of prices and trends furnished the House Committee on Agriculture based on proposed farm programs. I would have thought such projections could have been arrived at under conditions believed probable if my bill were enacted. But I will say this, that there are those who favor a return to the law of supply and demand and the conditions which would result from my bill, and these same supporters are farmers. I think they know the situation. Many farmers have written saying they support my plan.

Almost 20 percent of the entire Federal budget, or more than \$7 billion, is appropriated to help the farmers. That is too much. It is too much especially because the program is a failure. It is too much because it favors the big and rich as against the small and poor. It is too much because our farm program is socialistic and not in harmony with free enterprise. I am told a vast army of Federal career employees who hold their jobs through this federalized farm program opposed ending controls and subsidies. As one of my constituents wrote me a few days ago, we should back out of this farm giveaway before we are trapped and can never get out. I wonder if already it is not too late.

Speaking of constituents, I sent out a questionnaire with this question: "Do you favor reduction in agriculture price supports?" This went to a cross section of voters, and a tabulation of replies by an

independent organization showed that 4,055 answered "Yes" in favor of reduction. Only 469 replied "No," that they were against a reduction.

Since I introduced H.R. 10350 I have received letters of support from all over the country. Here is a typical unsolicited letter which reached my office on Saturday. It is from Bridge City, Tex., and is a sample of the widespread opinion held by the American people in strong opposition to our acreage and price support farm program:

MARCH 15, 1960.

The Honorable THOMAS M. PELL, House Office Building, Washington, D.C.

DEAR SIR: "Deo gratias" for you and your resolution H.R. 10350. It is my fervent hope that you will not waver in your fight to convince your colleagues of the saneness and merits of this all-important matter.

This is America—I believe. Then why must Congress be so discriminatory in its legislations? Are the Members that hungry for self-gain? Then if this be the case they will certainly change when the rest of the 180 million Americans who are not farmers wake up.

The present program's purpose expired when the Nation came out of the depression period 20 years ago. Yet it keeps coming back like a song. One of the most aggravating melodies I have ever heard.

The only consequence of the immediate enactment of your proposals would be just so many millions having to get off Uncle Sam's "gravytrain" and go to work. The biggest consequence would be a marked decrease in the Federal budget—a budget that would end up with a tremendous surplus to pay off the national debt which seems to be the farthest thing from most Senators' and Representatives' minds. This is, of course, probable if the many Socialist-minded people in Congress doesn't give the money away to Tito, Poland, Cuba, or TVA, REA, or you name it.

The Government needs a lot of money to keep its 17,000 businesses going, especially since Uncle Sam doesn't care if they make a profit or not. The taxpayers will make up their deficits and keep them in business.

I am following your efforts on this matter very closely in the CONGRESSIONAL RECORD. Please continue your American program. Let us always be able to say that this is America, "The land of the free and the home of the brave—and not the home of the hypocrite."

Respectfully yours,

EARL J. ANGELLE.

The Fight To Save Our Wilderness

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, the following editorial which appeared in the San Francisco Examiner on Tuesday, March 15, entitled "The Fight To Save Our Wilderness" is of particular interest to all who are concerned with the preservation of the natural beauty spots in our Nation.

We have enjoyed these gifts of nature and we should safeguard and preserve

them so that those who come after us in this great country may also enjoy them.

The article follows:

[From the San Francisco Examiner, Mar. 15, 1960]

THE FIGHT TO SAVE OUR WILDERNESS

Few areas of true wilderness remain in our country, and each day they grow more precious because more scarce. They do not belong to living Americans in fee simple, to do with as we like. They came to us in trust, as part of our inheritance, with the obligation that we pass them on undisturbed to future generations.

Today the pressures to break that trust are heavy. In part they come from exploiters, though these are not numerous. The greatest pressure is one for which none of us and all of us are responsible. It is the massive, all-pervasive, all-encompassing force of explosive population growth. Unless the trust is made all but unbreakable, it will not stand against that pressure. And time is short.

Pending in the U.S. Senate is a measure, S. 1123, to create that kind of trust. Commonly called the wilderness bill, the measure would create a National Wilderness Preservation System. Into that System would be deposited virtually all of the federally owned areas now designated as wild, wilderness, or primitive areas, the unspoiled back country of national parks and monuments, and some wildlife refuges and other minor areas.

No private lands would be added to Federal ownership by this bill, nor would any Federal lands be designated as wilderness that are not already so designated. Why then, you may ask, is the bill necessary?

Because these lands have a wilderness status only by administrative decree, and could lose that status by another administrative decree. Bitter experience has shown that such losses do occur. The wilderness needs the protecting arm of a strong, unambiguous law, and would get it under the wilderness bill. That is why we strongly urge public support for its passage.

The bill is particularly vital to Californians. They have the most wilderness to protect; at the same time the threat is acute here because of our abnormally rapid population growth and great tourist popularity.

Twenty-seven areas in California, constituting 9,000 square miles, would be preserved as wilderness. More than half of that is contained in just three areas, Death Valley National Monument, Joshua Tree National Monument, and the Yosemite National Park back country. Most of the remainder is in northern California's national forests.

These are all places where man is a visitor, not an inhabitant, and so they should always be. For man the urban dweller remains a child of nature, with a deep-seated need for wilderness where he can go and refresh his spirit, but not stay. He will destroy the last remaining wilderness only at his peril.

Israel Reaches New Peaks of Progress

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. FULTON. Mr. Speaker, we American friends of the people of Israel are proud of their accomplishments to date and wish them well for the future.

As Israel progresses through these times of risk, I wish to bring further to

the attention of the American people how the people of Israel are accepting this challenge and are working bravely toward peace and progress:

AMERICAN ISRAEL
PUBLIC AFFAIRS COMMITTEE,
Washington, D.C., March 21, 1960.

HON. JAMES G. FULTON,
House Office Building,
Washington, D.C.

DEAR JIM: I am enclosing the text of the statement made by Rabbi Philip S. Bernstein, chairman of our committee, before the House Committee on Foreign Affairs last week.

As Rabbi Bernstein pointed out, we believe that Israel has used American aid wisely and well and has become a showcase testifying to other nations that a state which preserves free institutions does more than any other form of government for the well-being of its people. As you will remember you had a significant part to play in this in 1951, when U.S. aid to Israel began.

We hope that American aid to Israel will be continued to enable her to expand her production, so that she may anticipate the termination of German reparations in 1963. Furthermore, as you know, Israel has never received the gift of arms or defense support, although she must carry a crushing burden to equip and train her forces in order to deter aggression from neighbors who are receiving large-scale shipments of arms from the Soviet bloc.

May I also call your attention to the concluding portion of Rabbi Bernstein's statement, suggesting that the Mutual Security Act provides an opportunity to reaffirm America's traditional support for freedom of the seas and our opposition to boycotts, blockades, and aggression.

I would like to take this opportunity to thank you for all that you have done in the past. It is pleasant to reflect that Israel has made such dynamic progress, thanks to you and others who have championed this cause.

Cordially,

I. L. KENAN.

STATEMENT OF RABBI PHILIP S. BERNSTEIN, OF ROCHESTER, N.Y., CHAIRMAN OF THE AMERICAN ISRAEL PUBLIC AFFAIRS COMMITTEE, BEFORE THE HOUSE COMMITTEE ON FOREIGN AFFAIRS, MARCH 14, 1960

Mr. Chairman and members of the committee, I want to thank you for the privilege of appearing before this committee today on behalf of the American Israel Public Affairs Committee.

Our committee's purpose is to strengthen American-Israel friendship, in the service of peace in the Near East. American friendship for Israel is, we think, indispensable to the attainment of a peace settlement in this troubled region. We hope that ultimately the Arabs will abandon their sterile and costly war against Israel. That day will come when the Arabs finally realize that they cannot alienate America as Israel's friend. This is one of several reasons why we urge continued American economic assistance to Israel.

One of the important criteria of our aid program is whether a nation can make effective use of our assistance. Our past aid to Israel—governmental and nongovernmental combined—has been generous and substantial. It has not been dissipated. On the contrary, it has been used wisely and well.

Twelve years ago, when Israel was established, it was predicted by some daring spirits that Israel might absorb a million refugees in a decade. She did—a spectacular and unprecedented achievement. A tiny country—8,000 square miles—much of it eroded wasteland and with a population of 800,000, made a home for a million people in a decade. It is one of those rare countries where

people are wanted, where people have value, where human personality is respected and dignified. We Americans may take pride that we helped Israel as she worked to receive and rehabilitate the refugees who found sanctuary on her shores. We helped her to put people, land, and water—three precious resources—to work, in harmony.

I do not wish to offer detailed statistics, but there is ample evidence of Israel's growth and development. The average annual increase in Israel's gross national product has amounted to about 10 percent over the past 10 years.

1. The national product, which was about 375 million Israel pounds in 1950, was close to 2,700 million Israel pounds in 1958. In real terms, this means that, allowing for increase of prices, the national product has increased more than threefold in that period.

2. The value of agricultural production, for example, has risen from 175 million Israel pounds in 1950 to about 560 million Israel pounds in 1958. Similarly, industrial production has gone up from 470 million Israel pounds in 1948 to 1,500 million Israel pounds in 1958.

3. There has been a significant improvement in Israel's exports balance payment position. In 1949, exports from Israel amounted to \$51 million, compared to \$455 million of imports. In other words, Israel was paying only 11.7 percent of its imports with its own exports. In 1959, total imports were about \$600 million, compared to total exports of some \$300 million in goods and services. Thus, Israel was paying its way to the extent of about 50 percent. And it hopes to reduce the balance of payments deficit to some \$200 million by increased production and increased exports in the next 4 years.

4. Israel is now making vigorous efforts to attract private investment. Recently, an Investment Authority was established. It hopes to attract \$300 million from private investors in the United States in the next 4 or 5 years. The new law for the encouragement of capital investment passed in 1959 is one of the most liberal laws in the world for the encouragement of private investments. It allows for the full repatriation of profits, for accelerated depreciation, and for generous tax concessions.

Thus, one may hope that in a few years Israel will be in sight of economic balance.

This advance would be much faster if Israel were not the victim of a declared war by her neighbors, who disrupt her trade by boycotts and blockades, and who have forced her to spend a disproportionate part of her earnings on the purchase of arms and training in their use.

We have been hearing a good deal about the concept of "showcase" aid. Certainly, the foreign-aid record demonstrates that Israel is eligible for that classification. For here is a country which shows that our aid, prudently and effectively used, can propel her toward economic equilibrium. The people in that country are making the best possible use of the money we have invested there.

Moreover, Israel must accelerate her productivity to anticipate the serious problems ahead, which arise because reparations payments from Germany will end in 1963.

But we must assess Israel's significance as a showcase from another aspect. We believe in freedom and individual personality. We count Israel as an exhibit—as a testament to other nations of the world—that a democracy, which preserves free institutions and self-government, does more than any other form of government for the well-being and happiness of its people.

This is not intended as a sermon. It is a highly practical thesis. It is being proved. We will need more than weapons—more than missiles and space ships—to secure the survival of our civilization. We will need people who share our commitment, who cherish

our faith in the worth of the human personality.

I would like to refer to another problem which faces Israel. We should bear in mind that Israel does not receive any gift of arms from our country.

When I first addressed this committee some years ago, it was to express concern on American arms shipments to the Arab States, and particularly to Iraq. I could not understand why our Government sent guns to nations which were openly in a state of war with Israel, and at the same time denied Israel the arms and security treaty she sought back in 1955, when President Nasser opened the Near East to penetration by the Communist war machine—Soviet arms and technicians. Although Nasser continues to receive modern weapons from the Soviet bloc, at bargain prices, Israel is still compelled to shop around the world and to pay top prices for arms.

Our committee has favored economic aid for all underdeveloped peoples. In the past, we have urged you to vote economic assistance for the Arab peoples, as well as for Israel. We continue to do this. And we have urged constructive programs for the resettlement of the Arab refugees, who were displaced by the folly of the Arab leaders who went to war against the United Nations partition resolution in 1948.

We have hoped that economic development, which raises living standards, will help to reduce tensions in the area.

The Arab war against Israel is not the primary or major cause of Middle East problems. The internal conflict in the Arab world, as well as the Arab-Israel conflict, grow out of the poverty of the Middle East, the waste of its resources, and the maldistribution and misuse of its wealth.

The tension between Israel and the Arab States is but one facet of this overall problem. The Arabs are torn by their rivalries. Hostility to Israel is a weapon to be brandished in the competition for domination in the Arab world. But, if the Arabs could concentrate on economic development, if progressive leadership could preach cooperation instead of animosity, the antagonism between the Arabs and Israelis could be quickly ended. There is no issue dividing Israel and the Arab States that cannot be resolved if the Arabs recognize the reality and durability of Israel's existence and negotiate differences with her directly—at the same table. And, as Secretary General Dag Hammarskjöld pointed out last year, the resettlement of the Arab refugees will be achieved with the economic development of the Arab countries.

We do not accept the Arab thesis that we must choose between the Israelis and the Arabs and that friendship for one precludes friendship for the other. We want our country to be the friend of Israel and the friend of the Arab peoples, and we want them to befriend each other. We are convinced that Israel and the Arab States have much to gain by cooperation and peace, and we work to bring that about.

We believe in economic assistance to the Arabs as well as to the Israelis, and we stress economic assistance rather than arms. But we must enter some reservations. We question the wisdom of aiding any country if that aid is used to further that country's war against another. Our aid is negated if our assistance to one people is used to damage the economy of another country which also receives assistance from us. This question arose last fall when the Western World loaned the United Arab Republic \$56 million to widen and deepen the Suez Canal, at the very moment when the U.A.R. was using the canal as an instrument of aggression and when it was detaining two ships illegally, demanding the surrender of their cargoes.

The Charter of the United Nations is clear. Members are pledged to abstain from the threat or use of force against the territorial integrity or political independence of any state. When the Arab States proclaim that they are in a state of war against Israel, they violate the United Nations Charter, just as President Nasser flouts a U.N. Security Council decision when he blocks Israel shipping through the Suez Canal.

Is it right to grant aid without requiring the recipients of our aid to conform to the laws and standards of the international community? No nation has an automatic right to our assistance. No nation should be allowed to extort assistance from us merely by threatening to go to Moscow. Laws govern the relations of nations. We should not close our eyes to their violation.

It is disturbing to reflect that we, ourselves, have involuntarily become implicated in the Arab boycott. There was a time when our country firmly resisted any attempt by another government to discriminate against an American citizen. We have always favored freedom of navigation in international waterways. American citizens have always acted within their indisputable rights in taking their ships and in traveling wherever their legitimate business called them on the high seas. And they exercised those rights in the well-justified confidence that their Government would sustain them. Yet our money goes to help a government which uses an international highway—the Suez Canal—as a private lake. The U.S. Navy has been advising shippers who trade with Israel that they bid for the business of carrying oil cargoes for the Navy at their own peril. And our surplus foods can be carried to Arab countries only in ships which avoid traffic with Israel.

The Mutual Security Act is the major legislative expression of American foreign policy. It is the one opportunity which Congress has to declare its views on matters involving our relations with other nations. Perhaps this legislation offers an opportunity to reaffirm our traditional support for the freedom of the seas and our abhorrence of boycotts and blockades, aggression, and war, and our determination never to compromise with aggression wherever it may arise and in whatever form it takes.

Our country reaches an eminence of greatness and strength and is most honored and respected by others as it adheres to morality in the conduct of our foreign policy. Our decisions must be ordered by our convictions, never by our fears. This is the road to peace, not only in the Middle East, but everywhere in the world.

Adenauer in Washington

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. COHELAN. Mr. Speaker, my continuing concern with the stalemate in Berlin leads me to submit the following article for the RECORD under permission to extend remarks.

In this article, Columnist Walter Lippmann reiterates his personal views on why serious negotiations on Berlin should be held in the near future. Equally worthy of note, I think, are his estimates of the significance of the recent

meeting between President Eisenhower and Dr. Adenauer.

The article, which follows, is from the March 22 edition of the Washington Post:

ADENAUER IN WASHINGTON

(By Walter Lippmann)

After his talks with the President, Dr. Adenauer said in a speech before the National Press Club that one sentence in the official joint statement "contains the basis for the West's attitude towards Khrushchev's demands with regard to Berlin and it is therefore of decisive importance in the present situation." Dr. Adenauer asked us to read this sentence most carefully.

What does the sentence, which is of such decisive importance, say? It says that the President and the Chancellor "agreed that the preservation of the freedom of the people of West Berlin, and their right of self-determination, must underlie any future agreement affecting the city."

Any future agreement. If that sentence is as important as Dr. Adenauer says it is, the President and he are agreed that there may be a new settlement in Berlin, which protects its freedom and its right of self-determination. It means, moreover, that they can imagine an agreement on Berlin made before the reunification of Germany. It means, moreover, that they are not committed to insisting that the freedom and the right of self-determination of West Berlin can be protected only by the maintenance of the status quo.

If the spirit and the letter of the Eisenhower-Adenauer statement express the authentic considered view of the Chancellor, then he has been misrepresented in this country by his most ardent supporters. They have been telling us that there should be no negotiations about West Berlin, that any future agreement would be appeasement and a surrender to the Soviet Union. They have been insisting that the fate of the free world depends upon revoking the promise made at Camp David to negotiate about Berlin.

They have, it appears now from the official record, been more royalist than the king, more Adenauer than Adenauer himself.

What happened, quite evidently, is that the Chancellor failed to persuade the President to revoke his pledge to negotiate and having failed, he accepted the President's formula. This formula contains the gist of the matter which is that, provided it protects the freedom of West Berlin, we are prepared to explore and consider and, if possible, to negotiate a new settlement. This is all that the British Government and all that the American critics of Adenauer's rigidity, have ever wanted to do.

The President has refused to tie his hands and he has preserved intact his right to explore the problem of the future of Berlin. Will this mean that in admitting that there is a problem of Berlin and that he is prepared to discuss it with Khrushchev, he is weakening the Western position? It will look that way to some.

But on the whole, he will not, I believe, weaken the Western position and rather he will reinsure it for the future.

To be sure there will be some Germans in West Berlin and there will be people elsewhere who, having been taught to believe that any discussion of Berlin is appeasement, will be worried and frightened when Berlin is discussed. That will be too bad and they should be reassured. But the real question at the bottom of the argument is whether the Western position in Berlin will grow stronger if we postpone a negotiation or whether it will deteriorate.

Because I am convinced that time is not on our side in West Berlin, I believe we

should attempt now to negotiate a new settlement which protects the freedom of West Berlin. Mr. K. may refuse to agree to such a settlement. It would not surprise me at all. But our diplomatic position in Europe and in the rest of the world will be stronger if we have attempted to make it and if we have identified ourselves with a genuine attempt to reach an accommodation in Berlin.

There are two main reasons why I think the Western position in Berlin will not grow stronger. The first is that Eastern Germany is playing an increasingly important role in the upsurge of the Communist economy. It is significant, as Flora Lewis reported in the New York Times on Sunday, that the migration from West Germany to East Germany is now half as large as the migration the other way. That reflects the rising economic levels in Eastern Germany. The stronger the East German economy becomes, the more difficult and the more distance will be its integration with Western Germany.

The second reason for wishing to see a serious negotiation about Berlin in the near future is that it would be very desirable that a political settlement should bear the imprint of Adenauer and De Gaulle. What does the West gain, what do Germany and France gain, by putting off serious negotiations until after Adenauer and De Gaulle have departed?

Does anyone know what Germany will be like after Adenauer? Does anyone know what France will be like after De Gaulle? It does not seem to be wise and prudent to put off into the indefinite future the crucial problem of Germany.

Four Star Television Series of Films on the Foreign Service

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. BLATNIK. Mr. Speaker, it is heartening to be able to report that there is some constructive work underway in two areas which are the frequent targets of destructive criticism.

I have learned that Four Star Television, one of the largest and most reputable producers of television films, is working with the Department of State toward the production of a series on the work of the men and women of the Foreign Service.

The public image of the State Department has been distorted by a number of recent publications, notably a book called "The Ugly American." We would be foolish to maintain that in an organization so large, there are not persons unsuited to represent this country abroad; but it is my view that such people are the exceptions, rather than the rule. And I believe that most of our Ambassadors, consuls, and other diplomatic and technical attachés, do an onerous and important job, daily turning in a creditable performance, and occasionally a heroic one.

The television industry, too, has come in for a great deal of adverse publicity. Here again, I am unprepared to believe the the venal and fraudulent efforts of the few should be generalized to charac-

terize the many. There are producers to whom public service means more than a slogan, and whose taste earns them a place on my screen.

Therefore, a combination of the Department of State and a sincere producer can result in a series which raises the standards of the television medium, and portrays to the public a more accurate picture of the Foreign Service. I am confident that this producer will bring forth a series replete with appropriate dignity and information, and still one which is entertaining.

I should particularly like to commend Dick Powell, the head of Four Star for his vision in seeing the value in such a series; our good friend Sylvan M. Marshall, an outstanding Washington attorney, for his role in bringing the Department together with Mr. Powell; to John Scall, the foreign correspondent for the Associated Press, who will head up the creative writers; and to Assistant Secretary of State Andrew Berding, and his top aide, Edwin M. J. Kretzmann, for their cooperation.

Charles L. Lathero

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. VAN ZANDT. Mr. Speaker, last week Members of the Pennsylvania delegation in Congress on both sides of the aisle were grieved to learn of the death of State Senate Librarian Charles L. Lathero, former resident of Altoona, Pa. Funeral services were held Saturday, March 19, at Camp Hill, Pa., where he had made his home with his devoted wife Cora, for the past several years.

Charlie Lathero was a close friend of mine for many years. He was the possessor of a pleasing personality that won him many warm friends in his years of service with the Commonwealth of Pennsylvania. It was said of him that he knew the mechanics of State government to such a degree that he was regarded as a "walking encyclopedia" when it came to answering questions concerning agencies of the Commonwealth of Pennsylvania. If Charlie did not have the answer you could rest assured that he would develop the information. This personal service he rendered to persons of all political faiths in a sincere and gracious manner. It was an outstanding characteristic of the type of service Charlie took delight in giving to those who sought his assistance.

The death of Charlie Lathero is a source of deep personal sorrow, and Mrs. Van Zandt and our son Jamie join me in expressing our profound sympathy to his wife, Cora, and other members of the family in the great loss they have sustained.

The following editorial by Mr. J. Edward Benney, city editor of the Altoona (Pa.) Mirror, appeared in the March 21

issue. It is an excellent tribute to the many fine qualities of Charlie Lathero who will be sorely missed by a large circle of friends and acquaintances who revere his memory and who are grateful for the opportunity of having known such an outstanding American and able public servant.

[From the Altoona (Pa.) Mirror, Mar. 21, 1960]

CHARLES L. LATHERO

Charles L. Lathero, Altoona native, who held the important post of State Senate Librarian at Harrisburg and who died last week after a prolonged illness, was a self-made man of the sort becoming increasingly rare.

His own native talents and energies, coupled with his qualities of mind and character, won him a State and National reputation in the realm of politics. His total service with the Commonwealth of Pennsylvania covered a span of 27 years during which he weathered the changes in the political tides because of his ability to perform the job at hand.

Mr. Lathero became Senate Librarian in 1948 and his success in fulfilling this post won for him the unanimous endorsement on every occasion by all of the members of the State senate, regardless of their party affiliation. This was a genuine tribute to Charley Lathero's popularity and devotion to his responsibilities.

There is no partisanship in the mourning at his passing. He will long be remembered as a leader of skill and enormous personal charm. Blair Countians in particular have lost a good and true servant in the governmental affairs at Harrisburg.

What About National Defense, Neutrality, or Neglect of Duty?

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from the general executive board of the Industrial Union of Marine and Shipbuilding Workers of America, AFL-CIO, Camden, N.J., together with an advertisement which appeared in the newspapers of Boston, New York, Baltimore, New Jersey, and Washington:

INDUSTRIAL UNION OF MARINE & SHIP-BUILDING WORKERS OF AMERICA, AFL-CIO.
Camden, N.J., March 17, 1960.

HON. THOMAS J. LANE,
Member of the House of Representatives,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN LANE: For 7 weeks now, Bethlehem Steel Co.'s eight Atlantic coast shipyards have been shut down by a strike of our union's members.

Our union's officers declined for 7½ months to sanction a strike, despite the almost unbearable provocations to which Bethlehem subjected our members. We took this position not only because of the hardship a strike would impose on our members, but in large measure, also because of the disastrous effect a strike in Bethlehem's shipyards would have on our country's defense program. These yards are building and converting for the Navy critically needed nuclear-powered and missile-carrying vessels.

During the 7½ months before we finally sanctioned a strike, we pleaded with the chairmen of congressional committees concerned with national defense, we pleaded with the Departments of Defense and of the Navy, we pleaded with everyone in Government who would give ear, to prevent the serious injury to our national defense that Bethlehem's irrational and stubborn course of conduct would make inevitable. Our pleas fell on deaf ears.

The enclosed advertisement, which appeared in the newspapers of Boston, New York, Baltimore, New Jersey, and Washington did cause the Navy Department at long last to bestir itself, in the sixth week of the strike, to prevail on Bethlehem to promise to resume negotiations with our union and to negotiate in good faith.

But on March 14, when negotiations were to be resumed Bethlehem found new excuses for refusing to negotiate and to attempt to settle the strike. Whether the Departments of the Navy and of Defense are reluctant, or feel it to be inexpedient to exercise the powers at their command to prevent Bethlehem from continuing to inflict serious damage upon our country's security and its defense program we do not know. We do know, however, that it is quite clear that Bethlehem has thus far been given no reason to feel that it must do what the country's best interests demand.

We believe that inquiry by you in the proper quarters, and your encouragement of appropriate action, will be materially helpful in bringing to an end this disgraceful attack upon our national defense by Bethlehem Steel Co.

Fraternally yours,

JOHN J. GROGAN,
President.
ANDREW A. PETTIS,
Vice President.
ROSS D. BLOOD,
Secretary-Treasurer.

WHAT ABOUT NATIONAL DEFENSE, NEUTRALITY, OR NEGLECT OF DUTY?

Four months ago, Secretary of Defense Thomas S. Gates told the Nation that one of the chief factors that made the steel strike a national emergency was that the shortage of steel and steel parts threatened to curtail the Navy's shipbuilding program.

The U.S. Supreme Court was so impressed by Secretary Gates' statement that it stopped the steel strike.

President Eisenhower and Vice President Nixon were so concerned about the imminent danger that they intervened to settle the steel dispute even after the strikers had returned to work.

Today we have steel, but eight of the country's major shipyards have been closed for 4 weeks.

Work on atomic-powered vessels and missile-carrying ships in these yards is at a standstill.

A nation threatened by saber-rattling enemies, with its very survival at stake, is entitled to know why.

There are two reasons:

1. For 7½ months, Bethlehem Steel Co., the owner of the closed shipyards, has refused to bargain in good faith with the employees' union for a new contract. During these months Bethlehem has lowered wage payments to these loyal American workmen; it has deprived them of seniority rights and has taken from them working conditions they had enjoyed for 20 years. For 7½ months the men refused to be provoked into a strike. Finally, they could not take it any longer—in defense of their self-respect, of their patriotism, of their human dignity, they struck.

The superior court of the State of Massachusetts, in a written review of the shipbuilders strike, said: "We find * * * that

the company was not making every reasonable effort in good faith to settle the dispute. . . . While the parties [Bethlehem Steel and the Industrial Union of Marine & Shipbuilding Workers of America] have conferred with governmental mediators, the company's position remains unchanged and it refuses to change any provision of [its] proposals. . . . Throughout this period of time, the company refused to make any concessions with respect to its [Bethlehem's] proposal. . . .

2. Mr. Gates' Department of Defense and the Department of the Navy knew that if Bethlehem persisted in its unrealistic attitude towards labor, a strike would be inevitable. They also knew that the U.S. Government, which they represented, was Bethlehem's best customer. Since the end of World War II, the United States Navy has given Bethlehem more than a half billion dollars in contracts without any competitive bidding. Surely, Mr. Gates and the Navy knew that businessmen are usually eager to please a good customer. Yet neither the Department of Defense, nor the Navy, took a single step to prevent Bethlehem from pursuing policies which created the crisis into which our naval defense has been plunged.

The Navy Department calls the situation a labor dispute and adopts a policy of neutrality.

We, as representatives of Bethlehem's shipyard workers, submit that there can be no neutrality when a Government contractor's greed and irresponsibility stop work on vital defense contracts.

We submit that there can be no neutrality when 18,000 men and their families are forced to suffer privations through no fault of their own.

We further submit that if the steel strike posed such a threat to our naval defense that President Eisenhower and Vice President Nixon forced a settlement, they and Secretary Gates should certainly intervene in the shipyard situation.

We are certain that if our Nation's leaders demand that Bethlehem make an honest and realistic effort to settle the shipbuilding strike, it will only be a matter of hours until Bethlehem does so.

JOHN J. GROGAN,

President, International Union of Marine & Shipbuilding Workers of America, AFL-CIO.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentations be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time; *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

A World in Debt to Israel

EXTENSION OF REMARKS OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1960

Mr. RANDOLPH. Mr. President, it was my privilege to have participated at the Israel 12th anniversary dinner, sponsored by the Charleston Committee for State of Israel Bonds, Sunday, March 20, 1960, in our capital city of West Virginia.

My fellow citizens afforded me the pleasurable opportunity to extend greetings on a program in which I preceded that veteran minstrel who mixes wit with wisdom, George Jessel, the "Toastmaster General of the United States," who delivered a meaningful address.

After Cantor Paul Reiss opened the program with the singing of "Hatikvah" and "The Star Spangled Banner," Rabbi Samuel Volkman of Charleston's Virginia Street Temple offered the challenging invocation.

Fred Marks, general chairman of the Committee for State of Israel Bonds, delivered a warm welcome and was followed by Mrs. Benjamin Newman, chairman of the committee's women's division, who spoke helpfully. The Governor of West Virginia's greetings for the State government were presented by his assistant, Charles Straughan. Mayor John Shanklin responded with greetings on behalf of the city of Charleston.

Dr. I. E. Buff, West Virginia State chairman for the 1960 Israel bond campaign, and Mrs. Buff, who serves with Dr. Willard Pushkin as honorary chairmen of the campaign, were most thoughtful and generous as my host and hostess at this impressive event.

Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the invocation offered by Rabbi Volkman, extracts from Sol Padlibsky's news story of the dinner meeting in the Charleston Daily Mail, Monday, March 21, 1960, and extracts from my remarks on the subject, "A World in Debt to Israel."

There being no objection, the invocation, news story, and Senator RANDOLPH's remarks were ordered to be printed in the RECORD, as follows:

INVOCATION OFFERED BY RABBI SAMUEL VOLKMAN, VIRGINIA STREET TEMPLE, CHARLESTON, W. VA., ISRAEL 12TH ANNIVERSARY DINNER, CHARLESTON, SUNDAY, MARCH 20, 1960

Dear God, we thank Thee for the privilege of living in this period when we witness the might of Thy hand, sovereign amid the flux of world events.

And for signs and wonders manifest in the restoration of a remnant of our people to the land of our forefathers.

For the healing of the wornout hills which exult in their new-found raiment of verdure.

And for the revival of an age-old people now learning to sing a new song of hope and faith in the future. Grant, dear God, that we may share in the pride and the glory of their accomplishments; that the heirs of tomorrow may include us in their prayers of thanksgiving.

Bless this occasion. Bless all words spoken here that they may enhance, ennoble, and strengthen the purpose for which we have come.

We thank Thee for the bread we are about to eat and say altogether:

Boruch Attah, Adonoi Eloheinu Melech Ha-Olom Ha-Metzle Lechem Min Ha-Aretz.

[From the Charleston (W. Va.) Daily Mail, Mar. 21, 1960]

(By Sol Padlibsky)

George Jessel, "the toastmaster general of the United States," spurred the sale of \$85,500 worth of State of Israel bonds last night at a sellout banquet at the Daniel Boone Hotel.

A sizable amount of the bonds was purchased by non-Jews at the affair sponsored by the Charleston Committee of the Israel Bond Campaign, of which Fred Marks, the master of ceremonies at the banquet, is chairman.

Jessel regaled the diners with his accounts of first meetings with reception committee people in his tour across the United States in his Israel bond campaign. He sprinkled Yiddish words, which lose something in translation, in his remarks.

He told the diners that he didn't have a religious background, and that when he was 8 years old he was alone with his mother on the East Side of New York after the death of his father.

RELIGION IMPORTANT

"I have been in the show business for more than a half century," said Jessel. "A few years ago I realized that it was important to me that I manifest the meaning of living a religious Jewish life."

"The work I am doing in the interest of the State of Israel formerly was undertaken by my good friend, Eddie Cantor. That was about 10 years ago. Cantor suffered a heart ailment, and I pledged to myself that I would carry on Eddie's great work for Israel."

"I have spoken in 110 cities across the Nation in 121 days, and each day has meant increasing gratification of a program that must continue to keep the sacrifices of the Israel pioneers always in our memories."

(Jessel has been honored by Israel's Prime Minister, David Ben-Gurion, in Jerusalem for "unselfish and devoted aid to the State of Israel." Last year, at a dinner in Hollywood, celebrities participated in a "salute to George Jessel" in behalf of Israel bonds. The dinner, which paid tribute to Jessel's 50th anniversary in show business, resulted in the sale of more than \$1,500,000 of Israel bonds.)

U.S. Senator JENNINGS RANDOLPH, a guest, characterized the rise of Israel as "one of the greatest achievements in the history of mankind."

REMARKS BY SENATOR JENNINGS RANDOLPH, OF WEST VIRGINIA, 12TH ANNIVERSARY OF THE STATE OF ISRAEL DINNER BY CHARLESTON AND SOUTHERN WEST VIRGINIA BOND COMMITTEES, DANIEL BOONE HOTEL, CHARLESTON, W. VA., MARCH 20, 1960

A WORLD IN DEBT TO ISRAEL

We are here to celebrate the 12th anniversary of the final fulfillment of the words of the prophets and the reward of 2,000 years of Jewish longing and aspirations. We are here also to contribute to the perpetuity and the strength of the State of Israel which presents this fulfillment, and more specifically, to the amelioration of circumstances for some 350,000 Jewish refugees in Israel who remain virtually homeless and unabsorbed. And despite the 12 amazing years of growth and development since the recognition of Israel, the path ahead is still marked with danger signs and strewn with obstacles.

War clouds gather in the Middle East. Reinforcements are again posted on the frontiers of Syria and Jordan. The Suez Canal is still blocked to the ships of Israel. And a fanatic's well-placed bullet in any of the capitals of the Middle East could easily plunge that area into war. Thus, it behooves us each—of whatever religious faith—to examine the nature and reason for our commitment to Israel.

As Americans and as participants in the great enterprise of Western civilization we are committed—within certain limitations—to the support of Israel. Our obligations are both moral and political.

First, we are politically involved in the support of an independent and peaceful development of Israel, because of our part in the United Nations partition of Palestine out of which the State of Israel emerged. This was further sealed by President Truman's immediate recognition of Israel on May 14, 1948, only a few hours after the final withdrawal of the British forces.

But American political support of Israel is not solely a matter of our keeping trust with past resolutions to serve Israeli interests. We have strong and compelling reasons of our own self-interest in our desire to see Israel prosper and flourish in peace. As a cultural enclave of the West, it offers our best hope for the development of democracy in a section of this earth torn for centuries by oriental despotism, intrigue, and tribal rivalries.

And despite the current and continuing tension between Israel and the neighboring Arab states, support of Israel represents the best hope for political stability and orderly progress in the Middle East, hence, our strongest defense against measures of desperation taken by some Arab leaders with their attendant infiltration of Soviet influence. Even though the Communist planners have made some costly blunders in the Middle East, the Red capacity for making mischief is unlimited, and the Russian interest in the stability of that area is far less immediate than that of the Western Powers.

Stated in its bluntest terms, as long as the Middle East is a battleground of the cold war, Russian interests are served by instability and by pitting Israel and the Arab nations against one another, while we must seek to maintain political stability and develop friendship with the Arab nations with-

out sacrificing the legitimate claims of the Israelis.

But more binding than any of these is the moral debt we owe to Jewish culture and tradition for having first awakened the moral consciousness of Western man. In the history of Western civilization perhaps the first truly civilized answer to the question of what each of us owes to his fellow man solely for the sake of man's humanity to man is given by the writer of Leviticus: "The stranger that dwelleth with you shall be unto you as one born among you, and thou shalt love him as thyself; for ye were strangers in the land of Egypt" (Leviticus 19:34).

The intellectual and spiritual contributions of Judaism were the source of the early nourishment of that which is most precious in Western civilization—the idea of the dignity and integrity of the individual, expressed in the despairing cry of Job that "I will not sacrifice my integrity," even in the face of an omnipotent God—the idea of social justice, served in varied ways and by such diverse personalities as Moses, Spinoza and Karl Marx—and the belief in the brotherhood of all men as the children of one Creator—these values lie at the heart of Western civilization and were the source of much of Christianity and Mohammedanism.

Also, as members of Western civilization and as brothers of the human race we are morally obligated to the cause of a Jewish national homeland as insurance against the persecution and oppression which has marked the life of the Jew in Diaspora. Spinoza, gentle and noble among our great philosophers, wrote that "A free man thinks of nothing less than of death; and his wisdom is a meditation not of death, but of life."

Thus he set forth the text of Israel. For certainly no people has offered its martyrs as bravely and in such numbers as the Jew. The Christian martyrs of the Roman Empire are numbered in the thousands. The Jews cannot name or number their martyred millions in the world of Christendom, culminating—to the eternal shame of all men—in the ghastly and inhuman crematoria of Hitler's making.

There has been a further difference between the lot of the Christian martyr and that of the Jew. The Christian died secure in his faith in the reward of an immediate afterlife. The Jews received no halo and no promise of reward; and though the idea of an afterlife acquired some popularity after the dispersion, it has never been the article of faith, the flaming conviction for the Jew that it is for the Christian. If Jewish martyrdom had meaning it was related to the continuity of Judaism and the hope of the ultimate rebirth of a Jewish national homeland. In the moving words of the ancient lament, "If I forget thee, O Jerusalem, let my right hand forget her cunning—let my tongue cleave to the roof of my mouth, if I prefer not Jerusalem above my chief joy." For this compelling reason, the free nations of the West—which call themselves Christian—must help justify the nameless martyred millions of Jews.

But there is a further debt of Western World to the Jew. Here I speak of the astounding intellectual and cultural contribution Jews have given to our civilization. Not only did the Jewish people give the Western World their own Book in the Old Testament, but it was the Alexandrian Jews who translated the Book of Law, the Pentateuch, into Greek.

It was these Jews and succeeding generations who kept alive the knowledge of classical Greek during the early Middle Ages when the light of learning had been virtually extinguished in Europe. And it was in large part through Jewish philosophers in the service of Moslem courts that classical

learning was reborn in Europe, thus laying the foundation for the Renaissance.

This Jewish devotion to intellectual achievement—so strong as to have been thought by many Jews and non-Jews as a hereditary trait—has placed the civilized world in lasting debt. Negligible as a political power in the world at large, and representing less than 1 percent of the world population before World War II, the Jewish people have supplied a leadership far out of proportion to their numbers in every field of human arts and sciences. And though this has been a contribution of individuals rather than of a group, it has been in large part the result of mobilizing the individual's resources in response to the oppression of the group. This capacity perhaps more than any other has been responsible for keeping the Jew alive as a cultural and national identity through 2,000 years of the dispersion.

In this sense, the oppression of the Jewish people may well have been a stimulus to the creativity of individual Jews. But whatever the source, the modern world would be far poorer but for the artistic and scientific contributions of Jews. Indeed, it is not overstating the case to remark that of the four men who have framed the problems of our century, three were Jews. I refer to Charles Darwin—the only gentile of the four—Karl Marx, Sigmund Freud, and Albert Einstein.

Whatever one may think of the conclusions they reached, the works of these four men opened new ways of thinking for mankind and gave a distinctive stamp to the modern world.

One may only speculate on the direction that Jewish creativity will take in the homeland of the State of Israel, though one may safely guess that the amazing Jewish resourcefulness and energy will remain. The brief history of the State of Israel is already filled with the pages of gallantry and courageous self-sacrifice.

Federal Aid Is Expensive

EXTENSION OF REMARKS

OF

HON. DALE ALFORD

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. ALFORD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Arkansas Democrat, March 20, 1960:

FEDERAL AID IS EXPENSIVE

Everybody ought to know by now that there are no pockets in Uncle Sam's Santa Claus suit. Every dollar he spends is dredged out of the citizens' pockets.

We like to think that Federal aid is easy money. But it's our own money that we had to earn, and forking it over to Uncle Sam's collectors, then getting it back again, is a mighty expensive process.

It takes a host of officials, drawing salaries in acres of offices, and traveling hither and thither, to handle all the bookkeeping, accounting, and redtape involved in reaping the tax money and paying it out.

It's a whale of a big business. Virginia's Senator HARRY F. BYRD lists 60 grant-in-aid programs to the States and local government units in 1959. By way of contrast, there were less than a half-dozen such programs in 1933.

The 60 operating in 1959 ranged through help to education, highway building, health activities, assistance and welfare grants,

housing and home financing, and a "scatteration" under other heads. Not included are the larger farm aid programs or the retirement plans financed by "deducts" from wages, salaries, and employers, or the big housing subsidies.

And the 60 programs paid out, in 1959, about \$6.4 billion. Another \$3.1 billion went to individuals, under some 30 programs. It sounds pleasant and generous.

But to get that money from Washington, the Nation had to pay a much larger sum in taxes. For, Senator BYRD finds, it costs Uncle Sam about 20 percent in salaries and other expenses to operate these programs.

Many of them are necessary, some vitally so. Most serve good purposes. But many could be operated more economically by people in their own States and communities.

Yet it's unlikely that the number will be reduced. It's more apt to increase. There should be a firm stand against any more. The traffic cost on the taxes paid and getting them back is too high. And it builds a national power which shrinks State and individual rights as it grows.

The Case for the Wilderness Areas

EXTENSION OF REMARKS

OF

HON. GALE W. MCGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1960

Mr. MCGEE. Mr. President, on February 23 I inserted in the Record a statement on the wilderness bill written by a former colleague of mine at the University of Wyoming, Prof. Burton W. Marston. Mr. Marston, a lifelong sportsman and outdoorsman, stated very well the case for some kind of constructive wilderness legislation. Mr. Marston is currently president of the Traveler Chapter of the Izaak Walton League of which I am also a member.

It has come to my attention since that a second installment of his discussion of the wilderness bill appeared subsequently in the Laramie Boomerang. I now have a copy of this later supplement and ask unanimous consent that it be printed in the Appendix of the Record. So that those interested in keeping these two excellent tracts by Mr. Marston together, they should know that the first installment appeared in the Record on February 23, page A1450.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Laramie (Wyo.) Boomerang, Feb. 7, 1960]

LETTERS TO THE EDITOR—THE CASE FOR THE WILDERNESS AREAS

Since the introduction of the original wilderness bill in the Senate, this proposed legislation has been the subject of all kinds of speculation and strange conjecture. This continues among the opponents even though amendments have been written into the bill to meet many of the objections made. Many of the opponents' statements seem to bear little relationship to the actual language and purpose of the pending legislation. Supporters of this legislation are being accused of being motivated by selfish interests. All sorts of dire consequences are forecast

by these opponents should this legislation be enacted.

Our good friends, the stockmen, seem determined to make out that all grazing privileges now enjoyed by them in the present wilderness area of the national forests will be withdrawn, or that, with grazing permitted, numerous additional regulations will be set up to hamper them in the grazing use. A study of the bill should show anyone clearly that this action would be impossible. Besides, public opinion, often a powerful factor affecting public administration, will undoubtedly continue to act as a balance wheel to departmental supervision, as it always has in the past.

Among other objections to this type of legislation are the following: It would destroy the principle of multiple use (a term which has undergone much distortion in its meaning and application) now enjoyed by the public in such wilderness areas; only a privileged few would have access to and use of these areas; the bill is unnecessary, since the Forest Service, Park Service, and Fish and Wildlife Service are already doing a good job in administering these areas; it locks up untold resources that are needed for economic reasons; it would add vast acreages to lands now set aside for preservation; it would create a new danger to families and individuals who might become lost or stranded in these areas; and, no action should be taken on this legislation until after the National Outdoor Recreation Resources Review Commission has given the report of its study, due late in 1961.

To all these objections the proponents of this legislation feel there are logical and obvious answers which definitely negate the objections. Many of the answers are contained in the bill itself and have already been given wide publicity. Actually the wilderness proposal is not very new; its enactment would change little, at least for some time to come. These areas are already closed to commercial exploitation—as in the national forests, the national parks, and wildlife refuges—but largely by Executive order or regulation rather than by law. One is prompted to note that we have had such areas in Wyoming, large ones, for many years, and nothing dire has yet happened to the State or to any of its residents as a result.

In spite of the persistent opposition, it is evident that the idea of preserving the wilderness areas seems to meet with general approval. Even many of the opponents have publicly stated they are for wildernesses. However, when it comes to proper organization of Government control of the Federal lands and the particular use or restriction of use that is involved, wide disagreement seems to prevail. No one group wants to sacrifice a present use or have it restricted in any way in order that a true wilderness area may be made possible. This is true in spite of the fact that many of the present uses of wilderness areas complement each other and can be followed at the same time.

That there is widespread support of this legislation was brought out in the various congressional hearings that have been held, in the number of bills that have been introduced in both Houses of Congress, in the support of the present measure in the Senate by several large national organizations. To name a few—the Wilderness Society of America, the Izaak Walton League of America, the National Wildlife Federation, the Wildlife Management Institute, and many others.

In urging that these wilderness areas be handed down to coming generations protected by law and not by mere administrative order (as at present), proponents of this legislation feel there is much more involved than mere legislative detail. The natural heritage of lofty mountains, rugged landscape, and untouched nature is a soul-

healing inspiration to any and all who view them or become associated with them in any manner. They represent a treasure beyond price to the mental and physical well-being of increasing millions of Americans in years to come, especially to those who are willing to put forth a little health-giving exercise and effort to enjoy the beauty and solitude these areas can provide. In addition to wilderness enjoyment these areas do, of course, provide vast water storage, forage, wildlife, and scientific values such as soil, wildlife and watershed research.

Proponents of the legislation believe that the areas we now have left should be protected and maintained; that we guarantee their future as wilderness. Otherwise, the population pressures being what they are, we may expect to see a Coney-Island type of use abounding in many of these areas in the not too distant future. This could involve four-lane highways encircling our highest peaks and penetrating the present areas of solitude, with all sorts of commercial exploitation established. It could happen.

Under the regulations we now have, as far as wilderness and primitive wild areas are concerned, it is a generally recognized fact that the Department of Agriculture and the Forest Service have done a magnificent job of maintenance. In this connection it is interesting to recall that for many years the Forest Service was the whipping boy of the grazing interests, who contended against the so-called high grazing fees imposed by the Service, while the farm organizations of the Middle West deplored the so-called cheap grazing lands available to the western stockmen on the reserves.

The thing with which we are concerned is this: We have no guarantee, under the present form of administration, that in future years some of these policies of the Forest Service could not well be changed, and for the worse. We have seen a great many changes come about through political pressures and various other developments that have changed the status of our public lands and other lands of the country.

Action now to protect and preserve a reasonable portion of these valuable wilderness areas may well prove a most beneficial endowment for the future of this region. A letter from supporters of the wilderness preservation idea to your Congressmen may help to bring favorable action on this legislation soon.

BURTON W. MARSTON.

Export-Import Bank Makes 100th Loan Under Cooley Amendment

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. COOLEY. Mr. Speaker, on Monday of this week, the Export-Import Bank announced that it had made its 100th loan to private business firms abroad under the provisions of section 104(e) of Public Law 480, the so-called Cooley amendment.

This provision was added to the law in 1957. It provides that up to 25 percent of the foreign currencies received from the sale of surplus commodities under title I of Public Law 480 shall be made available through the Export-Import Bank for loans to private industry in the countries from which the currencies

originate. Loans are available to U.S. firms, their branches, subsidiaries, or affiliates for the purpose of business development or trade expansion, or to host country firms having no U.S. affiliation for purposes which will expand the market abroad for U.S. agricultural commodities. This has turned out to be one of the most popular and constructive uses of the currencies received in our surplus disposal program.

I am including for the information of the House, Mr. Speaker, a letter I have just received from Mr. Samuel C. Waugh, president of the Export-Import Bank, commenting on the current status of this program, and attachments showing in detail the loans which have been made since last November 20 and the status of funds under this program.

As an example of the beneficial use to which this money is being put, I would call the attention of Members to the list of loans which have been made during the past few months and to the fact that four of them have gone for the expansion or construction of pharmaceutical manufacturing plants in parts of the world where modern medicines are in scarce supply and great demand. I hope, Mr. Speaker, that we can continue to use the foreign currencies accruing to us under this program in this beneficial manner.

EXPORT-IMPORT BANK OF WASHINGTON,
Washington, D.C., March 18, 1960.
The Honorable HAROLD D. COOLEY,
House of Representatives
Washington, D.C.

DEAR CONGRESSMAN COOLEY: The enclosed statement, which will be released on March 21 announcing the 100th credit authorized under the section 104(e) loan program, will, we believe, be of interest to you. Additional authorized credits, which will be announced later in the month, will bring the total to 105 for the equivalent of about \$62.3 million.

Several major credits in Indian rupees have been announced in recent weeks. In fact the Bank has now committed more funds in Indian rupees than in any other currency. We believe that the program in India is now well underway. Our representative in that country is very much encouraged about the interest that is being shown in the availability of these funds.

We have been less successful in finding good borrowers for the currencies of certain other countries including the United Arab Republic, Pakistan, Ceylon, Taiwan, and Korea. One of our directors, Mr. George Blowers, will visit the U.A.R. in a few weeks, and two staff members who have specialized in work on 104(e) loans will leave in a few days on a trip that will take them to Pakistan, Ceylon, Taiwan, and Korea. We anticipate that these visits will be of material assistance in developing potential applications.

We now have about 200 active applications for the equivalent of \$149 million. Sixty-nine of these applications are for Argentine pesos and French francs, which are not available at this time. There has been no change since we last wrote you concerning the status of the Argentine sales agreement. It is our understanding that very little has been deposited under this agreement and that the period in which shipments were to occur has elapsed. Similarly, we have no immediate expectation of receiving French francs because of the failure of the French to buy the cotton which constituted the principal element in the sales program. However, in neither cases is the situation clear enough to permit us to

remove these applications from our active list.

If the Argentine and French applications are not counted, there remain about 130 applications for the equivalent of \$77 million, and we have available to us at this time uncommitted funds equivalent to \$108 million. Most of these applications are for Israeli

pounds, Peruvian soles, Colombian pesos, and Indian rupees. Of these currencies, only the pounds and rupees are available at this time, although sales agreements with Peru and Colombia have been announced which are expected to generate currencies of those countries for 104(e) loans.

There is attached a list of the credits

authorized since we last wrote you on November 24, 1959, as well as a table which shows the provision made for 104(e) loans under the commodity sales agreements announced since that date.

Very sincerely,

SAMUEL C. WAUGH,
President.

TABLE I.—Sec. 104(e) credits authorized Nov. 20, 1959, to Mar. 17, 1960

Country	Borrower	U.S. affiliate	Amount in thousands of dollar equivalent	Purpose
Ceylon	Pfizer-Dumex, Ltd.	Chas. Pfizer & Co., New York	422	Working capital and construction of a warehouse and showroom for a pharmaceutical plant.
China (Taiwan)	Lien Chen Automotive Co., Ltd.	Federal Eastern Corp., Delaware	126	Facilities for the repair and sales of automobiles.
India	Goodyear Tire & Rubber Co. of India Private, Ltd.	Goodyear Tire & Rubber Co., Ohio	4,744	Facilities for the manufacture of rubber tires, tubes, and related materials.
	Synthetic & Chemicals, Ltd.	Firestone Tire & Rubber Co., Ohio	8,274	Facilities for the manufacture of synthetic rubber.
	Hindustan Aluminum Corp., Ltd.	Kaiser Aluminum & Chemical Corp., California	2,110	Construction of an aluminum reduction plant.
	Mysore Cements, Ltd.	Kaiser Industries Corp., California	1,160	Construction of a cement plant.
	Merck, Sharp & Dohme of India Private, Ltd.	Merck & Co., New York	1,053	Construction of a pharmaceutical plant.
Israel	Rastrom, Ltd.	Rassec Financial Corp., New York	111	Facilities for the manufacture of concrete building materials.
	Silos & Warehouses Co., Ltd.	None (expand the market for U.S. grains)	125	Construction of grain storage facilities.
	Ameor, Ltd.	Phileo Corp., Pennsylvania	656	Facilities for the manufacture of household refrigerators.
	Haifa Silo, Ltd.	None (expand the market for U.S. grain)	275	Construction of grain storage facilities.
	Palestine Milling & Trading Co., Ltd.	do.	56	Do.
Italy	Abbott Laboratories de Italia, S.R.L.	Abbott Laboratories, Illinois	886	Construction of a pharmaceutical plant.
Korea	Chon Nam Spinning Co., Ltd.	None (uses U.S. cotton)	308	Installation of equipment and working capital for a cotton textile mill.
Pakistan	Abbott Laboratories (Pakistan), Ltd.	Abbott Laboratories, Illinois	423	Construction of a pharmaceutical plant.
Turkey	Williams Bros. Co.	U.S. firm, Tulsa, Okla.	333	Working capital.
	Minneapolis-Moline Turk Traktor ve Ziraat Makineleri, A.S.	Minneapolis-Moline Co., Minnesota	778	Working capital for manufacture of agricultural and roadbuilding equipment.
Uruguay	TEM, S.A.	Hoover Co., Ohio	238	Facilities for the manufacture of electrical household appliances.
	General Electric, S.A.	General Electric Co., New York	534	Do.
	Sudamtex de Uruguay, S.A.	United Merchants & Manufacturers, Inc., New York	246	Working capital for the manufacture of textile products.
Total			23,062	

¹ Increase in credit previously authorized.

² \$267,000 immediately and the remainder contingent upon the collection of sales proceeds.

TABLE II.—Public Law 480 commodity sales agreements and supplements, Nov. 20, 1959, to Mar. 17, 1960

(In millions of dollars)

Country	Date signed	Market value of sales agreement	Provision for sec. 104(u) loans	
			Dollar equivalent	Per cent of sales proceeds
India (supplement)	1959 Nov. 23	\$18.5	\$0.9	5
Uruguay (supplement)	Dec. 1	20.8	5.2	25
Turkey	Dec. 22	35.0	5.3	15
	1960			
Greece	Jan. 7	6.3	.9	15
Israel	do.	30.2	6.0	20
Uruguay (supplement)	Jan. 13	6.0	1.5	25
Pakistan (supplement)	Jan. 28	26.0	2.6	10
China (supplement)	Feb. 11	6.0		
Poland (supplement)	do.	41.5		
Peru	Feb. 12	12.0	3.0	25
Vietnam (supplement)	Feb. 13	1.3	.3	25
Total		203.6	25.7	

¹ Emergency purchase of wheat.

The Export-Import Bank of Washington today announced its 100th foreign currency credit to private concerns abroad. A textile firm, Sudamtex de Uruguay, S.A., of Montevideo, a subsidiary of United Merchants and Manufacturers, Inc., whose main offices are

in New York, will receive 3 million Uruguayan pesos (the equivalent of \$300,000). All Eximbank foreign currency loans are made under section 104(e), the Cooley amendment to Public Law 480 which is the Agricultural Trade Development and Assistance Act of 1954.

Eximbank President Samuel C. Waugh said that Sudamtex is a leading private facility in Uruguay, and that it operates an integrated textile mill in the city of Colonia. Funds loaned by the Bank will provide working capital to assist in financing expansions in the manufacture and distribution of cotton textile products in Uruguay. It was also stated that the 3-million-peso loan would be increased to 5 million as additional Public Law 480 money is available. The credit is repayable over a 4-year period beginning in 1961.

In reviewing what he termed a successful program for foreign currency lending, Mr. Waugh pointed out that subject loan to Uruguay brings the value of loans authorized to the equivalent of \$57.2 million in 16 countries.

The first credits under this program were authorized in June 1958. Of the 100 loans, 91 have been to U.S. firms, their branches, subsidiaries or affiliates for the purpose of business development or trade expansion, while 9 loans have been made to "host-country" firms having no U.S. affiliation for purposes which will expand the market abroad for U.S. wheat, barley, feed grains, hops, and cotton.

The loans have helped finance the foreign currency costs of a wide variety of industrial and commercial activities, including the manufacture of chemical and pharmaceutical products, cement and cement prod-

ucts, paper, rubber and rubber products, animal feed, malt, textiles and clothing, electrical appliances and equipment, automotive parts, agricultural and industrial machinery and various products of refractory clay, steel, aluminum, wood and plastic. Nonmanufacturing activities have included petroleum storage and distribution, grain storage, retail merchandising, automotive parts repair, and a hotel.

Most of the loans have been of comparatively modest size, ranging from the equivalent of \$100,000 to \$500,000. Only 14 loans have been for the equivalent of \$1 million or more. The two largest have been to the Indian affiliates of the Firestone Tire & Rubber Co. and the Goodyear Tire & Rubber Co., both of Akron, Ohio. The credit to the Firestone affiliate is for the equivalent in Indian rupees of \$8.3 million for a synthetic rubber plant. The credit to the Goodyear affiliate is for \$4.7 million for a factory to produce rubber tires, tubes and related products.

An important use of the foreign currency loans is to help finance the local costs of projects, the foreign exchange costs of which the Bank finances with its dollar loans. Such complementary loans of \$840,000 and 12 million soles were made for a caustic soda plant in Peru. Combined loans of \$13,600,000 and 10 million rupees will help finance an aluminum reduction plant in India.

Substantial funds continue to be available in most of the currencies for which the Bank is now accepting applications. The following table shows the estimated amounts potentially and presently available after deducting credits authorized to date.

[In millions]

Country	Currency	Maximum potentially available	Probably available now
Ceylon	Rupee	22.0	5.9
China (Taiwan)	New Taiwan dollar	152.3	124.9
Colombia	Peso	40.0	
Ecuador	Sucre	4.5	4.5
Finland	Markka	318.3	190.8
Greece	Drachma	74.8	46.3
Iceland	Krona	19.4	17.2
India	Rupee	366.1	250.8
Indonesia	Rupiah	556.8	107.3
Israel	Pound	22.8	10.8
Korea	Hwan	700.0	700.0
Pakistan	Rupee	139.6	100.7
Peru	Sol	88.8	.9
Philippines	Peso	1.9	1.9
Turkey	Lira	109.7	62.3
United Arab Republic:			
Egypt	Pound	11.5	5.7
Syria	do.	8.6	
Uruguay	Peso	43.0	
Vietnam	Piastre	104.8	51.4

Applications may be submitted either directly to the Export-Import Bank of Washington, 811 Vermont Avenue NW., Washington 25, D.C., or to the U.S. Embassy in the country concerned. A detailed statement of the information required of applicants may be obtained from the Eximbank upon request.

In Memoriam

EXTENSION OF REMARKS OF HON. CLIFFORD P. CASE OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES
Wednesday, March 23, 1960

Mr. CASE of New Jersey. Mr. President, March 17 marked the anniversary of the surfacing of the nuclear submarine *Skate* through the Arctic ice. It seems to me appropriate to insert in the Appendix of the RECORD a tribute to the late Hubert Wilkins, whose contribution to this achievement was enormous.

One of my constituents, Mr. A. J. Marino, of Weehawken, N.J., has made a study of the life and work of Sir Hubert, and I am indebted to him for the following summary.

Although Hubert Wilkins was an Australian, he worked and lived for many years in the United States. He died on December 1, 1958, at the age of 70, still working to advance our military strength by his work with the Army laboratories at Natick, Mass.

When he took a small plane from Alaska to Spitzbergen, Norway, in 1928, he was the first man to fly across the Arctic. Among the many decorations he received at this time was a knighthood conferred upon him by the King of England.

In 1931 he outfitted an obsolete submarine loaned to him by the U.S. Navy and made the voyage to the Arctic Sea, sailing under polar ice. His adventures were described in his book, "Under the North Pole," published in that year.

Of the many tributes paid Sir Hubert, certainly the most dramatic took place on March 17, 1959. On that date the submarine *Skate* broke through the ice and surfaced at the North Pole. Services were conducted for Sir Hubert, and his

ashes were thrown to the winds as a final honor to a great explorer and scientist.

Sir Hubert's achievements are described in some detail in an "In Memoriam" prepared by the Office of the U.S. Quartermaster General. I ask unanimous consent that this tribute be printed in the Appendix of the RECORD.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

On behalf of the U.S. Army Quartermaster Corps, I wish to pay homage to Sir Hubert Wilkins, renowned arctic explorer and authority on polar regions and deserts. From 1942 until the time of his passing in 1958, he rendered outstanding services as environment specialist and consultant to the Quartermasters General.

Sir Hubert dedicated his time, talents, and remarkable fortitude to fulfilling one of the most important missions of the Quartermaster Corps, that of protecting the soldier against environmental hazards.

Typical of his breadth of interest, physical stamina, and devotion to duty, Sir Hubert voluntarily participated in the rigors of military maneuvers in the Arctic, Tropics, and major deserts of the world. In this manner, he experienced firsthand the effects of environmental stresses upon the soldier and his equipment.

Sir Hubert Wilkins made invaluable recommendations and personally devised techniques which greatly enhanced the Army's research and development program, including: functional garments, oversnow equipment, and personnel shelters to protect against the hazards of the Arctic and Antarctic; specialized footwear and handwear to prevent injuries caused by extreme cold; sleeping bags to allow soldiers to rest and regain functional efficiency; nutritional combat rations capable of preparation under extreme conditions; a face mask to protect against the bitter arctic winds; protective clothing for fighting crash fires; color shades and camouflage techniques to conceal soldiers in arctic, desert, and tropical environments; and attitude training to eliminate the soldier's fear of the unknown by instilling confidence in overcoming environmental hazards through the establishment of good living habits and the proper utilization of clothing and equipment.

The contributions of Sir Hubert Wilkins to the welfare and effectiveness of the U.S. serviceman in peace and war are beyond measure. His advice and guidance, based upon his vast experience, are reflected in countless improvements in rations, clothing, and other quartermaster supplies and equipment provided our Armed Forces. The successful operations of our military forces in any geographical area of the world, today and for the years to come, will constitute a living monument to his memory.

A. T. McNAMARA,
Major General, U.S. Army,
The Quartermaster General.

Proposed Jane Addams Commemorative Stamp

EXTENSION OF REMARKS OF

HON. GEORGE E. SHIPLEY OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. SHIPLEY. Mr. Speaker, this year marks the 100th anniversary of the

birth of a famous American woman, a fellow Illinoisan, Jane Addams.

I am proposing the issuance of a commemorative postage stamp marking the century which has gone into history since we Americans were first privileged to have this devoted woman among us.

Many remember Jane Addams as a social worker probably well in advance of her time. Others perhaps have lost sight of the fact that she also was an ardent advocate of peace.

Native of Cedarville, Ill., she was a graduate of Rockford and with Ellen Gates Starr she opened the social settlement of Hull House in Chicago in 1889, continuing as its resident head until 1935.

She became the acknowledged leader of settlement work in the entire United States and in 1919 she was chosen president of the International Congress of Women, presiding at conventions at The Hague from 1915 to 1922 and in other conventions at Zurich, Vienna, and Washington.

With Nicholas Murray Butler in 1931 Miss Addams shared the Nobel Peace Prize. She was author of "Democracy and Social Ethics," "Twenty Years at Hull House," "A New Conscience and an Ancient Evil," and "The Second Twenty Years at Hull House."

Her memory lives in the hearts and minds of many Americans today and through the issuance of hundreds of millions of postage stamps will be brought to graphic attention of the present generation.

A Reasonable Measure on Campaign Spending

EXTENSION OF REMARKS OF

HON. THOMAS C. HENNINGS, JR. OF MISSOURI

IN THE SENATE OF THE UNITED STATES
Wednesday, March 23, 1960

Mr. HENNINGS. Mr. President, many of our leading newspapers have long led the struggle for modernization and revision of our election laws. Their contribution in informing the people as to the issue before the Senate last January was quite helpful in the passage of a good clean elections bill. The Louisville Courier Journal, one of our Nation's outstanding newspapers, has for many years been in the forefront. They are continuing their efforts on behalf of the clean elections bill, and I ask unanimous consent that two editorials which have appeared in the Courier Journal respecting the clean elections bill, since its passage in the Senate, be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Louisville Courier-Journal, Feb. 1, 1960]

A REASONABLE MEASURE ON CAMPAIGN SPENDING

Congratulations to Senator HENNINGS of Missouri and those of his colleagues who have refused to abandon hope that Congress

can establish some sort of effective control and accounting of expenditures in Federal elections. Legislation to this end has been approved in the upper House by 59 votes to 22.

The Senate bill is especially noteworthy in that it would apply to primaries as well as general elections, and would also embrace committees set up to support individual candidacies.

As Mr. HENNINGS pointed out, primaries are, in practical effect, the only real elections held in about a third of the States. When the winner of a senatorial primary, for example, is assured of a seat in the Senate, he thereby assumes certain responsibilities and obligations to the whole people of the United States. It is ridiculous to say that those people have no business regulating the conditions of the primary wherein he is chosen. The States rights argument has been carried to great extremes, but it reaches sheer fantasy when it puts a no-trespassing sign on expenditures made in primary elections for Federal office.

The same no-trespassing sign applies at present to the expenditures of special local and State committees acting in a candidate's interest. Such groups may do the largest part of a candidate's campaign financing, but this is technically without his knowledge and consent. Therefore, neither he nor anybody else, has to account for the money.

The Senate bill, though it has now survived the hostility of such powerful figures as Majority Leader JOHNSON and Minority Leader DIRKSEN, still faces a battle in the House. Speaker SAM RAYBURN, for one—an extremely formidable one—objects to the provision holding candidates in primaries to account and actually is among those who call this an invasion of States' rights. Neither he nor Mr. JOHNSON seems to have much regard for his party's rights—or, at any rate, his party's national interests.

[From the Courier-Journal, Mar. 12, 1900]
ELECTION REFORM WINS IN SENATE, SNAGS IN HOUSE

The Federal Elections Act of 1959 (S. 2438), won its way through the Senate by the tidy majority of 59 to 22. Both of our Kentucky Senators voted for it. It seems too bad that its reforms would only go into effect next January 1, thus skipping this year's elections, but its sponsors knew they had a better chance of passing it that way. And the important thing is to get it on the books for the future.

Briefly, the measure lifts the ceiling on what each national committee can spend on a presidential campaign from the present unrealistic \$3 million to \$12½ million. But it introduces some notable new restrictions. For the first time, each individual is limited to \$10,000 a year for political purposes. Also for the first time, local and State committees must report everything they spend for Federal candidates, if the sum is above \$2,500. And primaries are brought under the same provisions as general elections.

The Senate bill was a victory for Senator HENNINGS, who has worked for years on election-spending reform. Similar measures have been introduced in the House by Congressman UDALL, of Arizona, and Congresswoman GREEN of Oregon. Observers see serious trouble ahead in the House. Why?

The answer seems to lie mainly in the restrictions the legislation places on primaries. These are the really vital elections in one-party States, notably in the Deep South. Of the 22 Democratic votes cast against the Hennings bill in the Senate, 15 were cast by Democrats from that region. And the seven negative Republican votes included such partisan stalwarts as Senators BRIDGES, BUTLER, HICKENLOOPER, and DIRKSEN.

The legislation must now run the gauntlet of the House Administration Committee. Its chairman is a Texan, OMAR BURLISON. Eight of its 15 Democratic members are from the South. Among the 9 Republicans are several who seem more likely to follow the lead of Senator DIRKSEN than that of the 21 Republican Senators who voted for the Hennings bill. It will take strong national pressure on the administration committee to pry this valuable legislation loose.

Regarding H.R. 1923, a Bill To Amend Title X of the Social Security Act To Enable the States To Provide More Adequate Financial Assistance to Needy Individuals Who Are Blind and To Encourage and Stimulate Needy Blind Individuals To Become Self-Supporting

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. KING of California. Mr. Speaker, on January 9, 1959, I introduced a bill to amend title X of the Social Security Act to enable the States to provide more adequate financial assistance to needy individuals who are blind and to encourage and stimulate needy blind individuals to become self-supporting.

Almost a quarter of a century of experience with the Federal-State program of aid to the needy blind has given us a greater understanding of the needs, problems, and capabilities of the men and women whose welfare is the concern of this program. The blind assistance provisions of the Social Security Act were adopted at a time of depression. The primary objective then was relief from the distress of poverty. We now know that assistance can be granted to needy blind people on terms that inescapably perpetuate poverty and dependency. The importance of more adequate relief from poverty among the blind than we now grant cannot be overemphasized. But relief alone is not enough; rather, it must be given on terms which assist, encourage, and impel the recipient to achieve independence and self-support by offering to him hope and opportunity.

A new approach in providing aid to the blind under title I of the Social Security Act has become imperative. This public assistance program will soon become one entirely for blind men and women in the productive years of life. Owing to the greatly expanded coverage and increased benefits under the old-age, survivors, and disability insurance system, those who lose their sight from diseases associated with the aging process will almost exclusively be old-age insurance beneficiaries. Blind workers who have succeeded in securing employment or self-employment in covered occupations will likewise be entitled to old-age benefits upon retirement.

The fact emerges that the category of blind people to be helped by public assistance will in consequence be composed predominantly of those who still have ahead of them years of possible productive effort and contribution to their communities and their families. It is of the utmost importance to these individuals as well as to the country that their productive powers be preserved from atrophy. This can only be done by granting assistance to them under conditions which save and promote their sense of personal worth, individual dignity and self-respect as valued members of a democratic society. Aid to the blind can be made into a program which extends to recipients the American tradition of opportunity. Reshaping the law to accomplish this end in addition to affording greater security from want is the principal purpose of this bill.

The amendments adopted by the Congress in 1956 contained important additions to the purpose clauses of the provisions relating to aid to the blind in the Social Security Act. The Congress recognized that much can be done by agencies administering blind assistance programs to encourage and help blind recipients to attain self-support and self-care. The changes in the law which were then adopted clearly authorized these State agencies to include as regular parts of programs, services by case workers and specially trained personnel designed to assist recipients to regain self-support and self-care. The amendments of 1956 also authorize—but less clearly—State agencies to assist recipients in the development of individual plans to attain self-support by utilizing whatever income and other resources they may possess in efforts to become established in occupations for which they may be fitted or in small business undertakings as well as whatever other ways may be feasible.

It appears unfortunate that, although a goodly number of State agencies are laying plans to add personnel to their staffs for the purpose of providing self-support services, the possibilities of encouraging and helping blind aid recipients to utilize their resources in fulfilling their need to be restored to gainful activity have been neglected. The fault perhaps lies with the inadequacy of the amendments of 1956. The Congress should make it unmistakably clear that the law contemplates and requires the widest possible use by recipients of individual resources in plans to achieve self-support and self-care. The need of every person to be a productive and contributing member of his community should be recognized as fundamental and as of equal importance and vitality as the need for food and shelter. The bill I have introduced would accomplish this objective by proposing several new provisions intended to give a wholly new conception and perspective to public assistance for the blind.

First, the bill proposes that all blind recipients be given incentive by granting them increased exemptions of earned income up to \$1,000 per year, and that incentive to gain complete economic independence be retained by gradually re-

ducing aid payments to them through the device of taking into consideration only 50 percent of each earned dollar above \$1,000 per year. The existing law was amended in 1950 to provide that \$50 per month of earned income be disregarded in determining the amount of monthly assistance. Thousands of blind recipients took advantage of the exemption to improve their slender economic status and some were stimulated to achieve self-support.

But the ceiling on incentive is still retained and the amount of exempted earnings has proved to be too low to gain a firm foothold on the economic ladder. For most it has been impossible to make in a single bound the immense leap from economic dependence to complete self-support which the present exemption necessitates. For fear of losing what little security blind assistance affords, others have been discouraged from making the effort. The method proposed in the bill for a larger exemption and for reducing aid payments gradually as independent earnings increase will at one and the same time enlarge the economic opportunities of the blind, stimulate them to greater efforts to become self-supporting, and enable them to achieve total economic independence.

Second, the bill provides that every aid to the blind recipient shall be entitled to possess at least the assessed valuation of \$3,000 of real and personal property; and additional possessions of real and personal property may be approved for individuals whose individual plans for attaining self-support may require their use. The requirement in the present law that all property and income of a blind individual must be utilized exclusively for his maintenance as a prior condition for receiving assistance has succeeded only in either impoverishing the individual who becomes a recipient or compelling him to live in impoverished circumstances without assistance.

To permit individuals to retain and enjoy modest amounts of property while being eligible for assistance is to preserve a basis for rehabilitation. To enable recipients to utilize their own property and other resources to gain self-support and independence from aid is to put constructive purpose into the law.

Implementing the self-support purpose further, the bill prohibits any public assistance agency from requiring blind recipients to subject their property to liens or transfer to these agencies title to their property as a condition of receiving aid. Encumbering the property of blind aid recipients deprives these individuals of an ability to use their own possessions for self-restoration and rehabilitation. We cannot successfully help the blind to return to productive and useful lives if we permit their futures to be mortgaged or their property to be taken from them because they received assistance in time of need.

Third, the bill also requires that the ability of relatives to contribute to the support of recipients be entirely disregarded in determining eligibility for public assistance. The enforcement of the legal responsibility of relatives to support dependent blind persons has never been

financially significant in reducing public assistance expenditures. It has, however, demoralized recipients by constantly emphasizing in their minds their dependent status and sense of helplessness. The enforcement of relatives' liability is unjust to aging parents of blind individuals still in the productive years of life and unfair to their youthful children endeavoring to become established in the world and generally results in spreading poverty rather than relieving it. The enforcement of relative responsibility is frequently disruptive of family relations, creates bitterness and resentment where hope and affection should be fostered and saves little or nothing in the cost of assistance to the blind. Accordingly it has no place in a welfare program which ought to maintain the sense of importance and belonging on the part of a recipient within the atmosphere of good family relations as a sound basis for his adjustment to blindness and restoration to normal life.

Fourth, the bill further provides for equal minimum payments to all eligible blind individuals except that the minimum would be specified by each State and could, therefore, vary with local conditions.

But the present system of individually budgeting recipients on the basis of individual need individually determined by a wide exercise of discretion on the part of individual social workers would be in a large measure replaced. Individual budgeting inescapably leads to the gradual assumption by social workers of control over the affairs and lives of recipients. If every bit of income must be searched out and every resource tracked down before the amount of each month's payment can be determined on the basis of the budgetary deficiency which then exists, the inevitable result is that the blind recipient, already oppressed by a sense of helplessness, soon loses all direction of his supposedly free consumption choices. The fibers of self-reliance are quickly sapped and loss of self-management is the unavoidable consequence. Under these conditions, the personal qualities of morale and enterprise which are indispensable to rehabilitative effort are undermined and destroyed.

The payment of fixed minimum amounts of aid to which all eligible persons are equally entitled as of right will reduce administrative overhead and preserve and promote the moral and psychological well-being of recipients. It will restore to them a power to manage their own affairs. It will nourish initiative and stimulate self-improvement. In contrast to the rigid means test and individual budgeting, equal minimum payments determined by law will provide a floor of security and foster economic independence and social reintegration.

Finally, to assure that aid-to-the-blind payments will more adequately meet the actual financial needs of recipients while they are in distress, the bill raises the ceiling on the matching of State funds by the Federal Government from the present maximum of \$65 per month average payment made to each recipient to \$75 maximum. When the

Social Security Act was first passed in 1935 the maximum payment to any blind recipient in which the Federal Government would participate was fixed at \$30 per month, of which the Federal Government would pay one-half. The maximum amount in which the Federal Government will share has been increased by only \$35, and even this increase includes average expenditures for medical care not authorized prior to 1950. Yet the cost of living has more than doubled since 1935 and the standard of living to which the American people have become accustomed has sharply risen. The consequence of the Federal Government's failure to keep pace with rising prices has been that even greater poverty and distress has been imposed upon the blind who must depend on public assistance. They have been compelled to eat and dress and live in a manner markedly different from the rest of the community. Many of the States have demonstrated their willingness to meet in part the challenge of the desperate situation thus brought about and have raised payments substantially above the Federal matching ceiling, but, others have fallen far behind. The latest figure available show that average payments throughout the United States are but \$69.05 per month, and this includes average expenditures for medical care.

The time has been long overdue for the Federal Government to attempt more reasonably to meet its responsibilities for raising the level of aid to the blind in every State. The bill therefore proposes that \$30 out of the first \$35 of average monthly payments to the blind shall be paid by the Federal Government. In addition, the variable grant formula adopted by Congress in its 1958 Social Security Amendments is continued. Thus the Federal Government not only will pay \$30 of the first \$35 of the average payment to all recipients; but, also 50 to 65 percent of the difference between \$35 and \$75. Accordingly, even the States which have the least ability to raise assistance payments without additional Federal participation because they have the smallest taxable resources, will be enabled to meet the actual needs of the blind recipients more adequately.

Adoption of these amendments will mean that the rehabilitative approach will constitute the very core of the Federal law providing for aid to the blind rather than the present outmoded Elizabethan Poor Laws concept of counting each penny of a resource unto the third generation. We now know from the examples of increasing numbers of blind men and women who successfully work at a wide variety of occupations ranging from electricians and farmers to businessmen and college professors that every blind person who is sound of body and mind is capable in his productive years of completely normal living and economic usefulness. By revising the Federal law, we not only translate into effective statutory provisions the 1956 enactment of the purposes of self-care and self-support; we can also materially encourage and enable the one-

third of this Nation's 350,000 blind persons who are dependent upon public assistance to take their rightful places in the economy as taxpayers rather than as tax consumers. It is high time that the Nation's laws providing for aid to the blind catch up with the facts established through a quarter of a century of experience under the Social Security Act.

The World Refugee Problem

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1960

Mr. HUMPHREY. Mr. President, we sometimes hear that our young boys and girls today are not concerned about the daily struggles for human freedom being fought here at home and by men and women around the world. I believe that the speeches given by Burtman Johnson of St. Peter, Minn., representing Nicollet County, and Linda Zimmer, St. Joseph, Minn., for Stearns County, in the annual Minnesota 4-H radio speaking contest are vivid examples of youth's concern for their brothers in need. The topic for which Burtman received the champion's prize and Linda, second place, was "Why I Am Concerned With the World Refugee Problem."

More than 800 Minnesota boys and girls participated in this contest which was sponsored for the 18th year by the Jewish Community Relations Council of our State in cooperation with the Agricultural Extension Service of the University of Minnesota. The 17 district finalists participated in 2 days of activities in our Twin Cities, visiting the State Capitol, the university, and Central High School in St. Paul, which arranged a Rural-City School Day, and Mount Zion Temple in St. Paul.

Mr. President, I ask unanimous consent that these two fine addresses showing the concern of two of our Minnesota young people for the world's refugees be printed in the Appendix of the RECORD.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

WHY I AM CONCERNED WITH THE WORLD REFUGEE PROBLEM

(By Champion Burtman Johnson, Nicollet County, St. Peter, Minn.)

"We look forward to a world founded upon four essential human freedoms: Freedom of speech and expression, freedom of every person to worship God in his own way, freedom from want, freedom from fear." These famous words were spoken by President Franklin D. Roosevelt on January 6, 1941. Has everyone in the world obtained these four freedoms in the 19 years since these words were uttered? Sadly, we must answer "No." We see that one of the greatest stumbling blocks in the way has been the world refugee problem.

I am concerned about the world refugee problem for three reasons. First, I am concerned because of what will happen to the refugees if nothing is done. Second, I am concerned because of what will happen to

the world if nothing is done. Third, I am concerned because of what will happen to me if nothing is done.

Why am I concerned because of what will happen to the refugees? Let us look first at the refugee problem caused by the Second World War and the activities of the National Socialist Party in Germany and the Communist Party in Russia. As unrest grew and war approached, thousands of mechanics, factory workers, engineers, teachers, preachers, and farmers of eastern European countries such as Poland, Austria, Latvia, and Bulgaria, fled or were taken from their homes. Most lived in concentration camps; many became slave laborers. Thousands of Jews were uprooted and subjected to brutal, cruel, and inhuman treatment.

After the war, thousands returned to their homeland. Large numbers would not or could not go home. Many were in excellent health and able to emigrate to other lands. Through the displaced persons act, the United States admitted many refugees who could not have come otherwise because of a slight health defect. At the beginning of this year there remained only 28,000 "hard core" refugees in Europe. Now during World Refugee Year it is expected that all of the remaining 120 camps in Europe will be closed and the people integrated into new countries.

World Refugee Year is an intensive effort of 65 of the United Nations to give increased assistance to the millions of homeless scattered around the world. While much will be accomplished during World Refugee Year, especially in Europe, it will be far from a complete solution to the world refugee problem. Rather, it should give us an increased awareness of the great problems that still remain in Africa, the Middle East and Asia.

One hundred and eighty thousand Algerians who fled their country during the long war for independence now roam through Tunisia and Morocco.

One million Arabs were displaced by the establishment of Israel in 1948. They are now a political football not only for the two nations immediately involved, but also for the United States and the other great powers. However, the fact remains that they are living under deplorable conditions. The United States and Britain contribute \$30 million annually, which is 90 percent of the relief money spent on these Arabs.

Thirty million dollars may sound like a huge sum, but it amounts to only \$30 worth of aid for each refugee each year.

Hong Kong has as many people as the State of Minnesota, crowded into an area less than one two-hundredths the size of our State. One-third of these, about a million, are refugees from Communist China. Many live and die on the street. For thousands more "home" is a mere shack made of scraps of tin, bamboo, or wood. The most tragic of the numerous problems in this crowded area is the youth—one-third die before the age of 16, usually of tuberculosis. Many teenagers are hardened criminals, saying that it is the only way to survive.

Similar, if not worse, conditions prevail in other parts of the world, especially in the Asian countries of India, Vietnam, Korea, and Macao.

Why am I concerned because of what will happen to the world? We can clearly see that if nothing is done to alleviate the problem, it continues to grow. We took action on the European refugee problem and we shall soon have almost completely eliminated it, but in Asia where we have done very little, the problem continues to grow by leaps and bounds. This problem could very well be just the sore spot over which a devastating war could erupt. We also know that if we do not help these refugees to become rehabilitated, their talents will be permanently lost to the world. The world cannot evade, or ignore the refugee problem.

Why am I concerned because of what will happen to me if nothing is done? I read in Genesis the question of Cain, "Am I my brother's keeper?" The Bible clearly teaches that we are indeed our brothers' keepers. We know that there is a God who will hold us responsible for our dealings with our brothers on earth.

How then can we show our concern for these refugees? We can support the relief work program of our church or synagogue. We can encourage the Government to make a careful evaluation of our refugee work and our immigration laws, which would result in a more positive approach to the refugee problem.

Through a deep awareness and a genuine concern, great things were accomplished in Europe to eliminate the refugee problem, but, regrettably, the same cannot be said of Africa and Asia. The people of other countries may differ from us in the color of their skin or in their form of worship, but dare we say that we have no responsibility for their welfare? The four freedoms have almost been attained in most of the countries of the Western World, but is that enough? We must not think that these ideals are impossible and impractical for the rest of humanity. Most important, we cannot forget for one moment that we are our brothers' keepers.

WHY I AM CONCERNED WITH THE WORLD REFUGEE PROBLEM

(By Second Place Winner Linda Zimmer, Stearns County, St. Joseph, Minn.)

Over 15 million people are living without a home, without a country, without hope. These are the refugees of Europe and Asia. Is there really no room for them on this earth, or is it that there is no room for them in our hearts?

The World Refugee Year began July 1, 1959, and will end June 30, 1960. The need for this effort was seen by four Englishmen who had toured European refugee camps in 1953. They were horrified by what they saw. In some cases, one member of a family was too sick or too old to migrate. The others refused to leave this member behind, so all remained in the camp. In other instances, the refugees were unskilled workers whom no country wanted.

In October 1956 the world had shown that it could open its heart to refugees. At this time a revolt was being staged in Hungary. After a few days of desperate and tragic fighting for freedom, the Hungarian students and workers were crushed by Soviet tanks.

At the height of the fighting, thousands fled their homeland to escape Communist persecution. Many fled to Austria, and within 2 months the total of Hungarian refugees reached 200,000.

Within 8 months nearly all had been resettled with the help of Western nations. Here was a dramatic example of how free nations working together can help the homeless.

Yet you'll find millions of refugees in the Middle East, in southeast Asia, in India, and in scores of other places. They all have one thing in common, the desire to stop being a refugee.

Refugee camps are spread across the world. They consist of barracks or mud huts, food is rationed in small portions. Disease is continuous because of the unsanitary conditions. It is hard for us to imagine the life of a refugee when we live in comfort. United Nations funds, plus help from churches and private welfare agencies, keep thousands of refugees from starving. But you, you the contributor, you are the refugees' only hope. Agencies need your support to continue their work.

Money is not all that is needed. Clothing, food packages, and prayers can make you

a helper of the homeless. Two cents buys a day's milk ration for an Algerian refugee child. Two dollars provides supplementary feeding for 1 month for an undernourished Algerian child. Twenty dollars outfits any refugee for the winter.

Meanwhile the refugees sit and wait. Many older men and women look forward to death. What else is there?

Kaya, a 15-year-old Arab girl is typical of many. Her wardrobe consists of one ragged cotton dress and one burlap dress which she uses when she hunts for bits of useful garbage along the streets. She doesn't go to school because there are no schools for refugees. The desire to learn is there but the fulfillment of that desire cannot be a reality. Kaya knows this, yet she does not understand the reason for her lack of food, clothing, and a home. We who have all that Kaya may never have cannot give her a sufficient answer. Yet we can assure Kaya and others like her that there is hope. For without hope there is nothing. Our contributions and our awareness of these needy people can bring a smile to the cracked lips of a girl who seldom smiles.

In Hong Kong there are 1 million Chinese refugees who have poured into the colony since the Communists took power in 1949. Today, one of every three persons in Hong Kong is a refugee. For thousands of men, women, and children, home is a shack made of scraps of wood, tin, or bamboo. Three people rent a bed and take turns sleeping in it for 8 hours each.

Why should I, a teenager, be concerned about this problem? My main reason for concern is the fact that 25 percent of these people are under 16 years of age.

Today's younger generation will make up the world of tomorrow. But how can tomorrow's generation be developed, and its leaders discovered if many of them are situated in refugee camps?

I feel it is my duty to inform others of the need for helping refugees. This I can accomplish through my daily conversation and by participating in events such as this. Freedom of speech and press are not just words in our Constitution. They are at my disposal if only I make use of them in the correct way. Once the American people are made aware of this problem facing our Nation, half our battle is won.

Let us who know freedom show our thanksgiving for the blessings bestowed upon us by helping the refugees. After all, they are human, too.

Oppose Glacier Peak Park

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. WESTLAND. Mr. Speaker, in Washington State we have about 9.7 million acres in six national forests. Three of these are in my district and legislation introduced in the 86th Congress would affect not only these national forests, but also the economy of the district.

The following Associated Press story, which I include in the RECORD, appeared in the Bellingham Herald and other newspapers in my district on March 14, 1960. The story is an indication of the growing opposition to any attempt to create a national park in the Glacier

Peak area situated in three of Washington State's national forests.

STATE SPORTSMEN OPPOSE GLACIER PEAK PARK PROJECT

VANCOUVER, WASH.—The Washington State Sportsmen's Council voted active opposition Sunday to proposals for a national park in the Glacier Peak area of the north central Cascades.

Two resolutions calling on the council to work against the park plan passed almost without a dissenting vote.

Foes of the 1,600,000-acre park contend it would increase the amount of land on which nearly all forms of hunting are banned to nearly half of the State's total acreage.

WANT MORE INFORMATION

Action was deferred on a related resolution asking council endorsement of a bill before Congress to create a wilderness area in the same north Cascades region. Delegates to the quarterly council meeting said more information was needed on the bill.

The Student Oath Issue

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1960

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a series of editorials which I have received regarding the affidavit section of the National Defense Education Act.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Springfield (Mass.) Sunday Republican, Dec. 27, 1959]

THE STUDENT OATH ISSUE

It seems hitherto to have been difficult in some quarters to grasp the essential facts of the so-called student oath issue. But with President Eisenhower favoring the repeal of the controversial clause and with Harvard and Yale conspicuously leading the way—although a number of smaller institutions had previously rejected Federal student aid because of that clause—the prospect seems good for the passage, at the coming session of Congress, of the bill for repeal which Senator KENNEDY vigorously promoted at the last session.

The crux of the matter is not the oath of allegiance. It is the peculiar affidavit of belief, which no one except students receiving Federal aid is now required to sign, and which has been stricken out of other Federal legislation. The bill introduced at the last session by Senator KENNEDY and Senator CLARK, of Pennsylvania, would have repealed, in its original form, both the affidavit of belief and the oath of allegiance. It was so approved by the Senate Committee on Labor and Public Welfare which reported it favorably 12 to 3. After debate, the bill was amended so as to retain the oath of allegiance but to insist on the elimination of the affidavit of belief. In this form, which exactly fits President Eisenhower's statement at his press conference on December 2, the bill will come before Congress when it reconvenes next month.

The President declared himself categorically in favor of the affidavit's repeal. But he saw no objection to the oath of allegiance. As reported by President A. Whitney Gris-

wold, of Yale, in one of the best and most careful analysis of the whole situation: "The colleges and universities are not protesting the oath of allegiance." President Griswold adds: "By itself the oath is no more than an affirmation of the duties every citizen owes to his country. . . . The disclaimer affidavit, on the other hand, extends beyond the basic law of the land into the realm of belief and conscience, where definitions are vague and actions become matters of debate."

Perhaps the most effective statement by President Griswold is this: "A natural reason for the position of the colleges and universities is that no one enjoys being doubted when everyone else is trusted." That is an exact statement of the present situation. The requirement of an affidavit of belief was dropped out of the Taft-Hartley Act by the so-called tough Labor Reform Act of this year for which the Senate voted 90 to 1. President Griswold further states: "Farmers, veterans, and beneficiaries of social security (to say nothing of other recipients of Federal benefits) . . . have never had to make a disclaimer affidavit." It is hardly to be wondered at that teachers and students in colleges and universities protest at being the only recipients of Federal aid who are now singled out and required to file affidavits as to their beliefs. It is as if they were the only ones in the entire country to be suspected. Instead of that, they are the very ones on whom we may well rest, through the progress of education, our strongest hopes for the wisest and firmest establishment of freedom under constitutional government.

[From the Toledo (Ohio) Blade Jan. 12, 1960]

REMOVE THE DISCLAIMER

Senator JOHN F. KENNEDY has said that he will press for early congressional action to remove the disclaimer affidavit from the National Defense Education Act of 1958. President Eisenhower has indicated that he feels the affidavit is not essential. And if Congress doesn't get bogged down in re-arguing a subject already thoroughly examined at the last session, it ought to be able to end quickly most of the controversy over the so-called loyalty oath provisions which have been to educators an objectionable aspect of an otherwise admirable Federal student loan program.

Much of the confusion about the loyalty oath lies in lumping for public discussion under this heading two separate and distinct requirements of the act. One is that a student who gets a Federal loan must subscribe to an oath or affirmation that he will support and defend the Constitution. The other is that he must execute an affidavit that he does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional means.

As the debate in Congress last year showed, the educational world's principal opposition is not to the oath affirming loyalty but to the affidavit disclaiming disloyal thoughts and associations. And repeal of the affidavit, as distinct from the oath, should not be too difficult to achieve. Most Senators in their votes seemed to recognize the validity of the objections raised by a number of distinguished colleges and universities to this feature.

The two most salient of these objections, it seems to us, are that the affidavit is discriminatory in that it questions the beliefs of college students while those of other recipients of Federal loans go unquestioned, and that the affidavit's vague provisions crack the door to possible invasion of academic freedom.

Both the oath and affidavit were part of a section tacked on to the education act hast-

ily and without much consideration. Discarding the latter and letting the former stand, while in the nature of a compromise with those who think that verbal protestations are an effective guarantee of loyalty, would at least permit the benefits of the Federal loan program to be received by students in colleges which decline on principle to participate in the loan program so long as the affidavit provision stands.

[From the New York Herald Tribune, Feb. 29, 1960]

MR. NIXON HITS THE AFFIDAVIT

Vice President NIXON, in response to a query from the heads of three midwestern universities, has declared himself in favor of repealing the controversial disclaimer affidavit required of applicants for federally aided student loans. This is the negative affidavit, in which each student applicant must specifically swear his innocence of any subversive thoughts or associations.

As a nation we should have more faith in our college students than to single them out for any such disclaimer, as if the exposure to learning made them especially suspect. And we should have more faith in the strength of free institutions than to act as if an ordinary citizen's loyalty has to be, or can be, coerced.

The President has already urged repeal of the offensive requirement; Senator KENNEDY has introduced a bill that would effect repeal. The Vice President's support, hopefully, will help end this affront both to our colleges and to their students.

[From the Boston Herald, Mar. 8, 1960]

THE BADGE OF ANXIETY

A government that is forever requiring oaths of loyalty and allegiance from its citizens bears the face of an anxious and worried government. It is fearful of revolution and takes to looking into people's eyes to see the first symptoms of rebellion.

The loyalty oath and Communist disclaimer now exacted from college students seeking Government loans under the National Defense Education Act are a badge of an American anxiety. They plainly suggest an uncertainty about the future of the country, a neurotic fear that sedition is dangerously prevalent.

And not only dangerously prevalent, but so sinisterly concealed that it cannot be detected by ordinary vigilance, but must be found by asking every citizen: "Will you swear you are not a traitor?"

The oath-affidavit device is so badly suited to uncovering revolutionists that a government would hardly invoke it short of desperation.

It is a device so blackened in history by the oppressive tests of religious or political conformity that those who know the past well are the ones who most vigorously oppose the oath in the colleges.

Alexander Hamilton was one who lived close to that past, and though he was no liberal, he denounced every loyalty oath.

Such an oath, he said, "substitutes for the established and legal mode of investigating crimes and inflicting forfeitures, one that is unknown to the Constitution and repugnant to the genius of our laws." Such oaths invert the order of things, obliging the citizen to establish his innocence and holding out a bribe to perjury.

The ordinary resources of criminal prosecution ought to be enough to weed out any seditious student who might seek a Government loan. It ought not to be necessary to resort to the indirection of prosecution for perjury rather than for the substantive crime.

Senator MUNDT has proposed an amendment to the Defense Education Act making it a crime to accept a loan while engaging in any activity already prohibited under the

1940 Smith Act, which in turn makes it a crime to teach or advocate, or conspire to teach or advocate, violent overthrow of the Government, or to belong to a group having such an aim. This seems to pile crime on crime, but it at least makes an act and not the denial of an act the cause for prosecution.

A strong nation, a nation well founded in the principles of human justice and dignity—as we believe this Nation to be—ought not to need constantly to demand protestations of loyalty from its citizens. It ought not to act the jealous lover, forever demanding a statement of affection.

This national display of anxiety is unworthy of us.

A Leader Dies: Jose Antonio de Aguirre

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. PORTER. Mr. Speaker, with great regret I learned this morning that Jose Antonio de Aguirre, President of the Basque Republic in Exile, had died yesterday in Paris of a heart ailment.

Determined, genial, democratic, Jose Aguirre was a proper and able leader of a great nation. He was my friend. I shall always cherish his memory. Two years ago at his invitation I visited Etchola, near St. Jean de Luz, France, on the Spanish border. There I met him and the other Basque leaders. Last year he visited in Washington and came up to my office.

Dr. Aguirre knew Latin America very well. He had friends everywhere. He and Dr. Jesus de Galindez had been good friends. We shared a lack of admiration for Dictator Franco and other tyrants, including of course Trujillo.

The Basques are a remarkable people. Jose Aguirre was a remarkable man. His spirit will live as long as there are men and women who cherish freedom and decency.

Under unanimous consent I include the obituary from the New York Times, March 23, 1960:

JOSÉ ANTONIO DE AGUIRRE DIES; BASQUE LEADER OPPOSED FRANCO—HEAD OF GOVERNMENT-IN-EXILE WAS ASSOCIATE OF GALINDEZ—TAUGHT AT COLUMBIA

PARIS, March 22.—José Antonio de Aguirre, who was head of the Basque Republican Government during the Spanish Civil War, died here today of a heart ailment. He was 56 years old.

Dr. Aguirre was appointed head of the Basque Government when the Spanish Republican Government in Madrid granted autonomy to the Basque Province. Though a devout Catholic, he was one of the most active and forceful opponents of Generalissimo Francisco Franco's regime.

During World War II he spent 2 years in New York as a professor of history at Columbia University.

WORKED WITH GALINDEZ

As president of the Basque Government-in-Exile, Dr. Aguirre had worked closely with Dr. Jesús Galindez, who disappeared mysteriously on March 12, 1956. Dr. Galindez had been a registered agent of the Basque here and an instructor at Columbia University.

During the investigation of Dr. Galindez' disappearance, Dr. Aguirre reported that \$1,016,000 collected by the missing man for Basque Government use had all been accounted for and that the Galindez accounts had been "meticulously kept."

Dr. Aguirre was elected president of the Basque provinces on October 7, 1936. During the Spanish Civil War, he was quoted often as describing the Nationalists under Generalissimo Franco as opponents of everything prized by the Basques—their language, customs and political aspirations.

Basque support of the Loyalists (Republicans), however, was attributed more to racial aspiration for autonomy than to sympathy with Loyalist politics. The Basques were said at the time to have chosen the alliance with Madrid as the lesser of two evils. It was said further that the religious issue apparently played a comparatively small part in the Basque stand.

After the Nationalist victory, Dr. Aguirre escaped to France. When the Germans drove through that country he fled to Belgium, and for a time took refuge in the Chilean Legation in Brussels. In France he was with a group of Basque refugees who were under fire near Dunkerque.

From Belgium, Dr. Aguirre went to Germany and escaped from the Nazis by going through their country in disguise. Later he went to Switzerland and to Sweden, where he boarded a cargo ship under an assumed name and sailed to Brazil.

Dr. Aguirre did not reveal his true identity until he had crossed the border to Uruguay. He was in Montevideo in 1941 when the late Dr. Nicholas Murray Butler, president of Columbia University, announced his appointment as a lecturer on Spanish history and law.

In a book he wrote, "Escape Via Berlin," published in 1944, Dr. de Aguirre told how he posed as a Panamanian, with a newly cultivated personality and mustache, in the German capital and was helped by Pan American diplomats to reach Sweden. Help came also from the Swedish Social Democrats, who cut red tape with aid from the British.

Missouri Sets Example

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1960

Mr. HENNINGS. Mr. President, the Senate has been occupied for several weeks with the civil rights debate, particularly with the right of all citizens to vote. The Rolla (Mo.) Daily Herald calls attention to another side of voting. I ask unanimous consent that the editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

[From the Rolla (Mo.) Daily Herald, Mar. 14, 1960]

MISSOURI SETS EXAMPLE

Before long many well motivated organizations will begin prodding the American citizenry to get out and vote in record numbers this year.

They'll be trying to stir the lazy, the indifferent, and the preoccupied. And they should try. The privilege of voting in a free society is too rare a possession to be shrugged off.

But even the most earnest and the most successful exhorters will not be able to do

much about the millions who will be disfranchised this year because they have moved recently and have not yet met residence requirements for voting in their new location.

In far too many States, the requirement is a solid year of residence. Only a few, Ohio (40 days), California (54), Missouri (60), have cut this to levels that are sensible for a vast, mobile population like America's.

In any given year, from 80 to 35 million Americans change residence, a substantial proportion from one State to another. It defies reason why they should be put out of action for a year as voters.

All of the States might well follow the example of Ohio, California, and Missouri.

A Realistic Farm Program

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. UTT. Mr. Speaker, faced as we are with a burdensome, scandalous surplus accumulation of wheat, everyone seems to be spending more time trying to place the blame than in solving the problem.

I am happy to see that both President Eisenhower and Secretary of Agriculture Benson have taken the broader view. They have repeated that this is a problem national in scope. It is not a Republican problem nor a Democratic problem and its solution will not be provided by either party working in partisanship. It will only be resolved by both parties working together in the national interest.

Unfortunately, some of my colleagues across the aisle do not approach the wheat surplus with the same attitude. They hammer away, day after day, trying to take the shoe of responsibility off their party's foot and put it on the GOP.

I am happy to note that some of our leading newspaper editorial columns are not mixed up in their history and do not mind calling a spade, a spade. I submit to your attention an editorial from the February 16 edition of the San Diego Union entitled, "A Realistic Farm Program":

NO MAGIC FORMULA—A REALISTIC FARM PROGRAM

President Eisenhower has made it clear in a message to Congress there is no magic formula for giving American farmers all the prosperity they want and deserve. He pledged, however, his determination to work out the best possible farm program without claiming it is any panacea.

The Chief Executive promised Congress he would approve whatever it enacts within a framework which recognizes realistic price support levels and avoids direct Federal subsidy programs.

Mr. Eisenhower's message reminds us that in this election year there is certain to be considerable agitation over farm legislation and policy. So it is not too early to lay on the line some of the facts concerning this traditionally controversial issue.

Remember, when you hear Members of Congress criticize them, that the current price support and production laws don't represent Republican farm policy.

Basically, these laws date back to 1933. They were intended to meet the crisis of a

worldwide depression. Their purpose was to help farmers by raising prices they received for food and fiber. The basic idea was to create an artificial scarcity.

Then at the start of World War II, this policy of a scarcity was reversed to meet food demands created by global conflict. Price supports were raised to a high level during the war emergency and their continuation for 2 years beyond the war was assured.

But—and here's where the trouble started—in 1948, 1950, and 1952, three successive Congresses failed to remove the wartime level of price supports, despite the original intention of a 2-year postwar limit. Hence production, began to exceed demand. This is the root of our present farm troubles.

During 22 of the 26 years encompassed by this legislative history, Congress was controlled by the party now in the majority, the Democrats. The Republicans held party responsibility only during 1947-48 and again in 1953-54.

Thus virtually all present farm legislation governing price supports and production controls was written by the Democrats.

They apparently are satisfied with the present farm program, for they have the votes in Congress to change it and have not done so. Yet the Democrats complain about what they call the Eisenhower farm program and blame their favorite whipping boy, Agriculture Secretary Benson.

Remember these facts as farm legislation becomes an increasingly greater issue in the months ahead.

Your Money

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1960

Mr. HUMPHREY. Mr. President, the real impact of the administration's tight-money policy is in the family budget of the average wage earner.

The editors of the Machinist, official weekly newspaper of the International Association of Machinists, have, in an editorial in their March 10, 1960, issue, illustrated most clearly what high interest rates and tight money mean to their members. The plain fact, as the editors say, is that it has cost a family with a 25-year loan on a \$12,000 home \$1,800 more in interest over the life of the mortgage because of increased interest rates secured by this administration.

Mr. President, I ask unanimous consent that this editorial, entitled "Your Money," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YOUR MONEY

A lot of union members have been adding up the interest payments they made last year. That April 15 deadline for filing income tax returns is not too far off.

For most of us the largest item of interest we pay is for the mortgage on the house. Adding it up, the homebuyer is amazed that so much of each payment goes for interest, so little for principal.

The union member may not realize it, but at this point he has run smack into the high

interest, "tight money" policy of the Eisenhower administration.

This is the policy that Leon Keyserling, former chairman of the President's Council of Economic Advisers, calls a "bonanza for bankers." Keyserling explained just why in simple ABC terms at the IAM's international staff conference last week at Chicago. Here are some examples he cited:

Go back to your mortgage. Suppose it's a 25-year loan on the typical \$12,000 home that so many families are buying. Because of the increase in interest rates since 1953—the tight money policy—those families are going to pay \$1,800 more interest over the life of the mortgage than they would have paid if the 1952 rates had remained in effect.

Take another example. Let's add up all the interest obligations American have accumulated over the past 7 years. This includes interest on the Federal debt, State and local communities' debt, and individual debts for homes, farms, cars, and other so-called durable goods.

This bill for interest is \$10 billion higher over the 7 years than America would have owed if the interest rates of 1952 had remained in effect.

As Leon Keyserling points out, the administration hails its tight-money policy as a preventive for inflation. But inflation can't possibly develop with more than 4 million Americans out of work and the Nation's industrial system operating at considerably below capacity. Tight money is making it more difficult for smaller firms to create jobs and expand production.

Keyserling says that about the only inflation going on is the ballooning of the profits of the banks from the excessive interest payments.

It seems to us that it would be a good idea this election year to find out just which of the candidates proposes to continue this tight money, bankers' bonanza policy. We're going to be paying on that mortgage for a long, long time to come.

Toward a Peak of Excellence

EXTENSION OF REMARKS

OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. ROGERS of Colorado. Mr. Speaker, under unanimous consent I insert in the Appendix of the RECORD an outstanding address by Chancellor Chester M. Alter delivered at the Founders Day banquet, University of Denver, March 7, 1960. We, in Colorado, are delighted to have such an excellent chancellor. He has made much progress in bringing the University of Denver forward in the field of education. This address was delivered on the 96th anniversary of this outstanding university. I know it will be of great interest to all who are concerned with private institutions of higher education. The address is as follows:

TOWARD A PEAK OF EXCELLENCE

(Address by Chancellor Chester M. Alter, Founders' Day, University of Denver, March 7, 1960)

On this occasion, Founders' Day, we gather to honor those who through the years, in a variety of ways have founded, nurtured, and sustained this institution. It is proper that

we should do this. At your plates you have found a replica of the document which set the beginning of this university, and which contains the names of those who were responsible for its founding. Down through the years trustees, chancellors, professors, staff members, students, alumni, and friends have made their contributions. They, too, should be recognized and remembered.

But as I read the history of this institution, I am impressed by one certain fact, that those who have made the major contributions to its growth were, of all things, not persons prone to look backward; they were men and women who kept their eyes on the future, on what lay ahead. And so tonight I know of no better way to honor those who are responsible for our being together here in this university than to follow in their footsteps, to look ahead, to think with you about the great challenges yet to be met. That mission I hope I have defined as the title of my address tonight, "Toward a Peak of Excellence."

For those of us who live near mountain country and who drive on easy roads to lofty heights, it is difficult to believe that only recently in the history of mankind have mountains been other than foreboding pinnacles shrouded in mystery and darkness. To ancient peoples the mountains were considered to be not a part of this earth but rather a sort of half-world between the earth and sky, the home of gods and demons, no place for mortal man. James Ullman, in his fascinating book, "The Age of Mountaineering," tells us that less than 200 years ago, any traveler compelled by circumstances to cross the lowest of the Alpine passes set out in mortal terror, his soul already commended to his God, not so much because of highwaymen that might well beset him on those deserted heights as for the probability of his encounter with a demon, a dragon, or the ghost of Pontius Pilate.

Slowly, however, Ullman tells us, as the 18th century came to a close, "As in every sphere of human thought and activity the bonds of ancient tradition were broken, as frontiers were pushed back with dazzling rapidity, man looked about him with fresh and eager eyes. Then the towering Alps, which had for countless centuries moved him only to awe and terror, now suddenly became a challenge, beckoning him to try his newfound knowledge, his skill, and his courage."

Today there are few peaks that have not given up their secrets. It is a rare and happy breed of men who climb our mountains. Why do they climb? Why do men turn their backs on the easy security of their daily lives to face the wind, the ice, the snow, the crumbling rock, the avalanche, the danger, and the death?

"The answer to this riddle," Ullman tells us, "is simply this. The men of the mountains climb because that is the way they are made. Scanning the heights, they see more than rock and ice and snow and the immense blue emptiness of the sky. They see, too, a great challenge to their own qualities as men; a chance to conquer their own weakness, ignorance, and fear. They have found the divine harmony and simplicity of the natural world, and themselves, as men, alive in it, a part of it. The mountaineering spirit lies not in what men do, but in what they are—in the raising of their eyes and the lifting of their hearts."

I have dealt this long on man, and the mountains which once he feared but which now he climbs in high adventure, because I think there is a parallel if we are to take seriously the mission of the university as being that which titles this address: "Toward a Peak of Excellence." The parallel is intriguing.

For countless centuries man's attitude toward knowledge resembled to a remarkable degree his fear of the mountains. Live in the safety of what you now know; pass on

without question the precepts you have learned; ascend the foothills only if you must, but let no man come up into the mountains where the gods dwell. The age of enlightenment, of inquiry, came slowly and those Galleos who edged their way upward into the shrouded mysteries to see what they could find, found principally great penalty for their irreverent adventure. And then, with almost bewildering suddenness, these fetters were struck off and man with high adventure began the dazzling exploration of his world, of himself, and of his society; his limitations only those that lay within himself.

The parallel continues. Today the mountain peaks that fall beneath the pitons and the crampons of the mountain men do not fall easily. Those who do climb are only those who must. They are those who ache with challenge and who, when defeated, whisper through cracked and wind-burned lips, "I'll get you yet."

And it is equally true that the peak toward which we aspire in higher education is not one that can be easily accomplished by wishful thinking. The task will be difficult, and dangerous. No easy highways to this crest. We have in the 95 years of our history already reached the high country and even this far the way has been hard, has been achieved only by devotion and dedication on the part of all who have worked in this great enterprise. It would be easy and safe and pleasant to stop here, and such a decision could, perhaps, be justified. We are good enough. Security is within our grasp. Here we could with modest effort long survive, indeed usefully survive; and to the valley dwellers this is perhaps enough. Why, then, press on to the peaks, the peaks of excellence? The impulse I believe is the same that drives the mountain men. We will press on because we must. The good is not enough. To men who would adventure in the mountain ranges of the mind, there can be no turning back. Whatever the horizons, they are too small; whatever the accomplishment, it is not enough; whatever heights have been scaled, others lie beyond. We will strive for this peak of excellence—because we must.

There is yet another parallel. Great mountain climbing is never an afternoon excursion. It is the result of years of preparation, of meticulous care, of well-laid plans. We read with interest how, in the great and successful assault on Mount Everest, level by level assault camps were set up, secured, provisioned, and then above them other camps, and then still others. Personnel, equipment, provisions. The logistics of such an assault are fascinating. And, always, there is plan. The configuration of the peak has long been studied. The glacial routes assessed. The treacherous cornices appraised. The scaling of these peaks is then no accident. The assault in every sense is the final execution of a master plan.

So too must we, as we move toward this great peak of excellence, chart our way. The crest toward which we climb must be identified, our resources numbered, our plans prepared, our methods appraised, the path we intend to take carefully charted. This we are doing and will continue to do, and tonight I would like to share with you at least the outlines of our goals, our progress and our master plan, here at this, your University of Denver.

What, first of all, is the nature of the peak of excellence that challenges us?

Two major problems confront us today in higher education. The first and by all odds the most urgent is the critical and perilous struggle that through our lifetimes will continue between the free world and the forces of totalitarianism. Grim as it is at present, I hear no thoughtful and authoritative voice that promises us some surcease; instead we are told that the forces of the

enemy will grow stronger; that in our democratic societies we have not even begun to face up to the realities of the coming struggle. Against this enemy then the forces of freedom must marshal every strength. The strongest of these can be our intellectual powers, and our finest armor the moral and spiritual resources of responsible free men. We must if we are to survive develop a nation of responsible citizens, capable of evolving through democratic processes great and dynamic leadership. In this necessity, higher education shoulders an enormous responsibility. Never has the need for quality in education been so imperative as now and through the decades that lie ahead.

Concomitant with this challenge, however, there is another problem. In a sense, this is the problem of numbers. Because of a variety of forces which are already in motion, colleges and universities in concert face the gigantic fact that 10 years from now their student populations will have more than doubled; some extend the numbers far beyond that proportion. The often mentioned population explosion is partially responsible for this fact. In addition, however, a growing economic base has made it possible for a greater percentage of young men and women to attend college than ever before. This fact we all applaud, as do we applaud the added fact that the growing realization of the importance of higher education has made available from public and private funds huge sums for scholarships.

But still another force is operative, and this one, though seemingly inevitable, gives us cause for concern. This is a growing so-called democratization of the intellectual base and of the function of higher education. More and more the justification of higher education has been expressed in terms of added income, better jobs, a higher level of postgraduation employment; and more and more there has crept into the curriculums of higher education those courses and departments and schools that are designed to prepare a hopeful student for his initial entrance into a career. We have been prone to tell ourselves that these students, because of their employment interests, have thus been exposed to at least some of the "liberating influences" of a college education that otherwise they would have entirely missed. But we have learned to our sorrow that such courses and departments breed still others, until today in higher education we face a vast proliferation of such subject matter, most of it professional but all too much of it at the lower level of vocational training.

Whatever the wisdom or the propriety or the value of these various trends may be, the results are unarguable—the college population over the next decade promises to all but engulf our educational institutions.

As difficult as this problem may seem, particularly against the backdrop of the new urgency of our major task, I see in our uniquely American dual system of higher education the machinery to meet this growing challenge, if both the tax-supported public institutions on the one hand and the private, independent institutions on the other, vigorously supported and adequately financed, set about the performance of their unique tasks. These I would define in broad generalization as follows:

To the tax-supported institution must fall the major burden of the onslaught of numbers and the concurrent expanding range of narrow needs that require an ever-increasing assortment and variety of courses. I am sure that most administrators of these institutions will exert every effort to modify this trend and to contain it within reasonable limits. I also know, however, that constituencies will be served wherever the tax dollar goes and although the serving of these relatively narrow needs of growing numbers

of persons is not the only, perhaps not even a major obligation of publicly supported institutions, it is surely they that should be principally charged with this task.

To the independent university, then, falls another obligation. This I would define as the attainment and the nurturing of great peaks of excellence in those relatively few intellectual, cultural and professional areas deemed most vital to the undergirding of a free society. This they should do by providing for relatively limited numbers of intellectually exceptional students extraordinary opportunity to develop themselves to their greatest potential in those areas in which the undergirding necessity is the development of the life of the mind.

This I believe to be the special mission of the University of Denver and toward the accomplishment of this mission I believe our major energy should be expended.

There is a special dimension to the propriety, indeed the urgency, of making this our mission. If, as I have said, this task of excellence is one of the special missions of the independent university, then it must be by reasons of geography be the unique responsibility of the University of Denver. The independent university flourishes in New England and along the Atlantic seaboard; there are many in the South and in the Middle West, several along the Pacific coast. But in this great 12-State area of the high plains and the Rocky Mountains there is but one, and that the University of Denver. In a very real sense then the full accomplishment of this character, the achievement of this peak of excellence, is our special obligation to higher education in this fast developing heartland of the United States.

This, then, is the nature of the peak we would ascend. This in vast generalization is our goal. How then are we preparing, must we prepare, for the accomplishment of this herculean task?

I have said that we will operate on the basis of selectivity of exceptional students. This principle is even now being applied. In my annual report you will find a description of our present methods of selection, all based upon such criteria as college board examinations, academic records and if need be, personal interviews. Let it be noted that last autumn our rejection of applications was 44 percent higher than those of the year before, although our total enrollment increased by only 6 percent. The process of selectivity is taking place.

What are our plans for the future? On the basis of present standards of admission, and against the general trends in college populations, I would predict that an enrollment of from 15,000 to 20,000 students would be entirely possible. How large do we propose to be? I envisage for the University of Denver not 20,000 students, but rather a limitation in size to some 8,000 students, 80 percent of whom would be full time, regularly enrolled. I would further envisage that about 1,800 of our total population would be enrolled in our graduate programs, 600 of these in our college of law. I would propose that about 3,800 students will be the maximum size of our college of arts and sciences, including certain professional fields such as education; that in business administration there will be in the neighborhood of 1,900, in engineering around 500. I firmly believe that to accomplish and maintain the excellence we desire and for economic reasons, we must hold our total student body this far in numbers below the levels of probable applications for admission.

We must be equally selective as we build our faculty to meet this rise in student numbers and intellectual ability. This indeed is both our most important and our most difficult task. We must maintain a healthy student-faculty ratio but the usual teach-

ing load of the average faculty member must be no more than 10 hours, rather than the present 15. Through increased and thoughtful use of teaching fellows, however, and through new and effective technologies of communication, I am convinced we can materially enlarge that extraordinary degree of intimacy between faculty and students that must be found at senior and graduate levels and which is already one of the great hallmarks of instruction at the University of Denver.

I see as an optimum distribution of faculty rank, approximately 37 percent full professors, 25 percent associate professors; the rest at the rank of assistant professor or the rapidly disappearing rank of instructor. Our full professors must be only those who by their efforts have distinguished themselves as scholar-teachers, and who day by day continue to build into the character of the university that intellectual maturity, that gentle wisdom which is the inevitable heritage of their long devotion to the life of the mind. The achievement of this rank should be difficult—but it should be rewarding. Our associate professors should be, as generally they are the country over, vigorous and energetic scholars, testing their scholarship through publication, initiating those programs in the university which eventually grow to great stature. No one should be brought into this rank who does not give great promise of such scholarly activity as to eventually merit the rank of full professor. These men and women, our professors and our associate professors, are our richest resource. It is this area of strength that at all costs must be maintained, encouraged, and protected.

As this faculty is built to meet the challenge that we face, two obligations are paramount. First, and by all odds the most important, we must develop programs of such high excellence that they invite the participation of established and potential scholars. And second, we must acquire the resources needed to offer some measure of just compensation. Without this latter, programs cannot be maintained, but without the former, without the presence of intellectual excitement, without the atmosphere of learning, scholars such as we desire cannot be secured nor kept, no matter what the financial reward. The scholars among our present faculty are evidence that certain programs at the University of Denver, present and potential, are powerfully compelling attractions, even though economically we have as yet no bargaining power at all. But if we are to attain the peak of excellence, this poverty of compensation must come to an end. I am firmly committed to the policy that in our future, all reward must be determined by the evident contributions of each faculty member to the intellectual community that we now have and that we are determined to build. I am equally committed, however, to the firm intent that by the centennial year of 1963-64, for those who measure up to the obligations of their rank, present salaries on the average should be doubled.

Exceptional students and an exceptional faculty, if these are not part and parcel of our plan, let us here and now turn away from any assault on that towering peak of high excellence.

What of our programs? What charts are there for the gaining of this hoped-for summit? These, I have said, are to be based upon a selection of those areas of study—intellectual, cultural, and professional—most vital to the undergirding of a free society.

Tonight I have no time to name the programs, one by one. But I would like to suggest a few yardsticks that may be used to determine the propriety of an academic program at the University of Denver.

First, every program that is to be maintained or inaugurated at the University of

Denver should be rooted and grounded in intellectual content. Moreover, it should be of such a nature that profound insights into the discipline of each program can be achieved through continuing research. In addition, every program should be capable of significantly enriching important areas of knowledge and understanding, that through its study meaningful horizons can be pushed back through inquiry, creativity, imagination, and perseverance. I think it is apparent, then, that at the core of all such programs are the traditional disciplines of the liberal arts and sciences, which deal with the nature of man, his social arrangements, and the physical world in which he exists.

Already, of course, our paths have been charted in this direction. Our college of business administration, I am proud to say has made significant and important strides in this direction. By comparison with other such colleges in the Nation, its faculty has developed to a unique degree professional studies within the framework of intellectual content, devoted to the comprehensive understanding of the economic, industrial and commercial climate of our society and increasingly rigorous in discipline. Much the same can be said of our college of engineering and of most of the professionally oriented programs within the college of arts and sciences.

I am sure that these trends will continue, that there will be a further permeation of these programs by the liberal arts, that to a decreasing degree will special attention to the peculiar problems of any small segment of our business or professional world be permitted to obscure the student's opportunity to gain a better understanding of himself, his physical environment, and the structures of society which man has created.

In a society in which the business and professional man seems to play an ever-increasingly important role, in which he is so often called upon to make important judgments in areas outside of his professional knowledge, we cannot afford to develop professional men and women who are scientifically illiterate, naive in the social sciences or inept in those areas of understanding, the humanities, that affect our value judgments and our tastes.

There are, in a sense, two other interrelated dimensions of our programs that must be kept in mind. These I would describe as their richness and their degree of concentration or depth. As the intellectual capacity of the average student increases, and as within our student body exceptionally capable young men and women are identified, I believe it to be our obligation to increase the extent of the areas of knowledge with which they should come in contact, or the depth of those experiences, or both. Once again this process has already begun. Beginning next fall, for example, we will launch our centennial scholars program. This is designed for exceptional entering freshmen in all undergraduate colleges. Through advanced placement, accelerated learning, special colloquia, independent study, directed reading and research, these young men and women will be given special challenge equal to their exceptional ability. This has been called our centennial scholars program because these young men and women will graduate with our centennial class in the spring of 1964. Already, however, as work on this program has moved ahead, there is planning underway to offer a similar program for the class that enters in 1961 and 1962 and 1963. I am confident that as we approach our centennial year of 1964 the intellectual level of the average student will have so materially increased and our drive for excellence will have reached such proportions that what is now a special program for unusual students will have become, with modification, the normal program for our average student; and that for those al-

together unusual entering freshmen of the year 1964, programs of yet greater excitement and challenge will have been prepared.

Development of depth of study in our programs is closely related to their potential richness. The easiest measure of such depth is, I presume, the extent of the work in any program which is available beyond that required for the baccalaureate degree. Let me begin by saying that, with a few exceptions, any field that is legitimate for undergraduate study ought to be of such proportion as to merit potential graduate work through the level of the doctorate. I am, therefore, certain that we must prepare to increase our present areas of doctoral study, being certain, however, that the resources of each area are entirely adequate for such advanced scholarship. We must have available the scholarly staff, the library, the laboratories and the other facilities that can enable and encourage a young man or woman to set out on what should be an exciting though often lonely adventure that leads to the legitimate doctoral degree.

Yes, permeating our programs there must be that richness and that depth of scholarship which alone can create that peculiar excitement to be found in the true climate of learning. In this direction, of course, we are already moving. Only this year we have extended our doctoral studies to additional areas in the College of Arts and Sciences; we have given much time and attention to the bolstering of other master's programs (which we hope will soon lead to doctoral studies); we have taken initial steps toward reduction of faculty loads to encourage additional activity in research and creative work. The charts are being drawn, the routes outlined, the strategy mapped. We are determined that our continuing assault on the highest peak of excellence will not be blunted or turned back.

Even as in mountain climbing, so, too, in our adventure, the problem of logistics is a difficult one. The procuring, the upkeep, the intelligent use, and the functional design of necessary equipments may well make or break such an enterprise. Though ideas in universities do not come from bricks and mortar and research does not spring spontaneously from test tubes, serious limitations in such physical properties do tragically limit the scholarly and creative capacities of our scholars and artists, both student and faculty. There is heartening evidence, however, that here, too, the university is "on its way." These past years have been exciting ones, for they have seen a committed dollar volume of building which exceeds that of the entire previous history of the university. Highly important to the new character of our students, who now in great majority come from outside our State, is housing. Two new residence halls costing \$1.7 million and housing 432 men and women were dedicated last year. Right now, on the drawing board are plans for several more such halls and, if present plans meet no unexpected reversal, ground for the first of these will be broken in 1961.

In the area of academic life, you know of the \$1,250,000 grant by the Boettcher Foundation, the largest such grant in the State's history, for the construction of the first three units of the Boettcher Center for Science, Engineering, and Research, which will permit a new, exciting, and unusual integrated program in these three areas. Construction on this great project will begin next fall. John Greene Hall, a new engineering-research facility, is already in use.

The University Law Center, which will not only house our law school but which also will be the center of legal activity in this great region, is moving rapidly through construction and will be ready for use next year.

And on the drawing boards are plans for other buildings which I am confident will soon be in construction. We are moving, and with heartening speed.

Behind all such development, however, as well as behind our plans for scholarly peaks of excellence, looms that inevitable and highly American symbol, the dollar sign. In the area of dollar support, as in other areas, the last decade at the university has seen progress of such remarkable dimensions as to demand national attention.

I am firmly of the opinion, however, as I review these past 10 years, that the near miraculous growth in the dollar support of this institution can be attributed not alone to the devotion, the energy, the dedication, and the faith of such wonderful groups as our trustees, our alumni, our business community, the Methodist Church, and our many other friends. It is also the result of a determined effort on the part of the university to assume its proper role as that of an independent university, devoted to programs of importance and high quality, girding itself for this mission that I am describing tonight, the vigorous assault toward peaks of excellence. I am equally convinced that as we fix our eyes on this single purpose and move unwaveringly toward this goal that the emerging character of the University of Denver will command those dollars necessary to its task.

The picture, it seems to me, is clear. Where 10 years ago, unrestricted corporation-foundation giving was \$25,000, last year it was over 10 times this amount. Where a decade ago annual unrestricted alumni contributions amounted to \$8,000, last year they were \$44,000, and this year the goal is \$100,000. Where 10 years ago support from the Methodist Church was only \$1,000, this year it is 33 times as much. When to this is added all other gifts and grants, the sum total for this past year given in support of the University of Denver amounted to nearly \$3 million, 128 percent over that of the year before. Yes, the logistics of the University of Denver's determined assault on a peak of excellence is demonstrably possible. For as we doggedly ascend these difficult heights toward that fixed and unalterable goal, the pride, the affection, yes, and the common-sense of the enlarging community which thus we serve to highest purpose will pour our in generous abundance the resources that excellence requires. Of this fact I am supremely confident.

Toward a peak of excellence.

The times require this of us. The universe about us is convulsive with change. We stand on the brink of space. We stand as well on the brink of catastrophe. In that portion of the world which is yet free, and its boundaries seem sometimes to be shrinking, no greater task confronts us than the continuing generation of responsible men and women, devoted to the preservation and the enlargement of a free society.

The responsible individual and a free society in an expanding universe. The dimensions of this challenge are infinite. This is the challenge of higher education, and to that challenge every university, in its own way, must respond with the best that lies within it.

Tonight I have tried to outline my impressions of the measure and the method of our task—to press on toward a peak of excellence. Of this task it may well be said, as James Ullman does of those who scale our earthly mountains: "Over and above all else, the story of mountaineering is a story of faith and affirmation—that the high road is the good road; that there are still among us those who are willing to struggle and suffer greatly for wholly ideal ends; that security is not the be-all and the end-all of living; that there are conquests to be won in the world other than over our fellow men. For it is the ultimate wisdom of the mountains that man is never so much a man as when he is striving for what lies just beyond his grasp, and that there is no battle worth the winning save that against his own ignorance and fear."

West's Dramatic Disarmament Plan

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1960

Mr. HENNINGS. Mr. President, the St. Joseph (Mo.) News-Press, last week carried a very good editorial respecting the West's disarmament plan. While newspapers across the land have commented on this plan, I believe this editorial should be brought to the attention of all Members of Congress and all others who have the opportunity to read the RECORD. Therefore, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Joseph (Mo.) News-Press, Mar. 15, 1960]

WEST'S DRAMATIC DISARMAMENT PLAN

Geneva, historic name for peace from that first international conference following the Crimean and American civil wars, marks Time's rolls again.

From Geneva the dispatches in your morning Gazette today report that five Western Powers unveil a dramatic disarmament plan. It would create an international group so powerful it eventually could veto a nation's military budget.

The proposal is gigantic in its potentialities. It is one more step of a hungered world clutching at man's eternal hope to end war. It is the aim, and we hope with more success, of the Hague tribunal called in the last part of the 19th century by Czar Nicholas II, the Disarmament Conference of the Harding-Hughes era, the Kellogg Pact of Coolidge's day.

Man has ever hoped for peace, abortive efforts as most have been, notably the Congress of Vienna following the Napoleonic wars and the Versailles Conference and ill-fated League of Nations after World War I.

All the world professes to want peace. We of the America know we are sincere. Would to heaven the ruling nation of the Old World, Soviet Russia, could believe us. Truly the millennium lies in the success of what was announced at Geneva yesterday.

Were that program the brainchild of the Kremlin what world propaganda the Eastern World would set forth.

What will the Eastern World say of this? That remains to be seen.

Here, possibly, just possibly, may be the time and the occasion for the meeting of the minds—to end the means of mass destruction.

History may have been made at Geneva yesterday. The ghosts of millions of people killed before their time by the Four Horsemen cry out to us please, please, not to let this golden opportunity pass us by.

An Expert Speaks on Imports and Exports

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. GEORGE. Mr. Speaker, recently certain labor groups, more and more in-

dustries, and agricultural producers have voiced growing concern, if not alarm, over the great upthrust of imports. In product after product new high import records have been established.

Total 1959 imports reached a new high record for all time; \$15.2 billion in imports exceeded by more than \$2 billion the previous record made in 1957. Meanwhile, our 1959 exports at \$16.3 billion were \$3 billion below the level of 1957.

Among the products that have been imported in fast-rising volume in the past 2 years are meat, lamb, and cattle. The uptrend demonstrates how vulnerable this country is today in point of import competition. The same thing is happening in automobiles, textiles, barbed wire, nails, tuna fish, plywood, sewing machines, cameras, tile, woolen goods, transistor radios, umbrella frames, machine tools, athletic goods, and many other items.

These great intruding volumes of goods from abroad, Mr. Speaker, create a condition that requires serious attention. It is true that many parts of the world can now, and do in fact, produce at much lower prices than we can manage. We have helped production rise to new levels of efficiency in other countries. We have given our factories over to visiting productivity teams from abroad in great numbers and, at the same time, have sent overseas some \$30 billion in the most up-to-date machinery and equipment, a large part of it paid for by our taxpayers.

Low foreign wages, coupled with much higher productivity that has resulted from the extensive mechanization abroad, have increased the competitive advantage of many foreign producers and manufacturers.

Mr. Speaker, recently Mr. O. R. Strackbein spoke before the annual meeting of the Corn Belt Livestock Feeders Association in Kansas City. Mr. Strackbein, a student of international trade, is chairman of the Nationwide Committee on Import-Export Policy, which comprises over 50 industries, agricultural, and labor groups and organizations that have a common problem in import competition.

While all of us may not completely agree with Mr. Strackbein's solution, there is no question but that he places emphasis on a most serious problem affecting the American economy of today. I found his speech highly informative and I believe it would be of great interest to my colleagues. Under leave to extend my remarks previously granted, I include Mr. Strackbein's address:

THE IMPORT STAMPEDE

(By O. R. Strackbein)

The great upsurge in imports in recent times has confronted many American industries with the increasingly pressing question of survival. That this is not merely a sensational observation but a reasonable appraisal of competitive realities will become clear if we look at the international economic developments of the past 2 years against the background of domestic economic policies of the past quarter century.

Massive changes have come about during that period. These changes are now coming into focus as a challenge to the international economic posture of this country.

I am well aware that this sounds preposterous to those whose heartbeats are lulled by the surging uptrends of our economic indexes of all varieties. National income is expanding. Employment is high and growing. Consumers are spending freely and money is flowing from buyers to sellers to producers in broadening streams. Great industries are planning billions of dollars in plant renewal, plant expansion and new production facilities. Exports give evidence of revival. We will sell abroad more cotton, more aircraft, more steel and fats and oil.

So say the official soothsayers and promoters of the grand optimism. Imports will level off. Our foreign account will run a lesser deficit and American vigor and unbounded know-how will conquer all, and thus prevail over sundry perils and assaults. This is good psychology in the wrong frame.

To be sure, it is good psychology in the face of adversity to be optimistic rather than gloomy, and not to dwell on difficulties and obstacles except as means of assessing them the better to overcome them. The best psychology, however, is to face facts; not to ignore them. Empty optimism is the best prelude to a headache. Mature people should assemble the facts, look at them, study them, try to determine their meaning and be guided by their significance.

After World War II nearly all economists were convinced that a very difficult period of unemployment and readjustment would occur. They were wrong; but they were not wrong because they harkened back to previous experience. They were wrong because they had not taken into account differences between post-World War I and World War II conditions. I do not say that these differences were so visible at the time. Ex post facto reflection is nearly always superior to estimates of currently moving forces that do not say in a loud voice what they mean or what is their intention. A later look-back often makes us feel stupid for not having recognized on the wing what now seems as clear as the hand before our face.

However, having made the passage from disarmament to peacetime operation after the war without an upset, let alone a crash; and having in the next decade or more encountered and weathered three recessions, each of which could have led into a tailspin but for some saving grace, many economists are now about to make the awkward error of the feverish twenties, and say that we are in a new era. We are so powerful and robust that we can overcome all onslaughts from without as we have withstood those from within.

Did we not roll over the recession of 1949 without scars or broken bones? Again in 1954, did we not shake off all interference and blockages and roar once more on our way. Then very recently in 1958-59, did we not repeat our previous performances; and are we not again on the highroad to more wonderful goals than ever before? Are we not now a \$500 billion economy? Was this not foreseen and forecast? Is it not manifest destiny then that we will keep on endlessly, our course pointed ever upward and onward?

Yes, we will live on expansion and expansion and expansion—in all directions, across national borders into foreign lands. Optimism and expansion will conquer all. So say the present-day professional optimists.

It is a heady elixir.

Of course, no one wants a breakdown; but we can import one if we refuse to recognize and deal with realities.

Among these realities are:

1. An untenable international competitive position.
2. A heavy and stubborn deficit in our total foreign account.

3. An expansion of imports and a shrinkage in exports.

4. High domestic production costs compared with other countries.

5. A sharp uptrend in foreign productivity per man hour.

6. A wage lag in relation to rising productivity abroad.

7. Loss of U.S. technological leadership among the nations.

8. Increasing trend toward mass production abroad.

9. Emigration of American capital to lower-wage countries.

10. Discouragement of expansion plans among domestic industries, especially suppliers, dedicated to the American market.

11. Increasing importation of parts and semimanufactures by domestic manufacturers as a means of competing with imports of finished manufactures.

12. Automation as a means of improving competitive position, resulting in unemployment and failure to absorb millions of additions to the labor force.

What does all this mean?

The answer can be given by looking around us. Let me offer a few examples.

Steel, automobiles, typewriters, sewing machines and petroleum are products that we were long accustomed to export while we imported little of them. These were the output of our most advanced industries in point of mass production and technology. We are now importing more of the products of these former American export pacesetters than we are selling abroad. A complete turnabout has occurred.

How could this happen?

If imports were able to attack and take the very ramparts of our most highly productive industries, what can they do and what have they already done, to others of our industries?

Some measure of this new condition may be gained from the fact that imports in the first 10 months of 1959 from Japan increased 54 percent compared with the first 10 months of 1958. In the case of Europe the increase was 43 percent.

Here are some of the echoes:

U.S. imports of Japanese electronic products in the first half of 1959 at \$22 million surpassed the whole of 1958 and tripled the 1957 figure of \$7.5 million.

According to President E. L. Wheatley, International Brotherhood of Operative Potters, 7,500 potters lost their jobs because of permanent company shutdowns in the last 10 years. Relentless import competition was the cause.

These experiences do not augur well for expansion of American industry. Not only did the pottery industry not expand in keeping with the increase in population; it actually contracted.

In 1947 our coal industry delivered 631 million tons of coal to customers. In 1949 residual fuel oil began pouring in from abroad, directly displacing coal. At the same time coal was suffering from domestic competition of diesel oil and gas. The impact of imports greatly aggravated the plight of the already beleaguered coal industry.

Then a few years ago we began to export coal in considerable volume, some 50 million tons a year. This foreign market came a cropper because foreign import restrictions were imposed. Exports are now greatly reduced and no longer offer the hope of a few years ago.

U.S. hosiery exports dropped 38.6 percent in the first 7 months of 1959 compared with the same period in 1958. "Our export market suffers a slow and painful death," said the president of the National Association of Hosiery Manufacturers.

Other products are facing similar difficulties, many of them from imports.

The Leather Glove Manufacturers Association reports that of the two leather glove producing areas in New York State, New York City has discontinued production while Fulton County producers have been whittled from 184 firms to 56.

Cattle hide imports more than tripled in the first half of 1959 while exports dropped sharply. Live cattle and beef imports in 1959 amounted altogether to an equivalent of more than 2 million head. Imports of lamb have also climbed sharply.

Woolen worsted imports, imports of silken fabrics, of cotton textiles and cotton garments, are causing great concern in the textile industry. Stainless steel flatware, bicycles, hardwood plywood, tuna and other fish, watches, lead and zinc, fluorspar, shrimp, and glassware are all products that are sorely beset by import competition. The only factors that have kept these industries on the survival list has been the phenomenal population growth, high consumer purchasing power, sustained by the high defense expenditures and other liberal Federal outlays.

What of the future?

If this country encounters another recession, will the combination of factors be the same as in the postwar period up to now? Will our economy again be able to stop short of a depression? In what respect have important factors shifted in recent years?

Previously there was the elasticity to be found in promoting exports through foreign economic and military aid, Public Law 480 exports, that is, sale of farm products for foreign currency or outright gifts; subsidization of agricultural exports such as wheat and cotton, Export-Import Bank loans, World Bank credit, and encouragement of foreign investments through guarantees against expropriation, etc.

In the past few years much of this elasticity has been used up. We have been running a heavy deficit in our total foreign account: \$7½ billion in the past 2-year period. Our gold has been flowing out; and it would flow out more rapidly had not our Government interest rates been raised. Unfortunately this upward trend in interest on the public debt increases the burden on the Treasury itself. The same holds true of our encouragement of agricultural exports. We can increase these exports only by increasing our subsidies or offering more extensive sales for foreign currencies. This means further burdens on the Treasury.

Our interest payment on our public debt is now about \$9½ billion per year. It will go on up quite sharply as bonds come due and have to be refinanced. Meantime our costs of production are already high in relation to the rest of the world, weighted down with high defense expenditures, foreign aid, the interest on a public debt of \$295 billion, social security costs, farm surplus holdings by the Government, rising wages, and much else that prices our goods from 30 to 40 percent above the world market.

If we move into another recession we will not have as we did in 1949 and 1954 a foreign world to supply, a world still hungry for our exports. Rather we will face a world that is competing with us not only in our own country but in world markets. Instead of burgeoning, our exports will be shrinking. Our investments in foreign plants will be relieving us of exports and some of our foreign production will be flowing back to us and creating competition with our home industry.

Unless we begin to place restrictions on imports to prevent the progressive loss of our home market, as other countries have done very extensively in postwar years, we will be driven to an even smaller share of both our home and our export markets. Competitively we are at the mercy of foreign production that has the advantage of low wages, increasing productivity, and lesser public burdens of taxes. Our economy has

lost its great productivity lead; but has kept its wage lead. Therefore if we are to stand we must make judicious use of tariffs and quotas, even as other countries also resorted to import restrictions as they needed them. The best insurance of survival for many of our industries lies in offsetting the great wage-productivity gap that separates them from other countries.

Without import restrictions, tailored to particular competitive conditions, more of our industries will be driven to progressively smaller segments of our market. We are not bound to grant to imports the right of eminent domain in our market. Under existing trade policy a virtually free hand is given to imports to capture from any American industry from a quarter to a half or even more of its market, while legislative enactments have deprived these industries of most of their competitive defenses. If we insist on such domestic economic policies we owe it to industrial and agricultural producers and to their workers a commercial climate in which they can compete. Tariffs or tariff quotas are the best instrumentalities to accomplish this and we should use them to assure our competitive survival.

World Refugee Year

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1960

Mr. KEATING. Mr. President, the march of humanity toward its high destiny in this world has for centuries been impeded by the roadblocks of bias, bigotry, and distrust. It is heartening, therefore, to note the great and far-reaching counteraction to such roadblocks that is represented by the spirit of World Refugee Year. This year of 1960 has been so designated, under the auspices of the three great religious faiths of the United States, and the present week of March 20-27 will mark the active launching of the vast work of charity that will give life and meaning to World Refugee Year.

In witness of the importance of the mission thus undertaken, Gov. Nelson A. Rockefeller of New York has issued a pertinent official statement. Mr. President, in view of the timeliness and significance of this statement, I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY GOVERNOR ROCKEFELLER

The three great religious bodies—Catholic, Protestant, and Jewish—which afford spiritual comfort to the people of America, are united in an effort to succor the needy people of other countries. This project of mercy has particular emphasis now because 1960 has been set aside as World Refugee Year.

This union of our religious organizations is a magnificent expression of brotherhood in action. It truly exemplifies the brotherhood of man under the fatherhood of God. Their overseas relief programs bring help and comfort to victims of war, disaster and political upheaval. They provide food, clothing, shelter, medicine in emergency

crises and also continuing assistance to millions of underprivileged and undernourished men, women, and children.

The leaders of all faiths have agreed in selecting March 20-27, 1960, as the period of their intensive effort. The Protestant appeal is called "One Great Hour of Sharing," in Catholic churches it is designated "The Bishop's Relief Fund," in Jewish temples and synagogues, it is the "United Jewish Appeal Special Fund." The campaign will culminate on March 27, but the United Jewish Appeal will continue throughout the season.

The people of the Empire State have always responded to this great religious entreaty with warm hearts and open hands. I urge them especially in this World Refugee Year to keep faith with this noble tradition.

Problem for All

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Washington Star, Tuesday, March 22, 1960:

PROBLEM FOR ALL

For two persuasive reasons the economic and social problems of the Nation's senior citizens currently are receiving the most searching attention since the principle of public responsibility, even though limited, was recognized in passage of the Social Security Act in 1935.

In brief, the reasons are: (1) That the steady lengthening in average life span has increased greatly the older-age population—the number of people who have passed their peak earning power and who are living on relatively small, fixed incomes in an era when virtually all living costs, and particularly those involving protection of health, have been rising; (2) that there already has been evidence on State and local levels of these older citizens uniting in bloc voting, a tendency which gives increasing political significance to their needs and wishes.

At the moment, Congress is examining the problem on two fronts and, quite understandably, with a thought to the potential impact on this year's national elections. It is reasonably certain, too, that the campaign platforms of both political parties will contain a plank calculated to have special attraction to the more than 20 percent of the eligible voters who will be 60 or older by November. On Capitol Hill, the broadest study has been made by a Senate labor subcommittee with the committee majority making 12 far-reaching recommendations for greater Federal services to the aging. More immediate possibility of action, however, exists on the House side where the Ways and Means Committee has several legislative proposals for broadening social security coverage. Most controversial of these is one sponsored by a high-ranking committee member, Representative FORAND, Rhode Island Democrat, to provide Government-paid health care to social security pensioners. Mr. FORAND has announced that he will ask the House membership to sign a discharge petition if the Ways and Means Committee does not report his bill to the floor in the near future.

The fact that there are political implications almost automatically built in to public consideration of this overall problem should

not becloud the problem itself. The Senate subcommittee majority, for example, was not talking of something unreal when it referred to problems facing "the young couple with aged parents to support; the middle-aged who find employment opportunities closing to them; those about to step over the threshold into the strange and uneasy world of retirement; and the aged themselves who, having reached the alleged golden years find them a badly tarnished imitation." This is not a problem for paternalistic Federal action only. As the majority said, it is a challenge calling for a partnership approach "utilizing all levels of government, private organizations and individuals." Focusing national interest on the problem today should help resolve it tomorrow.

Higher Interest Costs Extra Billions

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1960

Mr. HUMPHREY. Mr. President, I fear that our sometimes abstract economic policy discussions and the administration's stubborn defense of "tight money" fail to take into account just what Republican increases in the interest rate mean to individual Americans.

We all know that we need houses, highways, and schools in every part of our Nation and that we are going to need more every year. The AFL-CIO's monthly Economic Trends and Outlook for February points out that because of "tight money," a 10-room school will cost an additional \$7,500 in interest this year and \$150,000 more by the time the bond issue matures. It will cost a State government \$93,000 in extra interest this year and a total of \$1,860,000 before a \$5 million highway project begun this year is paid for. Individual home buyers will pay at least \$3 billion in additional interest on 20-year mortgages signed in 1960. Small businessmen will pay an extra \$850 million on 1960 short-term loans.

Mr. President, I ask unanimous consent that this excellent report published by the AFL-CIO Economic Policy Committee be printed in the Appendix of the Record.

There being no objection, the report was ordered to be printed in the Record, as follows:

HIGHER INTEREST COSTS EXTRA BILLIONS—TIGHT MONEY COSTS TOO MUCH

The only price rise that does not seem to bother the administration very much is the higher cost of borrowing money. For 7 years Federal Reserve and administration spokesmen have repeatedly issued public "inflation warnings" and called for tighter money. Despite their announced concern about inflation, however, they have not been warning the American people about the unnecessary billions of dollars tight money costs. But higher interest rates cost more now and will cost more in the future than much of the spending the administration calls inflationary.

Unlike some other prices, the cost of borrowing money usually lingers on—sometimes for a quarter of a century. The person who

borrow money for 10 or 20 years does not have to worry so much about tomorrow's rates. He will be paying at today's rates for years to come. Recent high interest levels will therefore continue to hurt taxpayers, homebuyers, farmers, small businessmen, and consumers for a long time—regardless of the direction rates may take in the future.

How much will they hurt? The cost-conscious administration has not bothered to find out. Sufficient data has not been collected. The President's Economic Report this year merely discusses percentage trends in interest rates, but provides no detailed information about the total cost of higher interest charges.

MORE THAN \$4 BILLION

These percentage figures mean the American people are now spending billions more for interest payments than they would be spending if interest rates had stayed at lower levels. Nobody can begin to tell accurately how much more until the Government collects and supplies adequate data. But some rough projections can give a good idea of the billion-dollar implications in some of these changes.

More than \$4 billion in extra interest payments will be spent in the near future—nearly \$3 billion in the 1961 Federal budget and over \$1 billion in 1960's extra interest charges for some other parts of the economy.¹

Estimated difference between interest payments at 1960 rates and at 1952 rates on some 1960 loans

Type of loan	Extra cost of interest in 1960	Extra cost of interest over lives of loans
	Million	Billion
State and local bonds	\$143	\$2.9
Home mortgages	354	5.4
FHA	91	1.6
VA	35	.7
Conventional	228	3.1
Consumer loans	315	
Automobile paper	180	.8
Other consumer		.5
Goods paper	135	.3
Business loans	425	.9
Total	1,237	10.0

¹ Or \$1.2 billion.

Close to \$3 billion of the total \$4 billion will go into extra Federal interest payments—out of tax dollars—in the President's proposed budget for fiscal 1961. (The word "extra" is used to denote the additional interest costs above the budget of 7 years before.)

Seven years earlier, the cost of maintaining the Federal debt—interest payments on the fiscal 1954 budget was less than \$8½ billion. For fiscal 1961 it is scheduled to reach more than \$9½ billion. That is almost a 50-percent increase in interest charges on the Federal debt, although the debt itself is estimated to be only 3 percent higher than 7 years before.

\$3 BILLION MORE

The \$3 billion in additional interest charges is more than the administration has budgeted for any of the following programs:

¹ These estimates represent only part of the cost of higher interest charges. They serve as examples of the magnitude of the total. They compare only what some current rates are costing with what the rates 7 years before would have cost. They do not include the extra charges for higher interest during the past 7 years. They do not include the extra cost of higher interest rates on loans to be issued in future years.

	Billions
Atomic Energy	\$2.7
International Affairs and Finance	2.2
Commerce and Housing	2.7
Natural Resources	1.9
Public Assistance	2.1
Veterans' Compensation	2.1
General Government	1.9

Why doesn't this extra \$3 billion in interest payments cause the administration to crusade against inflationary interest rates? Why doesn't the fact that this increase costs more than the housing bills vetoed as inflationary last year cause the administration more serious concern? The administration chooses to ignore the importance of their impact.

The President's solution to the problem of higher interest costs, is to lift the legal ceiling of 4¼ percent on long-term U.S. bonds, to complain about inflationary pressures which these interest rates reflect, and to suggest that higher interest rates on bonds might somehow bring some other rates down. No mention is made of the tight-money policy's upward pressures on rates in other sectors of the money market.

COMPETITION

The budget message sounds as if interest rates have moved upward magically in response to inflationary pressures, without any conscious influence by the administration and/or Federal Reserve Board tight-money policy. Seven years of intermittent money tightening prove the fallacy of this implication. The Government has influenced the rise in interest rates in the short-term market and refused to take actions that would alleviate interest rate pressures.

Now that long-term bond rates at 4¼ percent will not attract investors, the administration merely finds that they cannot compete for investment funds and wants to lift the legal ceiling.

If the Government were a business, as the administration seems to think, how many businesses successfully compete with themselves? By forcing the Government to compete for investors as if it were a private corporation while at the same time helping to force interest rates upward through tight-money policies, the administration has helped increase the cost of Federal interest payments \$3 billion. Yet it would consider an extra \$3 billion for labor and public welfare inflationary.

The argument that the public receives these interest payments will not change the result. After all, any government spending reaches the public in one form or another. Surely Federal spending for schools, houses, health and welfare reach more of the public in more ways to the greater advantage of more people than interest rate money which mostly pours into financial institutions of the Nation.

1960'S EXTRA \$1.2 BILLION

The extra cost of today's interest rates extends far beyond the Federal budget. Over a billion dollars will go into this year's extra interest payments for just a part of this year's total volume of loans. Over the life of these loans, the extra interest charges would come to more than \$10 billion. At 1952 interest rates this year's interest costs on the estimated 1960 volume of loans for State and local governments, various kinds of mortgages and some consumer and business borrowing would be more than a billion dollars less.

The table on page 1 shows how these estimates are distributed.

THE EXTRA \$143 MILLION—STATE AND LOCAL BONDS

Tight money has already delayed many State and local government projects, but some public service needs can be put off no longer. The bond issues in 1960 will cost an extra \$143 million in interest payments this

year. This amount includes only the extra payments in 1960—the excess of 1960's interest rate over 1952's interest rate—applied to an estimated volume of 1960 bond issues.

That means that \$143 million in extra interest payments will be added to the cost of vitally needed schools, hospitals, roads and other public necessities. This extra cost will continue for an average of 20 years until the bonds mature.

Almost \$3 billion extra, therefore, will be spent by these governments for interest on bonds of 1960 issue by the time those bonds mature.

How is this estimate reached? In 1952, the average municipal bond yield was 2.19 percent. By 1957, tight money had driven the average up to 3.60 percent. As 1960 began, a conservative estimate of the year's rate was about 4.05 percent.

Based on these yield rates, \$143 million more will be spent this year on this year's bond issues than would have been spent if 1952 rates were still prevalent today. Since the average length of such bonds is 20 years, the cost over the life of the bonds will be \$2.9 billion higher than at 1952 rates. It will be \$691 million more than if 1957 rates—those prevalent just 2 years ago—had been maintained.

The impact on the cost of various projects, these State and local bond issues finance, illustrates even more concretely the added cost of today's high interest rates.

A 10-room schoolhouse, for example, financed this year would cost at least an additional \$7,500 in this year's additional interest charges and about \$150,000 more by the time the bond for the schoolhouse matures.

The interest cost of this hypothetical schoolhouse is based on the Office of Education's estimate of a single classroom's construction cost of \$40,000.

Compare the total cost—payment of interest and principal—of 10 such classrooms over the 20-year life of a school bond. At 1960's interest rates, the total cost would be \$724,000. At 1957's rates, it would be \$689,000. At 1952's interest levels, the cost would be \$575,200.

An extra \$148,800 over the total life of the bond, therefore, is added just because interest charges are so much higher than they were 7 years ago. (\$724,000—\$575,200 = \$148,800.)

The same is true of other projects. A million-dollar hospital projects will cost an extra \$18,600 in interest payments this year, if comparisons are made between 1960 and 1952 interest rates. In 20 years, this little extra item will come to \$372,000.

A \$5 million highway project this year will cost a State or local government an extra \$93,000 in this year's interest payments. By the time the highway is paid for, the extra interest charges over those at lower rates will come to \$1,860,000.

Obviously these estimates are not inclusive of all the extra interest charges paid this year, as State and local governments continue to pay for bonds issued in the tight-money years before this. These rough approximations give an indication only of an extremely high added cost from extra interest charges at today's rates.

Some estimate that the total extra interest costs for State and local governments are now running at a rate of \$350 million yearly, basing their estimates on relationship between State and local debts and the Federal debt and other comparisons. Until the Federal Government starts to supply adequate information, no one will know what the amount is. But even the minimal figure of \$143 million—just for this year's added costs—illustrates how heavy the burden of interest payments is.

It is interesting that the administration, so concerned with every upward wrinkle in

the consumer's price index, and so interested in shifting almost every public service cost to the States, has made no extensive study of the high cost of high interest at this level.

THE EXTRA \$354 MILLION—MORTGAGES

Nor has the Government come up with any extensive study of the total interest costs to home buyers, based on rising interest payments. 1960 FHA, VA, and conventional mortgages may cost an extra \$354 million in interest costs this year.

FHA mortgages may cost homeowners an extra \$91 million in this year's interest payments—\$91 million more than 1952's interest rates would have required. By the time those mortgages are paid off, the extra interest charge will amount to \$1.6 billion.

VA mortgages will cost another \$35 million extra this year because rates are higher than 7 years ago. By the time these mortgages are fully paid, the extra cost will easily be three-quarters million dollars.

These figures do not even take into consideration the money paid in discounting FHA mortgages—currently costing several million every month.² They do not count the cost of last year's excessive mortgage rates, or the possibility of too high rates next year. They merely assume that last year's volume of mortgage loans will be maintained, and estimate the cost of interest over the life of 1960's probable mortgage volume.

Conventional mortgages will cost an extra \$228 million in interest charges this year. Over their lives (averaging 20 years) this year's conventional mortgages will cost an extra \$3 billion.

For individual home buyers, these slight percentage hikes in mortgage rates will amount to thousands of dollars on individual loans.

Consider, for example, the person who gets a typical \$12,000 FHA mortgage this year, at the current 5.75 percent rate (plus one-half percent insurance charge).

His mortgage will cost more than \$3,000 more over its total life than if 1952 FHA rates still prevailed. It is up \$1,620 over 1957 just in added interest charges during the life of the mortgages.

Here are the figures showing the extra cost of higher interest for a \$12,000 FHA mortgage:

Year	Rate (percent)	Total cost	Extra cost of higher interest
1952	4½	\$23,556	
1957	5	22,140	\$1,620
1960	5¾	23,760	3,204

The added expense for a VA mortgage is much the same although the rates and average length of time for payment are different. A typical \$13,000 VA loan for a typical

²In early February, Representative ALBERT RAINS, chairman of the House Banking Subcommittee on Housing, announced that mortgage premiums on Government-insured mortgages were costing home buyers approximately \$45 million each month. By discounting, or subtracting a percentage of the face value of the loan in advance, the lender gets a rate of return comparable to high-interest rates in the open market. Average rates actually paid on FHA and GI loans therefore amounted to 7 percent instead of the statutory 5½ percent on FHA and 5¼ percent on GI. In theory, the homebuilder or seller pays these discounts, but actually the costs are passed on to home buyers in added costs of housing. Typical discounts amount to 5 percent on FHA and 10 percent on GI loans.

27-year span cost 4 percent in 1952—or a total of \$21,307. By 1957, the rate was up to 4½ percent, making the total cost of the loan \$22,490. This year, the current 5¼ percent VA rate has upped the cost to \$24,336—more than \$3,000 over the cost of such a mortgage in 1952.

Interest rates on a typical conventional mortgage have changed less in the past 7 years than other mortgage rates—only 1 percentage point higher. The average amount of such a mortgage is also higher—\$14,000. Because of the higher interest rates, however, this year's average conventional mortgage will cost \$1,876 more in its 20-year life than the same \$14,000 mortgage cost 7 years ago.

MONTHLY PAYMENTS

Even monthly payments are higher than the slight percentage changes would indicate. The interest on FHA's typical \$12,000 mortgage costs \$15 more a month this year than it would if 1952 rates still applied. Interest on VA's typical \$13,000 loan costs \$16 more a month, and a conventional mortgage's interest is up \$12.50 since 1952.

Added altogether the higher cost of higher interest for homebuyers will amount to hundreds of thousands of dollars just in extra interest payments this year for this year's estimated volume of mortgages. Several billions will be spent for extra interest before these mortgages are fully paid.

It's odd that a cost-conscious administration does not publicize this cost.

THE EXTRA \$315 MILLION—CONSUMER LOANS

Additional billions have been and will be paid for higher interest charges on consumer purchases. Nobody knows how much. In this mysterious area, even the levels of interest rates are not known. All the American consumer knows is that costs have gone up.

Estimates (based on two items for which some figures are published—automobile paper and other consumer goods paper—and assuming a 7-year rise of only 1 percent in interest rates) show that part of this year's cost will amount to \$315 million in extra interest charges. Extending these estimates over the life of the loans, an average of 30 months, the extra interest cost is up \$0.8 billion over the cost at 1952 rates.

Beyond that, the possibilities of additional charges run into billions, but there is no way to get an estimate. Even the individual buyer has no way of knowing the interest cost. For example, the retail seller now tells the buyer only how much his monthly payments will total. The interest charge per month, the yearly rate of interest need not be mentioned.

In the same way, a small loan company need tell a borrower only that the monthly interest rate is 3 percent, not that the yearly rate might be 36 percent.

Only recently, Senator PAUL DOUGLAS has introduced a bill, S. 2755, to require labeling of such purchases. Labels would list the yearly interest charged on loans, as well as a breakdown of the amount of interest and the amount of principal. For example, a \$250 charge for a TV set would include \$230 for the TV set and \$20 for financing—clearly marked, plus an indication of the annual rate of 20-percent interest.

The administration has made no announced effort to get such information—either in specific or general form. Two and one-half years ago, the Secretary of the Treasury merely told a Senate committee such information was not available and described the difficulties of obtaining it.

THE EXTRA \$425 MILLION—BUSINESS LOANS

Short-term money rates have increased sharply in the past 7 years until the extra cost in 1960 is an estimated \$425 million. These short-term loans average 2 years in duration, and rates on them have risen from

3.5 percent in 1952 to 4.6 percent in 1957 to 5.3 percent in 1960.

Over their life, 1960 short-term loans will cost at least an extra \$850 million, almost a billion more than they would cost at 1952's 3.5-percent rates.

MORE THAN \$4 BILLION

These estimates for some of 1960's extra interest costs, therefore, total over a billion on this year's loans: \$143 million for State and local bonds, \$354 million for mortgages, \$315 million for consumer loans, and \$425 million for business loans. That \$1.2 billion total is merely a slight indication of the extra cost of high interest rates.

Another \$3 billion, estimated for the fiscal 1961 budget, puts the near future's extra interest up to more than \$4 billion. Past years' extra interest and the extra charges on future loans would add additional billions of dollars to this cost.

Nearly 1 Million Unemployed Americans in 138 Pockets of Chronic Unemployment Look to the Democrat-Controlled House of Representatives To Approve an Area Redevelopment Bill Before Adjournment

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. VAN ZANDT. Mr. Speaker, this second and concluding session of the 86th Congress convened January 6 and until this time very little has been said and no action has been taken regarding S. 722, a bill providing for area redevelopment aid to the Nation's 138 labor surplus areas commonly described as being "pockets of chronic unemployment."

The Douglas-Payne bill, S. 722, which passed the Senate last spring by a vote of 49 to 46 and which was reported out of the House Banking and Currency Committee on May 13, 1959 is now bottled up in the House Rules Committee where it appears to be headed for a legislative death after lingering there since May 19, 1959.

While the Rules Committee refuses to act on area redevelopment legislation, nearly 4 million American citizens or 4.8 percent of the Nation's labor force are hopelessly unemployed. While it is true that the nearly 4 million unemployed are distributed throughout the Nation yet in the 138 labor surplus areas or pockets of chronic unemployment nearly 900,000 are without employment and living on public assistance and surplus commodities.

Among the 138 labor surplus areas, 31 of them are classified as major labor surplus areas, with 558,850 persons unemployed. Please keep in mind that these people residing in the 138 labor surplus areas have been unemployed for years; their unemployment compensation benefits are exhausted; their age is against them; and the only thing they have to their name is the roof over their heads.

Speaking frankly, they should not be expected to migrate elsewhere for employment, as their problem should be solved at the local level. It is the people in these areas of chronic unemployment that area redevelopment legislation will benefit.

Time and time again the need for area redevelopment legislation has been explained to Congress as well as the great effort that labor surplus communities are making to rehabilitate their economy.

Committees of both Houses of Congress have held hearings in Washington and at strategic points throughout the Nation. As a result there are scores of area redevelopment bills pending in both branches of Congress, together with 18 volumes of printed hearings containing nearly 26,000 pages of testimony and costing the taxpayers of the country over \$150,000.

Mr. Speaker, it would not surprise me if Congress, since 1955 when the legislation was first introduced, has spent over a half million dollars on hearings, travel, printing, and so forth. The only thing we have to show for this expenditure of funds is the bill, S. 722, now bottled up in the House Rules Committee.

Mr. Speaker, since the Senate has already spoken by approving the area redevelopment bill, S. 722, it is squarely up to this House to take action on the legislation. As already mentioned, S. 722 is tied up in the House Rules Committee where the membership is composed of eight Democrats and four Republicans. In view of the fact that the House of Representatives is controlled by the Democrats by nearly a 2-to-1 majority, the responsibility for getting action on area redevelopment legislation rests solely on the shoulders of the Democrat Party.

Those of us who want immediate action on area redevelopment legislation are not unmindful of the fact that the Senate bill S. 722 is not getting much support from the Eisenhower administration because of the difference in cost between it and the administration bill.

Therefore, since it has been frequently urged during the past 6 years that there is a definite need to compromise conflicting views regarding area redevelopment legislation, those of us in favor of such action repeat again it is the only means of ever obtaining favorable consideration of the legislation at this session of Congress.

Mr. Speaker, our best hope is to have the House approve a bill and then try to reach a compromise through a Senate-House conference committee, as it is only through acceptance of a compromise that hope lies for enactment of an area redevelopment bill.

Time is running out on the 86th Congress, with adjournment predicted early in July or less than 4 months away.

Since we have legislated for practically every segment of the American economy and for varied groups, including foreign nations friendly to this country, in my mind we owe prompt and proper consideration of the plight of the 900,000 hopelessly unemployed who reside in 138

labor-surplus areas which have been suffering from chronic unemployment for several years.

Therefore, it is my sincere hope that the House of Representatives will accept its responsibility for the fate of area redevelopment legislation by prevailing upon the Democrat-controlled House Rules Committee to take immediate action on S. 722, which passed the Senate a year ago.

Such action would pave the way for an early vote on a vital legislative measure concerning the health and welfare of nearly 1 million unemployed Americans.

Resolutions Adopted by the Student Council of Grinnell College, Grinnell, Iowa, With Respect to the Loyalty Oath and the Disclaimer Affidavit in the National Defense Education Act of 1958

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. SCHWENGEL. Mr. Speaker, one of the students taking part in the "Week in Washington" program which I initiated and sponsor in cooperation with the Iowa clearinghouse for students and instructors of Iowa colleges, is Miss Lois Christopherson, a junior at Grinnell College, Grinnell, Iowa.

Miss Christopherson called my attention to a resolution adopted voluntarily by the student council at Grinnell. Because I know of its voluntary nature, entirely free of any influence or pressure from the school administration, I asked her to draft a note which would explain the background leading up to this action and to make a copy of the resolution available to me.

I particularly feel that it should be brought to the attention not only of the committees in Congress now considering legislation to repeal these sections of the National Defense and Education Act, but of all Members as well. I am sure that my colleagues will agree that this is a significant contribution to the issue at hand. Under leave to extend my remarks, I want to have Miss Christopherson's note printed in the Appendix of the Record, along with a copy of the resolution.

DEAR MR. SCHWENGEL: As a small but excellent liberal arts college, Grinnell has recently instituted under the sponsorship of its student council a thorough review of the loyalty oath and disclaimer affidavit which are attached to the 1958 National Defense Education Act. The debate began with the election of a student council president who had spent the previous semester as a political science student at American University, and was facilitated by organized discussions in each hall, as well as by an all-college coffee hour in which a student-faculty panel discussed the merits or lack of such of the two attached oaths. The immediate result was a highly stimulating interest in public affairs in general; the ulti-

mate result was a unanimous vote of the student council, as well as an overwhelming vote of the general student body, favoring the repeal of both the disclaimer and the loyalty oath. The vote was taken after an evening of considered discussion in each hall in which both the pros and cons of the two oaths were reviewed. And it should be emphasized that although the college administration had previously taken a stand in opposition to the disclaimer and loyalty oath, the administration did not exert any influence at all on the discussion or on the final student vote.

The resolution drawn up by the council and approved by the student body is as follows:

Very sincerely,

LOIS CHRISTOPHERSON,
Grinnell College Student Council.

Whereas the National Defense Education Act of 1958 established several programs of Federal aid to education; and

Whereas section 1001(f) of the act provided for a loyalty oath and a disclaimer affidavit to be signed by all applicants for loans; and

Whereas there are grave doubts as to the constitutionality of a provision which may infringe upon the first amendment protection of belief and association; and

Whereas it is a denial of due process of law to compel an individual to gage his conduct by such vague criteria, when criminal liability may turn on his action; and

Whereas the singling out of the academic community for affirmation of loyalty and belief is invidious and implies distrust with no factual foundation; and

Whereas the oath and affidavit reveal a lack of confidence in our form of government and in our social institutions; and

Whereas Grinnell College, along with 18 other distinguished colleges and universities, has refused funds under this act: Therefore be it

Resolved, That the Grinnell College Student Council, representing student sentiment, favor the repeal of section 1001(f) of the National Defense Education Act.

Resolved, That the Grinnell College Student Council endorse the stand taken by the faculty, administration, and trustees of Grinnell College.

Resolved, That the Grinnell College Student Council establish a committee to foster student activity for repeal of section 1001(f), the loyalty oath and disclaimer affidavit provisions of the act.

Resolved, That the Grinnell College Student Council communicate this resolution to Senators and Congressmen, newspapers, and the student councils of other colleges and universities.

Postal Pay Increase

EXTENSION OF REMARKS

OF

HON. JESSICA McC. WEIS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mrs. WEIS. Mr. Speaker, on Saturday, March 12, 1960, Branch 210 of the National Letter Carriers Association conducted a rally for the postal employees of the Rochester, N.Y., post office. At that rally, a resolution concerning H.R. 9883, and other postal pay increase legislation was adopted. I should like to insert this resolution in the CONGRESSIONAL RECORD at this point:

Resolved, That we are in dire need of passage of pay legislation and urge support of H.R. 9883 or similar bills to place letter carriers and other postal employees in a position to maintain a decent American standard of living.

Sam W. Russell

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. McINTIRE. Mr. Speaker, society is always the loser when an able citizen retires from his chosen field of work, and so, with the scheduled retirement of Sam W. Russell from the Federal-State Market News Service, it can check up another loss.

This dim prospect, however, becomes brightened by the realization that this competent citizen and my good friend retires from his active endeavors with that deep sense of satisfaction which flows from a job well done.

In recognition of our friendship and as a tribute to his dedicated service, I submit to the RECORD the following article on Sam W. Russell as it appeared in the March 16 issue of the Bangor Daily News:

VETERAN CROP REPORTER ENDS LONG SERVICE TERM

PRESQUE ISLE, March 15.—Sam W. Russell has been a reporter for the Federal-State Market News Service since teeth were pulled for a dollar and the Saturday Evening Post sold for a nickel.

On March 25 he will retire, following 38 years and 3 months of Government service. The 3 months were with the U.S. Army during World War I, and for the last 22 years Russell has been Federal-State Market News Service representative in Presque Isle, the largest Market News Service field station for a single commodity in the Nation.

Russell has been responsible for sending daily potato bulletins 5 days a week to about 3,600 sources.

"I live in the house by the side of the road and try to be a friend of man," paraphrased Russell Tuesday in an interview. "My longest stretch in terminal market reporting on fresh fruits and vegetables was on the Washington Street wholesale district in downtown New York, from 1923 through 1928. I went to field reporting, returned to the Washington market in 1929, and in 1939 was assigned to the Presque Isle office."

These are important dates in Russell's career. Actually there have been a number of other assignments. And he spent the 1935-36 season in Presque Isle, before being assigned here in 1939.

The bulletin which Russell issues from the Presque Isle office of Market News Service has been described as offering a clear picture of market conditions for the given day— which the consumer wants. The service is free and comes from Russell's office in the Postal Building.

The bulletin includes information on daily rail shipments from Maine, carlot holdings at terminal markets, prices at certain terminal markets, destination of all Maine carlot shipments, weather and other facts.

Russell had reported on grapes, snapbeans, onions, watermelons, strawberries, cabbages, tomatoes, and other products. He has

worked in Rochester, N.Y., Leesburg, Fla., Valdosta, and Macon, Ga., Elizabeth City, N.C., Laredo, Tex., Olney, Va., and Newark, N.J.

His bulletins here are issued from September through June, to 38 States and to Canada. Russell compiles his daily report from telephone conversations, personal visits, wire, mail, and teletype figures from Maine and from terminal markets in other areas.

Russell is from Altoona, Pa., and is a graduate of Pennsylvania State College.

He was the first member of the U.S. Department of Agriculture to conduct a regular market news service program on radio.

Russell lives on a 3-acre farm on the Caribou road and raises chickens and sells eggs. His philosophy is: "Do the very best you can and be glad you are yourself."

Good and Rich

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, I recommend as an antidote for the particular poison being spread by those who see nothing but the seamy side of the American economic system the following article by John Allan May, humorist and London correspondent for the Christian Science Monitor:

GOOD AND RICH—COME WHAT MAY

(By John Allan May)

LONDON.—Somehow I cannot quite bring myself to believe all I read about today's America.

"Our industrial system has gone soft and is progressively less able to compete," writes a great and thoughtful American editor of my acquaintance.

And Thomas Griffith, I see, who has just published a book that is rather critical of American culture, puts it in these words: "Our goal has become a life of amiable sloth."

Neither of these remarks quite fits in with the other complaints made simultaneously by both these and other critics. The chief other complaint is that it is making money—that is the central, and most revolting, feature of American society. But there you are; you cannot have it both ways unless you happen to be a critic.

"For what makes money cannot be really wrong and what doesn't make money can't be really important. . . . The real test is ability to 'meet a payroll,'" reports Prof. D. W. Brogan, ironically, reviewing Mr. Griffith's book in the Guardian.

"This," the professor, a good friend of America, adds, "is described as the free-enterprise system, and this is the doctrine the United States offers as the one thing needful to the insurgent masses of Asia and Africa."

And then I see that Thomas Wiseman, a theatrical columnist, commenting wearily on an interview he had with William Saroyan, says that Mr. Saroyan's insistence on the essential goodness of man "hardly sounds so noble" in a period when there are "two cars in every garage."

Now, although it does not seem to me that a man has necessarily to be ignoble to buy his wife a car, or that people would be really better people if only they made less money, I should like to make it quite clear before getting on with the play that I admire these critics personally, and that I, too, favor the ends they think they favor.

I, too, think professors important. I, too, want to see wider freedoms for all men. I, too, want to spread justice. I, too, want to help eradicate the poverty of the poor. I, too, want to prove the brotherhood of man and improve the quality of society. Yet when the critics fulminate in quite the way they do about America the curtain always goes up in my mental theater and I find this scene playing:

A Cabinet office. Two men are sorting mounds of papers and of strange-looking gadgets.

President Grogan: "What went wrong? Why have we produced so many things? Don't you know things do not make the quality of our life? It's ideas. Why all these millions of things?"

Secretary Frifith: "I'm afraid it was a little miscalculation, sir. Changing that slogan, 'No more amiable sloth; now for stern, energetic action.' People began to produce and produce and produce, you know. Sweet people, but while we used to have too much of everything before, now we've got much too much. They are so productive. And it is all stuff we don't even want."

President Grogan: "That's impossible."

Secretary Frifith: "I agree, sir. I agree. Of course it is. But you'll remember that when we produced what people wanted or could be persuaded they wanted, an awful lot of people made money. And we just couldn't have that."

President Grogan: "The only really profitable thing for society is to insure that what is made is profitless."

Secretary Frifith: "Exactly. I will have that inscribed on the dictatorship bill, sir. It is very clear. Now that brings me to the report of Secretary for Aid Wisestman. I am afraid it will be a bit of a shock, sir. The underdeveloped countries have all joined the Communist bloc."

President Grogan: "It's impossible."

Secretary Frifith: "Quite so, sir. You will recall our campaign to impress upon them that making money was not in the least important and that production does not, as businessmen used to claim, provide a service for one's fellowmen and that rapid material progress must be eradicated as it is founded on greed and that philosophy above all is the thing. It was successful and they became even poorer than they were before."

President Grogan: "Impossible."

Secretary Frifith: "Absolutely. A secondary consequence, of course, was that note from the President of Fakiristan drawing your attention to a surplus of philosophers, teachers, and lawyers in his country, whom we offered posts at our colleges where they now are, some of them upside down. Well, now, after all that they say that what they really want is work for their people and buyers for their produce and profits for their expansion."

"None of this our new doctrine offers them. The Soviets, of course, have always been outright materialists. So now they have easily persuaded them that these things are so worthwhile that even freedom is a small price to pay for them."

President Grogan: "Planning is better than freedom. I agree there. Free enterprise is for the birds. What is that noise?"

Secretary Frifith: "Oh, I forgot. There are 75 million Americans out of work now that we have eliminated wants. They are outside and want to know what to do."

President Grogan: "Tell them to attend my lecture this afternoon. And later, this evening maybe, to become cultured."

The curtain falls on him.

Moral: The essential goodness of a man has nothing whatever to do with the size of his garage or the fullness thereof. But the wealth of his neighbor has. Particularly if the latter builds garages or fills them.

It is important to the world that America be good and rich. And it is not, after all, impossible to be both. Or even to be free as well.

Impact of Increasing Imports of Fabricated Products on American Industry

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. KEARNS. Mr. Speaker, in a message to the Congress a few days ago, the President expressed his concern over the growing foreign competition to the American exporter and directed the several agencies of the executive branch to take certain steps which may help to strengthen the competitive position of our export industry. He has asked for the support of the Congress toward this end, and such support, I am certain, will be forthcoming, since the economic strength of the United States is a matter which transcends the boundaries between political parties and between sectional interests.

Without in any way minimizing my support of the President's recommendations with respect to exports, I would call your attention to the other side of the coin of foreign trade. The President's message does not deal with this other side of the coin, but I am certain that we cannot effectively and justifiably treat the one side—exports—and ignore the other side—imports. The one bears on the other as the back of the hand bears on the palm.

The disastrous impact of increasing imports of fabricated products on our American industries, particularly the so-called small business element of our industry, and which is felt with special emphasis by the skilled and unskilled laborer who is the veritable backbone of our industry, was clearly stated by Mr. James A. Roemer, chairman of the board of the Sharon Steel Corp., in that corporation's bargaining conference with the United Steelworkers of America, AFL-CIO, on May 15, last. To these pertinent remarks, I would earnestly solicit your attention:

A very good customer of Sharon Steel bought 13,867 tons in 1955; 18,587 tons in 1956; 15,958 tons in 1957 and only 6,349 tons in 1958.

In this instance, the 10-inch mill lost about 5 weeks' work to foreign competition. Here was \$4 million of business and wages that went to Europe, as the contribution of Sharon Steel and its employees.

This foreign material was delivered to the customer's plant at \$22 to \$30 a ton less than our delivered price. And this customer is not on the eastern seaboard. One of our eastern seaboard customers bought foreign 10-inch mill tonnage at \$44 a ton under our delivered price. This gives you some idea of how foreign competition in 1958 affected you and the Sharon Steel Corp.

A highly respected constituent, Mr. Ray F. Eisenbies, president of the Sawhill Tubular Products, Inc., of Sharon, Pa., recently analyzed for me the effect of

increasing foreign competition on his company, as well as on other American companies engaged in the manufacture of steel pipe. Imported steel pipe amounted to over 200,000 tons in 1958, and to an all-time high of 553,000 tons in 1959. Mr. Eisenbies tells me that many of his company's markets, particularly those adjacent to ocean harbors, have already been seriously affected and, with the opening of the St. Lawrence Seaway, others will soon feel the impact. The cost of this Nation's economy both in profits and in jobs, is steadily mounting and urgently requires the best thought that can be brought to bear on the solution to the problem in both the executive and legislative branches of the Government.

As a contribution to that solution, I would say that the remedy probably lies not in the erection of high tariff walls against foreign products, but in the establishment of quotas for such products whose unrestricted importation inflicts heavy penalties against American industry and labor and seriously weakens our country's defensive strength. The philosophy of quota limitations has been well accepted as a legitimate and effective means for the protection of American agriculture, as well as American industry and American labor.

Mr. Speaker, there are many other firms in my congressional district—as well as throughout the Nation—that are bleeding because of this unexpected influx of imported goods upon our markets. I hope, therefore, to supplement this report with additional data from firms in my district and throughout the country.

In the meantime, I respectfully urge the Members and the cognizant committees of the Congress to give this matter their prompt and most sympathetic consideration.

The Nth Country Problem and Arms Control

EXTENSION OF REMARKS

OF

HON. FRANK M. COFFIN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. COFFIN. Mr. Speaker, the wide diffusion of nuclear weapons is one of the great threats of the sixties. During the course of our discussions on control and inspection, the spread of science and technology in the nuclear field is not standing still. As knowledge and greater technical competence increase in different countries, there is the accompanying danger that there will be many new atomic powers anxious to have their own supply of weapons.

In assessing the threat, in order not to overestimate it nor underestimate it, we need all the sound, factual information we can acquire. A recent study by the National Planning Association, "The Nth Country Problem and Arms Control," makes an important contribution to the kind of information we need.

Mr. Speaker, under unanimous consent I submit for the RECORD a section of this report:

STATEMENT BY THE NPA SPECIAL PROJECT COMMITTEE ON SECURITY THROUGH ARMS CONTROL ON THE NTH COUNTRY PROBLEM AND ARMS CONTROL

Acute fears have beset us since the introduction of nuclear weapons of mass destruction. But we have occasionally found some comfort in the thought that peace might be assured by a "balance of terror": that, while nuclear weapons are confined to just a few great nations with an enormous stake in the planet's land and people, an all-out nuclear war is unlikely. This balance is an uneasy one, involving many complicated factors and it impels a continuing race for new offensive and defensive armaments.¹

EQUILIBRIUM AND NUCLEAR WEAPONS DISTRIBUTION

But the production of both atomic and hydrogen weapons by Great Britain, the more recent development by France of atomic weaponry (which will soon be demonstrated by a test explosion), and the rumors of nuclear weapons research in Communist China raise disquieting doubts about the validity of the "balance of terror" formula. Atomic weapons may eventually become so widely diffused that there will be no equilibrium or symmetry in their distribution. Among their owners may someday be rulers—and perhaps even ex-rulers—who have no major stake in world stability. Indeed, it has even been suggested that eventually atomic weapons, like other powerful armaments, might find their way into the international open market, or that they might fall into the hands of outlaws and revolutionaries.

This is a problem which has caused considerable concern for some time. It was referred to in our earlier report, "1970 Without Arms Control" (pp. 39-42), and in recent months it has been the subject of considerable discussion in the United States and abroad.

As factual background to assist in planning arms-control measures to deal with this problem, we are publishing the accompanying technical paper in which three qualified scientists have attempted to estimate the difficulties which face a new power aspiring to enter the nuclear-weapons race and to set forth in detail the factors involved and the resources and capabilities required. We believe it will be of great use to bring this material to public attention so that students and observers in the fields of international affairs, military science, economics, government, and the natural sciences may use it in making their own analysis of the problem.

The paper shows that many nations are capable of creating an atomic weapon without outside assistance. But it offers no encouragement to those who think that such a program can be undertaken without facing difficult obstacles and high costs. And the cost of the warhead represents only a small part of the cost of maintaining the deterrent.

It is as easy to overestimate the rapidity of the spread of nuclear weapons as it is to underestimate it. The difficulties and delays faced in the French atomic-weapons program demonstrate concretely that a nuclear-weapons capability is not easily arrived at. After the first working models have been produced, many hurdles remain. Even the testing of weapons presents problems. France has received strong protests from nations neighboring her test site and from the United Nations General Assembly, which called on France, by a vote of 51 to 16, to cancel her proposed tests in the Sahara.

Deep fear of the imminent spread of independent nuclear capability has on some occasions been accompanied by an emotional zeal to wash the problem away by dramatic

gestures. Perhaps as a reaction to the seeming complacency of statesmen, individuals in Britain and elsewhere have urged such desperate measures as unilateral nuclear disarmament. Those who view the problems of mankind in a context larger than their own immediate time and place are entitled to great respect. Their contribution to public discussion of security problems is a valuable counterbalance to an all too prevalent tendency unthinkingly to accept outworn concepts. However, the lessons of recent history warn that, within the realities of the moment, it is possible that such counsels may lead, not toward peace, but toward war. It is arguable^{2,3} that World War I, would not have been started if the attitude of the allied powers, particularly America, had been clear from the outset; that Hitler would never have embarked on his infamous adventures if he had been aware of America's deep commitment to European security; and that the North Koreans would not have invaded South Korea if they had correctly understood the concern of the United States with the integrity of the Republic of Korea. Further, it is the nature of world politics today that those urging unilateral disarmament can speak freely on one side of the world but not on the other. Their right to speak openly is essential to the maintenance of free government. However, in foreign countries which are not accustomed to free and vocal public discussion, reports of these activities might create an impression of division and irresolution, which might well tempt an act of aggression.⁴

But while the immediacy of the dangers of nuclear diffusion is often overestimated, it is obvious that four nuclear powers present different problems than do two nuclear powers. If France could independently produce an atomic bomb at a time when her military and economic power were being subjected to heavy strain, still more countries might also produce one at some time in the future. It is by no means clear how fast events are moving, but it is certain that they inevitably move only in one direction—toward the greater spread of nuclear weapons capability.

DANGERS OF DIFFUSION

This committee feels that the prospect of widely scattered nuclear weapons presents a very serious threat to world stability. This scattering was called the "third country problem" in the days before Britain had nuclear power; it was called the "fourth country problem" before France had the bomb within her reach; and it is now safer to call it the "Nth country problem." It is a challenge which is not receiving the very serious attention it deserves at home or abroad. It is also a possible opportunity—an opportunity to find at least one common concern which might move the nuclear powers of both the East and of the West to achieve some limited agreements for joint action.

Proliferation of nuclear weapons will inject incalculable factors into the equation of international politics. Some countries, under economic or other pressures, may eventually sell atomic weapons. Governments under fanatics or dictators may act rashly. The possibility of accidental or of unauthorized use of atomic weapons will increase. Irresponsible "mischief-making" by one small nation could catalyze a nuclear conflict between larger powers, or might cause pre-existing nonnuclear hostilities to escalate into nuclear hostilities.

The risk of accidental war by the mischievous action of a third party or by the possible mismanagement of tests, war exercises, strategic miscalculation, and the like is further enhanced by the rapid introduction of "quick reaction" systems. These tend to be inflexible, so that full-scale war may grow out of inadvertencies or deliberate mischief. It will become even more difficult to achieve and enforce arms control agreements, and

much harder to inspire confidence in their effectiveness.

Since it is hardly reasonable to expect a nation developing nuclear weapons to refrain from testing them, worldwide radioactive contamination is likely to exceed predictions based on projected tests by the present nuclear powers only.

The Nth country problem derives urgency from the fact that we are approaching the point where it will no longer be possible for the present nuclear powers to control the spread of nuclear weapons. Once a nation has successfully complete an atomic weapons program, it will have nuclear stockpiles which can be stored without appreciable deterioration, which can survive changes of government, and which can be sold, exchanged, or given away.

The period, then, in which the major power blocs have a common opportunity to limit membership in the "atomic club" is, in the long view of history, a very brief one. We are now living in that period, and 10 years of it have gone by.

The question of whether to invest or not to invest in nuclear armaments will be debated in many capitals during the years ahead. No aspirant can afford to ignore the grave difficulties and heavy expenses which confront a would-be atomic power, nor ignore the fact that a profuse capacity for destruction is not necessarily a source of security. It is certainly clear that atomic weapons projects are not, in the present state of the art, easy for a middle-sized nation to undertake. But standards of rational priorities of economic effort are not always observed, and from the days of the pyramids of Egypt, human needs have been sacrificed to concepts of glory. We cannot predict with assurance what nations will have, and what nations will not have, independent atomic capabilities in the years ahead.

FRANCE AND BRITAIN

This statement is not a discussion of arrangements to share weapons or delivery systems with allied nations as a matter of mutual defense. Such arrangements are made within the context of existing arms competition and tensions, and this committee does not recommend unilateral disarmament measures. Nor do we criticize British and French decisions to achieve independent nuclear weapons capability. We note, however, that many competent military experts, including outstanding experts in Britain and France, have criticized the British and French nuclear weapons development from the standpoint of the effective allocation of defense effort.

It has been said that the disproportionate emphasis on a strategic nuclear weapon has resulted in a neglect of more important limited war capabilities and that possession of a small stockpile of nuclear weapons of a fairly primitive sort, without advanced means of delivery, is of doubtful value. Although France has an advanced aircraft industry, it has no heavy bomber which could effectively penetrate the borders of the Soviet Union, and neither France nor Britain have the long-range missile capabilities required for modern nuclear weapons systems. Security vis-a-vis the great powers cannot be achieved merely by developing a nuclear warhead without the support of the most modern aircraft and missiles. And the use of nuclear warheads against targets whose defenses are more primitive raises the specter of the catalytic wars, which starts between small nations but eventually draws in great-power protectors.

However, the much criticized French decision to arm atomically was not lightly made. The French were persuaded primarily by the argument that no alliance or commitment would be strong enough to compel any nation to risk nuclear destruction to aid another. They would explain their position approximately as follows: (1) Nuclear power

Footnotes at end of speech.

does not deter aggression unless the potential aggressor believes that the nuclear retaliation, causing greater destruction than he is willing to bear, will actually be used to answer an attack; (2) it is not credible that a country will enter a nuclear war, exposing its own cities to obliteration, solely in defense of another nation; (3) therefore, the only nuclear power that deters an attack on France is one that rests entirely in French hands. Some French writers go on to make three further points: (4) The only nuclear deterrent that will protect other European countries is one that lies completely in the hands of each such country; (5) therefore, each European country should have an independent atomic capability; and (6) since the interests of France are closely enmeshed in those of the rest of Europe, France will be safer if every major European country has its own atomic weapons capability.

However, the strong impression persists that the true French motivation, conscious or unconscious, is the belief that possession of nuclear weapons will heighten national prestige and promote French eligibility for American nuclear assistance.

PEACEFUL USES AND MILITARY DEVELOPMENT

The accompanying technical report shows that the distribution of reactors to utilize atomic energy for peaceful purposes has considerable bearing on the distribution of military nuclear capacity, because of the possibility of using these reactors to produce weapons-grade fissionable material for weapons. Intergovernmental contracts for assistance in building power reactors are going forward rapidly. They are constructive and commendable. At the moment, they do not involve the danger of military production, but such programs may well, over the years, expedite a spread of nuclear weapons. The possibility can be minimized by control arrangements over the type of reactor and its operational processes, and over all the materials that enter and leave it.

Controls are made technically possible because the very practices which contribute to the manufacture of the best weapons-grade material are those which tend to make the production of heat and power least efficient. Perversion of the purposes of the reactor can be prevented by requiring that the design of the reactor and the procedures for handling fuel conform to the necessities of efficient energy production, and by forbidding those which result in the purest material for weapons. If fuel rods remain in the reactor beyond a certain period, the plutonium 239 that is collecting in the fuel elements becomes poisoned by plutonium 240, which makes the resulting material more difficult to use for weapons purposes. Thus economic operations favor longer fuel cycles, and the use of shorter cycles would indicate a military purpose.

The Board of Governors of the International Atomic Energy Agency (IAEA) has drafted a set of control regulations subject to approval in 1960 by the Agency's General Conference, on which all members are represented. Euratom (European Atomic Energy Community) is also trying to develop such a safeguards system, and the United States, United Kingdom, and Canada place safeguards on their exports under bilateral contracts.

The maintenance of strict control arrangements in bilateral contracts may become more difficult, however, as the bargaining power of recipient nations increases. Fuel consumers, led by India, demonstrated a strong resistance to controls in the discussions which preceded the adoption of the statute of the IAEA. In their view, the imposition of controls was an insulting symbol of the desire of the great powers to perpetuate a monopolistic position. These pressures may become difficult to resist in future bilateral contracts.

The IAEA presents a genuine opportunity to mitigate the danger of the diversion of nuclear power reactors to military purposes. It can administer controls strictly, without injury to national pride. Its rules provide for the application of a very effective set of controls. At the present time, the IAEA, a large and expensive piece of administrative machinery, is standing idle. The nuclear powers are bypassing it by the use of bilateral contracts. Yet, the IAEA could insulate the major powers from imprudent demands on the part of recipient countries. An agreement, expressed or implied, among the major powers to use the IAEA in place of bilateral agreements would be a major step toward eliminating the possibility of the diversion of power systems to weapons development.⁹

This would at least provide some method of controlling the use of the reactors supplied under economic assistance programs. It would not provide a complete check on nuclear weapons development in the recipient countries, however, because this would also require control of fuel fabrication, chemical processing, and isotope separation facilities. When extensive controls are proposed, the issue will undoubtedly be raised as to whether recipient countries would be willing to accept such interference with what they regard as their own economic-political development unless the major powers themselves were subjected to similar inspection. Such controls might very well be instituted, however, if the major powers would agree to a cutoff of future nuclear weapons materials. And the execution of such tasks might conceivably be assigned to the IAEA.

NUCLEAR MILITARY ASSISTANCE PROGRAMS

Military assistance programs involving atomic weapons are also going forward. These programs in themselves involve a spread of nuclear weapons capability, but this is a derivative capability rather than an independent capability. This paper is concerned with the spread of independent nuclear capability.

It should be noted, however, that a derivative nuclear weapons capability is in itself a step toward eventual independent capability. Nuclear powers will attempt to retain the control over their nuclear warheads which are placed in other countries for emergencies, but it is to be expected that these efforts will be resisted. General de Gaulle, for example, resists any control by the United States of its atomic weapons stored in France. In treaties with other NATO countries the United States has found it necessary to vest in the recipient countries a right to continue to receive both ancillary equipment and restricted information on the use of nuclear systems, and this right can be determined only by consent by both parties until the expiration of the NATO treaty.

In situations of military assistance, it is possible that, over the years, accommodation to the recipient country may eventually erode controls. Here, particularly, one must weigh the effectiveness, in a critical juncture, of the treaty pledge as against the fact of effective territorial sovereignty and the possession of military force at the site of the weapons stores. While NATO military assistance programs involving nuclear weapons may tend to spread independent nuclear capability, the alternative would be either (a) the possibility of independent development of nuclear weapons by each of the NATO countries, or (b) the imposition of a unilateral arms handicap on the NATO nations.

In the nature of things, arrangements of this sort among the NATO countries are

widely publicized and vigorously debated, while the placement of nuclear weapons in the Warsaw Pact territory remains a military secret.

There may be many excellent reasons for opposing such a deployment of weapons on the NATO side, but to oppose them merely on the basis of a broad policy against nuclear diffusion would seem to place a disadvantage upon the side which operates openly.⁷

Furthermore, at the present time, no arms control agreements have been entered into, and under these circumstances it would not be fair to ask one side to accept unilateral handicaps.⁸ The fact that this momentum exists, and will exist on both sides is, however, a powerful argument in favor of the proposition that agreements should be reached as early as possible.

SUGGESTED SOLUTIONS TO PROBLEM

This committee is agreed that it would be desirable to prevent the wider diffusion of nuclear weapons capability. However, it finds that the problem is an extremely complicated one, since the basic requirements—scientific knowledge, industrial and material resources, as well as technological skills—are already being distributed around the world at a rapid rate. It has considered many possible solutions.

Treaty limitation: Some have suggested an international treaty which would limit nuclear weapons to the present "have" nations without embracing other aspects of arms control and international security. This idea was rejected because it was felt that it could easily be evaded and that it would be meaningless in the event of war. Its enforcement would require a high degree of inspection in the nonnuclear countries. Those who are innocent of any nuclear power would naturally resent being inspected more than those who possess atomic weapons.

Voluntary limitation: A suggestion advanced by Ireland's Minister for External Affairs, adopted by the United Nations Political Committee on November 16, 1959, calls for voluntary measures: Nuclear powers should undertake to refrain from supplying nuclear weapons to States which do not possess them, and nonnuclear nations should undertake to refrain from manufacturing or acquiring such weapons. This, like all pronouncements which are merely declaratory, would operate effectively against open societies but would not operate against closed societies.

International control of nuclear testing: In our statement "International control of nuclear testing" (July 1958), we pointed out that one of the primary values of an agreement to discontinue nuclear tests would be its tendency to curb independent nuclear development by new powers. We stated:

"A prohibition on nuclear tests by itself cannot prove a completely effective control on the spread of nuclear bombs among many nations. . . . A relatively crude bomb could be developed by a determined nation without testing, although it is not very likely that any nation would even commit a weapon to use without some testing and/or practice firing by its own nationals. Also, certain countries, such as Britain, France, and Sweden, might test at least until agreement is negotiated, although we doubt that they would block agreement."

"Thus, other control measures, particularly a control on the production of nuclear materials, will be necessary adequately to prevent the spread of nuclear weapons. Nonetheless, a test prohibition can be one helpful measure, and it is clearly the simplest and most feasible step that can be taken now."

Although not a guarantee of complete certainty, we believe that a test discontinuance agreement would effectively limit the membership of the so-called "atomic club."

Footnotes at end of speech.

Agreement to cease production of nuclear materials: International arms control agreement to cease production of nuclear materials would, of course, make possible a far more effective method of preventing the development of nuclear weapons by the nuclear have-nots, because it would install a more thorough type of inspection machinery, which would enable the detection of preparations for weapons manufacture at early stages.

Up to the present time, negotiations for both a production cut-off and a test agreement have been stalled, because of the Soviet Union's refusal to accept the inspection machinery which is required to check on compliance.¹⁰ But it is difficult to conceive that the nonnuclear nations will accept a nuclear inspection system which does not also apply to the nuclear nations.

Limitation in exchange for protection: It has also been suggested that the have-not nations could be dissuaded from independent development of atomic weapons if the have nations would give them a firm assurance to protect them by the use of their own nuclear weapons. However, a have-not nation may find it difficult to believe that its ally would risk nuclear destruction in its behalf.

Limitation of independent capability by freer distribution of weapons: Another suggestion has been that the have nations freely offer nuclear assistance to their allies, under conditions which restrict the availability and use of these weapons. This suggestion is of some value if the problem is to prevent the immediate commencement of research and development programs; however, it obviously is not a bar to the ultimate diffusion of independent weapons capability. It spreads derivative nuclear capability in order to prevent the spread of independent nuclear capability.¹¹ The reasoning behind the proposal is: They are going to get it anyway, so why not share it in a way that retains some military and legal control in the center of the power bloc?

Limitation enforced by haves: Finally, it has been urged that the have nations agree to impose their will by force on the have-not nations, and to introduce a rigid inspection system which would also be imposed by force.

It was also suggested that the three nuclear powers, in giving economic assistance in nuclear power production, should supply reactors on a lease system only, and should reserve to themselves the processing of reactor fuel elements. This would satisfy a demand for electrical power without giving control of fissionable material. A simple inspection process would prevent fuel reprocessing. The penalty for violation would be a joint withdrawal of economic aid by the nuclear powers.¹²

This proposal did not recommend itself to the committee because it was felt that so high-handed a procedure would hardly be an acceptable method of enforcing the peace. It was also felt that since the have powers have had so much difficulty in reaching agreement on far less controversial matters, it was very unlikely that they would work together in so unconventional a project and at the expense of their allies.

Furthermore, with respect to this and other limitation proposals, this committee feels that unless a have-not country is presented with an alternative which will guarantee its security, it cannot be expected to renounce its aspirations to achieve weapons which the have nations already possess. The basic problem is to achieve some method of offering security to a nation which is asked to forego its nuclear potentiality.

FINDINGS AND CONCLUSIONS

In conclusion the committee finds:

1. That if present national policies continue, independent nuclear military power

will be spread widely among many countries within the next 30 years.

2. That the diffusion of independent nuclear weapons among many countries will, over the years, upset international stability and increase the danger of war.

3. That the spread of nuclear know-how and equipment through international assistance in peaceful economic uses of nuclear power, although useful and praiseworthy, might tend eventually to contribute to the diffusion of military nuclear power.

4. That nuclear military assistance programs providing for the gift and loan of warheads do not directly create independent nuclear power, but are factors which will tend over the years to contribute to the growth of such independent nuclear power. The committee concludes:

1. That the dangers of the wide diffusion of nuclear weapons within the next 30 years are real. Such diffusion may very well vitiate the stability which could conceivably otherwise arise in an era of balanced nuclear forces. These dangers must be considered by both the United States and the Soviet Union in all their negotiations on arms control. Neither side wishes to take substantial risks, but both sides must consider the heavy risks involved in continued inaction.

2. That the nuclear powers could curtail the dangers of perversion of economic aid programs for peaceful uses of nuclear power if they would make greater use of international agencies which impose stringent controls. Both the East and the West could operate through the IAEA without loss of national advantage. This would require no further treaties. If one side embarked upon such a policy and the other did not follow, there would be no loss greater than a slight loss of operating efficiency and of influence on the commercial aspects of reactor operation.

3. That direct control of the spread of independent military nuclear power is possible only in terms of larger disarmament arrangements. The promulgation and enforcement of an effective international accord to cease nuclear tests will tend to prevent the development of nuclear weapons by new countries. More comprehensive agreements—particularly those looking toward controls on production—will provide a more potent inspection system, which could enable control authority to detect evasions with certainty and accuracy.¹³

¹ A continuing race for armaments, even among a few powers, does not assure lasting peace by a balance of terror. Progress toward arms control is essential, and obtainable only by vigorous effort with sufficient priority compared to immediate military consideration (William C. Davidson and David R. Inglis).

² I think this is misleading and inaccurate. Nations do not go to war because of their ignorance of what some other nation might do. If they take the initiative in going to war, they do so because their total estimate of the situation tells them that this is the favorable time (Harvey A. DeWeerd).

³ It seems to me that a great mistake of many Americans is to assume that Khrushchev is like Hitler, just as it was a mistake of many fellow travelers and liberals in an earlier day to make too sharp a distinction between different brands of totalitarianism. Hitler, like Stalin, was a wild and often wholly irrational tyrant with megalomaniacal aims, while Khrushchev and his band are politicians in charge of a going concern, men of little fanaticism (despite service to the ideology of Marxism and Leninism), and at least as concerned as we are with keeping a viable system alive. In this they differ very greatly from the Chinese who are still in a terrifyingly fanatical stage. Thus, the notion indicated in the text that pacifism on our side is a danger because it may tempt the Russians to an act of aggression is open to question in spite of the example of North Korea (the North Koreans may well have moved without official blessing from Moscow in one of the many misunderstandings that can happen even in a totalitarian regime). Nor is it quite true, but self-righteous, to say that these voices of conscience are free to speak and demonstrate on one side of the world but not on the other. It is my impression that Polish intellectuals have been quite courageous in self-expression if not in public demonstration.

It is difficult intellectually not to let our thinking about the future be governed by efforts to correct mistakes in the past. The statement brings to mind the belief that Oxford pacifists of the 1930's encouraged Hitler in his hope that England would stay neutral in the face of his aggressions. The implication is that, to deter aggression now, our minuscule group of pacifists must line up with the most xenophobic elements in the country to avoid any sign of our being divided and irresolution. Again, the assumption that the Soviet Union now wishes to incorporate Western Europe, or at least West Germany, and is only deterred by force, may well be contrary to fact. In my opinion, the last thing the Soviet Union wants within its borders is millions of anti-Communist socialists and social democrats—or even idealistic and rationalistic western Communists. The

division and irresolution in this country that is most salient is not that concerning foreign policy, but rather that concerning the aims of our national life—aims often so thin and unimpressive as to lead some to look to our enemies abroad for an agenda of living and dying and a factitious source of unity and dedication (David Riesman).

"The situation today can no longer be measured in terms of the thirties. The security of the United States and indeed of the world depends not on arms supremacy but on arms control. Even if we have an overwhelming advantage (which we do not) with respect to the nature and number of weapons, if the situation should get out of hand (perhaps through an accident) then the result would be destructive of the national welfare. All thinking with respect to the problem of security today should begin, I believe, with the recognition that victory can no longer be achieved through military means. Victory, however, is critically important. It must therefore be pursued through those means which make nonmilitary victory possible.

Against this changed background, it becomes important, it seems to us, to break away from old patterns of thought, however valid they may have been up through the end of the Second World War. This is especially true in the matter of unilateralism. To take the flat position that all unilateralism is bad could mean, in practice, a serious loss for the United States. Our failure, for example, to take the initiative with respect to a cessation of nuclear weapons testing cost us heavily in a large part of the world. We should never have allowed the Soviet Union to be the first to do the obvious (Norman Cousins and David Riesman).

"The argument that increased military destructive capabilities reduce the danger of war is not convincing. In Korea, international supervision of steps to achieve political stability including free elections, coupled with adequate programs to improve the living conditions and the rights of the people in the area, would have been alternate actions to military backing of Syngman Rhee, and might have had a better chance of preventing war. It must also be stated that, to a large extent, the historical role of military forces has already been abandoned, and that tangible defense and profitable conquest have been replaced by deterrence. This change, together with the widespread reliance upon and deployment of nuclear weapons, represents in itself a desperate and unprecedented measure. Advocacy of principled action when such upheavals are taking place, reflecting concerns beyond our immediate time and place, gives less indications of division and irresolution than that shown by countries which discourage or suppress such expression (William C. Davidson).

"The proposed use of the IAEA may have other merits, but I do not believe that it would significantly delay the diffusion of nuclear military power. Either the "haves" do, or they do not, want to assist particular countries in becoming nuclear powers. If they want to do so, the IAEA, or its use proposed above, will hardly stand in their way (Klaus Knorr).

"Counterbalancing the military disadvantages of considerable openness are the essential differences in the relationship between the U.S.S.R. with the Warsaw Pact countries, as compared to that of the United States with the NATO countries, which would make the Soviet Union reluctant to supply nuclear weapons to the Warsaw Pact countries unless forced to do so as a countermeasure to open nuclear dissemination. For other reasons as well, the disadvantage is a limited one, and can be more than offset by the advantages of a broad policy against nuclear diffusion (William C. Davidson and David R. Ingalls).

"While we are working toward IAEA and arms control agreements between us and the Red bloc, we ought to limit the diffusion of nuclear weapons among NATO and other anti-Communist nations for a very simple reason: Nothing will do more to solidify the Warsaw Pact, inhibit possible liberal development within the U.S.S.R., and repel the neutral nations from us, than to allow Germany and Japan—and eventually Turkey and Pakistan—to get nuclear weapons (Dave Frisch).

"Recognizing the grave difficulties of "Treaty Limitation," "Voluntary Limitation," "Limitation in Exchange for Protection," and "Limitation Enforced by Haves," we may nevertheless need to try some or all of these ideas if international testing and production limitation agreements are not soon forthcoming (Dave Frisch).

"That is, required by the proposals so far made by the West. Requirements may be modified both by the improvement of detection techniques, which could be pursued with more vigor, and by reevaluation of the danger of low kiloton evasions compared with dangers of the Nth country and other problems associated with continued testing (William C. Davidson and David R. Ingalls).

"Derivative nuclear capability, defined in committee finding 4 on page 15 to include nuclear warheads, shares many of the dangers of independent possession by increasing the probability for accidental war, and for the catalyzing of wars between major powers as a result of acts by smaller ones. Furthermore, it involves weapons based on many years of design and testing, rather than the relatively primitive weapons achievable initially by independent efforts. Dependence of a nation's armies on nuclear weapons obtained through derivative capability, coupled with modern weapons know-how, can provide a decisive incentive for the development of advanced independent capability. Any stockpiling of nuclear weapons by additional countries, even if originally subject to restrictions on their use, seriously complicates eventual control (William C. Davidson and David R. Ingalls).

"It is my opinion that this approach holds some reasonable promise (A. M. Stone).

"Although I share the committee's view that measures to curb the spread of nuclear arms are desirable, I cannot appraise the danger in terms of the committee's assumption that "present national policies" will continue during the 30-year span it allows for the diffusion of nuclear weapons. I believe it probable that, long before many middle-sized and small nations have squandered resources in developing nuclear armaments, the tensions that make such conduct conceivable today will have subsided (David F. Cavers).

"Chairman Richard S. Lehman is not participating in the work of the committee while engaged in a Government assignment in the field of arms control, and therefore did not take part in the preparation of this report.

"See footnotes to committee statement.

The Forand Bill

EXTENSION OF REMARKS OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I wish to include an excellent editorial pertain-

ing to the Forand bill which appeared in the Buffalo Evening News, Buffalo, N.Y., on March 22, 1960:

THE FORAND BILL

For countless older people, living on small fixed incomes or pensions, the rising cost of hospital-medical care presents an increasingly cruel and worrisome dilemma. Just at the time in their lives when they need such care most, and when the cost of providing it for them is multiplied, they can least afford it.

What to do about this dilemma is the subject of a blazing controversy in Congress over a bill known as the Forand bill. Sponsored by Representative ARNE J. FORAND, Democrat of Rhode Island, the bill is undergoing hearings before the House Ways and Means Committee. Very simply, it would provide "free" (that is, taxpayer) health insurance for everyone eligible for social security old-age pensions. To finance it, an additional payroll tax would be borne by every employer and employee.

The Forand bill has been vociferously supported by the AFL-CIO and all the usual labor-liberal political action groups. And it is roundly denounced as an entering wedge for socialized medicine by the American Medical Association. The Eisenhower administration has opposed the bill while conceding that the problem it aims at does exist. Health-Education-Welfare Secretary Flemming is scheduled to spell out the administration view and offer the committee an alternative approach tomorrow. Vice President Nixon is said to have pushed hard within the administration for support of a modified version of the Forand bill.

We hope the administration will come up with something solid and imaginative. For while the Forand bill does, in our opinion, need some modifying, we think it would be a bad mistake for its critics—doctors, private insurers or anyone else—to underestimate the seriousness of the problem it deals with, or the anxiety which millions of older people now experience for lack of access to adequate health protection at moderate cost.

The basic idea of using social security machinery in one way or another to extend health insurance coverage to old-age pensioners not only makes sense, but it has an aura of political inevitability. The whole history of social security in this last quarter century, after all, has been one of continuous mushrooming growth, often with too little heed paid to the cost factor. This latter objection has been raised by critics of the Forand bill, who claim that giving full health coverage to everyone eligible for an old-age pension would cost far more than the bill admits.

Quite apart from the actuarial soundness or unsoundness of the Forand bill, however, our main objection to it as it stands is that it would create a new and unnecessary Federal insurance bureaucracy. Instead of just underwriting the abnormally high cost of covering the over-65 age group in the existing plans—Blue Cross, Blue Shield and the like—the Forand bill would create a needlessly competing system. In that respect, it is wide open to the charge of being an entering wedge for socialized medicine.

Far better, it seems to us, would be a Federal approach which aimed simply at charging the social security system the difference between the cost of providing hospital-medical care for those under 65 and the 2½-times greater cost of covering those over 65. This great difference in the use of medical care facilities by the older group is, after all, the crux of the problem. There are various ways in which that cost differential could be absorbed by society. One, for example, would be to require that all group plans offer coverage at a uniform rate regardless of age—and then bill the social security fund for whatever difference there

experience tables showed between the cost of caring for those over 65 and under 65.

While the Forand bill needs substantial modifying, however, it has the virtue at least of going right to the heart of what is admittedly a very real and pressing social problem. In fact, it may well turn out to be the most insistent social security problem of the sixties. And it is the kind of problem which—for obvious political as well as sound social reasons—simply is not going to take no-action for an answer.

The South Is Not Helpless in the Presidential Election of 1960

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. BOYKIN. Mr. Speaker, in the January 1960 issue of the Alabama Lawyer appears an excellent article by my good friend, Hon. Gessner T. McCorvey, of Mobile, Ala., entitled "The South Is Not Helpless in the Presidential Election of 1960."

Gessner McCorvey is one of the most distinguished members of the Alabama bar and was formerly chairman of the Alabama State Democratic Executive Committee. He is highly respected not only in our State, but throughout our Nation and is known as an authority on constitutional law.

Mr. Speaker, I believe it would behoove all of our Members of both parties and of all sections of our great Nation to read this timely article. The South has nurtured the Democratic Party through its leanest years and has been the backbone of the party ever since the party's beginning. The South's leadership is fighting a last ditch battle for the rights of the States which our people believe were intended for the States to maintain and exercise, by our Founding Fathers. It gives me great pleasure to include Mr. McCorvey's informative article in the RECORD, at this point:

THE SOUTH IS NOT HELPLESS IN THE PRESIDENTIAL ELECTION OF 1960

(By Gessner T. McCorvey)

Much has been said and written in recent months by those posing as Democrats to the effect that the South is helpless in its fight to maintain the constitutional doctrine of local self-government—more properly referred to as "States rights." Those making such announcements, who take the position, to use a slang expression from a popular song of some years ago, that "The South Is All Dressed Up and Nowhere to Go," are ignorant of our political history and also ignorant of our Federal Constitution.

The South by making the fight that Alabama and three other Southern States—South Carolina, Mississippi, and Louisiana—made in 1948—can fully protect its right through proper use of the electoral college.

Some of the powers that be in high Democratic circles even take the position that they can win without the South. In my opinion these gentlemen with such views are just sadly mistaken.

Recent developments have made it imperative that the Southern States fight for their survival if we are going to preserve the traditions of our homeland.

THE SOUTH IS NOT HELPLESS

It is only necessary for it to use a weapon given to it by our Constitution, namely, the electoral college, and we can win our battle if all Southern States will join together in demanding that any so-called National Democratic Party seeking the electoral vote of the South, must first be made to understand that the South will only support for President and Vice President candidates who will demand a continuance of our segregation practices, and candidates running on a platform which announces in unequivocal terms that it recognizes as the law of the land the 10th amendment to our Constitution which provides as follows:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

The Democratic Party as we and our ancestors have known it, is a party which has as its cornerstone the doctrine of States' rights, as guaranteed by the above quoted section of our Constitution. Our ancestors went to war to preserve these rights.

In 1948 Alabama, South Carolina, Mississippi, and Louisiana, made a valiant fight by the use of the electoral votes of these States. Had Texas, Florida, Virginia, and Tennessee joined us in 1948 (and in 1952 these States deserted the anti-southern party calling itself the national democratic party) we would have undoubtedly put two great southern Democrats at the head of our Government in Washington—STROM THURMOND, of South Carolina, and FIELDING WRIGHT, of Mississippi.

In view of the recent unconstitutional decision of the U.S. Supreme Court in the school segregation case, it is now necessary for the South to fight, if our civilization is to survive as we have known it.

We of the South have the purest Anglo Saxon blood in the Western Hemisphere and we must keep it that way. How any southern white man or woman could think of supporting for President of our beloved country a man who advocates this unthinkable antisouthern racial program, is simply more than I can understand.

I yield to no man in my respect for the desire to help our colored friends. However, in the South, we must have segregation. All intelligent Negroes realize this.

Aside from the outrageous effort which the National Democratic Party is making to wreck our civilization along the racial line, I would certainly like the best in the world to see that the national party using the label Democratic so conducts its affairs that men like Norman Thomas, the Socialist Party's six-times candidate for President, cannot say he would never again be nominated for President by the Socialist Party, as this is unnecessary since the so-called National Democratic Party, as now constituted, has adopted the entire platform of the Socialist Party.

Everyone agrees that we should fight out our differences "within our party." However, we mean within our own party, and not within the party of our enemies. Here in Alabama our party is the Democratic Party of Alabama, and we fight out things within our party in the primaries conducted by the Democratic Party of Alabama.

When we talk of the Southern States combining their electoral votes and demanding fair treatment from the Federal Government, we frequently hear criticism by those who are unwilling to fight to the effect that what we are advocating is that this country have some 15 or 20 different political parties such as some of our foreign neighbors are cursed with. We plan nothing of the sort. We only wish to see that there is one American party which is willing to fight for constitutional rights and stand firmly and unequivocally for a government which recognizes the fact that our Constitution ex-

pressly provides that the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

Neither the so-called National Democratic Party nor the National Republican Party is willing to make a fight to preserve States' rights. We have at hand right now conclusive evidence of the fact that we of the South can expect no help from either of the major political parties in our effort to maintain segregation throughout our area. While General Eisenhower has, in many respects, made a great President; yet he certainly "stepped out of bounds" when he sent his Attorney General, Mr. Brownell, before the Supreme Court of the United States to argue in favor of the abolition of all segregation throughout our public schools. We cannot hope for any relief from any party whose leaders try to wreck our civilization and absolutely throw to the four winds the cardinal principle of States' rights which was granted to the States at the time our Government was formed, merely because they wish to capture the Negro vote. Unless the above quoted clause protecting the rights of the States had been inserted in the Bill of Rights, we would have had no Federal Government, as many States would have refused to be a part of any government where their rights were not protected. Consequently, unless the Democratic Party is going to return to its former principles and, in the platform of its national convention, firmly stand for the doctrine of States' rights, then our only hope is for the people of the South, through the electoral college, to make their voice heard.

Much has been said and written about the hopelessness of the fight of southern Democrats. With this I cannot agree.

We southerners consider the doctrine of States rights the foundation stone of the Democratic Party as we have known it. We are opposed to a powerful centralized bureaucratic government in Washington which undertakes to deprive the States of their independence of action in those matters which have not been delegated to the United States by the Constitution.

In answers to the charge that southern Democrats who are unwilling to follow the rabid antisegregation leaders of the Democratic Party have nowhere to go except to join the Republican Party, let me point out the fallacy of any such claim by briefly reviewing the situation in the presidential election year of 1948. At that time I was chairman of the State Democratic Executive Committee of Alabama, and was one of Alabama's 11 presidential electors, being chairman of the Alabama electors.

As everyone knows, in 1948 Alabama, Louisiana, Mississippi, and South Carolina cast their 38 electoral votes, joined in by 1 elector from Tennessee, for Gov. STROM THURMOND of South Carolina for President and for Gov. FIELDING WRIGHT of Mississippi for Vice President.

It has been stated by some of the pinkish press that our fight was senseless and stupid. I would like to present a few figures to show how ignorant is any man who makes that contention.

The Constitution of the United States, which has often been described as the greatest document ever penned by man, gives relief to us from the situation which might arise when neither of the candidates nominated by the two major parties is acceptable to the American people.

There were 531 electoral votes. A candidate for President had to receive 266 electoral votes in the electoral college or else the election of a President was thrown into the House of Representatives. In 1948 Truman received 303 electoral votes, or 37 more than the required majority. I had assumed that California would, of course, go for Dewey, with Governor Warren, of California, on the

Republican ticket for Vice President. Then, too, I thought that the influence of Senator Taft and other Republicans in Ohio would be such that Ohio would go Republican and that Illinois would also go Republican. California and Ohio each had 25 electoral votes, and Illinois had 28 electoral votes. Consequently, if any two of these three States had gone Republican, it would have meant that Truman would not have received a majority in the electoral college. California, Illinois, and Ohio all went Democratic in 1948.

Or, if any one of these three States had gone Republican and the States rights Democrats had been able to carry Texas with 23 electoral votes, we would again have had a situation where Truman would not have received a majority in the electoral college. In fact, if both California and Ohio had gone Democratic, but Illinois had gone Republican, then Truman would still have been prevented from getting a majority in the electoral college if any one of the four Southern States of Virginia with 11 electoral votes, Georgia with 12 electoral votes, North Carolina with 14 electoral votes or the other 10 electoral votes from Tennessee had gone for THURMOND. We would have had the same result if Texas, with her 28 electoral votes, and any two other Southern States had gone for THURMOND.

If any of the situations above mentioned had come about, the election of a President would have been thrown into the House of Representatives, with each State having one vote. If a majority of the State delegations in the House had been Democratic, there would have been no chance for a Republican to have been elected President. The House of Representatives would have been limited in its vote for President to the three high men in the electoral college, viz: Truman, Dewey, and THURMOND. Under the Constitution the House of Representatives could not have gone outside and elected anyone other than one of the three high men in the electoral college. If a majority of the State Delegations in the House had been Democratic (and they certainly will be in 1960), the selection of a President would then have been strictly between Truman and THURMOND. The Republicans would not have thrown their votes away by voting for Dewey. If the southern Congressmen had stood by THURMOND, as I am sure they would have done had they seen a chance to elect the first southern President since the Civil War, I doubt if there was a Republican Congressman who would have voted for Truman in preference to THURMOND. In the first place, no one had even been more badly abused than those Republican Congressmen had been by Truman. In the next place, a sound and conservative statesman of the type of STROM THURMOND would appeal much more strongly to the average Republican Congressman than would Truman with his socialistic leanings.

Consequently, the States rights movement came very near succeeding in 1948, and it was far from being a forlorn hope. As one of the noted columnists put it, THURMOND's election "didn't miss by more than an eyelash."

I could not better express the feelings and sentiments of the vast majority of the conservative States Rights Democrats of the South than to quote the very forceful and vigorous language of Texas' great Governor, Allan Shivers. The following is the statement of Governor Shivers:

"In the dignity of our history and the majesty of our manhood we say to the national party: 'We must see the black and white of the platform and the color of the eyes of the nominees. We offer no blind, debasing, humiliating pledge in advance, to accept without murmur whatever may be handed in grudging charity after we have stupidly surrendered in advance and cravenly

thrown ourselves at your mercy.' No, the Democratic Party of Texas, I hope, is to be dealt with in 1952 before, during, and, if necessary, after the national convention in July. I scorn the suggestion that 'loyalty' demands an abject contemptible unconditional surrender in advance to the whims or dictates of any absentee overlords of the national party."

"The self-governing and self-respecting Democratic Party of Texas, which nurtured the still, small light of the party of Jefferson and Jackson for 50 years during which it was extinguished in darkness in the North and East, does not slink or cower, hat in hand, to anybody's back door to make a blind trade of our heritage for a small handout."

Those are magnificent, forceful, fighting, and ringing words. Would that more southerners had shown a like manful, defiant, and fighting spirit when the customs and traditions of our beloved people have been so viciously attacked by those who are so aptly described by Governor Shivers as "absentee overlords of the national party."

Our fight should, of course, be made within the framework of our own party—the Democratic Party of our respective States. No third party should be considered. All we have to do is to see to it that our people are placed in a position where their wishes can be freely expressed in the primaries of their own party. For the present—and probably for some decades to come—our State will in all probability vote the Democratic ticket in the November general election. It is our job to see to it that this Democratic ticket for which we vote is a ticket which represents the voice and sentiments of the real people of the South, and not a ticket forced upon us by the national convention of any party, masquerading as Democrats, when such party has not the slightest conception of what we mean by States rights, the cornerstone of the Democratic Party, as we have known it throughout the years. We do not wish to leave the Democratic Party, but, on the other hand, we are not willing for a group having ideas entirely foreign to our views to take over the party known as the Democratic Party and try to make us—through our party loyalty—swallow ideas and principles which we are unwilling to adopt. All we have to do is to keep our State Democratic primaries open to all Democrats and in these primaries nominate as our candidates for presidential electors for the ensuing general election only candidates who are willing to fight for the principles for which the Democratic Party as we have known it down the years has stood. We can only do this when our voters are free and can express their views at the polls. The voters cannot have a free expression of their wishes if they are to be bound by party rules that force them to vote for candidates who may have different views from their own. The State Democratic executive committees of the Southern States would be pulling off a Russian stunt if, while urging everyone to vote, they would only permit them to vote for candidates for presidential elector who will promise to support whoever is nominated by a national convention in which the smaller States have very little voice. For example, in 1948 we nominated as our presidential electors 11 staunch State rights Democrats. I was among that number and was made chairman of the Alabama presidential electors. When we participated in our party's primary, we took a pledge to support the nominees of that primary in the ensuing general election, and this is exactly what we did. We supported ourselves in the general election and were overwhelmingly elected. Then, in compliance with the promise we had made to the people of our State that we would never cast an electoral vote for Harry Truman or anyone else advocating his anti-segregation programs, we cast Alabama's electoral vote for Thurmond and Wright.

Perhaps it would be well for me briefly to review, especially for the benefit of the younger generation, why it is that for decades past we have had what is known as "The Solid South." We never hear of the "Solid North," the "Solid West," or the "Solid East," and here is the reason. Shortly after the tragic era of the sixties, the Republican Party was in power and that party was headed by such South haters as Thaddeus Stevens who, spurred on by his Negro mistress, wished to treat us as a group of conquered provinces and furthermore desired to Africanize the South. The Republican Party stood for a strong and powerful centralized Government in Washington rather than for home rule, local self-government, or what is more correctly termed State's Rights. While I do not think the group then in control in Washington represented the sober sentiment of the great majority of the people of the North and East, yet they were in power, and had divided our Southland into a number of military districts with a military general over each district, backed up by Federal bayonets. Then came the historical congressional election of 1874, when there occurred an upheaval which neither the politicians nor newspapers had foreseen. The Democrats were swept into control of the Congress by a great victory which was referred to as a "tidal wave." I think that was the origin of the term "tidal wave" which has been frequently used in our political life for the past 75 years. With the Democrats in complete control of Congress, the Thaddeus Stevens group of South-haters who wished to grind our Southland under their iron heels was unable to obtain appropriations of the necessary funds with which to continue the subjugation of the South. The Grand Old Democratic Party, a name I will always revere, honor, love and cherish,—having charge of the purse strings of the Nation, refused to furnish further funds to continue the oppression of our people. The result was that Federal troops had to be withdrawn from the South, as they would not serve without pay. This was the end of "Carpenterbagism" in the South—at least, during that Tragic Era—and our Nation settled down to become the greatest on the face of the globe.

The doctrine of States' rights as guaranteed by the 10th amendment to the Constitution of the United States, was at that time recognized throughout the Nation as the foundation stone of the Democratic Party as our fathers and grandfathers knew it. The Democratic Party, following the teachings of the immortal Jefferson, demanded that each State be permitted to handle its own affairs instead of each State having to take orders from Washington.

We can well understand, when we reflect on this situation, why it is that southern men and women of all classes and of every shade of thought—ministers, bank presidents, engineers, doctors, lawyers, architects, industrialists, office and factory workers, white collar employees of every type, farmers, laborers, and all other southerners—unitedly stood by the Democratic Party as it was then known. It was the party that denounced interference from Washington with the internal affairs of the States and it was only by handling our own affairs, without interference from Washington, that our southern civilization could possibly survive.

From that day down to a few brief years ago, we owed our allegiance to the Democratic Party and we were true, loyal, and faithful in discharging our obligations to the Party that had saved the Southland from destruction. We furnished our electoral votes, year after year, to the party which had meant so much to our people. There are years within the memory of all of us when the candidates for President and Vice President of the Democratic Party did not receive any electoral votes, except those of the Solid

South. But for us the Democratic Party as a national party would have passed into oblivion and disappeared from the political scene as did such parties as Teddy Roosevelt's Bull Moose Party, the Progressive Party, the Populist Party, the Prohibition Party, the Know Nothing Party, and countless other parties whose names flashed across the political horizon for a few brief months or years.

But now, what do we find? We find the party that we of the South admittedly saved from destruction on a number of occasions, brutally turning against us and biting the hand that fed it. No more unscrupulous plan could be concocted by the mind of man for wrecking a civilization than the plan which the anti-South faction of the National Democratic Party devised for no other purpose than to lure the Negro vote of Harlem and the slums of other northern and eastern cities. To this plan they give the high-sounding name of "Civil Rights Program." It should more properly be termed a "Civil Strife Program." By this shameful and conscienceless betrayal of the South, and by this endeavoring to force upon us impossible conditions, they hope to keep the Negro vote of the North and East. Just think to what depths of degradation they have sunk when they are willing to stab in the back those who have on numerous occasions saved their party from complete destruction. It is hard to conceive that such unprincipled political opportunists could live in this great country of ours.

We can well understand why it is that under existing conditions there is no longer the burning desire which formerly existed in the hearts of all southerners to see the banner of the so-called National Democratic Party victorious. To many of us that party is regarded as a group of socialists masquerading as Democrats under the name of "National Democratic Party."

The South has ample "presidential timber" and if the Southern States would pool their political power, so to speak, by a wise use of their electoral votes, I have no doubt that a great southerner can be put in the White House. To mention several of the great leaders of the South who would adorn the office of President of the United States, and whom we could all be proud of, let me refer to such outstanding southern statesmen as HARRY F. BRAD, of Virginia; JAMES B. BYRNES and STROM THURMOND, of South Carolina, both of whom are worthy successors to such great and patriotic South Carolinians as Wade Hampton and the immortal John C. Calhoun; Senator JAMES O. EASTLAND, of Mississippi; Governor Allan Shivers, of Texas; and Senator RICHARD B. RUSSELL and Senator HERMAN TALMADGE, of Georgia. These great southern statesmen are a few of those who have been most active in the fight to preserve the South and its traditions.

I feel confident that if the South will stand together by use of its electoral votes it can control the situation in 1960. Without some part of the southern electoral vote I don't think that the nominee of either the National Republican Party or of the National Democratic Party can get a majority of the electoral votes, and when the election of a President is thrown into the House of Representatives, it is my firm belief that the candidate for President supported by the States' rights electors from the Southern States will be elected, because the House of Representatives will be Democratic. No Republican Congressman, when he saw a Republican had no chance in a Democratic House, would think of such a thing as voting for the nominee of the Democratic National Convention in preference to voting for a great Southern States' rights Democrat of the type of the statesmen above mentioned.

In Alabama and other Southern States there is a very sincere respect and affection

existing in the relationship between the races. We southerners are proud of the fact that we have none of the horrible race riots which have so frequently occurred in the North. There is not an intelligent man or woman in the South, white or colored, who does not realize that this is due solely to the fact that we practice, and will insist upon, the absolute segregation of the races. In Chicago, Detroit, East St. Louis, and other northern cities there have been more Negroes killed in one race riot than in all the lynchings in all of the Southern States in all of the 90 years since the Civil War. Notwithstanding our ideal racial relations in the South, the abolishment of all segregation laws and practices is one of the main planks in the so-called civil rights program.

There is no State in the Union in which the relations between the white people and their colored friends are more harmonious and friendly than in the State of Alabama. In fact, Alabama and other Southern States are the only places on the face of the globe where two entirely separate and distinct races live together, side by side, in peace and harmony. All intelligent southerners, both black and white, well know that this is due solely to our segregation laws and practices now in force and which will continue in force.

The attempt to force upon the South an FEPC law is, of course, nothing more nor less than an effort to break down all segregation practices.

One of the finest tributes ever paid to the southern people was that of the late Senator Borah, one of the really great Republican Senators of a few years ago. In discussing our handling of the race situation, Senator Borah made this statement:

"I shall contend that the southern people have met the race problem and dealt with it with greater patience, greater tolerance, greater intelligence, and greater success than any people in recorded history dealing with a problem of similar nature."

What a pity that men like Harry Truman of Missouri, Hubert Humphrey, of Minnesota, and Adlai Stevenson, of Illinois, could not have the understanding, the intelligence, the wisdom, the fairness, and the knowledge of history that men like Senator Borah possessed.

I appreciate the fact that in 1948 when many southerners refused "to take it lying down" but stood up and fought like men, some of those who made the fight were penalized by bureaucratic Washington by having their patronage taken away from them. As a result of this we now find some of these very officeholders crawling back to Washington, begging forgiveness and promising to be good little boys and never to transgress again. I guess it is the old case of "the burnt child dreads the fire." However, the vast majority of Southerners who are not interested in holding any political job but who are only interested in trying to save our wonderful country before it is too late, are not overawed by the threat of bureaucratic Washington to deny them any patronage. They will vote as freeborn American citizens for what they know is best for their country, unless the small groups constituting the State Democratic executive committees of the respective Southern States adopt resolutions which will compel Democrats to stay out of their State Democratic primaries unless they will first take an oath to support the nominees of the so-called Democratic National Convention even though such nominees openly and defiantly announce their intention to wreck our southern way of life and play havoc with the friendly relationship existing between the races throughout the South by abolishing all segregation.

The large group of southerners to which I belong is frequently referred to by the Trumanites, the Humphreyites and the Steven-

sonites as "Dixiecrats." To me "Dixie" is a grand old name and always will be. I could not possibly have any objection to the word "Dixiecrat" except that it carries with it the idea that the indignant revolt of our people as a result of the usurpation of the powers of the States by the Federal Government, as a result of the wasteful expenditures of public funds, as a result of the creation of countless Federal jobs for the faithful and as a result of the almost unbearable tax burden which has been piled upon the shoulders of all classes of our people, is confined to the South, when, as a matter of fact, this indignation is nationwide. The word "Dixiecrat" is applied to us in sneering and contemptuous tones by the "Patronage Counter Boys"—even by some southerners who are eating out of the public trough—who try to make light of the fight we are making to preserve our civilization.

Let me add that I am confident that there are thousands, yes, tens of thousands, of genuine and worthwhile Americans in States throughout the North, East and West, who believe as we do that the Constitution is the law of the land and that the States should run their own affairs without interference from Washington. A strong States' Rights candidate for President of the type I have above mentioned would be welcomed by such citizens in all sections of our country, and we would undoubtedly receive help from areas of America outside of the South, in our fight to restore constitutional government to our people.

Some of the politicians who wish to whip the South in line try to scare and frighten our Representatives in the Congress—both in the Senate and in the House—by threatening them with demotions on committees, the loss of committee chairmanships, etc. To anyone familiar with the situation this is ridiculous and really silly. The national Democrats, even if the Democrats were in control of the Senate and the House, could not possibly organize either branch without the votes of the southern Democrats. Furthermore, in 1948, none of the 39 Congressmen or 8 Senators who supported Thurmond and Wright were in any manner demoted on committees or deprived of committee assignments. Then, too, threats like this really get nowhere as the average southerner does not scare very easily.

It is my sincere hope that the people of the South will rise up in 1960 as Alabama, South Carolina, Mississippi, and Louisiana did in 1948, and make their voices heard in the electoral college in the selection of our next President and Vice President.

Indignities to Humanity by Red China

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. CANFIELD. Mr. Speaker, the Passaic (N.J.) Herald-News on Saturday, March 19, 1960, carried a page 1 story with the caption "Meyner Proposes U.N. Admit China." Speaking in Los Angeles, Calif., Governor Meyner was quoted as saying:

For if the United Nations can be transformed into an agency with effective powers, then the real question will be, not should Communist China be admitted to membership, but rather what can the world do to make sure that Communist China doesn't stay out.

I find myself in disagreement with this point of view. The country we are talking about is the same one that had the audacity to inflict an outrageous 20-year sentence upon Bishop James Edward Walsh. This was but the most recent of a series of indignities to humanity by Red China.

May we remember these acts and the unheeded protests of Secretary Herter when we consider whether or not such a government should be a part of the United Nations.

Nothing Is Wrong That a Little Money Can't Cure

EXTENSION OF REMARKS OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ULLMAN. Mr. Speaker, I have long been a supporter of an expanded program of range rehabilitation on our public lands. The deterioration of this public asset has not only resulted in hardships for current users of the range, but means that we, as a nation, are not getting the maximum benefit of this important resource. A realistic program of rehabilitating these rangelands is demanded by our traditional multiple use approach to land management. I commend to other Members' attention the following editorial from the Oregon Cattlemen of March 1960:

NOTHING IS WRONG THAT A LITTLE MONEY
CAN'T CURE

(By Cecil L. Edwards)

A 5- to 20-fold increase per acre in forage production could be easily attained if a greater share of the funds received from national public land resources were diverted to restoration of Oregon's public rangelands. In short there is nothing wrong with the Bureau of Land Management practices that a little money couldn't cure. Range restoration experiments have conclusively proven that there are several million acres of Oregon land that will respond in almost dramatic fashion to seeding practices using improved native grasses such as Whitmar's beardless wheat grass (domestic version of famed Oregon blue bunch grass), crested wheat grass and others that have shown adaptability to Oregon range conditions and use. Re-seeding, brush clearing (elimination of sagebrush, rabbit brush and Juniper), development of water holes, building of fences and cattle guards for management control and a carefully planned grass seeding program would do the job. Careful analysis shows that the costs of such a program carried out on a long range basis would actually be a paying investment not only in direct returns to the Government from greater rental fees and increased tax receipts, but also measured in indirect returns that come under the broad complex of applied conservation.

The Bureau of Land Management receives about seven times more money from the sale of natural resources on the public lands than is committed back to the land. True a large part of these receipts are from such non-renewable resources as minerals, gas and oil, therefore it would seem all the more in the public interest and wisdom to literally plough back some of these funds in that

great and ever valuable renewable resource—grass. Nature will then take over and with good management, provide a new crop every year. Oregon is apportioned only about \$225,000 for all range projects that involve some 15 million or more acres. This is a pittance when considered in relation to the chore. Costs of range improvement work varies from \$3 to about \$8 per acre. This is a real bargain when it is considered that in a typical average instance, 4 acres can be made to take care of as much game or as many head of livestock as 20 acres or more are now required to do. An increase in the capacity of ranges is the only practical answer to the ever increasing BLM cutbacks and to the big squeeze being imposed on the cattle industry through accelerating recreational demands. It is suggested that all readers of this editorial whether rancher or conservationist write their Congressman, outline the facts and press for a greater diversion of public land receipts to the improvement of public lands. The rotogravure section in this issue carries a picture story of the Bureau of Land Management in Oregon, its problems and practices. Write your Congressman today.

Address by Dr. Harlan Hatcher at Annual Congressional Dinner of University of Michigan Club

EXTENSION OF REMARKS OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Record, I take pleasure in calling to the attention of my colleagues the following speech by Dr. Harlan Hatcher, president of the University of Michigan. Dr. Hatcher's timely address was made at the annual congressional dinner of the University of Michigan Club of Washington on February 24, 1960:

When the University of Michigan men are gathered together anywhere in the world, they will represent a good share of the leadership in their respective communities and in the business or professions which they serve.

Our reunions in Washington are annual demonstrations of their numbers and their distinction, especially in the field of public service. Once again I salute you, and express the pride of the university in your work and your accomplishments.

I greet you with a truism: this is a fast-moving era. It is hard to keep it in focus or in perspective. You must take some specific benchmark in time, like the prostrate Europe of 1947 and the Recovery Act or Marshall plan bill of April 1948, and measure it against the present prosperity of West Germany and the debate on 12th-year extension of the plan with a budget of over \$4 billion.

Or you weigh the fact that we no longer monopolize the A-bomb, but share it with Great Britain and now France, and are in danger of being surpassed by the U.S.S.R. And we consider the new debate touched off by the missile and space age.

In industry we have only to measure the magnificent General Motors and Ford research centers in their campus settings against these same establishments when I became president of the university 9 years

ago. Pre-World War II plants are largely out of date and have been replaced with new ones making products that were only in the research stage a few years ago.

These are only three random samples of the nature of our changing world environment. You may add your own. They will touch every detail of your personal, community, and national life.

The University of Michigan helps create these changes. It must also respond to the changes which it has helped to effect. There are perhaps a dozen or so pacesetters among the universities in the world today. Without trying to rank them in order of distinction and service, the University of Michigan must accept the honor and the responsibility of being one of them. Our university would have to undergo constant change merely to retain its relative position. It must move aggressively forward to provide the research and training on the rising levels which the safety and welfare of the Nation so urgently demand.

We are having some trouble getting really conscious of the nature of these demands and adjusting to the rising level. We have all been so busy trying to keep up with the needs of our growing children on their way through nursery, kindergarten, the grades, and now the high schools, that we haven't actually attacked the problems confronting the colleges and the universities. We haven't much time, and we can't put it off much longer.

We still seem to think that it is just a matter of some more teachers and classrooms and a TV program to accommodate more undergraduate students in our colleges. It is that, of course, but in this decade and for this generation a baccalaureate degree is only a beginning. It is now roughly the equivalent of a high school diploma in our fathers' day.

Of the 24,000 students now enrolled at the University of Michigan, almost 40 percent already have attained their first degree. On this one thread you may unravel the story of the swift pace of change in our time. And from it you may deduce the problems which we must proceed confidently to solve.

Our present outmoded and inadequate physical facilities bear about the same relation to the present needs in engineering, medicine, music, and dentistry, as the Mack Avenue or Highland Park plants would bear to present needs of the Ford Motor Co. or Kettering's old laboratory to GM's program of modern research.

The University of Michigan is a constitutional corporation with a budget for all operations for the year ending June 30, 1959, of \$92,614,994. Of this amount, \$26,000,224 was spent for research, and \$40,607,583 in the general fund primarily for salaries and wages. This general fund item is the heart and center of our budget.

Of this \$40,600,000, 9 1/2 million came from student fees, and \$30 million as a direct appropriation by the State legislature.

Another vital part of our operation is capital outlay. We were making good progress on overcoming obsolescence and adding urgently needed space for our 16 colleges and schools. But in 1957 the program came to an abrupt halt, and no money has been provided by the State for new construction since that time. The situation has gone from serious to critical in this fast-moving age. Our planned program languishes while our needs mount.

These few facts will help pose the most pressing problem the university has confronted in many years. When and how will we be able to regain our traditional place in faculty salaries to guarantee the retention of, and addition to, our distinguished faculty? When and how can we get started again on building the facilities needed by all units, but especially by en-

engineering and the sciences, by medicine, dentistry, education, architecture, and music?

I understand that about 90 percent of our military striking force is vested in Strategic Air Command. I would say that at least 90 percent of our country's creative force centers in the colleges and universities. And in many critical shortage areas, it resides in a limited number of our ranking universities. They must be nourished and supported. The whole precious future of the Nation depends upon it. How shall we do it?

Under the special stresses of our time, and the resulting American psychology, it has become natural and habitual to turn to Washington and ask for Federal aid for a great variety of services—including some aspects of education.

The American tradition has been, and still is in theory, that full responsibility for education rests in the community, the district, or the State. By and large these local agencies have done a fair job, and in some cases a most outstanding one.

But the problem is big and getting bigger; the needs are now pressing, and becoming critical and national in scope. We have been edging into, or drifting into, or backing into stronger and stronger Federal involvement. Let's take a quick look at the developing situation.

The National Government is already spending heavily for research. The research demands of the country, especially in all aspects of defense, have become as stupendous as they are urgent. The scientific personnel in our universities have been called upon for help. The Federal Government enters into contract with the university for this research service, and the universities have responded, often for patriotic reasons at some expense and sacrifice of mission to themselves. This is now a major assignment in institutions like Massachusetts Institute of Technology, California Institute of Technology, the University of Michigan, the University of Chicago, and the University of California at Berkeley. Ever-increasing sums of Federal money go to the support of this effort. The program has become so intertwined with the institutions that serious consequences would result if this support were suddenly cut off. It amounts to about \$20 million a year at the University of Michigan.

The Government has taken on some major responsibilities in the field of health and medical care for the Nation. Research, medical training, and patient care are expensive. The Federal Government has given substantial aid to medical colleges and schools of public health to provide buildings and laboratories and to support certain programs of training and research. Grants from this source have enabled us to keep moving in the last 2 years at the University of Michigan where we have added to the laboratories of the school of public health, and have built, jointly with the State and foundation funds, a Mental Health Research Institute, and, jointly with private gifts, a laboratory for the college of pharmacy.

The Federal Government helped us build our great new radiotelescope at Peach Mountain near Ann Arbor. It recognized responsibility for helping educate the veterans who had served in World War II and in Korea. The \$16 billions invested in this effort are among the most productive ever spent by the Nation. It has also acted as guarantor for loans for building student housing on a self-liquidating basis.

The Federal Government recently extended still further its responsibility through the National Science Foundation and the National Defense Education Act. It gave some recognition to the teaching staff under the Fulbright bill.

It has also given aid to communities where its activities required a large number of people to take up residence and, therefore, imposed an undue burden upon the established schools, and where its installations removed property from the tax rolls. For many decades it has made substantial appropriations to the agricultural colleges for research and extension services of many types. And, in the days when the Federal Government had something of its own to give away, it granted Government lands to the States to establish schools, and, later on, what are still termed the land-grant colleges and universities. Our great Willow Run Research Laboratories were a gift to the university by the Federal Government as surplus property.

This, together with school-lunch programs, teaching materials, and kindred items, is not an exhaustive list, but a fair sample of the nature, extent, and magnitude of Federal aid to education as it has so far developed.

The one critical final step which has not been taken is a direct appropriation by the Congress to pay professional salaries and to build classrooms and teaching laboratories and libraries on the campuses.

Yet, as I have already pointed out, these two items, the operating budget and the classrooms of all types, are right now among our most urgent needs, and our State legislatures are finding it difficult to finance them.

Should the Federal Government take the final plunge and give aid for these purposes?

One of these days the Congress will have to give an answer to this one. It may not be one dramatic act, but a series of smaller ones that will drift us into a policy.

This is a question that needs the most careful study and appraisal. We need to know what we are doing and why. I will make a few observations on it. Education for the growing child population is a national necessity. Research and training on the advanced graduate and professional level and in certain critical shortage areas has now become equally vital to the United States as a Nation. The traditional interest of the individual States meshes with the new and advanced collective needs of the Union. It is already a serious question whether the single efforts and decisions of each separate State can do what the Nation as a whole must have done. Our few distinguished private institutions which are equipped to serve this need can carry only a part of the load. The responsibilities of publicly supported universities are grave and inescapable.

By and large the States have done well by their universities. But the individual States consider themselves handicapped by the present tax structure and the philosophy behind it. In any quest for taxes the Federal Government comes first. The Congress of the United States can and does levy and collect taxes in Michigan beyond the imagination or practical power of the legislature of the State. The legislature says taxes are already too high, and that other sources of revenue have been preempted by the Federal Government. They may recognize the needs of higher education for staff and facilities but they say they cannot find the money after the Federal Government has taken its levy.

Increasingly the mood of the local units is to cut back or stand still, or to seek aid from the Federal Government. Yet the hard fact remains that the Congress has no money it does not collect from the same people whom the legislatures say it cannot tax further. It is a head-on collision nearing a stalemate. Some accommodation to the dilemma must be found soon.

It seems unlikely that State legislatures will move far enough and fast enough to do what is nationally required.

It is certain that the Nation as a whole must have bold, vigorous, and immediate action to protect its stake in education, particularly on the highest levels where the expense is greatest.

The Congress, therefore, has a limited number of choices. To be exact, it has three.

1. It could make a direct appropriation in some form to help support faculty salaries, to provide laboratories, libraries, and classrooms, and to aid the general operation's budget. Serious problems of philosophy, tradition, law, and administration attend this one. This is the step not yet taken and it has many pitfalls that should be carefully marked and labeled.

2. It could voluntarily and with stated intent relinquish certain sources of revenue, or allocate earmarked funds, to the States on which they could levy for the support of education.

3. It could enter into partnership with the legislatures in determining what joint responsibilities they share on the national and State level, and it could then exercise its more potent taxing power to see that the national as well as the State interest in education is served. The University Grants Committee of Great Britain is one possible form which this solution might take.

A possible fourth choice, that of a hands-off policy, has long since been exercised as we have already indicated.

It is possible that any of these alternatives could be operated within the American tradition of local responsibility and control in education. It is no longer a question of Federal aid, but of how much, in what form, for what purpose.

We cannot permanently drift along in our new world setting without a more rational and assured plan of support for our universities, and we should have a firm and acceptable rationale for Federal participation.

At this point one looks again at our great and wonderful Republic, and the values for which it stands. Our pride in our achievements for our people is matched only by the envy or the determination of other nations to catch up with and overtake us. These countries know that education is the key that unlocked the door to greatness for us. They are emulating us in this. The dividends which they are beginning to reap are gratifying to them.

We may not slumber or sleep or grow complacent. We must press on for the right things. And then we must be willing, after sorting them out and marking their value, to pay for them.

Why are we all working so hard? What do we want to buy with our higher wages and bigger dividends?

Of course we want to buy houses, cars, food, clothes, and other private spending items. We also want to buy education, general health, roads, and reasonable happiness and security for our children, ourselves, and the older members of our families, and for our country.

These services can be had for most of our people only through the group investment principle of individual payments to a responsible operating agency. Unfortunately we have no better label for this investment or purchase plan than the annoying and unlovely word, taxes. This sorry word was disfigured long ago by the arbitrary taxgatherer of ancient and selfish tyrants. It, therefore, has wrapped round it an aura of extortion, of robbery, of seizing the substance of the needy family to gratify the lust of the idle.

We need a new name for our service-purchase plan. Perhaps if we called it our quarterly payment to the Great American Investment Trust Fund we might understand the process better and participate more willingly.

We could advertise it with Securities and Exchange Commission approval as the one gilt-edge, blue-chip, growth-stock corpora-

tion that is guaranteed to hedge us against inflation and yield the highest dividends and richest returns on our investment.

Then we might talk more realistically about the things we must buy for America, and decide more rationally which we shall pay for by private purchase plans, and which and how much we shall buy for the citizens as club members.

The U.S.S.R. resolved this by virtually abolishing the freedom of choice of the individual. Its leaders are quite boastful of their plan of complete state authority and imposed control. They claim that this is the way of progress and the future, and that they will overtake and surpass this "supreme achievement of capitalism" which is America.

I honestly don't think they will. And I think our way of diverse support and individual freedom can meet the challenge. But I shall feel a lot happier about it when we shed a little more of our easy complacency, and face up to the inescapable and demanding fact that we must get on with the exciting and rewarding task of making and keeping our great universities the best in the world. The extra margin that produces greatness makes all the differences in the returns.

Ireland's Day of Joy and Thanksgiving

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. BECKER. Mr. Speaker, I sincerely regret that the editorial taken from the New York paper, the Irish Echo, did not reach me in time to insert on Saint Patrick's Day, March 17. However, in reading this editorial, I was struck with something new and I take the position that it is never too late to pay tribute to Saint Patrick and, therefore, insert herewith the editorial of the Irish Echo written for Saint Patrick's Day, 1960, and commend it to all readers:

St. Patrick's Day is with us again. The world has long recognized it as a day outstanding in the annals of Ireland's contributions to civilization through the medium of Christian culture for hundreds and hundreds of years. The universality of its recognition is unique as a testimony of the world's appreciation of a saint whose influence on Ireland's mode of life changed its whole concept of the eternal destiny of mankind, lifting it to a supreme and sublime acknowledgment of the Heavenly Creator of all humanity.

As a day of joy and thanksgiving for the ineffable and efficacious blessings which St. Patrick brought to Ireland, the 17th of March is, with the Irish race both in the land of its nativity and away from its shores, a day to be observed and celebrated with due cognizance of racial traditions for festive occasions, among which worship of God, that was so dear to the heart of Ireland's national apostle, has priority. That is surely a fitting form of both devotion to God and reverence to the one who made His name a household word in Ireland.

And the Irish-born Gael and those who came among the Gael and adopted the native customs of the race are justified in making St. Patrick's Day an event which is redolent of olden and historic times of patriotism and allegiance to faith and fatherland. In many a far distant land from Ireland its

exiles epitomize those traditional aspects of the country in which St. Patrick was to find so much pleasure and consolation among its people.

THE WEARING OF THE GREEN

The green banner for Ireland's honor
And the shamrock so evergreen,
They are ours here after the manner
Of the land where they first were seen.

Parades in honor of St. Patrick's Day in the United States, and there will be quite a number of them with some of the largest within the environs of this city, will, as customarily, be featured by a general wearing of the green in regalia, banners, flags, rosettes, and uniforms, with an overall display of the shamrock among the paraders. This is what really makes the outdoor celebrations connected with Ireland's great annual festival so attractive and colorful and, most of all, so reminiscent of Ireland.

With the tunes for Ireland's glory,
Flourishing from bagpipe and fife,
Telling us again the story
Of Ireland's patriot life.

There should be no need to remind any person of Irish birth or descent that a green token of some sort should be displayed by that person as a mark of esteem for the commemoration of Ireland's patron saint.

Our Monetary System: How the Tight-Money and High-Interest Policy Affects Small Business and Big Business

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. OLIVER. Mr. Speaker, on two previous occasions I called attention to a series of articles published by the Texas Observer on the subject of our monetary system and on the subject of the Federal Reserve's economic policies which are being effectuated through its manipulations of the monetary system.

Today I want to call attention to the third in the series of articles by the Texas Observer staff.

This article explains some of the reasons for the growth of big business, for the tendency for control of more and more of the country's economic resources to become concentrated into the hands of the giant corporations, and the interlocking relationships between the big industrial and utility corporations and the big financial corporations.

As I have indicated on previous occasions, these articles by the Texas Observer review the record and the activities of the gentleman from Texas [Mr. PATMAN] on the subject of the management of our monetary system, and the articles thus frequently quote our distinguished colleague.

Without reference to this personal aspect of the articles, however, they are informative and challenging. It would seem to me that the grave problems dealt with here are properly the business of all Members of Congress, and I believe that all Members will find these

articles both interesting and profitable reading.

The third of the series of articles is as follows:

[From the Texas Observer, Jan. 22, 1960]

WHY BORROW WHAT YOU HAVE?

WASHINGTON, AUSTIN.—WRIGHT PATMAN, the Congressman from Texas since 1928, is a raging populist, an old-style liberal who distrusts Eastern robber barons and casts his baleful, corrosive oratory against the New York sharpies in what Henry Clay Alexander, chairman of Morgan Guaranty Trust Co., of Manhattan, calls "the always fascinating and elusive subject of money."

PATMAN has never confined his crusades to banking. In 1956, for example, he introduced a bill to graduate the corporate income tax. Corporations receiving net income of \$50 million or less would have received substantial tax reductions (a \$10 million net income company would pay 10 percent less taxes). Corporations with net incomes of \$50 million or more would have paid higher taxes. The government's total income would have been the same.

"If it is fair and just to have graduated tax rates on individual incomes, then it is equally fair and just to have graduated rates on corporate incomes," PATMAN argued. "The tax structures is channeling substantially all of the income available for investment in business growth into a few super-giant industrial corporations, and making them investment bankers. These corporations are rapidly taking possession of all of the productive wealth, yet the result is a slowing down of industrial growth and a disappearance of competition, upon which our historic public policy depends for regulation of the free enterprise system. Small and medium size firms are being squeezed out. If our free enterprise system is to survive, these trends must be reversed."

In 1952, he recited, one-tenth of 1 percent of U.S. corporations had 48 percent of all the net income of the corporations. Nine-tenths of 1 percent of the corporations received 71 percent of all the net corporate income. "We need to check the wave of corporate mergers and consolidations," he told the House.

What happened to his bill?—for it has not been heard of since. PATMAN told the Observer in Washington—as though of a trip to the moon when he was younger and rash—"I couldn't get anywhere on that. I couldn't even get a hearing on it. Perfectly justified—but I couldn't get a hearing."

HIS ROLE IN HISTORY

PATMAN's fights for small business are a part of the history of the United States. In 1936 he coauthored the Robinson-Patman Act, a basic part of the national law against monopoly which is sometimes called the small businessman's Magna Carta. In August 1941, he introduced a resolution calling for an investigation into why small business was not receiving more defense contracts. He was listened to. The House Small Business Committee was created, PATMAN was made chairman, and throughout the war he watchdogged the interests of small business in the defense effort—automobile and tire dealers, hogging of scrap metal by big firms, the black market in meat, defense of price controls, the lumber industry, the independent oilmen.

In 1942 he introduced the bill which became the Murray-Patman Act creating a Small War Plants Corporation with a revolving fund of \$150 million.

Still hard at work on these themes, PATMAN's small business committee, in a 1959 report, struck at interlocking directorates and managements among the major financial and industrial corporations of the country. Conclusions:

"These top financial companies are interlocked with the larger firms of American

industry and finance to a remarkable degree. In fact, the degree to which the top financial companies were found to be interlocked in and among themselves is quite remarkable.

"Of the 135 base companies in the study (the largest companies in each field), 107 shared at least 1 officer or director in common with another of the 135 base companies. Among the 35 commercial banks, 32 were interlocked with 1 or more of the other 135 top companies. Of the 20 mutual savings banks, 19 were interlocked with 1 or more of the other top financial companies. Of the 20 life insurance companies, 18 were interlocked with 1 or more of the other 135 companies. Of the 20 fire and casualty companies, there were also 18. Among the 20 investment companies, 11 were interlocked with at least 1 other company. And, of the 20 investment banks, 19 had interlocks with 1 or more of the other 135 companies.

"Turning, then, to the longer list (1,667) of manufacturing, commercial, utility, and other nonbase companies, it was found that 905 shared directors or officers with 1 or more of the 135 top financial companies."

Last October, speaking to the automobile wholesalers of Texas in Dallas, PATMAN advocated legislation against "predatory pricing" in the car industry and warned against growing concentration of economic power—a key theme of the New Deal dusted off for 1959. He demanded to know why the Republicans had licensed only 35 new companies under the new small business investment company program, for which a bill he sponsored obtained \$75 million in new money. He and Senator LYNDON JOHNSON had coauthored the basic law on the subject, the Small Business Investment Act, in 1958.

Thus PATMAN has been fighting what he regards as dangerous concentrations of business power since his earliest days in Congress. It surprised no one to hear, last month, that he is defending Texas laws prohibiting bank monopolies against a pending decision of the Federal Reserve Board to permit a bank holding company to acquire more voting stock in the First National Bank, of Paducah, Tex.

"I am on the side of small banks, the medium size banks, and all other banks not pursuing a greedy policy," he says. "I am against the greedy big bankers who are trying to continue to monopolize the free use of the Government's credit and have a Nation of only a few banks with branches."

IN A NUTSHELL, DISNEY

PATMAN lay low in the Congress on money and banking for many years, quietly drawing forth facts on the subject in public hearings. Then, in 1943, he appeared as a witness before the House Committee on Ways and Means during a hearing on "Debt Limit of the United States." If PATMAN's views ever prevail on the question of money and banking, or simply if he is right, his testimony on February 13, 1943, was historic.

At this time the national debt was \$135 billion; by the end of the fiscal year 1944, it was to have zoomed to \$210 billion. Enormous war expenditures had to be financed. "The occasion of my appearance before this committee," PATMAN said, "is to make a suggestion about how billions of dollars a year can be saved by Government on this huge national debt."

"My plan is no different from present plans and methods except that no interest will be paid by the Government for a large part of its credit used to finance the war."

He was not, PATMAN said, opposed to interest being paid for other people's hired money; he was not opposed to States, counties, and political subdivisions paying for money they hired. "I am opposed to the U.S. Government, which possesses the sovereign and exclusive privilege of creating money, paying private bankers for the use of its own money," he declared—and the issue was joined, then and there.

"These private bankers do not hire their own money to the Government," he declared. "They hire only the Government's money to the Government, and collect an interest charge annually."

This was admitted, PATMAN said, by the highest monetary officials in the Government and the major bankers. He had been interrogating them for years.

After selling all the war bonds and collecting all the taxes possible, PATMAN said, the Government still needed more money to finance the war. "That money must be obtained through creation; it has got to be created. And my point is that the money, if it has got to be created on the Government's credit, that the people should not have to pay interest on that money that is so created. That is it in a nutshell, Mr. Disney."

PATMAN then defended his bill to authorize the Federal Reserve banks to issue non-interest bearing bonds to finance the part of the war that would otherwise be financed by the Federal Reserve and the commercial banks on interest-bearing Government bonds.

PATMAN was simply saying that the Government was giving the banks its credit and then paying the banks interest for the use of its credit. Congress, under the Constitution, has the right to coin money and regulate the value thereof. Some new money must be created; let the Government create it, and inflation will be retarded by the amount of interest the Government does not have to pay.

"Why should we burden the taxpayers on a \$300 billion debt, when we know they will never be able to pay more than just the interest on it?" he asked. "That means a perpetual debt of \$300 billion. That means that any inflation that we have in that \$300 billion will remain indefinitely, whereas if you adopt a plan of saving the interest on a substantial part of that money, you can reduce it each year by as much at least as you would pay in interest, and then you reduce the inflationary condition each year instead of having it remain the same each year."

MR. DISNEY'S RETORT

The committee chairman, R. L. Doughton of North Carolina, asked PATMAN how the banks could be induced to lend the money without getting paid interest. PATMAN told him, in effect, he just did not understand. The Government-controlled Federal Reserve banks would furnish the money. "Suppose the Federal Reserve banks balk?" "They can't balk. They are an agency of the Congress," PATMAN told him.

PATMAN recited testimony in which Mariner Eccles, head of the Federal Reserve, agreed that what the Government does anyway is create money to buy Government securities. "That is what your money system is," Eccles had said.

"Why should the Government borrow its own credit?" PATMAN pleaded. "If we spend \$300 billion on this war, it will cost about \$8 or \$9 billion a year to pay the interest. . . . In all probability, this is all the taxpayers of this country will be able to pay, and will, therefore, be unable to make any payment on the principal of the debt each year. That being true, all the money that will be raised in taxes to pay on the national debt will go to the people who are using the credit of the Nation absolutely free, and who have had farmed out to them the use of the idle gold free, and the people will therefore be caused to pay a debt that is useless, wasteful, extravagant, and unnecessary."

"The people do not have the money and we have got to create it," PATMAN said. "I don't want the taxpayers of this Nation to pay interest for the next 200 or 300 years. That is the point I am trying to make."

Doughton was not disposed to effect any sudden reforms. "This is a rather sweeping change," he said, "and the committee could hardly be expected to come to a satisfactory decision until it heard all the facts from the people who wish to be heard."

The charge of "greenback" minting and "funny money" was suggested by Representative Harold Knutson of Minnesota. He recalled that he had been in Germany after World War I and had to pay 1,250,000 marks for ham, an egg, and coffee he could not drink. "I am not saying you haven't got a plan, because I don't know enough about it," he said.

PATMAN said the reason Germany had such inflation was their small gold reserve. "It does look to me as though we should be able to find a way of working out this thing without placing too great a strain upon our economy," said Mr. Knutson. "I can't say you haven't got a good plan, Mr. PATMAN, because I don't know."

"We don't have to go to Germany to find out about money or currency," PATMAN rejoined. "Go to the Confederate States of America, after the War Between the States, and you will find currency just as worthless. . . . That is all that is behind money, the integrity of the nation, the ability of the people to pay taxes."

Mr. Disney—Mr. Wesley E. Disney, Congressman from Oklahoma—was heard from, too, the transcript of the hearing, smelling of stockrooms and yellowing with age, reveals.

"I have heard it suggested that would put the Government in the banking business. I have heard that statement in connection with Mr. PATMAN's bill," he said.

Ex-Senator Robert L. Owen, chairman of the Senate Banking and Currency Committee at the time of the passage of the Federal Reserve Act in 1913, replied: "The Government should leave the banking business to the banks, most emphatically, and the banks should leave the governing business and the exercise of sovereignty to the Government," he said.

PATMAN's bill never passed. Today the national debt is only a few billions short of \$300 billion. The annual interest charges, paid out of taxes, have attained \$9 billion a year, the second largest item in the Federal budget. There is no immediate prospect that the necessities of taxing and spending will permit the reduction of the principal of the debt anytime soon.

If PATMAN was right, something is wrong.

The New Textile Products Fiber Identification Act

EXTENSION OF REMARKS OF

HON. LUDWIG TELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1960

Mr. TELLER. Mr. Speaker, the recently enacted Textile Products Fiber Identification Act is a significant advance in the long-established congressional policy of protecting the consumers of our country against deception in the marketing of clothing and textile fiber products.

I believe that the scope and purpose of this act should be set out in the CONGRESSIONAL RECORD in aid of widespread understanding of the beneficial effects of this important law. For this reason, under leave to extend my remarks in the

RECORD, I set out an article on the act written by Alvin David Edelson, a knowledgeable lawyer who has had long experience in the field covered by the act.

The article by Mr. Edelson follows:

THE NEW TEXTILE FIBER PRODUCTS IDENTIFICATION ACT

(By Alvin David Edelson, associate member of the law firm of Noble & Moyle, of Washington, D.C., and formerly trial attorney with the Bureau of Litigation of the Federal Trade Commission)

On March 3, 1960, the Textile Products Fiber Identification Act, enacted by the 85th Congress on September 2, 1958, became law. Because of the vast commercial field covered by the act and, of course, the fact that in finality such acts are drafted by lawyers, the Textile Products Labeling Act will raise a large number of complications, both legal and commercial, and present to the lawyer and businessman who must deal with it, the usual difficulties. This article will not attempt to treat the question of the advisability or the desirability of the new textile act. The act, like its predecessors, the Fur Products Labeling Act of 1950, and the Wool Products Labeling Act of 1939, will, judging by the experience of the mammoth growth of a permanent body of administrative law, be here to stay. The businessman must live with it, the legal profession, both governmental and private, will mold it. But for the somewhat harassed businessman, beset with hundreds of governmental regulations, this article will attempt to give a rough and broad outline of problems to be encountered.

COMMERCE AND JURISDICTION

Of primary interest to the businessman, of course, is whether or not the act pertains to him. Generally speaking, since the act defines a textile fiber product as: "(1) Any fiber, whether in the finished or unfinished state, used or intended for use in household textile articles; (2) any yarn or fabric, whether in the finished or unfinished state, used or intended for use in household textile fabrics; and (3) any household textile article made in whole or in part of yarn or fabric," excluding products subject to the Wool Products Labeling Act of 1939, nearly any businessman in the textile field, including retailers, will be covered. Since even the layman is well aware that national governmental, including Federal Trade Commission, jurisdiction must depend upon interstate commerce, it may be well to get into this aspect now as laid out in the act, and show its relation even to the usually immune small local intrastate retailer.

The Textile Act, like its predecessors, the Fur Products Labeling Act and the Wool Products Labeling Act of 1939, has, in addition to the standard commerce clause, specific commerce clauses as defined in section 3(a-d) of the act. Section 3(a) of the act covers "the introduction, delivery for introduction, manufacture for introduction, sale, advertising or offering for sale in commerce, transportation or causing to be transported in commerce, or the importation into the United States of any textile fiber product which is misbranded or falsely or deceptively advertised." As can be seen, such a clause would not only cover the intrastate manufacturer but could cover an intrastate manufacturer who delivers to a buyer who subsequently sells interstate. Further, advertising in commerce by itself would create jurisdiction. Since almost all newspapers have interstate circulation, the placing of an advertisement not in conformance with the act would by definition in section 3(a) invoke Federal Trade Commission jurisdiction. Thus, as those who are familiar with the Fur and Wool Acts are undoubtedly aware, the Textile Act is similar in its attempted approach to jurisdiction. In legal parlance, section 3(a) might be termed a "stream of

commerce" type jurisdiction; and although such jurisdiction as relating specifically to the Commission's labeling acts has not been strongly tested, the principle as was developed in the General Motors and Ford Motor Company cases has been strongly established. Thus, for lawyers who relish that big constitutional question, which at a single blow wipes out an entire administrative function; and for the businessman who looks forward to it simply from the point of view that it is one less headache to deal with, section 3(a) presents poor prospects, save perhaps from a few hypersensitives within the administrative circle itself. Thus, as all-inclusive as is the net which hangs from section 3(a), its inclusiveness would appear to be of most proper legality, and indeed by modern-day standards should not startle the lawyer or businessman. But, as pointed out, section 3(a) is but the beginning of a large legal pincer movement and is followed by an even more extensive, section 3(b).

Section 3(b) covers "the sale, offering for sale, advertising, delivery, transportation or causing to be transported of any textile fiber product which has been advertised or offered for sale in commerce." As the reader can readily discern, the process of jurisdiction is based on the fact that articles have been tainted in commerce by advertisement or offer. This proposition has not been tested in the courts, but it appears of small likelihood that it will be, as it strikes at a somewhat unusual situation. However, from the businessman's point of view it means that he will be held to the act if he handles goods which have been previously offered in commerce or advertised in commerce. Thus, local intrastate businessmen run the risk of violating the act by not knowing the history of the goods they are dealing with. For instance, a businessman buying goods advertised previously by the seller in the Chicago Tribune, which seller did not label such goods in accordance with the Textile Act, would be in violation as the goods have been tainted by commerce as defined in section 3(b). Since the Chicago Tribune has a substantial out-of-State circulation, the goods have a history of being advertised in commerce. The lesson here would appear to be: Know the history of your merchandise.

Section 3(c) of the Textile Act closely resembles section 3(b) of the Fur Products Labeling Act; but if anything spells its traceback jurisdiction in bolder and clearer terms, section 3(c), covering "The sale, offering for sale, advertising, delivery, transportation, or causing to be transported after shipment in commerce, of any textile fiber product whether in its original state or contained in other textile fiber products"; is mammoth in its jurisdictional scope. As can be seen, it, like section 3(b), is a traceback type jurisdiction hinging its jurisdictional base on the history of the goods. The businessman will have easily guessed at this point that section 3(c) will virtually cover almost every retailer of soft goods in the United States. Or more simply seen from the reverse side, a retailer, in order not to be in commerce under this clause, would have to receive all of his textile products from manufacturers located in the same State as himself. Naturally, even if such a retailer exists, he would have to avoid the pitfalls as already outlined in sections 3(a) and (b). Thus, as the act is written, even the usually immune small local retailer will undoubtedly fall subject to its provisions.

The constitutionality of this type clause has not seriously been tested. Under the Fur Products Labeling Act, a case was decided in the Ninth Circuit Court in California, *Pelta Furs v. Federal Trade Commission*. But the case, while purportedly covering the point in part, appears to really have missed the mark. Its comments on traceback jurisdiction

really amounted to dicta, as an actual sale in commerce was in evidence in that case.

Thus, in the final analysis, if all parts of the Textile Products Labeling Act stand, the businessman, unless confined to local trade and advertising and local source of supply, will fall subject to its jurisdiction.

LABELING PROVISIONS

Having determined one is subject to the jurisdiction of the Textile Products Labeling Act, what happens then? The labeling provisions of the Textile Act are very similar to the Wool Products Labeling Act of 1939. Section 4(a) makes it a violation of the act to falsely or deceptively stamp, tag, label, invoice, advertise, or otherwise identify a textile fiber as to its constituent fibers. This provision is relatively simple. One cannot call rayon nylon. Thus, section 4(a) is strictly prohibitory in nature. For instance, just as in the Wool Products Labeling Act, failure to place any label on a product at all would not be covered by section 4(a). This situation would be covered by section 4(b) of the act which sets out the mandatory requirements for labeling, invoicing, and advertising.

Section 4(b) requires the textile products to be labeled or tagged, and to disclose the following information: "The name of each fiber which constitutes 5 percent or more of the product with each name being given equal prominence, and the names appearing in the order of their predominance by weight." What this means, quite simply, is that if you have a raincoat composed of 30-percent nylon, 20-percent rayon, and 50-percent acetate; the order of names on this label must be acetate, nylon, and rayon. This principle of disclosure by order of predominance, in fact, has been insisted on by the Commission under section 5 of the Federal Trade Commission Act, and was actually litigated in the *Cannon Mills* case (Docket No. 7115). In fact, it was litigated on behalf of the Commission by this writer. Previous to that, the principle was strongly entrenched in the Commission's trade practice rules for the rayon industry. If a fiber or fibers compose less than 5 percent of the product, it cannot be designated by trademark or generic name, but only as "other fiber or other fibers," thus, 70-percent nylon, 26-percent rayon, 4 percent other fibers. Nondeceptive trade names may be used in conjunction with a generic name. As in the Wool Products Labeling Act, one can designate ornamentation as: "All nylon exclusive of ornamentation"; "All rayon, 4-percent silk ornamentation." Further, as in the Wool Products Labeling Act, ornamentation is limited to 5 percent of the total fiber weight of the product.

If one is tempted to think that the requirements of section 4(b)(1) are mere technical trivialities, the history of proceedings under the Wool Products Labeling Act and the Fur Products Labeling Act should discourage such approach. Lawyers defending clients before the Federal Trade Commission and thence to the courts have found the so-called de minimus arguments to be given short shrift.

Section 4(b)(2) of the act is again very similar to the Wool Products Labeling Act. It requires setting out the percentage of fiber by weight. Thus, one cannot set out 50-percent nylon, 30-percent rayon, and 20-percent cotton. A percentile must thus always precede the fiber name. The prohibition against setting out generic names in front of a fiber or fibers which compose less than 5 percent is reiterated in this section. Perhaps it would be as well to advise the reader that this appears to be a sore point with the Commission. It undoubtedly has resulted from the irresistible temptation of the advertiser to put his best foot forward, even though it might only be a toe or, more

closely, a toenail. Needless to say, the act covers the situation, and a label attempting to proclaim the wonderful virtues of a below 5-percent material will be in trouble.

LABELING TOLERANCE

Provision is made in the act for deviations under allowable tolerances. Under rule 43 (a), a tolerance of 3 percent has been established, add or subtract. If you have an actual 38-percent nylon, 35 or 41 percent will pass the mark. Past this point, the burden shifts to the manufacturer to prove unavoidable variations in manufacture despite due care. The crucial point to remember is, of course, that the burden has shifted, and the manufacturer is put to proving his case. Where representations are made that a fiber is composed of but one material, such as "all nylon," tolerances of any sort will not apply, save as to ornamentation. A 3-percent or even a 1-percent deviation under such circumstances is a violation. As can be easily seen, a manufacturer, not certain of the history of his goods and with bad or clumsy records, will have a difficult time complying with the law, despite the best intentions. Indeed, such was often the case under the Wool Products Labeling Act.

IDENTIFICATION OF PERSONS RESPONSIBLE ON LABELS

Section 4 of the act requires the name of the manufacturer of the product, or one or more persons subject to section 3, with respect to the product. Such a requirement is usually not difficult to comply with, save that the big retailer usually runs into trouble during his substitution of tags. The nemesis here is the carelessness of employees making substitutions. This provides a constant headache for the large retailer. The Commission's point of view appears to be that goods when exposed to the customer must provide that customer with all required information. Goods exposed to the customer for long periods, waiting for tags to fill empty places, would appear to be waving the flag at the bull.

FOREIGN DISCLOSURE

Section 4(b) (4) requires foreign disclosure. That is, the name of the country where the product was manufactured and processed. Foreign disclosure not only permeates the Wool Products Labeling Act and the Fur Products Labeling Act, but has a long history with the Commission under section 5 of the Federal Trade Commission Act. It perhaps can be considered a sore point, as it goes back to high-pitched emotional feelings of a less-sophisticated America. But with the Federal Trade Commission the principle seems to be firmly established in law; regardless of the fact that people no longer consider imports from Japan as "junk" nor imports from Germany as "tops." Needless to say, one must view the foreign disclosure requirement with great care.

ADVERTISING

Like the Fur Act, but unlike the Wool Act, the New Textile Products Labeling Act has specific provisions covering advertising. Indeed, the Wool Products Labeling Act does not cover advertising at all; misleading advertising of wool products has been, and continues to be, charged under section 5 of the Federal Trade Commission Act.

Section 4(c), which controls the advertising of Textile Products, is a bit peculiar in its effect, as it is what, one may term, quasi-mandatory. Section 4(c), for example, requires that all information required under sections 4(b) (1) and 4(b) (2) be contained in the body, heading, or other part of the advertisement, except that percentages need not be shown, if any disclosure or implication of disclosure of fiber content is made. The requirement would appear to come into play if a disclosure or implication of disclosure of fiber content is made. Of course, if no disclosure or implication of disclosure

is made, the advertisement goes unaffected by this act. The difficulty is immediately seen in the term, "implication of disclosure." This is defined in rule 40 as "terms in written advertisements which are descriptive of a method of manufacture, construction, or weave, and which, by custom and usage, are also indicative of a textile fiber or fibers; or the use of terms in such advertisements which constitute or connote the name or presence of a fiber or fibers." This would appear to indicate that terms such as satin, tweed, plaid, and the like, are sufficient to invoke the section. Secondly, the advertising terms developing from day to day would do likewise; Satiny, Nylonette, Rayex, and those other ingenious devices of the advertising copy man. This act will not outlaw the terms which imply, or the disclosure, but once such terms are used, the information as required in sections 4(b) (1) and 4(b) (2) must become part of the advertisement. Rule 40 is broad, and administrative experience might well have foretold that it would be. The Commission, rather than attempt to set out every name at the onset, has chosen to wait, and pick and choose amongst those that are developed. Instead of outsmarting the ingenuity of the industry, the Commission appears to have wisely chosen to out-wait them.

More liberal, in a small respect, is the fact that Section 4(d) does allow the placing of additional information above that required on stamp, tag, label, or other identification in advertisements. This is not allowed under the rules of the Fur Products Labeling Act and the Wool Products Labeling Act.

SPECIAL LABELING SITUATIONS

Also, section 4(e) of the act provides that each textile fiber product contained in a package need not be labeling if the sale is intended in package form for the consumer, and the package carries a stamp, tag, or label equally applicable to each product in the package. While this would appear to be sufficient for a manufacturer or other person who intends final sale in package form, one who breaks the package for individual sales has the responsibility of full labeling requirements as provided in rule 28. In the case of, let us say, sheets in a package, disclosure on the box is sufficient to cover sale if the package is sold. Breaking up the package and selling the sheets individually means labeling. As can be seen, the problem here will probably be one for the retailer who will, in most instances, demand labeling of individual items regardless of whether packaged or not.

The act by virtue of section 4(f) makes allowances for severance from bolts, pieces, and rolls. Tags on the bolts, pieces, or rolls will serve to cover sales of pieces cut from these. There is provision, however, that a representation of such a portion as containing a different fiber percentage than indicated requires labeling. In actuality, this portion of the act should not provide too much difficulty, providing the representation to the retailer is not out of line.

USE OF FUR NAMES

Of great interest to the trade, and especially the retailer, should be the fact that the Textile Products Labeling Act covers the use in advertising of any fur name or fur note fur. Section 4(g) of the act prevents the use in advertising of any fur name or fur symbol which is not a fur or fur product within the meaning of the Fur Products Labeling Act. This, naturally, creates a bit of a headache. Fur names permissible under the Fur Products Labeling Act are listed in the Fur Products Name Guide. Thus, the familiar pitfall of using improper animal names, under the Fur Products Labeling Act, will be present under the Textile Act. Once again, the principle problem will no doubt occur at the lower echelon of employees; and the familiar examples of viola-

tions such as Persian, instead of Persian lamb, Mouton, instead of Mouton-processed lamb, and the like, will haunt the department manager. A textile product containing the hair, fiber, or blend of an animal may be described as such, but only as rabbit hair, or the like. The attempt to use that much better sounding, but incorrect French word Lapan hair, will be "verboten."

If instruction under section 4(g) of the act appear somewhat stringent, the rule covering this section is more so. Rule 9(b) prevents the use of the name, or part of the name of a fur-bearing animal, whether a single word, a combination word, or any coined word, which is phonetically similar to a fur-bearing animal name, or which is only a slight variation in the spelling of a fur-bearing animal name. The Commission sets out examples: "Ermine," "Mink," "Persian," "Broadtail," "Sabelon," "Minx," etc. It is well to remember these are only examples. The stringency of the statute in regard to fur names appears to have grown directly out of the Commission's experience under the Wool Products Labeling Act and the Fur Products Labeling Act. Undoubtedly this section will receive heavy play at the investigative level, as it will enable the Commission to enforce a principle that it has thus far been unsuccessful in enforcing under section 5 of the Federal Trade Commission Act, as witnessed by the Elliot Knitwear case: "(Cashmora), where the advertiser advertises 'Cashmora contains no Cashmere'."

Needless to say, the ingenious devices of the advertisers will be seriously hampered by the act; but in large part, it probably the advertising in the industry that is most likely responsible for the interest created in legislation in this field.

HANDLING AND DESTRUCTION OF LABELS

Section 5 of the act provides for protection against mutilation or destruction of labels, and makes such, a violation of the act. This appears to be a supersafeguard against an event rarely occurring and would not appear to be a real problem to the legitimate businessman. However, with the extensive jurisdiction which is the Commission's under the Textile Act, the new large number of previously introduced businesses might spotlight a few of the more colorful merchants. As the story goes of an aroused housewife in Los Angeles who purchased a pen and pencil set, a ladies pocketbook, and a mink coat for \$35, and duly registered her complaint that the mink coat was not in fact mink. "That's right," said the merchant, "but what's she complaining about, I only made \$10 on the deal." So can be expected a host of similar tales.

SUBSTITUTION OF LABELS

Section 5(b) (1) and (2) allows for persons carrying duly registered identification numbers to substitute labels meeting 4(b) (2) requirements for labels already on the product. The Textile Act, like the Wool Act, and the Fur Act, allows for the use of substitute labels. This, of course, is of benefit to the large retailer who prefers his personal label on the goods. But as can be imagined, introduces a number of headaches. Carelessness of retailers in making correct substitution has caused a great deal of difficulty under both the Fur and Wool Acts. The fact that de minimis is no argument under this act, coupled with such carelessness, could well spell trouble. It would appear that continuing supervision in this area is clearly indicated. The "I didn't know" defense has never availed too well, and would appear to be growing steadily less persuasive.

BREAKING PACKAGED GOODS

Section 5(c) provides that breaking a unit label package will require labeling the individual units so sold. This is a retailers problem; and it would appear that, if the retailer has any idea that packaged units, al-

though intended for sale in such forms, will in all probability be broken by him, he would best have all units labeled individually before accepting them.

RECORDKEEPING

As can be expected, the Textile Act will provide some of its worst headaches in the area of recordkeeping. It can well be expected that this area will be viewed closely by the Commission, as it undoubtedly will be the Commission's greatest means of enforcement. Recordkeeping is covered by section 8 of the act. Section 8(a) requires every manufacturer, subject to the act, to maintain proper records showing the fiber content, as required in the act, of all products made by him. Such records must be kept at least 3 years.

Section 8(b) provides that persons who substitute labels pursuant to section 5(b), such as retailers already discussed, shall keep records showing all the information on the discarded tags and the name or names of the person or persons from whom such textile product was received. These must likewise be kept for 3 years.

Section 8(c) makes the failure to keep records, as outlined above, a violation of the Federal Trade Commission Act; an unfair method of competition and an unfair or deceptive act and practice. However, the area of recordkeeping can run into deeper waters. It would appear that willful falsification of records under the act would clearly violate section 10 of the Federal Trade Commission Act, which is a criminal offense calling for a fine of from \$1,000 to \$5,000 and imprisonment for, from 1 to 3 years. Complete failure of recordkeeping results in administrative action; willful false recordkeeping, into a criminal offense. Section 6 of the Textile Act is implemented by rule 39, which more clearly spells out the details.

Rule 39(a) requires maintaining records by the manufacturer, irrespective of whether a guarantee has been given or received. While a guarantee protects the person it is given to as to representations made on its contents, it does not relieve the person from recording in the regular manner. The rule undoubtedly was made to enable the Commission to get behind each and every transaction and trace it to its source. As in the Wool Act, undoubtedly the Commission will prove many of its cases by records rather than in the laboratory.

Rule 39(a) (1) and (2) spell out just how records are to be kept. Rule 39(a) (1) calls for the percentage of each fiber placed in each style, lot, or description as applicable to the textile fiber product of such manufacturer in the form of a fiber, yarn, fabric, or other form. Thus, the fiber is picked up in the cradle and followed to the grave, as 39(b) (1) calls for some means of identifying the records with the textile product to which they relate. In addition, virtually all data pertaining to raw stocks including correspondence must be kept by the manufacturer.

Experience under the Wool Act and Fur Act would indicate that records are of paramount importance; and, of course, section 10 of the Federal Trade Commission Act, already referred to, demands they be treated with more than casual attention.

NEW FIBERS

If the new Textile Act is broad in its coverage by inclusion of a new vast multitude of numbers, it is peculiarly unequalled in its power under section 7(c). The Commission's power under this section, supplemented by rules 6 and 7, almost amounts to licensing power. In this respect, the Commission departs from the largely prohibitory Wool and Fur Acts. Under section 7(c): "The Commission is authorized and directed to make such rules and regulations, includ-

ing the establishment of generic names of manufactured fibers, under and in pursuance of the terms of the Act as may be necessary and proper for administration and enforcement." While it is true that the Commission was authorized under the Fur Products Labeling Act to establish a Fur Name Guide, it was hardly expected that any new animals would be discovered, at least on earth. The textile industry, of course, presents an entirely different picture. New textiles have, in recent years, developed to an enormous extent; nylon, rayon, acetate, etc. If the Commission has interpreted the act correctly, witness rule 6(a), it now sits in judgment on newly manufactured textile creations and, in fact, determines if they are new. Rule 7 is in fact a name guide covering manmade fibers, defining them in terms of chemical formula and weight.

Rule 8 provides a real base for establishing a generic name for a new fiber. This provides for an application in writing, which gives, broadly speaking:

1. Reasons why the product should not fall under one of the names as set out in rule 7.
2. The chemical composition of the fiber.
3. Suggested names for consideration as generic.
4. Other pertinent data.
5. The proposed market date of the product.

Under the rule, the Commission acts in 60 days or devises or assigns a symbol, pending further consideration. The rest of the rule reads as follows: "After taking the necessary procedure in consideration of the application, the Commission in due course shall establish a generic name or advise the applicant of its refusal to grant the application, and designate the proper existing generic name for the fiber."

The rule is peculiar in two respects. First, the Commission in naming a new fiber, not only purports to judge if the fiber is new; but even if the Commission does find it new, the Commission appears to have reserved the right to name the fiber itself. Suggested name of the manufacturer appears to be just that suggested. Secondly, and coupled closely with this fact, is that no criterion has been set up under this rule to establish why the Commission can refuse a manufacturer's generic name if the manufacturer has in fact produced a new fiber. It would certainly appear that the Commission has brought itself squarely into the realm of property rights with rule 8. Further, it would appear that the rule as read might well be void because it either extends past the intent of Congress, or if not allows deprivation of property without due process of law. This is patently obvious because the rule as read allows the Commission to establish its own generic name without question. Since no criterion are cited, a theoretical situation can be used where the Commission could act arbitrarily and capriciously and still be within the letter of its rule. There is, in fact, presently a manufacturer bringing suit against the Commission to challenge the Commission's denial of a new generic name. *Courtlands (Alabama) v. Federal Trade Commission, et al.* This suit, however, does not reach this point because the Commission has denied that the fiber involved is new. But the battle might well shape up. It is one thing to list names of fur-bearing animals. No one owns these names or created them. But, isn't it another to insist on the right to establish names which reflect the work and creativeness of new man-made fibers. Thus, aside from the question of deception, it appears to this writer that Congress and the Commission both might have exceeded the bounds of the Constitution. That is, it might well be that Congress did not have the power to give and the Commission the right to establish generic names in the first place.

It appears to this writer, at least, that such is the case. Certainly where no relation can be shown to deception, one really wonders precisely what section 7(c) is hinging on. Undoubtedly, this portion of the statute of the rule involved here will be tested sooner than any other provision, and those who are interested will find out.

INJUNCTIVE POWERS

As under the Wool Act, the Textile Act gives the Commission injunctive powers wherever the Commission has reason to believe that any person is about to perform an act which would violate the Textile Act. For some reason the Textile Act does not, as the Wool Act does, give the Commission condemnation power.

Injunctive proceedings under the act are covered by section 8. Under this section injunction may be sought and held in effect until final administrative determination by the Commission, or final disposition by the court on review. The injunction obtained by the Commission under this section goes against the act and not the goods. For example, goods may continue to be shipped, but failure to label properly, or to invoice properly, or other violations named in the injunction, means disobedience to court order and, of course, is punishable as contempt. Injunctive power is one of the Commission's most powerful weapons. Under the act, the Commission can bring such suits in its own name, and does not have to liaison through the Justice Department. Thus, the Commission can act with relatively fast speed. Of course, the possibility of swift punishment, vis-a-vis, contempt of court, before the case is ever touched by administrative process, gives the Commission an advantage it does not enjoy under section 5 of the Federal Trade Commission Act. There is little question in this writer's mind that the Commission is far more potent under its Fur, Wool, and Textile Acts, than it is under section 5. Yet section 5 was initially created as the heart and core of the Federal Trade Commission. If anything, the injunctive power of the Commission will certainly go a long way toward the Commission making itself felt in industry in an unprecedented manner, and perhaps might spell a revision in the future to grant such powers across to the boards to all acts administered by it.

FOREIGN IMPORTS

The difficulty of American goods complying with the act, and imported goods not doing so, has been contemplated under the act by section 9. This section requires that imported goods meet the requirements of section 4 of the act, and further prohibits companies from falsifying or perjury invoices. Such falsification or perjury will allow the Commission to ban such companies from importing, save by filing bond with the Secretary of the Treasury in an amount double the value of the products. Despite this section, imported goods improperly labeled may be expected to give trouble, where proof of mislabeling must depend upon records rather than laboratory techniques. This would be so, quite naturally, because of the inaccessibility of such records. This problem is still a headache under the Wool Act because of the fact that no laboratory technique has been sufficiently developed which can determine the difference between wool and so-called reprocessed wool. However, where chemical determinations can be made, the problem dissipates; and, of course, chemical techniques on manufactured fibers should not be difficult to determine. If this proves not to be so, however, the American manufacturer will find himself once again the victim of his country's own good business practices.

GUARANTEES

As in the Wool and Fur Acts, the Textile Act provides for the protection of the busi-

nessman vis-a-vis the guarantees. However, mere provision of guarantee is not enough. This is covered by section 10 of the act. This provides that a person shall not be in violation of the act if he receives a guarantee in good faith, signed by and containing the name and address of a person in the United States by whom the product was manufactured and received from, and which states the product is not misbranded or falsely invoiced.

The key here is good faith. It can be expected that a person, for example, could not receive goods which have patently obvious defects, and rely on his guarantee. In short, the experienced businessman cannot, because of the guarantee, express the state of mind of a housewife. Good faith will be within the realm of reasonableness of business experience. It is doubtful that a man in the silk trade 20 years can assert a guarantee as a defense to linen being labeled as silk.

Three types of guarantees are provided for under the act. A specific guarantee covering a shipment or series of shipments, in which case the guarantee appears on an invoice or other relating paper. A continuing guarantee from the seller to the buyer covering all textile fiber products sold between the two, as between a manufacturer and retailer; and a continuing guarantee filed with the Commission by the guarantor, covering all textile fiber products handled by the guarantor. Under the rules, a separate guarantee may be given in reasonable form, and rule 36 provides suggestions as to how the guarantees shall be made. The continuing guarantees, however, from seller to buyer, are mandatory and not suggestive. These must be used as set out in rule 37. As can be expected, continual guarantees with the Commission also require mandatory forms and are set out in rule 38.

It can well be expected that guarantees will be a sore point with the Commission. They go to the integrity of the entire act; and furnishing false guarantees is a violation of the act under section 10(b). A person guaranteeing on the basis of a guarantee will not be guilty under this section. But again, good faith is the crux of a successful guarantee defense.

CRIMINAL PENALTIES

Like the Wool Act and the Fur Act, the Textile Act contains criminal provisions. These are not to be taken lightly. This is covered by section 11(a) of the act. Willful violation of sections 3, 5, 6, 9, or 10(b) is a misdemeanor, punishable by a fine of not more than \$5,000 or imprisonment of not more than 1 year or both. The key here, is "willful." This concept does not include carelessness, occasional slips, and the usual trivial type mistakes, but calls for a definite and knowledgeable intent. This definite and knowledgeable intent, however, may be inferred from the circumstances. Unlike the injunctive power granted to the Commission under the act, the criminal provisions of the act call for the Commission's certifying all pertinent facts to the Attorney General; and if the latter concurs, he shall cause appropriate proceedings to be brought. From experience under the Wool Act and Fur Act, such proceedings are much slower than injunctive proceedings; but if increases in personnel is granted to the Commission, it may well be that increased activity may take place in this area. The weight of this section will most likely fall more toward the manufacturer than the retailer, as it appears an economic fact of life, in our times, that very often the retailer does not really know the quality and composition of his merchandise, and has become strictly a brand man. This would appear especially so in some of the larger retail chains. The lesson, if any, appears to be the exercise of due care and ordinary business judgment.

EXEMPTIONS

Exemptions of various types of articles of manufacture, and incidental articles, are set out in section 12 of the act. The important point to remember here is that this exemption is lost if any representation as to fiber content of each article is made in any advertisement, label, or other means of identification. By representing, the act is invoked. Provision is made under this section as well for the Commission to exclude other textile products on the basis of lack of necessity of the protection of the ultimate consumer, and insignificant textile fiber content.

SUMMATION

In summing up, as the Federal Trade Commission goes, the Textile Act is one of vast and sweeping powers, for the reason that a mammoth number of businesses will be suddenly required to perform mandatory functions to be policed by the Commission; and for further reason, that the act contains injunctive powers and criminal penalties. Strangely enough, the Commission can with this simple Labeling Act hit harder, faster, and more effectively than it ever could under section 5 of the Federal Trade Commission Act or the Clayton Act. The act does not provide the built-in defenses of the Robinson-Patman Act or the long established decises and rational of section 5 of the Federal Trade Commission Act. If defenses are developed, they will have to be new, and created from everyday circumstances. Fortunately, methods of procedure, including administrative hearings, rights of appeal, and the like are part of this act, as this act is part of the Federal Trade Commission Act. But it would be useless to pretend that the businessman has not been beset with yet another onerous burden of governmental regulation.

The act is concerned with technicalities, and this voids the screen represented by the businessman's favorite phrase, "a mere technicality." Its primary essence in being appears to be to keep the ultimate consumer informed to pinpoint accuracy. Whether or not the ultimate consumer really wants to be so informed, or what his real preferences are, is now a moot question. Whether the act is really a good thing, is also for the time being, moot, as is whether its purpose will be served. For the businessman, it is here.

How Much Water?

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I wish to insert in the Record an editorial from the Central Oregonian of March 17, 1960, published in Prineville, Oreg. It deals with a topic which has traditionally been of vital interest to westerners, and which is becoming similarly important to people all over the Nation.

The article follows:

How Much Water?

By 1980 the United States could be a water-shy nation if proper forethought, planning, and action are not taken to stop waste, pollution, and other misuses of this valuable resource.

This warning was sounded recently by Roscoe Flemming, special correspondent for the Christian Science Monitor.

"The 250 million or more Americans of 1980 will need usable water in huge new drafts, for new uses and thirsty industries," Flemming says. "The Nation's needs for fresh water have doubled each quarter century. And the pace grows faster."

One of Flemming's first concerns is for those communities who are seeing the door of opportunity slowly close because of the lack of this one resource. Those communities with a large, sure supply of fresh water lose no opportunity to brag of it as first among their attractions for new industry.

In Crook County, where the city of Prineville has applied for additional water from the Crooked River project for (among other things) industrial purposes, it is fast being learned that water is the resource necessary to develop all others, so the country must provide usable water in advance of all other resource development.

Yet, with the importance of water such as it is, people largely refuse to become concerned—as long as water comes out of the taps. Flemming points out that as a people Americans have been spoiled. They get worked up about water only when the well runs dry or conversely, in time of flood.

The average irrigation farmer, according to Flemming, pays about one penny for a thousand gallons, or more than four tons, delivered all the way from the mountains to nourish his crops. If he has to pay more he grumbles that he cannot make a living at the high cost of water. This is quite often true, he agrees.

The big fact about the U.S. water supply is that nature still provides much more than the Nation could consume, but that with present means, only a fraction of it can be utilized. Most water is still wild, captured in the hills like an animal, leashed, and led to where it is put to work.

What are some of the things to worry about regarding our water supply? In a normal year rainfall in the United States supplies about 5 billion acre-feet of water. The Nation, however, actually loses about 10 percent of this. Of this 5 billion acre-feet, about 70 percent becomes runoff from which man dips for his needs. But so far he is dipping about one-third—the rest is so distant from where he needs it, or is otherwise so unavailable that it costs more than it is worth.

Flemming points to the Nation's 2 million manmade reservoirs as another source of water. Pertaining to dams, U.S. Geological Survey experts say that it gets more expensive in each basin in proportion to the amount of water usefully stored, until at last it will become uneconomical in all basins. Even now, the United States pays in terms of water lost to evaporation from such artificial reservoirs alone at least 33 million acre-feet yearly.

Turning to ground water, there is many billion acre-feet of it. But for much of it the cost of pumping is prohibitive, and much of it is so mineralized it can't be used without treatment.

It is doubtful, Flemming writes, that complete distribution of surface water will solve the problem. At the same time, he states, the largest potential supply of fresh water lies in stopping waste of the available supply in such menial tasks as carrying off sewage. He mentions seepage in the western irrigation districts, too. A general yardstick, he says, is that only about half the water in the reservoir actually reaches the crops. Even then, it is likely to be carelessly used.

Flemming mentions other possibilities for increasing the water supply: Controlling evaporation.

Cutting forests selectively, as on the western mountains, permitting to reach the ground snow that otherwise remains up on the evergreen branches by billions of tons and softly and silently vanishes away?

Making snow reservoirs by covering huge mountain drifts with such substance as sawdust in order to cut down melting and evaporation.

Seeding the clouds to increase rainfall.

Finally, freshening salty water from the 314 million cubic miles of ocean.

All this will take much more cooperation among various agencies than is now being experienced. Marion Clawson, of Resources for the Future, notes what he calls an obsession of westerners to expand irrigated farming with water that may actually be much more needed for expanding cities or industries.

Will this result eventually in a National Government water policy that will limit the amount of water going to farmers?

Was Mr. Vanderbilt Right?

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the January 1960 edition of the Quarterly Review, a publication for public relation consultants. The article was written by my good friend Mr. William Safire, vice president of Tex McCrary, Inc., one of the leading public relations firms in this country.

Mr. Safire is a former newspaper correspondent and foreign correspondent for WNBC. I thought that the article would interest former newspaper and public relations men who are serving in the House today, and I therefore include it, as follows:

Was Mr. Vanderbilt Right?

(By William Safire)

William Vanderbilt, railroad tycoon was trying to get some sleep one night aboard his private car, when he was aroused by a newspaper reporter pounding on his door. He declined to see the reporter, who indignantly replied: "But I represent the public."

Thereupon the commodore's son roared back with the words that have been the bane of the existence of New York Central Railroad press agents to this very day:

"The public be damned."

With the benefit of historical hindsight, we might well conclude that this statement caused severe damage to what we now refer to as his industry's corporate image.

Indeed, a public-be-damned attitude became the bete-noir of textbooks and learned articles on the technique of public relations and almost every practitioner in the field today has heard himself saying to a client: "You can't adopt a public-be-damned attitude." The PBDA—as the reactionary attitude may be referred to among communications counselors—might well be replaced totally by what the Federal Communications Commission has named the PICON: Public Interest, convenience, and necessity.

At a recent board meeting of a large corporation, the chief executive officer, with an eye toward increasing earnings, made a suggestion about moving a certain plant's location, undoubtedly an unpopular move to at least one community and a segment of the company's personnel. The suggestion was met with negative head-shakings. All

around the table. "Bad for public relations" was the consensus.

The executive excused himself for a moment, stepped into an adjacent executive washroom, looked straight in the mirror, and silently mouthed the words, "The public be damned." Thus relieved, he returned to the board meeting and gracefully acquiesced.

In today's business community, public relations has assumed an aura not unlike motherhood or apple pie. Very few red-blooded Americans will admit they don't like apple pie—those who do are considered iconoclasts, suspiciously eccentric—and nobody at all will come out against good public relations. And as it became sacrosanct, it became a shield for abuses.

The less significant abuses—some corporate yachts and airplanes, fringe benefits to top personnel all written off as "public relations expenses"—do not concern us here. What is far more important is to examine the effect of public opinion on the operation of a business, to see how "public relations considerations" affect basic corporate decisions. Never admitting it openly, many an executive wonders when a public should be damned, when it should be pandered to—and wonders if there is ever a happy medium.

Let's set up a few ground rules that most businessmen will accept:

1. A business is in business to make a profit, not merely to make friends.

2. A business that has to cheat and lie to make a profit should go out of business, voluntarily or otherwise.

3. In the long run, a favorable public opinion toward your company or product helps create profits. Lincoln said: "Any policy to be permanent must have public opinion at the bottom."

4. The long view cannot always be taken in a competitive situation—a still longer view is staying in business. Lincoln was denounced as a dictator when he made the unpopular move of suspending the basic right of habeas corpus; sometimes, though not always, the ends justify the means.

Apply the above ground rules to specific situations, and see what happens.

CASE 1: LAYOFFS

A publicly owned company, existing solely on defense contracts, lays off its men frequently whenever there are cutbacks. A committee from the town and from the union urges the company to begin a program of diversification, a good hedge against the cutbacks. The public relations counsel advises strongly for this, as the only way to win good community and employee relations. The company's treasurer points out that the money market is very bad for a diversification investment at this time, and that since the cutback-speedup cycle is profitable though unpopular, he advises that any thoughts of diversification be postponed. Which public do you damn, your local community or your stockholders?

CASE 2: TESTIMONY

The president and owner of a company is called before a congressional investigating committee. His reputation is important to him; as far as he knows, he has been honest most of the time, but there are a few situations that he would rather not go into, part of his distant past. Dilemma: Should he be a cooperative witness and try to answer everything?

Says the public relations counsel, who probably has not been told everything: "Client, you have nothing to hide. Pleading the fifth amendment would bracket you with racketeers and thugs and Communists—it is essential, for your good name and for the public relations of your company, to answer all the questions to the best of your ability. If they get to a delicate subject, let your memory go hazy, but look like you're trying to cooperate."

Says the lawyer, who does know everything, because a client's relationship with a lawyer has been established by the courts as completely confidential, and a public relations man's has not: "If the questioning is more than superficial you start taking the fifth. We'll accuse the committee of irrelevancy, take a contempt citation, and beat it in the courts."

Many a businessman, faced with this dilemma, will say: "I'll listen to my lawyer. A lot of good public relations will do me in jail."

CASE 3: DISCLOSURE TO PRESS

You are planning a significant merger between two publicly held companies, on a 3 shares for 1 basis. A reporter hears a rumor and asks you for an interview. If the rumor sees print, the price of the stock of the smaller company will rise sharply, probably ruining the deal.

The reporter is sure to ask you to confirm or deny negotiations, neither of which you can properly do. If you deny, you are lying, and if you confirm, you spoil the deal. If you refuse to do either, you are tacitly confirming. You could take the reporter into your confidence and ask him to run nothing, and most financial reporters are extremely responsible men; some, however, may not want to run the risk of being beaten to their story by other newsmen.

Your public relations man wisely tells you that "it is very bad public relations to suddenly become unavailable to the press. And if you get this particular reporter mad, he'll be sniping at us for years. From the long-range point of view, see him and let's try to get him to hold it." In the long view, you know he's right. But if you don't put this merger through, your company will be in dire straits and may never see the long view. You know the reporter's editor won't run a stock-stimulating rumor without some indication of confirmation, such as a refusal to deny the rumor—and if you don't see the reporter or answer his calls, he won't have that refusal.

At this point bad public relations often sets in and many a businessman decides this would be a good time to go to a convenient hospital for a 3-day checkup.

CASE 4: LOBBYING

Your company is induced to locate near a certain city with promises of long-term low property taxes. You buy and build a headquarters, and along comes a new political administration in the city that promptly threatens to raise your property taxes.

The matter is put to the city's voters in a referendum. Your public relations counsel prepares to launch a campaign to defeat the tax rise, lays out a plan using every trick in the book; ads and stories appealing to the city's fiscal responsibility, veiled hints to employees that higher taxes might mean lower wages, establishment of independent citizens' committees to support your point of view, the complete public relations package. He takes a quick poll before he begins, assesses the voters at 60 to 40 against you, but feels an aggressive campaign can eke out a victory at election time.

You calculate the risk. If you win, you'll probably have to fight it out again next year; if you lose, you lose for good—they'll never lower your taxes once they're raised. Then you calculate the cost; the public relations campaign will run about \$20,000.

You talk it over with a lobbyist at the State capitol. He says, for a \$20,000 retainer, he will get the State legislature to pass a bill effectively blocking the city from ever annexing your property and raising your taxes. "Sure it's lousy public relations," he admits, "but the hue and cry in the city will die down after a while. And your conscience is clear—you're only making

sure you get what the city promised you in the first place."

You write a check for \$20,000 and give it to whom? The lady or the tiger?

None of the foregoing illustrations was hypothetical; in each instance cited, an actual corporate executive was called on to make a decision, carefully weighing the "public relations considerations."

The reason why no corporate names are mentioned here is that in each case, the decision was, in essence, "the public be damned." Damned it was, but with a minimum of fanfare; once the decision was made, the public relations man was called upon to sugarcoat the pill as best he could.

ATTITUDES OF PUBLIC RELATIONS MEN INVOLVED

Interestingly, the four public relations men reacted differently. One quit in a huff, after telling off top management eloquently in a board meeting that he would never become a "mouthpiece for a company with no conscience." Another felt the same way, but he liked the money he was getting so he swallowed his integrity. The third, an organization man and generally insensitive soul, figured that whatever the boss decided must be right and he plunged in to repair the damage.

The fourth public relations man, an independent Madison Avenue operative who is cordially hated by many and thoroughly respected by most, explained his reaction in this way:

"The function of a lawyer is to warn of pitfalls and discover loopholes; a treasurer, or a certified public accountant, contributes to a decision by showing quickly and accurately what the effects will be on the books; a registered lobbyist, at his best, can closely assess the chances of passage of pertinent legislation and predict what is necessary and to get it across.

"My job in this case was to calculate the effect of the alternative actions on public opinion, and to recommend the course that would be best for the long-range public relations of the company. The president listened carefully, agreed with my thinking, and did precisely the opposite. He decided the other considerations were more important, which was his prerogative.

"No, I don't feel I should resign the account. I'm a professional counsel; I counseled professionally and was right about my area. If I were the company president, with the responsibility of looking at all the other facets in a decision, perhaps I would have done the same."

Too detached a point of view? Perhaps. But lawyers and accountants should not be asked for public relations advice, nor public relations men for legal or financial opinions, unless they have passed the bar or are qualified financial men.

The sooner management men recognize the area of limitation as well as the area of competence of their various counsel, the better able they will be to lay out clearly the factors in a corporate decision.

And the sooner public relations specialists realize that their special area is not always the overriding factor, the closer they will come to professional status and the easier they will find it to live with occasionally necessary "public-be-damned" attitudes.

The arrogance of the robber barons of the 1890's seems to have been replaced by the arrogance of those self-appointed corporate consciences today. A conscience in business is an extremely important thing, but there are those times when the native rue of resolution is sickled over with the pale cast of overemphasized public relations. The public, as well as the customer, is not always right.

In the next few years, as more public relations men drop the messianic pose and adopt a more professional attitude, we may see this significant consideration in a corporate deci-

sion—the public relations aspect—find its proper place in the management of honestly profitable business.

Yes, Mr. Vanderbilt, even in the future there will be a right time and place for your "public-be-damned" attitude. But it's never a good idea to holler it at a reporter.

Hoffa's Private War on Congress

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DERWINSKI. Mr. Speaker, the Chicago Sun-Times, on March 16, carried a most interesting and enlightening editorial, which I am including in the RECORD for the consideration of the Members of the House and Senate:

HOFFA'S PRIVATE WAR ON CONGRESS

James R. Hoffa is out to "get" 82 Members of Congress running for reelection this year. He has marked them for political oblivion in a confidential memorandum he has sent his trusted lieutenants in the Teamsters Union. Also on his blacklist is Senator KENNEDY, Democrat, of Massachusetts, a candidate for President, because KENNEDY supported a labor reform bill in Congress last year.

The Hoffa memorandum details an election battle strategy designed not only to defeat the 82 he has listed because they supported labor law reform last year but also to give support to 59 Representatives Hoffa believes will "buy" Hoffa's program for weakening the new restrictions.

Some of those Hoffa wants to retire from Congress have long been regarded as friendly to labor, but Hoffa wants to replace them with persons friendly to Hoffa. He is even willing to accept segregation extremists to unseat those on his blacklist.

The purge list came into the hands of the New York Herald Tribune last weekend. Hoffa denied its existence, naturally, because he does not wish to have his Napoleonic political dreams of power known to the general public. As Senator KENNEDY said when he read quotations from the secret list:

"Hoffa's proposed purge list should be an alarm bell to all Americans. Hoffa's only standard is not whether candidates have supported legislation in the interests of organized labor or the general public but only if they will 'buy the line.' I am delighted to be high on Hoffa's purge list and am certain the vast majority of members of both political parties will regard Hoffa's opposition as an endorsement."

We would not automatically support any candidate opposed by Hoffa—some may deserve defeat for reasons other than those that motivate Hoffa. But certainly any candidate who buys Hoffa's line and is willing to trade his independence for the dubious support that Hoffa can deliver deserves public scorn.

Hoffa is an associate of hoodlums and goons and he should be removed from his position of power in the labor movement for the sake of labor's own good name if not for reasons of public morality. Instead, he has the tacit support of many persons in the labor movement and he is encouraged to use his union to corrupt a congressional election.

Hoffa is not only at war with the public, he is at war with the top leadership of the AFL-CIO. In a meeting here last weekend he denounced George Meany, AFL-CIO

president, for not fighting labor reform vigorously. Hoffa is bidding for power in the labor movement outside of his own union. His proposal that all union contracts expire on the same day as the Teamsters' union contracts, which he made here and in New York Monday night, would make Hoffa the most powerful man in the labor movement. He could stop all industrial production if his mad dream of power came true.

Public reaction against Hoffa's private war on Congress is sure to be swift and impressive. We doubt whether he even has the support of all of his union members. Even John L. Lewis could not deliver the vote of his union members in 1940 when he turned against F.D.R.

Responsible labor leaders should see the direction in which Hoffa is heading. It was the Teamsters' (and a few other unions) use of force and intimidation that helped bring on labor reform last year. His present activities must surely intensify the demand for more labor reform and more curbs, reflecting outraged public opinion.

Salute to Columbian Bar Association Upon Admission To Practice Before the U.S. Supreme Court

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. SANTANGELO. Mr. Speaker, March 22, 1960, was the commencement of a new tradition in the history of the legal profession in New York. Thirty-eight members of the Columbian Lawyers Association were admitted to practice before the U.S. Supreme Court. One of them was a woman. I had the high honor and privilege of sponsoring this group before our highest court in the land.

Last year the Columbian Lawyers Association initiated the practice of arranging for the admission of their legal membership to practice before the Supreme Court of the United States. Then 53 members were so admitted.

The Columbian Lawyers Association is a young, flourishing bar association operating in the first judicial department of the State of New York. Its membership consists of more than 600 members and is composed of lawyers of Italian origin who practice principally in the city of New York and the county of Westchester. Many of them are leaders in their respective communities. They are dedicated to guarding our American traditions and to building a sound body of law for our future.

Among its foremost aims is the maintenance of a high standing of conduct for the legal profession, including the prosecuting officers of both the Federal and State Governments and the selection of capable and learned judges to serve in our courts. They are of the firm belief that in order to fulfill the great promises pronounced in our Declaration of Independence and to realize the American goal of equal justice before the law, lawyers must be skilled advocates,

sensitive to justice, and with high standards of conduct, both for the bar and the justices of the courts.

The journey to Washington was meticulously prepared by Joseph Contiguglia, a member of the association, and a referee in the workmen's compensation board in the State of New York. Done to transport 38 active lawyers to Washington from the city of New York and other members who were interested in accompanying the applicants. The success of the program was a credit to the planning and preparation which Mr. Contiguglia provided.

Prior to being sworn in by Chief Justice Earl Warren, this bar group had the distinct pleasure of meeting with the Clerk of the U.S. Supreme Court, James R. Browning, for a half-hour. Mr. Browning detailed the intimate workings of the members of the Supreme Court in the exercising of their discretion to review a matter or to decide a case. The explanations afforded the group by Mr. Browning provided a better understanding and appreciation of the tremendous tasks which burden the Justices and the procedures in the accommodation of conflicting viewpoints.

Prior to the formal swearing in, Chief Justice Earl Warren met with the group informally and discussed the aims of the bar association and the Chief Justice stressed the importance of a familiarity with the workings of the Supreme Court and the need of lawyers being admitted to practice before the supreme judicial body.

After the admission to the Supreme Court, the Columbian lawyers had luncheon at the Congressional Hotel. Several Members of Congress attended the luncheon. Representatives Victor L. Anfuso, of Brooklyn; DOMINICK V. DANIELS, of New Jersey; and JACOB H. GILBERT, of the Bronx, addressed the group, pointing out the significance of their membership in the U.S. Supreme Court and the pride that they felt in this demonstration by New York's legal talent.

On the evening prior to their swearing in, a reception was tendered to the group and many of their Washington friends by Mr. and Mrs. Gaspar Morell, a former New Yorker, now a successful Washington builder. Mr. Morell's beautiful home on Kalorama Road, on Embassy Row, provided the scene for happy reunions and pleasant exchanges. Several Congressmen attended the reception, including Congressmen ROBERT N. GAIAMO and EMILIO Q. DADDARIO, of Connecticut. Judge Alexander Holtzoff, of the U.S. District Court for the District of Columbia, attended the reception and, as a former New Yorker, recalled his experiences in that great city and welcomed the lawyers to our Capital. Congressman JOHN J. ROONEY, member of the House Appropriations Committee and chairman of the Subcommittee on the Departments of State and Justice and the Judiciary and Related Agencies of the Appropriations Committee, also welcomed the association and presented the viewpoint of those who controlled the purse strings in the protection of our court system.

Congressman BASIL L. WHITENER, a member of the Judiciary Committee from North Carolina, also welcomed this legal entourage, and although we were in the process of considering the controversial civil rights bill wherein Members from the North and South disagreed, he demonstrated that our disagreements could exist without the Members being disagreeable. One of the guests was Col. Giovanni Nicollo, assistant air attaché of the Italian Embassy and professor of aerodynamics. He addressed the gathering and expressed his pleasure of this practice of lawyers visiting the Capital City for such a lofty purpose of being admitted to the Supreme Court. Mr. and Mrs. Mario Noto, Assistant Commissioner of the Immigration and Naturalization Service, also graced the reception with their presence. Also in attendance was Inspector Anthony Richitt, of the Metropolitan Police Department. We cannot express fully our appreciation for the hospitality of Mr. Gaspar Morell and his lovely wife, Anita Morell, whose charm has been recently displayed in the Washington press.

The roll of the newly admitted members to the Supreme Court is as follows: John F. Aiello, Charles Bakos, Nicholas A. Basso, Sabino J. Berardino, William J. Bianchi, Carmine J. Capozzola, Ralph A. Cavallo, Leonard A. Conticello, John H. Curcio, Michael A. Del Greco, Michael A. Di Salvo, Thomas Esposito, Max Feigin, Theodore R. Freschi, Joseph P. Gaiamo, Arthur F. Lamanda, Vincent J. Mandese, John J. Mangini, John Jay Mangini, Jr., Joseph A. Marchetti, Pascal Marsico, Anthony R. Martorano, Pasquale A. Mele, Edward Howard Mollison, Murray E. Morrison, Alfred F. Muscio, Pasquale Palumbo, Carmine J. Perrotta, Miss Annette M. Pollaci, Joseph F. Romano, Joseph V. Rubino, John C. Sacco, Anthony Serpone, Michael Sibillio, Alfred Frank Sica, Anthony B. Tripodi, Merritt T. Viscardi, and Salvatore Viscardi.

The president of the organization is Michael LaPenna, who was the spokesman for the group with Chief Justice Warren at their preinduction conference.

Now that these lawyers have returned home to New York leaving Washington richer because of their visit, I say to them "Congratulations and Hail Columbian Lawyers Association."

"Believing"

EXTENSION OF REMARKS OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. ANFUSO. Mr. Speaker, in these trying days when the struggle for the minds of men reaches new heights and greater fury, let us also remember that we have a most encouraging weapon which can help bring ultimate victory to the peoples of the free world in their

efforts to live in freedom, democracy, and human dignity.

I refer to faith in God and the belief in the existence of the Supreme Being. Communism is a godless ideology, without a soul, without a heart, without any resemblance to a decent way of living. Its leaders are heartless and ruthless. Its whole way of life is devoid of any understanding or appreciation of the individual human being, his moral concepts, and his belief in the Supreme Ruler of the World.

It matters not what one's creed may be, whether Protestant, Catholic, or Jew, whether Mohammedan, Buddhist, or other faith. What matters is the fact that one faith in his heart and prays in his own way to his God. A person with faith is a better and more moral human being. A person who believes cannot lose faith in the future of mankind or in the hope for a better world.

Mr. Speaker, these thoughts came to my mind as I was reading the words of a new song, called "Believing," which has just been recorded and released to the public. The words and music were composed by Ethel Phillips, Kenneth Roberts, and Anne Lavere. It is recorded on Genie Records with the noted singer, Jeannie Thomas, as vocalist. I want to congratulate all these people for a magnificent job.

The words of this brief song are as follows:

Believing is like a prayer,
Believing is everywhere;
Believing can be the start,
And happiness will soon be in your heart.
A little faith in all you do,
And miracles will soon come true;
The magic a wish can weave,
Is yours and yours alone—if you just believe.

Remember Korea?

EXTENSION OF REMARKS OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. MOSS. Mr. Speaker, instead of our being able to move forward in these last few years to an enduring peace, our growing military and diplomatic weakness has brought us virtually to the brink of nuclear war.

Almost unbelievably, with the current administration, advertising catchlines have supplanted realities in the conduct of our Government. Where, in 1952 and 1956, this Nation was led to expect a bold new policy of seizing the initiative and leading the world to newer and better things, we have been given "salesmanship at the summit" and lectures about who knows more about defense matters than almost anybody else.

The weakness of our so-called foreign policies would make a jaybird jeer. And in the face of the greatest peril we and the democratic nations of the world have ever known, the President has developed the fixation that balancing the Federal

budget is the most important issue this Nation faces.

Nothing could be further from the facts—except perhaps the phony and flagrantly untrue slogan "Peace and Prosperity," now being readied by the Madison Avenue boys for the administration's upcoming election campaign.

In this connection, under leave to extend my remarks in the RECORD I ask to include the following revealing and interesting article from the Sacramento (Calif.) Bee of Monday March 7, 1960, entitled "Eisenhower Never Has Ended the War in Korea."

EISENHOWER NEVER HAS ENDED THE WAR IN KOREA

Remember Korea?

It is where President Dwight D. Eisenhower went immediately after his election in 1952 to keep a campaign pledge. It is a place Eisenhower is credited with pacifying.

"He ended the Korean war, didn't he?" many ask.

The fact is he tried to sweep it under the rug. Look magazine states boldly: "Almost 6 years after the Korean war armistice, there is no peace."

In many respects Korea is the cruelest hoax ever played on the American people. The armistice is somewhat of a fraud because it released Red Chinese troops to attack elsewhere, as has been seen in Peking's assaults on Quemoy, their role in wresting Indochina from France and their attacks on Tibet.

Few realize the facts set forth in Look. Some 40,000 American soldiers still man a single strand barbed wire fence between South and North Korea.

The Americans are armed chiefly with World War II weapons. Look found the 8th Army there has no M-14 rifles, no M-60 machineguns, no M-59 tanks, no M-59 personnel carriers and no surface-to-air missiles for air defense.

Gen. George H. Decker, Army Vice Chief of Staff, says American forces in Korea are right down to rock bottom in logistic support. Certain trucks have been rebuilt as many as six times.

By contrast Russia is in the second round of weapons modernization since World War II and it is a cinch bet that what North Korea needs Russia will supply.

Gen. Carter B. Magruder, commander of United Nations forces and the American 8th Army in South Korea, summed the situation up for Look when he said:

"If there was fighting that used up equipment rapidly we could not support sustained operations."

The Nation's policy assumes the threat of massive nuclear retaliation will deter the Communists from starting a new war in Korea. But it did not deter them in Indochina, India, and Laos. U.S. soldiers have been taken to the brink in South Korea with outmoded climbing equipment and the situation is a decoy for an all-out war.

The next time anyone says Eisenhower ended the war in Korea the bluff should be called and raised.

Program for Peace

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. BLATNIK. Mr. Speaker, a recent survey taken by the Gallup poll revealed

a strong trend among our people to insist that the President of the United States should be a "worker for peace." That is, the major criterion for the political leader of our Nation should be that he is dedicated to and capable of developing a positive U.S. program to build a just and enduring peace.

Such a program has been largely spelled out over the past several years by the senior Senator from Minnesota, HUBERT H. HUMPHREY. In a series of addresses and legislative proposals Senator HUMPHREY has issued a dramatic challenge to his fellow Americans to take the leadership in a worldwide cooperative effort to build peace through concrete, specific works of peace.

Much of this program the senior Senator from Minnesota has presented to the Senate in legislative form. In some instances there has been action to implement his proposals.

Mr. Speaker, under leave to extend my remarks in the Appendix, I include a brief summary of the chief points of Senator HUMPHREY's program for peace, a program which could form the basis for a more creative and effective foreign policy for our country in the coming years.

SENATOR HUBERT H. HUMPHREY'S PROGRAM FOR PEACE

Senator HUBERT H. HUMPHREY's program for peace is the result of years of study and experience in the field of foreign affairs. He is chairman of the Senate Subcommittee on Disarmament, a member of the Senate Committee on Foreign Relations, and a former delegate to the United Nations. He has traveled widely and met with the top leaders of the world, including Soviet Premier Khrushchev.

His thesis is that the United States must act boldly with measures to remove the basic conditions and causes of violence and war from the world—poverty, hunger, disease, and illiteracy—and to create a world security system to replace the arms race.

The Humphrey program is a positive program. It is written in solid and bold legislative proposals. These are its provisions:

A MANHATTAN PROJECT FOR PEACE

Early in 1960, Senator HUMPHREY introduced legislation to establish a National Peace Agency, with the responsibility and authority to coordinate America's efforts for peace.

The National Peace Agency would marshal the full scientific genius of America to tackle the immense technical problems of arms control—a "Manhattan Project for Peace." The Agency would be charged with responsibility to find new ways of achieving disarmament agreements and developing workable and safe inspection and control systems.

The Humphrey proposal sets safeguarded disarmament as the basic, immediate goal of the United States. The National Peace Agency would provide the governmental machinery through which that goal could be achieved.

Senator HUMPHREY said on March 7: The American people are more than willing to pay the billions requested by the President for arms; indeed we are willing to

invest far more than that, and for the present we shall be forced to do so. There is as yet no escape from the arms race.

How much more eagerly our people would support an investment in the creation of an alternative to the arms race.

Our people are eager to get on with the creative, humanitarian projects that we have so long dreamed of, eager to plow into the works of peace the dollars we are now pouring into the works of war.

FOOD FOR PEACE

The Humphrey program for peace clearly outlines the "creative, humanitarian projects" which are necessary to remove the conditions of war.

The foundation of his "Works for Peace" is a bold new program contained in legislation introduced in 1959—the International Food for Peace Act.

This legislation would authorize far broader and more positive and constructive use of America's food and fiber abundance as a weapon against hunger and starvation.

A food for peace program would also promote the economic development of backward nations, help to stabilize American agriculture and serve the foreign policy of this country by building essential conditions of peace.

Senator HUMPHREY's legislation provides for increased sales and grants of America's agricultural surpluses and allows for contracts of sufficient duration to enable other nations to plan their development more efficiently.

Today the United States spends more than \$1 billion a year just to store food and fiber surplus and many of our leaders consider that surplus a problem of disposal.

The food for peace program would, instead, convert local currencies obtained from loans and sales of food and fiber into positive works of peace. And it would give the American people reason to thank God for the great abundance of their soil, and to find deep satisfaction in the knowledge that it is being used for worthy purposes.

HEALTH FOR PEACE

The Humphrey program emphasizes that disease is the enemy of all men, and that rampant disease can weaken the will of nations and add to the conditions of war.

Senator HUMPHREY has offered legislation to provide additional funds for the World Health Organization to use in the battles against cancer and heart disease and to strengthen the office of Surgeon General of the United States for international health efforts.

His program calls for establishment of a National Institute for International Health, through which medical scientists of the world could cooperate in the war against diseases.

He has also proposed Soviet-American institutes of health in which Russian and American medical scientists could work side by side to fight disease. These institutes—plus reciprocal professorships and fellowships in universities of both nations—would provide international zones of peace, zones of enlightenment, zones of healing.

A WHITE FLEET

One of the most dramatic of Senator HUMPHREY's works for peace is his pro-

posals for a White Fleet—mercy ships which would bring help and relief to the people of disaster areas.

His proposal calls for the United States to demothball Navy ships, reoutfit hospital ships with the help of private foundations, and let them serve as task forces for peace.

These White Fleets could be sent to the scenes of earthquake, flood, hurricane, famine, or disease epidemics. One would be kept in the Mediterranean and the other in southeast Asia—each ready to bring help within 3 or 4 days to any disaster area within 1,000 to 1,200 miles.

Each group could throw into a port 800 to 1,000 hospital beds, operating facilities and laboratories, power for a whole city, and emergency rations for 300,000 people for a full week.

Two White Fleets could be operated at a cost of between \$10 million and \$15 million—a small investment for a great work of peace.

EDUCATION FOR PEACE

The Humphrey program for peace would also attack illiteracy and ignorance—two basic ingredients of violence and war.

His proposal is based on the premise that underdeveloped countries cannot hope to become strong forces for freedom and peace unless their citizens can develop sound judgment and diverse skills.

It was spelled out in legislation to establish in the executive branch of our Government an International Educational Development Foundation.

This agency would have the authority to assure a vigorous program through which the United States would assist other nations in improving their educational systems.

Public and private groups would be enlisted in an effort to provide more and better schools, teachers, and facilities to areas held back by illiteracy.

Such a program would be financed by local currencies acquired from sale of America's agricultural surpluses.

The pool of such currency now amounts to about \$2 billion, and is expected to reach \$10 billion by 1963. Only a tiny fraction of available currencies is used for educational purposes. The Humphrey food for peace program would increase the amounts used in the battle against illiteracy and ignorance.

DEDICATION AND ACTION

The Humphrey program for peace recognizes the dedication of all Americans to the goal of a world in which all men are free and secure. It recognizes the latent power and skill of America which can be harnessed to achieve that goal. Creative leadership can harness the great driving force of America in the works of peace, as it has many times mustered it to defend our Nation in great wars.

The Humphrey program for peace calls for hard work and constructive action to take giant strides toward America's goal and to utilize fully America's energies.

With dedicated leadership, that program can succeed and America's goal of an enduring peace can be achieved.

Some Words of Truth About Farm Subsidies

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. EDMONDSON. Mr. Speaker, it is both refreshing and reassuring to find in today's metropolitan press a strong word in defense of America's embattled farmers, who are the favorite whipping boys of many editorial writers and columnists.

While anyone close to the farm economy is aware of the grave problems confronting the hard-working Americans who operate our farms and dairies, the farmer continues to be the object of attack and misunderstanding.

No fiction is more widely circulated than the claim that our farmers enjoy great subsidies at the cost of the city dweller, who derive no benefit from the Nation's farm program.

It is true that we appropriate billions of dollars for that farm program, and it is equally true that many dollars in that program are expended in undertakings of doubtful benefit to a sound farm economy.

It is equally true, however, that many dollars identified as "appropriations for agriculture" go into nonfarm pockets.

It is also emphatically true that the city family derives enormous benefits from many governmental programs that are known as farm programs.

A real service in public understanding was performed this week by the Tulsa Daily World, in an article by that newspaper farm editor, Herb Karner.

Mr. Karner's article, the first of several he proposes to write on the subject, is entitled "Many Enjoy Subsidies at Farmers' Expenses":

[From the Tulsa (Okla.) Daily World, Mar. 21, 1960]

MANY ENJOY SUBSIDIES AT FARMERS' EXPENSE (By Herb Karner)

A recent letter to "Voice of a Free People" appeared in the Tulsa Daily World written by a Tulsan in which he criticized the farm program and concluded his letter saying:

"May I ask why the farmer should be subsidized while those engaged in other small businesses are not? If I go into the grocery business and go broke, Uncle Sam merely says: 'That's too bad.' If a working man loses his job he gets a few weeks of unemployment pay and then is on his own. He gets no subsidy year after year and I believe he is just as much an American as the farmer."

"The farm program is nothing but class legislation."

Hey, Just one cotton pickin' minute. There is entirely too much talk going on about how much farmers are costing taxpayers that is completely misleading.

The above letter is a classical example of the great American indoor sport of forming opinions and passing judgment without bothering about facts.

Sincere as the above writer is, it's obvious he is completely unaware of the situation. And we're first to admit he is justified in his statement politicians are using the "farm

program" to drive a wedge between city folk and farmers to further their own political ambitions, and while there may be some elements of truth in what they say, most of it is unfair.

So, it's high time to sit down and separate fact from fiction, because we believe city folk have a greater stake in a prosperous agriculture than do farmers themselves.

It's high time our taxpayers had some truth about the \$7 billion farm budget that is causing the average "man on the street" to scream farmers are getting rich at their expense, claiming only farmers receive a subsidy.

So, let's talk about subsidies—and at the same time make it crystal clear we are not defending or trying to justify a continuation of ineffective farm programs and abuses now in operation that have hurt the farmer more than they have helped him.

But, we want to point out farmers are not the sole beneficiaries of that \$7 billion farm budget—not by a long shot.

What makes up the agricultural budget anyway? How much goes to farmers?

The farm budget is something of a catch-all. Many of the items, about half the total amount, have absolutely nothing to do with supporting farmers, but are primarily a public service.

And right here our friendly farm critic makes his first serious error when he says "the working man gets no subsidy," and city folks pay the farm program costs without benefiting.

If taxpayers want to be realistic about cutting down the farm budget, let's start by cutting out all give-away food that goes into welfare, school, service, institutional, and foreign aid channels.

Sure. It's all charged to farmers. Welfare commodities amounted to over \$300 million alone last year, with our own State getting a \$15 million slice of the melon.

So, if the man out of work that only gets a few measly unemployment checks, which we've yet to see a farmer collect after a crop failure, he probably lugged home plenty of free groceries, paid for out of farm program funds. A subsidy? What else?

Just one step farther. The popular hot school lunch program cost a whopping \$150 million, and the special school milk program added another \$75 million.

In Tulsa County alone the school milk program is costing in the neighborhood of \$25,000 a month.

Who benefits? Well, since farm population is around 10 percent it becomes rather painfully obvious if our farm critic has any children in school, he's benefiting directly from the farm program budget—if he has any relative or friends getting welfare hand-outs—anyone in the armed services or State or Federal institutions, taxpayers are footing the bill with farmers getting the rather odious credit for it.

Sure. Let's not subsidize the farmer, but let's also keep the record straight. Let all who are benefiting in this "great barbecue" pay their own way for a change, or at least admit they are receiving a bigger handout than the farmer.

Mr. Tulsan, who claims "the farm program is nothing but class legislation," did you enjoy your bacon and eggs this morning? And the pot roast you had last night?

This may come as a surprise to you, but the USDA meat inspection program cost the agricultural budget \$21 million last year. A program solely to assure you a safe and wholesome supply of food.

So, if you don't want this subsidy, you can help cut the farm budget by inspecting your own food, or take your chance of running up your grocery bill because your ever-lovin' wife bought inferior produce.

No subsidy? Friend, your food bill is lower today in relation to earning power than it ever has been. That pot roast you ate last

night cost you less because low-cost meat imports last year accounted for 10 percent of the beef consumed.

This depressed the price of beef, and who picked up the tab? Nobody but the farmer—the profit he lost is still in your pocket, friend.

And so it goes—

You receive no farm subsidy? How about the services you receive from our county agricultural agent? Or didn't you know our friendly and efficient county agent, John Stoger, and his hard-working force spends more time with city folk than with farmers?

Your lawn not doing so well? Shrubs look scrawny? Ray Zimmerman and Ansel Hull, extension specialists, are helping hundreds of city folk iron out their problems.

Jim Hamilton, marketing specialist, keeps track of food bargains and lets you know about them daily in newspapers, including the World, and radio. Is your home a better place to live in because your wife may be a member of the home demonstration club? Gladys Logue and Evelyn Stringer, home demonstration agents, spend countless hours with city folk.

Your kids, or youth you know, active in 4-H? Roy Sharkey, assistant county agent, is on tap to guide them and give them supervision and counsel.

Wonderful service, isn't it? Who pays for it? Why, taxpayers, of course. Where does the money come from? By now you must have guessed—from county, State, and Federal farm budget. Who gets kicked in the shins because the farm budget is so high? That independent soul who has twice as much invested per farmworker than industry has per worker—the farmer.

Sure, ask the average "man on the street" what he thinks of subsidies and chances are 10 to 1 he'll say he's against them.

Ask him who gets most Government subsidy and his answer will be the farmer.

Ask him if he or his business receives a subsidy and he'll tell you in no uncertain terms, "No." Our friendly farm critic said so in his letter.

Well, next week we're going to talk about more subsidies. It'll be a jolt to learn in the past 50 years for every \$1,000 this country has spent for subsidies the American farmer has received only \$5—yes, that's right, a measly 5 bucks.

That's why farmers are getting awfully tired of indignant letterwriters, misinformed politicians, metropolitan newspapers, and sophisticated slick magazines screaming about the cost of the farm program.

The New York Times Hails Two of Delaware's Great Museums

EXTENSION OF REMARKS OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. McDOWELL. Mr. Speaker, the National Park Service reports that Americans are taking a deep interest in our own history, and that the proof of this interest is the millions of people who visit our historic sites and buildings each year. The National Park Service is charged with responsibility for many of these sites and buildings under the broad authority of the Historic Sites Act of 1935.

The National Trust for Historic Preservation, established by the Congress

some years ago, also is doing its utmost to preserve those important buildings connected with our past as a nation.

Americans spend about \$2 billion each year to travel abroad to visit the ancient buildings and sites of other lands, and the significant growth of interest in our own American history means that an increasing share of the travel dollar will be spent with our own merchants, hotel and restaurant owners, and other businessmen.

The New York Times recently called attention to two great museums in Delaware, the Henry Francis du Pont Winterthur Museum, and the Hagley Museum, which are musts on the list of those who are interested in our own American history.

I include here an excerpt from the New York Times article of February 28, 1960:

[From the New York Times, Feb. 28, 1960]
DELVING INTO AMERICA'S PAST IN DELAWARE

(By Max H. Siegel)

WINTERTHUR, DEL.—Of all the areas on the eastern seaboard where scenic beauty is combined with historic sights and associations, few can match in richness and variety the country along Brandywine Creek, which crosses the Delaware-Pennsylvania border just a few miles northwest of Wilmington.

This is a region of rolling hills, with views to enchant the nature lover, sites to intrigue the historian and collections to charm both the antiques lover and the casual tourist.

The outstanding attraction in the area is the Henry Francis du Pont Winterthur Museum. It is an eight-story stucco building that rises among the hills of Mr. du Pont's estate. Behind its weathered walls is housed the most extensive and probably the most expensive collection of Americana ever assembled.

There are about 100 rooms in the museum. And these, together with small halls, foyers, and alcoves, are furnished impeccably in the styles that prevailed in this country between 1640 and 1840. Everywhere, the visitor will see a blending of history and craftsmanship.

A NEW ROOM

Such great attention is paid to detail that recently the outside wall of the museum was pushed back 12 inches to allow the installation of a parlor from a stone house built in Wernersville, Pa., around 1775. It is impossible to detail all the other treasures of the museum, but among them are a part of George Washington's dinnerware set, French porcelain ordered for the White House by President James Monroe and a chair from the home of Gov. John Penn, the last colonial proprietor of Pennsylvania. Also on view are a Gilbert Stuart portrait of Washington, for which the general posed, and several rare tankards and a pitcher by Paul Revere.

Another aspect of early American life is portrayed in an old mill a few miles from Winterthur. The building, completely restored and modernized, is the Hagley Museum. Here is portrayed this country's early economic growth through a graphic presentation of the industries that flourished along the banks of a single stream—the Brandywine.

Exhibits open to the public carry the story of Brandywine from the days of Indian culture through the Du Pont family's first powdermaking operations.

While the Hagley Museum concentrates on telling a story of the past, it uses every modern device known to museums to do so. It has motion pictures with sound, a talking map, dioramas, working models, and just simple exhibits. One of the most interesting

is a 20-foot relief model portraying the Brandywine Valley during the time of its greatest significance as an industrial center.

Should the visitor be sated with the story of the past, he can travel a few miles west to the famous Longwood Gardens in Kennett Square, Pa. The gardens have been under development since 1906, when an old property dating to colonial times was acquired by Pierre Samuel du Pont for his personal use as a country estate.

The gardens are open to the public every day of the year. But in the winter, the visitor will have to be content with about 3½ acres of hothouses.

ITALIAN WATER GARDEN

In warmer weather, acres of outside gardens are open to visitors. They include an Italian water garden containing beautiful fountains and pools, an open-air theater with underground dressing rooms, an unusual water curtain and stage fountains, and an arboretum. The outdoor gardens may be visited from sunrise to sunset.

To get the most out of a visit to the Brandywine Valley, the tourist should make arrangements in advance. The Winterthur Museum, which is not open Sundays and Mondays, requires advance reservations. Requests listing one or more possible open dates should be mailed to the Winterthur Museum, Winterthur, Del., at least 2 weeks in advance of the time desired.

Hawaii: Land of Opportunity

EXTENSION OF REMARKS OF

HON. DANIEL K. INOUE

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. INOUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Monday, March 21, 1960, issue of the Honolulu Advertiser, setting forth another reason why Hawaii can be justly called the Land of Opportunity: [From the Honolulu Advertiser, Mar. 21, 1960]

If you doubt that Hawaii is a "Land of Opportunity"—take a look at the Man Kwong Loo family.

Today, Loo is a successful businessman who has started 12 children well on the way to bright careers.

Forty-five years ago, Loo was a poor immigrant from Canton, and in 1922, he was a 25-cent-an-hour worker at the Hawaiian Pineapple Co.

The Loos, who operate a grocery at 1203 Palama Street, were examples of energy, industry, and imagination to their 12 children.

But Mrs. Loo credits Navy apprenticeships, scholarships, and the GI bill with big assists in giving their children higher education.

"With such a large family," she says, "we couldn't finance college educations for all the children."

Frank, the eldest, got his start by graduating from Navy apprentice school at Pearl Harbor. He went on to the University of Hawaii, the U.S. Merchant Marine Academy, the University of Ohio, and Yale law school—on scholarships. Today he's a State legislator.

Bill, an electrical engineer at Pearl Harbor shipyard, graduated from the University of Michigan under the GI bill.

Herbert is treasurer of the Apprentice School Alumni Association and vice president of the Pipefitters and Plumbers Local 811.

George, another former Pearl Harbor shipyard worker and University of Michigan graduate, is a research attorney with the U.S. Patent Office in Washington.

Henry and Elsie graduated from the university here. He is an Air Force lieutenant in Japan. She teaches English at Roosevelt High School.

Victoria is a registered nurse. Janet turned down a college scholarship to attend St. Francis Nursing School.

Shirley and Abraham are students at the university. Lilly work at the American Security Bank. Ralph, the youngest, is a sophomore at McKinley High.

Immigrant Loo has lots to be proud of.

Fair Employment Practices

EXTENSION OF REMARKS

OF

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. KARTH. Mr. Speaker, we have for days now been concerned with discussing and acting on one of the basic rights of free American citizens—that of voting.

This is as it should be because the right to the ballot is fundamental to our democracy.

I, for one, regretted however that Mr. CELLER's amendment for creating a Commission on Equal Job Opportunity Under Government Contracts was declared not germane because of an overly restrictive rule under which the bill is being considered. The purpose of the amendment was "(b) To implement the policy of the U.S. Government to eliminate discrimination because of race, creed, color, or national origin in the employment of persons in the performance of contracts or subcontracts to provide the Government with goods or services."

The right to equal job opportunities is of paramount importance in a thriving democracy. All that was requested in this amendment is that competent, qualified workers be given a fair chance to hold jobs on federally paid-for projects without regard to their color, race, religion, or national origin.

To those of my colleagues who believe that we here are attempting to punish the South with civil rights legislation, may I point out that the equal job opportunities amendment is as necessary in the North as it is in the South.

The North—especially the great metropolitan centers—has traditionally been the land of opportunity for Negroes of the South who increasingly are being displaced by the agricultural and economic upheavals below the Mason-Dixon line. The unskilled of these people who are strangers to urban life have often met prejudice even in our States. As painful as is this process of integrating people into what to them is an alien way of life, I am confident that the cultural, social, and economic problems are being worked out.

We in the many States of the North, for example, have tackled the problem

of discrimination on the job with fair employment practice laws. We attempt with these laws not to erase prejudice from hearts, but to make it possible to be just—to give a man, or a woman, a fair break at getting and holding a job he or she can well do.

I am proud of the record of my State, Minnesota, in this field. We have had an effective statewide fair employment practices statute since 1955. In fact, I was one of the authors of the Minnesota law and helped secure its enactment when I served in the legislature.

I am proud, too, that each of our three major cities, Minneapolis, St. Paul, and Duluth, has local ordinances to implement fair employment practices.

Being just and decent to minorities has paid off for us in Minnesota with peace, mutual respect, and prosperity. In fact, I recommend these qualities highly to those of my southern colleagues who have drunk so deeply from the cup of disregard.

We have temporarily been prevented from offering this amendment, commissioning equal job opportunity under Government contracts, and other amendments just as worthwhile.

But we will be back—again, and again, and again—for the cause of justice in civil rights shall ultimately be triumphant.

Chemicals in Food

EXTENSION OF REMARKS

OF

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. SISK. Mr. Speaker, there is a proper and growing concern in our country about protecting our people against chemical contamination of foodstuffs. It would indeed be ironical if our expanding scientific ability to protect ourselves from pests, fungus, weeds, and insects should be turned into a menace to our people.

Achieving controlled and safe use of chemicals is a serious problem, not only to consumers, who must be assured of protection, but to the farmers and processors who raise and handle the crops. Both farm groups and processors and canning organizations not only recognize the vital necessity of proper use of chemicals but, I am glad to say, they are adopting rigorous voluntary programs to guarantee the safety of foods produced in this country and to assure consumers the products for which they are responsible fully meet all health requirements of the pure food laws.

I believe the program of the canning industry is particularly worthy of commendation. This program has been adopted as a matter of company policy throughout the United States, and I would like to call the attention of the Members to the expression of company policy and control recently communicated to me by Mr. R. U. Mackay, district manager of the California Packing Corp.,

in my home city of Fresno, Calif. Needless to point out, the successful operation of this program in Fresno County is of great importance to the Nation, because that county is our country's leading agricultural producer.

I think it is worthy of note that adoption of these forward-looking policies will protect consumers of American produced foods, but they will not afford equal protection on imported food. This emphasizes the urgent need to insure that food imports conform to health and quality standards of domestic production.

Mr. Mackay's letter follows:

DEAR CONGRESSMAN SISK: The public has become more and more aware recently of the possibility of harmful chemical residues in food products which may result from misapplication of pesticides or fungicides to raw products. I find that many persons are understandably confused because of varied information published as to what residues may or may not be harmful to humans. Growers and processors of raw products used in the fruit and vegetable canning industry have a great problem in making sure what pesticides or fungicides can be used and in what dosages and at what times they may be used. I am writing this letter to tell you of our company's chemical pesticide policy and the control program which has recently been adopted by us and the canning industry.

Our company has a definite policy to be followed in our raw product procurement and processing operations in the Fresno area and which also applies to all areas in which we procure our fruit and vegetables. Which specifies that "no crop is to be accepted and processed which has been treated with or grown on land treated with a pesticide chemical which has not been accepted for registration by USDA for use in connection with all growing of the commodity involved [and] the usage limitations which have been accepted by the USDA must be adhered to for the specific fruit or vegetable commodity to which they apply."

We know that in order to carry out our policy to the proper degree we will need extreme vigilance on our part and also we will need vigilance and cooperation on the part of the growers from whom we procure our products. The National Canners Association, which includes practically all canners in the Nation, has accepted the responsibility of this matter and has outlined a basic procedure to be followed to see that a pure and clean product is distributed to consumers. This program also needs and accepts cooperation of Government agencies, farm organizations, and the press, in order to educate the various persons responsible for the growing and processing of our food products.

The Fresno area is the center of our national raisin production and also produces a large quantity of other fruits which are used for canning, therefore, I am sure this subject is of great importance to you and to the growers of these crops.

As indicated by the cranberry episode, negligence by very minute portions of the producing or processing segment of our food industry could mean financial ruin to a great many of us regardless of the area in which the negligence occurred. I would like you to be apprised of the action which we and others of the processing industry are taking in this respect and I am attaching to this letter a copy of the industry's program.

We are fully aware of the fact that canned fruits and vegetables have tremendous distribution throughout our Nation and they maintain their position as some of the most economical foods on store shelves. We are proud that we have helped to establish this position and intend to maintain our position.

I can assure you we are going to do our utmost to see that the consuming public continues to get the cleanest and finest possible products for our Nation's dining tables.

Should you have any comments relative to our efforts, I would be very pleased to hear from you.

Yours very truly,

CALIFORNIA PACKING CORP.,
R. U. MACKAY, District Manager.

A Report From Africa

EXTENSION OF REMARKS OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. CURTIS of Massachusetts. Mr. Speaker, President Harold C. Case of Boston University recently returned from a 2-month tour of the continent of Africa in the interests of higher education. His trip was under the auspices of a grant from the Ford Foundation to the university's African research and studies program. On March 14, 1960, President Case delivered an address entitled "A Report From Africa," at a special Boston University founders day convocation in Hayden Hall on the University's Charles River campus.

With world attention being focused on Africa, I am sure this report will be of special interest to my colleagues, and in the extension of my remarks, I include Dr. Case's excellent address as follows:

A REPORT FROM AFRICA

(By President Harold C. Case of Boston University)

Sierra Leone, on the bulge of west Africa, has spectacular natural beauty. With its high escarpment, beautiful beaches, tropical forests, and lush undergrowth, it is a lovely country. Freetown, its capital, is large, crowded, bustling. In Freetown and elsewhere, Africans walk, while Europeans ride, and the interweaving of vehicular and foot traffic is constant, dangerous, and confusing.

One evening in Freetown we were guests of honor at a garden party. The women's clubs of Sierra Leone were launching a co-ordinated program for the improvement of the women's organizations. The garden was large; its formal planting resembled a Florida estate. Gay colored lanterns, an African band, rich and varied costumes, provided a festive setting.

Dr. and Mrs. John Karefa Smart, whom we had known since 1947, when he was a student in Edinburgh and we were American leaders in a world conference in Oslo, were our host and hostess. Dr. Smart, a Sierra Leonean, is a graduate of McGill University, School of Medicine, Harvard School of Public Health, Edinburgh School of Divinity. He is a member of the Prime Minister's Cabinet, as the Minister of Mines, Forests, and Labor.

We talked of world affairs, African nationalism, the obsession with independence on the part of leaders of Sierra Leone, and the scheduled constitutional conference to be held in London in April 1960. He reminded us that the new air-conditioned hotel under construction in Freetown is scheduled for completion in time for the independence celebration hopefully set for December 1960. The discussion was informative, sophisticated, and inspiring. Suddenly Dr. Smart

said: "Please excuse me. This is a dance of my tribe."

He left the group seated around a table, joined the dancers, and, dressed in his tribal robe, he danced with the abandon of a true member of his African tribe. The rhythm of the drums ceased, the music stopped, the dance ended, and Dr. Smart returned to our table, seated himself, and began the conversation about political freedom in the modern world, precisely where he had left it off.

He had illustrated one of the problems of Africa and had demonstrated an important prospect for success among emerging nations.

The problem is the tension between the forces of conservatism, illustrated in the tribe, the Poro or secret society, the village in the bush with its hereditary chief and council, the folk wisdom and the barter economy, on the one hand; and the claims of nationalism, portrayed in the university graduate, the tools of modern industry, the resources of forest, mine, and river, the currency economy, the western clothes, and the atomic age, on the other hand.

This tension is expressed in a popular west African song in which a girl speaks of her fondest hopes. She sings:

"What shall I do to get a man of that type?
One who is a 'been to,'
Car-full and fridge-full.

What shall I do to obtain a man like that?"
—"The Way in Africa," Carpenter.

The English is mangled, but the meaning is clear; a "been to" is one who has been to college, has traveled and who knows the world. "Car-ful" means that he has acquired a car; "fridge-ful," that he has a refrigerator. What more could any girl ask?

There is an element of tragedy in this new tension. The stable, quiescent way of African life is ending. Village crafts are dying out; manufactured goods are cheaper and better. Sewing machines are humming in every African city, but needlework is suffering. Bicycles shorten and improve the pleasure of travel, and trucks are more comfortable and less strenuous than heads for transporting freight. Currency offers much wider range of choice for commodities than barter. The comfort of a night's sleep on a good mattress defeats all arguments for traditional rest on reeds and straw on the ground. In this movement, the tribal chief is becoming a civil servant who collects taxes from each hut in his village. He is no longer an hereditary monarch who leads his tribe on lion hunts.

To be sure, there are important gains. Disease is decreasing, and some World Health Organization teams, with African assistance, have succeeded in virtually eliminating certain prevalent diseases. Infant mortality is being reduced, although 40 to 50 percent of the babies die in their first year, and 60 to 70 percent within the first 5 years. Diet is being improved. More proteins are available, and people are living longer and better. Life is slowly becoming more comfortable, less painful.

Still juju continues. Bones, bits of hair, monkey heads, snake skins, chemicals for potions can be purchased in any native market. Secret societies still claim the membership of all tribal members. Animism and Moslemism and Christianity struggle for the minds and loyalties of the people. Education is respected and sought more universally than any other modern influence. The quality, kind, and philosophy of education will shape Africa's future. Whoever shapes the mind, will fashion the nation.

But the sober fact is, that the old customs are weakening. The city with its vast slums and its tragic unemployment is recruiting young Africans. Western clothes are replacing tribal robes. Cinema houses are

crowded by Africans who see American-made motion pictures with violence, sex, and sordidness as their principal themes. The machine is winning over the handcraft, and the hospital is replacing the witch doctor. The old days will never return.

In this breathless moment of social change, a vacuum of serious import and large proportions is being created. The old ways are becoming bankrupt because they have not provided the things young Africa wants. They have not produced income for cars, modern houses, satisfactory education, the respect of other nations, or political independence. So they are being repudiated.

Psychologically, the African wants a "place in the sun." He wants to decide his own fate. He wants membership in international organizations. He is likely to believe that all these things—appliances, education, communication—go along with freedom, and are free. A good deal of disillusionment lies ahead for Africans.

But the danger was illustrated for us in a conversation with a musician-composer who wrote the Ghana national anthem. He sang it for us, with the original words, then with the official words. In the official version all reference to God as leader in the struggle toward national character has been taken out, and man's inner drive to fulfillment has taken its place. "This," said the professor, "illustrates one of the problems of Ghana."

The hope is that John Karefa Smart, doctor, minister, statesman, who talks about the philosophy of independence one moment and dances with his tribe the next, and Prof. Philip Gbeho, of Achimota School in Accra, who writes an anthem of faith and who understands why secular language has replaced his words, illustrates the human bridges that span the chasm between old ways and new ones, and provide spiritual qualities for national health.

The day we arrived in Freetown, the harmattan began. The harmattan is a wind; it begins to blow across sub-Sahara Africa in December and continues for 4 months. It makes life beautiful. The day before our arrival, the temperature in Freetown was 95°, and the humidity was 99 percent. As we arrived, the winds had lowered the temperature to 75° and the humidity to 65 percent. These winds form in Siberia, sweep across the frigid steppes, gather up red dust called laterite in the Sahara Desert, and are the air conditioners of central Africa, from Dakar on the West Coast, to Zanzibar on the east. The laterite dust is microscopic and sifts into everything—houses, closets, suitcases, cameras, food—everything.

Suppose that dust were made radioactive. It is swept up, mopped up, washed off, inhaled, swallowed. It pervades. This is the underlying reason for the violent reaction of people who live south of the Sahara to atom bomb tests in the desert. The fallout in that dust may bring a change in weather, ruin crops, stop the rainy season, blight the lives of millions of Africans, or so they believe.

Viewed from our safe vantage point in the United States of America, the protest may seem like nonsense. But when one is on the spot, contending with the dust, and taking on new energy because of the invigorating harmattan winds, the hostility to those tests seems very real.

And anyway, this issue involves the importance of getting inside any situation, if you are to understand it, much less report about it.

If you were planning to visit 11 African countries in 10 weeks and were seeking to get accurate information, proper documentation, to comprehend the deep-seated conflicts current on that vast continent, and to reach well-grounded conclusions, how would you go about your task?

We spent a year in preparation, with advice from members of the Boston University

African research and studies staff, conferences with African Ambassadors, educators, Government agents, students, and with British officials who were visiting or studying in the United States. We read broadly and hopefully with some depth.

We approached Africa by way of England. In London, we spent days conferring with officials in the British Colonial Office, the Inter-University Council, the bureau of commonwealth studies of the University of London, and the Fulbright commission for the United Kingdom. In Paris, we conferred with an American authority on the Belgian Congo, former U.S. consul in Leopoldville.

Briefed on British and Belgian Africa, we received the benefit of the knowledge, points of view, concerns, and constructive suggestions of citizens of the United States assigned to these African countries. They included ambassadors, consuls general, consuls, information officers, public affairs officers, ICA technical experts, educational consultants, businessmen, and, of great importance, their wives.

We left Africa with profound respect for the Foreign Service staff members of the United States. They are well trained, wise, and dedicated. They deserve a better hearing than they are receiving at home.

British, French, and Belgian officials, governors general, permanent secretaries of education, staff members, principals of university colleges, members of faculties of teacher-training institutes, technical schools, vocational schools, industrialists, directors of airports, seaports, mines, construction projects—all gave us time and knowledge to aid us in understanding Africa.

But we gained most from our association with Africans. We conferred with them in their offices, homes, schools, colleges, industries, markets. They represented brilliant, but illiterate, business executives; graduates with advanced degrees from Boston and other outstanding American and British universities; executives of banks, industries, agricultural and engineering experimental stations; taxi drivers, people on the street, civil servants, prime ministers, cabinet members.

I want to offer some observations based on our experiences.

No one knows all about all of Africa. Experts usually begin by limiting the areas or range of their authoritative information. For Africa is not a nation, nor is it likely to become one at any foreseeable time. It is a conglomerate of emerging peoples. They have intertribal and intersectional hostilities. They speak more than 500 languages or dialects. In many sections they still lack a viable economy, and a majority of Africans live in primitive conditions at a subsistence level. Illiteracy averages 90 percent in the sub-Sahara countries.

So Africa is a series of concepts—and concepts change from day to day.

I prefer to call it "paradoxical Africa," not "darkest Africa." Regularly scheduled planes of latest design, with excellent multiracial crews, connect all principal cities. There are bush trails below, but up there the airways are well charted and traveled. However, the airport at Dakar is next-door neighbor to thatched-roofed rondavels or huts, where half-naked women do back-breaking work. At Kano, in northern Nigeria, on the edge of the desert, and the caravan route, the emir long since ordered a trumpeter to mount a camel and blow a warning blast, so that women would not be endangered by being seen by strangers. The emir's directive is still in force, and today, when the public address system at the Kano Airport announces an approaching plane, the camel-riding trumpeter rides to the main gate and blows furiously, warning women that strangers are about to arrive.

Air France flies from Dualla to Lambarene, to Brazzaville, in Equatorial Africa. Our

plane was a modern version of the DC-3. The food was good. The plane was filled with passengers and cargo. Imagine our surprise to note that directly behind our seat was a box of cargo, and that it contained a live cobra, en route to the Pasteur Research and Health Institute, in Brazzaville.

The Albert Schweitzer Hospital on the Ogowe River has places for 350 patients and their families. The operating rooms and out-patient clinic are modern. But families live with and care for their sick members in buildings erected for that purpose, and each morning women arrive from up or down the river, with perogues (boats carved from logs), with bunches of bananas, yams, fish, or pieces of meat, to cook in iron pots for their families.

In Nungua, Ghana, there is a modern agricultural experimental station, and its excellent results in improvement of plant and animal strains and better methods of cultivation, will make a vast difference in Ghanaian life; but as Mr. J. J. Hill, its manager, led us around an experimental field of pineapples to a banana grove, and we walked ahead in a carefree manner, he stopped us, searched for a good-sized tree branch, and led us into the banana grove, saying, "We have three deadly snakes here—the spitting cobra, black mamba, and puff adder. One never walks here without a stick to kill a snake."

Nigeria has a new government-operated television station at Ibadan, a city of 750,000. It had been on the air about 1 month when we were there. I was the first American to appear on that station, to discuss education. Every aspect of that broadcast was at the level of standards of communication in the United States. After the broadcast was ended, I congratulated the crew and staff. The director, a Britisher, is the only non-African on the staff. He replied, saying that my approval meant more than I might know, since not a single member of the station's staff had ever seen a television set nor watched a television program when he began to train them 4 months before the date of my visit.

So, will you set aside your impressions of a continent made up wholly of pythons and bushmen, of impenetrable rain forests and unexplored valleys, of witchcraft and primitive existence; and will you consider a continent with the most primitive living and the most articulate scholarship on earth, the most backward witch doctors and the most advanced medical service, black magic and modern psychiatry, pythons and Pasteur institutes, ancient bushmen's paintings and enchanting modern art—all existing side by side.

Nineteen hundred and sixty may prove to be the turning point in the whole historical encounter between Africa and the West. The torch of true political independence and economic freedom is being carried from hill to hill, across west Africa through Senegal, Gambia, Sierra Leone, Guinea, Ghana, Liberia, and Nigeria, into the steaming forests of the Congo, the vast expanses of equatorial Africa, and on to South Africa, Rhodesia, Kenya, and Ethiopia.

Two hundred and thirty million people, with widely differing cultures, vast geographical separation, many separate languages, religions, and customs, and spread out in 12 million square miles of territory, are emerging. Drawn toward industrialism as a moth to a lamp, they are striving in various ways for a new life.

No thoughtful person can ignore Africa—because of, first, its size, one-fifth of the earth's surface, larger than China, India, and the United States of America combined. French Africa is 20 times larger than France. British Africa is 20 times larger than the United Kingdom. The Belgian Congo is 100 times larger than Belgium. Portuguese Africa is 23 times larger than Portugal.

Second, its natural resources, the iron, copper, uranium, cobalt, nickel, rubber, diamonds, gold, oil, waterpower (Volta River, Kariba Dam), on which every nation and individual now depends. The largest undeveloped natural resources on this planet are in Africa.

Third, its rapidity of change. Five years ago, three-fourths of the population of Africa received decisions handed down by London, Paris, Brussels, Lisbon, Amsterdam. Then, a half-decade ago, only Ethiopia, Liberia, Libya, Sudan, and the Union of South Africa were free of European rule. Now, the following are on the way to, or have already achieved independence from colonial domination: Sierra Leone (constitutional conferences to begin in London next month); Ghana, starting its fourth year of independence; Nigeria, now constructing the government buildings and negotiating with British and American leaders to counsel them on their way into full independence; the Belgian Congo, moving so swiftly that the Brussels Government has speeded up the date of independence four times in 24 months and has unfinished government buildings in Leopoldville, begun in the confidence that Belgium would weather the storm for many years; Guinea, left by France without typewriters, trucks, adding machines, appliances of all kinds, and now being supplied by the Czechs and Russians—having renounced the French franc and announced a new currency within a week; Rhodesia, a federation primarily in name, unwilling to continue, victimized by white settlers; Kenya, emerging from the London conference with more political and economic power in the hands of Africans than anyone had considered possible at this time.

Certainly, Africans are moving at a dangerous pace, around uncharted political curves, on undeveloped economic bush trails. They lack enough educated leadership. They are risking much. But they are determined. The magic word is "independence." They say, "We are finished with a horse-and-rider civilization. We refuse to be ridden any longer."

The permanent political alignments of emerging African nations will be the decisive balance in world politics.

Fourth, its human resources. The real potentiality of Africa does not lie in its mineral deposits or its forests, nor in its waterpower.

We are witnessing an all-out effort on the part of the small nations to raise their living standards, to achieve freedom from colonial powers, to manage their own destinies. The unique aspect of this situation is that it comes at a time when there is a sense of international responsibility on the part of powerful nations, and when a world forum, the United Nations, guarantees a hearing to these emerging countries.

Colonialism, at least so far as Western powers are concerned, is in its final stages. African countries are presently uncommitted. We should not be maneuvered into the position where our assistance of any sort appears to be forced by the growing interest of the Soviets in African nations.

On the other hand, to assert that Communist influence in Africa is negligible or that the Soviets are not utilizing all methods at hand to capitalize on this social revolution, is to be both naive and blind.

Let me cite two examples. In equatorial Africa, four U.S.-financed leader grants are offered annually. These are the conditions. The applicant must be fluent in the use of English. This automatically bars most young men and women from equatorial Africa, since they speak their own African language and French, but only a few speak or understand English. The applicant must prove that he has not belonged to any Communist organization. This is difficult for him to prove, even if it is a fact.

Russia offers 400 scholarships to equatorial Africa. There are no language requirements. Nor is any student barred because of his organizational memberships. He is met on arrival in Russia, by an African, speaking his own native language. We required a student to remain in the United States until his work is completed. Russia requires him to return home each summer, and with the best Russian-made clothes, good luggage, a fine bicycle, and a prepaid vacation; he is directed to travel in the villages. There he makes an impression. He looks well fed, is well groomed, has the best equipment, and he credits all of these things to his friends, the Russians.

I do not intend to generalize. I do desire to infer Russian interest in the future of equatorial Africa.

In Ethiopia, the Emperor's visit to Russia produced an offer of a loan of \$100 million (U.S. dollars) but with the proviso that a technical school should be built by the Russians, for the Ethiopians, in Addis Ababa. Russian-made equipment, Russian teachers, in the capital city may have no long-term political significance, but they do indicate the strategy being employed by the Soviets.

What may we do to promote the well-being of African people, to support the movements for political independence, and to strengthen the economy, morale, and morals of these emerging countries?

First, the United States of America should rely on principles, not on expediency, for its policies. We should announce our complete opposition to colonialism, on the ground that it is immoral, and that if it had usefulness, that time has passed.

Africans want our reassertion of democratic ideals, belief in independence, and support of freedom.

Second, we should acknowledge that the pace of events in Africa cannot be controlled by European powers. We should then proceed to give counsel for implementing the legitimate aims of Africans, not standing aside as if we were neutral, unless a conflict with Soviet interests is involved.

Third, we should think with some pride of our association with Africa through Christian missions. More than 90 percent of all primary or elementary education in Africa today is mission education. Virtually every adult leader in sub-Saharan Africa is a product of a mission school. Biblical precepts in which these leaders have been rooted will have value in future administrative policies they will develop.

Fourth, we should claim our Negro citizenship as the world's most compelling link with African nations. One in ten Americans has an African ancestor. The American conscience established Liberia as a home for emancipated slaves and named its capital for the President of the United States, James Monroe. The dramatic value of our policy of noncolonialism should be exploited.

Fifth, we should give our primary concern to two phases of the new African education and economic improvement.

Concerning education, it is too late to try to educate rank-and-file African adults, more than 95 percent of whom are illiterate. Instead, we should assist in the establishment and use of new instruments of communication, the picture, radio, television. A single radio and loud speaker will serve a typical African village. Programs in African language will be understood by everyone. The meaning of independence, the responsibilities of citizenship, ways to sanitation, personal health, better foods, improved agriculture, animal husbandry, and many other important subjects can be taught to illiterate people, at low cost, by modern electronics.

Elementary education is the key to the future for every African country. Presently more than 70 percent of the elementary teachers are inadequately trained; many have only 2 years of formal education. The

extension of the well-equipped teacher, the multiplication of teacher training, the recruitment of qualified Americans to strengthen teacher education, must be one of our concerns. The standard maintained and the prevailing philosophy of elementary education will ultimately determine the quality of leadership and the political affiliations of Africa.

African textbooks have been largely British or French inspired. They must be rewritten to provide materials for African culture and conditions, for the education of Africans. To this task we could give valuable assistance.

The task of elementary education belongs to the Government; mission schools should continue to serve and to expand their facilities and staffs, with Government standardization and financing.

Secondary education should be the joint responsibility of Government and missions. Larger numbers of young Americans should be recruited for high school teaching and for secondary teacher education in Africa. When colleges and universities, and private and public high schools guarantee professional position, with advancement, to members of their staffs who elect to teach in Africa, for 3, 4, or 5 years, the recruitment will be made much easier.

Higher education in Africa enjoys very high standards, but is still much too small in enrollment to provide the number of well equipped leaders needed.

This is not entirely because colleges are late arrivals on the scene. Fourah Bay College in Sierra Leone is more than 100 years old. Still, it was granted a charter as a University College only last month. That college admits 150 Nigerians, partly because there are not enough qualified Sierra Leoneans to fill all of its places.

Lovanium University in Leopoldville has buildings worthy of any university in the world, and a distinguished faculty, and the only atomic reactor in Africa. But the reactor is not used by African students, while places are vacant in the institution, because in all of the Belgian Congo, there are so few graduates of secondary institutions.

I have suggested to Monsignor Gillon, rector of Lovanium, that until the time comes, perhaps 10 or 15 years from now, when that university has a full enrollment, an intake from institutions of higher learning in the United States of America, for a junior year in Lovanium, be arranged.

The university college in Salisbury will be 4 years old next September. It enrolls 335 students, only 31 of whom are Africans. Its facilities are excellent. Its standards are very high. Its influence is notable. On its opening, African students were housed separately from European students. There is a law in the Federation of Rhodesia prohibiting Africans and Europeans from residing under the same roof. During the first year the European girls became fond of the one African girl then enrolled. She lived alone in a dormitory. They requested permission to invite her to move into their residence hall. The request was granted. She moved. The city of Salisbury reacted against the move with violence. The second year, 8 African men students were housed in a hall for 32 students. European men were denied admission because their dormitories were crowded. European and African men were housed in the same building, with the result that the law has been amended, making this arrangement legal, but only on the university grounds.

On the other hand, a dozen nations in Africa lack accommodations for students. Nigeria alone has an estimated 10,000 qualified students who cannot continue their education because the university college, with 400 students, at Ibadan is filled.

Russia has proposed to the world that it will build a free university for 4,000 students from Africa, Asia, and Latin America. This

is a propaganda victory for the Soviets, unless we are able to make a better proposal. A small group of distinguished colleges and universities recently announced a plan to accept 25 African students for college education, with all costs incurred in the United States underwritten. This is a good example of the idea I now propose.

There are more than 1,900 colleges and universities in these United States. Unlike the Russian proposal of a future fulfillment—these well-established, accredited institutions could achieve an immediate educational victory by agreeing to accept an average of two African students for full-time study, each with tuition, board, and room provided by the college, for a period up to 4 years.

Announced now, the plan could become effective in the fall of 1961, with details for applying, evaluation of educational credentials, establishment of a committee of Americans, joined by Foreign Service officers, to interview candidates in Africa, with the stipulation that African governments will provide transportation and incidental expenses. The effect on African countries in a decade would be phenomenal.

Since technical experts are critically needed, I suggest the development of a pool of experts, available for high-level use overseas, answering to the United Nations for appointments, but financed by the United States.

Believing in the idealism of American young people, I propose that we seek to enlist 1,000 college graduates for educational service in other countries, for a period of not less than 3 years, with a bonus for their service, in salary and status, instead of a vocational penalty, as they now find it to be.

Because capital is essential for underdeveloped countries, investment in projects promising recovery, and hence treated as loans, has worth. Roads in Africa are essential for economic improvement. A hard-surface road there stimulates economic development to justify its cost.

Harnessed water power can change the face of west and central Africa. Business agreements, with steady governmental support, through international monetary organizations, but assuring the countries of Africa that they can anticipate such projects and organize for full utilization of the expected resources, will contribute much to steadiness in African countries.

This may be one of the most important years of this century. In it, the future trend of mankind on this planet may be determined. The decision is now being made, and the issue is whether the democratic societies have the will and the self-discipline, the creativity, and energy necessary to do the things required to win for the world a full triumph of the way of independence and freedom.

If we can discipline ourselves to do hard work in behalf of mankind's future, to act from principle, not out of the demands of expediency; if we can make headlines because of our absorption with people, not payola; with issues, not filibusters; then we can make an unprecedented contribution to the underdeveloped countries, and in the process, find our own quality of freedom.

The Airlift Problem—II

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Rec-

ORD, I include the following article from the New York Times, Wednesday, March 23, 1960:

THE AIRLIFT PROBLEM—II—CARIBBEAN GAMES POSE THE MAJOR TASK OF SETTING MILITARY TRANSPORT'S NEEDS

(By Hanson W. Baldwin)

The largest peacetime military airlift operation in history—Exercise Big Slam/Puerto Pine—now in its second week, has posed, and may attempt to answer, a number of major air transportation problems.

The first and major problem, which has led to much confusion about the amount of military airlift needed by the Nation, is the statement of requirements. The Joint Chiefs of Staff outlined the general military needs of the Nation to support these strategic concepts and war plans.

The Joint Chiefs have stated the military airlift requirements for general atomic war. MATS says it can meet these requirements with its present force of 483 4-engined passenger and cargo planes.

However, the Transport Service believes that replacement aircraft and a modernization program are needed particularly for some of the aging cargo aircraft such as the Douglas C-124 Globemaster, which is the workhorse of the service's fleet.

REQUIREMENTS UNSPECIFIED

But the airlift requirements for limited war—a small atomic war, or a war waged with conventional weapons only—had never been outlined, at least to the Army's satisfaction.

The Joint Chiefs of Staff apparently believe an airlift adequate for general war is adequate for limited war. But the Army holds that a large part of MATS might be earmarked in a time of emergency for support of the Strategic Air Command and other missions, and that not enough would be available to transport troops overseas quickly.

The Army's statement of requirements has tended to stress mass as well as speed. The Army would like to be able to move at least one airborne division, preferably two—(11,890 men to a division)—anywhere in the world in a week or less.

Ideally, the Army would like these troops combat-loaded and ready to land on enemy territory instead of using staging bases on friendly soil from which to prepare for an airborne assault. The Army says the 101st Airborne Division can move out of Fort Campbell, Ky., in 4 days but that the limitations of the airfield stretch this out to 7 days.

ALTERNATIVES OFFERED

However present plans of MATS, the Army declares, contemplate a time period of 28 days.

The transport service says that, using all its available planes for troop lift only and assuming that the troops would be landed at a friendly airbase to reload in troop carrier assault aircraft to attack an enemy objective, 15½ days would be required to move one airborne division 5,000 miles.

If all the available transport and cargo aircraft in both the Tactical Air Command, which operates troop carrier assault aircraft, and MATS were used, this time could be cut by a day. If 232 more aircraft of the Civil Reserve Air Fleet—commercial planes earmarked for military use in time of emergency—were used, this time might be cut to 9.2 days.

There are thus many different estimates of the time required to move an airborne unit a given number of miles in a certain time. All these estimates differ depending upon the assumptions.

About all the Army and transport service agree upon is that more modern airlift is needed; they differ as to kind and amount. Both also seem to agree, with the support of

many civilian authorities in the Pentagon, that the Nation's present outline of airlift requirements for general atomic war is unrealistic. They also agree that it places emphasis on the most unlikely kind of war and that more stress should be given to airlift needs for limited war.

Exercise Big Slam/Puerto Pine has stressed, as all troop transportation exercises have done, that any attempt to combine mass and mobility adds up to astronomical aircraft requirements.

All the fuel used in Puerto Rico for the transport service's planes was transported there by sea. No ammunition is being airlifted.

SUPPLIES BY AIR LIMITED

Only about one-third of the supply requirements are being transported by air. Medium and heavy tanks cannot be air transported, and even the light tanks can be airlifted only at the rate of one in each aircraft.

The airborne division has 52 light liaison aircraft and helicopters in its organization. These must be disassembled for air transport and the Army now contemplates using a naval aircraft carrier to transport them.

In Lebanon, a sea "tail" of about 25 ships was required to back up and support one airborne battle group of about 2,000 men.

Thus there are many observers who believe that the Army has set its airlift requirements too high and that the concept of total air transportability—the so-called air transportable army—is beyond achievement now or in the foreseeable future.

Instead of attempting to move masses of troops and equipment by air, the objective should be the extremely rapid transportation of fairly small numbers of troops—lightly armed and with limited staying power—to any part of the world.

These fire brigade forces could then be reinforced and supplied, not only by airlift but also by prepositioned stocks of arms and equipment in various parts of the world and by support from the sea.

Airlift is essential for speed but seallift is equally essential for mass and staying power.

Taxes and Farm Prices Hinge on Wheat

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following carefully reasoned article by the distinguished secretary of the Massachusetts Farm Bureau Federation, Mr. Carleton I. Pickett, whose knowledge of farm problems and integrity of viewpoint cannot be questioned:

TAXES AND FARM PRICES HINGE ON WHEAT

(By Carleton I. Pickett)

Wheat is the key to the whole political farm problem. It is more important to Massachusetts farmers—even fruit and vegetable growers or cranberry producers and to Massachusetts taxpayers than any other matter before the Congress. The outcome of wheat legislation probably will shape all other farm legislation and the amount of money we pay for farm programs.

Here is a support program that has caused a wild explosion of surplus, an ugly growth on the agriculture economy and on the problems of taxation.

The experts say that a thousand dollars a minute are being spent on storage alone. The political impact of those engaged profitably in storage is tremendous enough to reach up to and shape the farm policies of a Massachusetts contender for the Presidency. They involve organized labor to such an extent that the policies for agriculture are being influenced by labor.

The situation is so serious that bills are going into the congressional hopper at great rate to adopt variations of the Brannan plan to pay farmers for the difference between the market price and a Government-legislated price. These aim at controlling the number of cows per farm or the number of acres. Other bills want to deputize farmer committees to control output and price. Still others seek to maintain the old parity yardstick of support. None are going to help but the advocates are many, well organized, and vocal.

Have you written to your Congressman yet about wheat and taxes? It may be too late in another 10 days.

The farm bureau proposes:

1. Elimination of all wheat acreage allotments and marketing quotas.
2. A price support based on the corn price support adjusted for differences in weight and nutritive value.
3. No sale of wheat stocks in storage on the domestic market to compete with producers.
4. Cushion the shock of the new and much lower support price by temporary use of the conservation reserve part of the soil bank.

Quick action by the Congress can protect this year's crop and not saddle the farmers who do not grow wheat and the taxpayers with unsound and costly programs.

To all of New England the outcome of the wheat crises is of deep concern. We cannot go on establishing by law subsidized crops far in excess of what we can ever use. Nor can we pay the bill for more of the same or for any of the visionary schemes with political appeal.

Someday we have got to get agriculture back on its own feet. We do not want to destroy it by ill-conceived cures or by extreme rapidity but everyone ought to demand of his Congressman that we start right now.

In wheat areas the mail from farmers, bankers, storekeepers, labor unions, and just people is pouring into Washington.

Farm bureau has proposed to the Congress principles that will work. It has appealed to its friends to make themselves heard.

John Puts June (and Cadott) on State Map

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, Wisconsin's new 1960 highway map, which is a guide to the State's 9,000 lakes, 1,500 trout streams, and 5 million acres of publicly owned forests, has an added attraction so far as my office is concerned. The cover picture shows my secretary, June Kysliko, sitting by a waterfall on the Chippewa River in my home district in Wisconsin.

The color photo was taken by June's father, my friend John Kysliko, who runs a farm near Cadott, Wis., and is well

known for his black-and-white and color photography. John has had one or more pictures included as representative of Wisconsin on the State's highway map for 5 consecutive years, but this is his first cover picture.

Under leave to extend my remarks, I would like to include in the RECORD a story about the highway map written by Walter H. Brovald, editor of the Cadott Sentinel:

JOHN PUTS JUNE (AND CADOTT) ON STATE MAP

"Three colorful new features highlight the State highway commission's 1960 edition of the Wisconsin highway map now ready for distribution."

So reads the opening paragraph of the official news release concerning the brandnew State map, but folks in Cadott and surrounding area will be quick to note a fourth colorful feature, and one in which the village is unique.

Right on the cover of the map is a picture of Cadott's own June Kysliko, daughter of Mr. and Mrs. John Kysliko. John, who has had one or more pictures included as representative of Wisconsin on the State's official map for 5 consecutive years, is able this year to boast of being a cover photographer. He took the picture of his daughter sitting beside a gentle falls of the Chippewa River bed near Jim Falls.

John has had as many as four of his photographs selected for use on the map in past years, but those "three colorful new features" the State boasts of resulted in a sharp reduction in the number of pictures used this year—but John is justifiably proud that his one picture is the cover photo.

One of the inside photographs, however, is a special one for John, too. It was taken by Mrs. Robert Andre, another daughter of the Kyslikos' and shows their granddaughter, Ann Andre, of Milwaukee, feeding ducks in Milwaukee Park.

What about those three new features of the map?

The more than 100 miles of interstate highways opened for traffic in 1958 and 1959 are shown for the first time on the map and the locations of the portions still to be completed are also indicated.

The mileage log on the map's back has been made much easier to read through the use of pink, blue, yellow, and green color on the cities names and on the mileage figures.

And Wisconsin's eight State symbols—the flag, flower, tree, wildlife animal, song, fish, bird, and animal—are pictured in natural colors. Twelve color photos portray the State's natural beauty and recreational advantages.

Enlarged area maps of Milwaukee and 13 of the State's other largest cities are included on the map along with the information on the location of historical markers, State parks, and forests. A new, easy-to-read legend makes route finding simpler than ever before.

Governor Nelson's message on the map includes a cordial invitation to tourists to visit Wisconsin with a request to motorists to observe careful driving practices.

About 800,000 copies of the map will be distributed this year through service stations, hotels, motels, restaurants, and other public places and a copy of the map is included with each reply to the thousands of requests for information on Wisconsin received by the conservation department.

Beautiful and useful as the map is otherwise, it is expected to have a large circulation in this area as residents make use of the opportunity to point out to travelers and visitors that John Kysliko has really put Cadott on the map.

Small Business Administration—Its Responsibilities and Programs

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the March 1960 issue of the Michigan Business Review. The author, Mr. Philip McCallum, of Ann Arbor, Mich., is Administrator of the Small Business Administration, and in his informative article describes the varied activities of his agency in assisting small business.

The article follows:

SMALL BUSINESS ADMINISTRATION—ITS RESPONSIBILITIES AND PROGRAMS

(By Philip McCallum)

President Eisenhower on July 18, 1958, signed into law the Small Business Act of 1958, creating for the first time in history a permanent agency of the U.S. Government to foster the welfare of small business enterprises.

The importance of small business to the Nation's economy, of course, had long been recognized. During World War II the Smaller War Plants Corp. was created to help harness the full effort of the Nation's small business firms to the war effort, and when the Korean conflict began the Small Defense Plants Administration was created for a similar purpose. The Reconstruction Finance Corp.'s financial assistance activities included loans to small business concerns and to the victims of floods or other natural catastrophes.

The Small Business Administration succeeded the Small Defense Plants Administration in mid-1953 with broadened powers to assist all small business concerns.

MADE A PERMANENT AGENCY IN 1958

By 1958 the need for the services of the Small Business Administration to foster and assist the Nation's small firms had been so firmly established that the agency was made a permanent part of the Government virtually without opposition.

Not only was the Small Business Administration made a permanent agency in 1958 but its powers to help the small business segment of the economy were increased by enactment of the Small Business Investment Act. This legislation authorized the creation of private companies which will furnish equity funds and long-term financing to small business concerns. The functioning of local development companies and small business investment companies and the Federal assistance available to them will be described hereafter.

The philosophy that led to the establishment of the Small Business Administration is perhaps best stated in the Small Business Act of 1958, which says:

"The essence of the American economic system of private enterprise is free competition. Only through full and free competition can free markets, free entry into business, and opportunities for the expression and growth of personal initiative and individual judgment be assured. The preservation and expansion of such competition is basic not only to the economic well-being but to the security of this Nation. Such security and well-being cannot be realized unless

the actual and potential capacity of small business is encouraged and developed. It is the declared policy of the Congress that the Government should aid, counsel, assist, and protect, insofar as is possible, the interests of small-business concerns in order to preserve free competitive enterprise, to insure that a fair proportion of the total purchases and contracts for property and services for the Government (including but not limited to contracts for maintenance, repair, and construction) be placed with small-business enterprises, to insure that a fair proportion of the total sales of Government property be made to such enterprises, and to maintain and strengthen the overall economy of the Nation."

RESPONSIBILITIES OF SBA

To achieve this basic purpose the Small Business Administration has established various programs of assistance to small firms.

The Small Business Administration has five major areas of responsibility:

1. Helping small business gain access to adequate capital and credit through financial counseling, bank-Small Business Administration participation loans, direct Government loans, and assistance to privately owned small business investment companies;
2. Helping small business obtain a fair share of Government purchases and sales;
3. Helping small business obtain competent management, technical and production counsel;
4. Making disaster loans to persons whose homes or businesses have been damaged or destroyed by storms, floods, and other natural disasters, and to small business concerns which have suffered substantial economic injury because of excessive rainfall or drought conditions in their areas; and
5. Serving as an advocate of small business with other Government departments and agencies in many fields and programs in which small business has an interest.

FINANCIAL ASSISTANCE

A summary of each of the responsibilities assigned to this Administration follows:

The Small Business Administration since its inception has operated a financial assistance program designed to provide term loans to small manufacturers, service industries, retailers and other businesses eligible by size, dollar volume, or other pertinent standards.

These loans, made on either a direct basis or in participation with banks, have totaled more than 18,000 in number for \$850 million since the inception of the program in 1953.

The loans have been in amounts from \$1,000 to \$350,000 with an average of \$40,000 (although nearly 60 percent have been for \$25,000 or less). Maturity dates have been averaging about 5 years, although longer maturity dates are provided when considered necessary.

Small manufacturers, retailers, service establishments and other small businesses are eligible for SBA loans for business construction, conversion, or expansion; the purchase of equipment, facilities, machinery, supplies or materials; or for working capital.

There are two broad types of Small Business Administration business loans: "participation" and "direct." In a participation loan, the agency joins with a bank or other private lending institution in a loan to a small business concern. In a direct loan, there is no participation by a private lender—the loan is made entirely and directly by the SBA to the borrower.

By law, the agency may not make a direct loan if a bank or other private lending institution will join with it in a loan to the borrower.

Business loans generally are repayable in regular monthly installments, including interest on the unpaid balance, and can have maturity dates up to 10 years.

SMALL BUSINESS INVESTMENT COMPANIES

In addition to the direct financial assistance rendered to small business concerns by SBA under the Small Business Act, further assistance was authorized through the creation of small business investment companies and development loan companies under the Small Business Investment Act of 1958. This assistance, which is actually rendered by privately organized companies, is not a duplication of the direct assistance rendered by the Small Business Administration but is designed to make long-term funds and equity financing available to the small business segment of our economy. Considerable testimony was presented by the Federal Reserve Board and other authorities to show that the costs in underwriting for public sale security issues in small amounts is disproportionately high to small business concerns. The Congress passed and on August 21, 1958, the President signed the Small Business Investment Act of 1958, thus providing the means by which privately organized and operated small business investment companies would serve as a source of equity and long-term financing for small business concerns.

Small business investment companies contemplated by this act were authorized to provide the equity and long-term funds for small business concerns, which large underwriting firms normally provide for the larger corporations. Whereas the securities of large corporations are bought by underwriting firms and resold to public investors, the securities of small business concerns could not be expected to be as marketable as those of the larger companies. As the cost of investigating and investing in small concerns is relatively high, it was necessary to provide certain inducements to private capital to invest in the long-term debt or equity securities of small business concerns.

FINANCIAL ADVANTAGES

The act, therefore, necessarily gave to the small business investment company substantial inducements, including tax advantages, provided certain amounts of Federal funds to assist in the formation and growth of small business investment companies, and permitted the purchase of securities convertible into the stock of the small business concern financed.

Many companies, after a study of these inducements, have been formed. To be exact, 68 small business investment companies have been licensed by the administration as of January 22, 1960, and in addition, applications for the forming of 81 additional companies have been submitted.

The financial assistance that SBA may give to a small business investment company is the authority to lend any one company up to \$150,000 to assist the company to obtain the minimum required capital of \$300,000; furthermore, SBA is authorized to loan any one small business investment company an amount equal to one-half of the company's capital.

TAX BENEFITS

The tax benefits available to small business investment companies are briefly these:

A small business investment company actively engaged in the business contemplated by the act will not be subject to taxes on accumulated earnings.

A small business investment company (except under certain circumstances) is also exempt from personal holding company taxes.

Under the Technical Amendment Act, losses realized on the stock of a small business investment company may be treated as an ordinary loss rather than a capital loss. This loss deduction applies to all purchasers of stock from a small business investment company and is not limited to the original stockholders.

The Technical Amendment Act also permits 100-percent deduction rather than an

85-percent deduction allowed to the corporations for dividends received by the small business investment company.

A further inducement for the formation and successful operation of small business investment companies is contained in legislation passed by the Senate (S. 2611) which will, if enacted by the House, provide greater flexibility in the types of securities the small business investment companies may take from the concerns they finance. This should enable small business investment companies which are experienced in underwriting and selling securities, to create and sell, profitably, to public investors and investing institutions many of the securities they generate. Greater flexibility in the types of permissible securities should also augment the borrowing power of the small business investment companies from banks and other institutions.

ASSISTANCE TO DEVELOPMENT COMPANIES

The other type of company eligible for financial assistance under the Small Business Investment Act is the development company—both the State and local development company. The act authorizes SBA to loan to a State development company an amount equal to the loans obtained by the State development company from its members and others, the only proviso being that the State development company must use the funds obtained from SBA to finance small business concerns.

The act also authorizes SBA to loan to a State or local development company a total of \$250,000 to assist in the development of any one project. At least 20 percent of the cost of the project such as the completion, expansion or conversion of a manufacturing building must be provided by the development company, in which case SBA will provide the remaining 80 percent. The property being developed must be leased to an identifiable small business which will be required to make periodic payments to the development company sufficient to repay the funds advanced by SBA.

During the first year of operation 34 loans had been made to State and local development companies in an amount of \$4,181,774.

THE PROCUREMENT ASSISTANCE PROGRAM

Under the procurement assistance program, which is a major activity, the agency helps small business concerns obtain a fair share of Government contracts. Although work toward this objective is done in many ways, perhaps the most effective means is through cooperation with the major Government purchasing departments and agencies to have bidding on suitable contracts or parts of such contracts reserved for small business concerns.

This program, known as our joint set-aside program, has resulted in the awarding to small firms of approximately 75,000 Government contracts totaling about \$3 billion. This applies only to contracts set aside for small business and does not include many billions of dollars which small firms have received in Government contracts either as prime contractors or as subcontractors.

ASSISTANCE WITH MANAGEMENT PROBLEMS

Another responsibility which has been assigned to the Small Business Administration is to assist small business concerns with their management problems. This activity is referred to as the management and research assistance program.

This program is educational in nature and is conducted principally through administrative management courses, management research, and publications for small business owners and managers. SBA co-sponsors management courses which are offered by universities and colleges. SBA has co-sponsored nearly 700 of these management courses in cooperation with 255 educational institutions. Since the start of the program

in 1954, 21,500 business men and women have attended these courses. The students—small business owners and managers—pay the cost through tuition.

SBA issues many publications relating to various management subjects. Recent titles include "Pricing Arithmetic for Small Business Managers," "How Better Business Bureaus Help Small Business," "Traps To Avoid in Small Business Management," and "How To Reduce Your Operating Costs." Nearly 7 million copies of these publications have been distributed upon request.

RESEARCH PROGRAM

In addition, during the 2d session of the 85th Congress, the agency was given the responsibility of launching a new research program through which State agencies and educational institutions will be given grants of not more than \$40,000 per year within each State to finance small business management studies and counseling.

During fiscal year 1959, 52 grants ranging from \$7,465 to \$40,000 and totaling approximately \$1,900,000 were awarded to educational institutions and State agencies for studies of specific small business problems, in each of the States and District of Columbia and the Commonwealth of Puerto Rico.

The University of Michigan has received a grant of \$40,000 to make an analysis of the management factors contributing to the success or failure of small manufacturing concerns.

When this study and others are completed, they will be widely disseminated by the Small Business Administration and the universities, and they may well be of special interest to the readers of the Michigan Business Review. It is the consensus that a great deal of valuable information will be developed by these research studies.

Another form of direct assistance is, of course, the disaster loan program which is mentioned above as the fourth major area of responsibility assigned to SBA. Since this program is not in the strict sense a business program, I feel that any further discussion of it would be beyond the scope of this article. The discussion so far has been restricted to what might be called the agency's direct forms of assistance to small business concerns.

ADVOCATE OF SMALL BUSINESS IN GOVERNMENT

The fifth responsibility which has been placed with this agency and which affects each and every small businessman in the SBA's function as the advocate of small business in Government.

Many sections in the Small Business Act refer to the responsibility of SBA in formulating policies which affect small business, a few of which are being pointed up here. The act empowers the agency whenever it determines such action is necessary "to consult and cooperate with all Government agencies for the purpose of insuring that small business concerns shall receive fair and reasonable treatment from such agencies."

Another section of the act says in part: "To the extent deemed necessary by the Administrator to protect and preserve small-business interests, the Administration shall consult and cooperate with other departments and agencies of the Federal Government in the formulation by the Administration of policies affecting small-business concerns."

Much has been done since the Small Business Administration was created to foster the interests of small businesses. In 1958, President Eisenhower created a Cabinet Committee on Small Business. This small business committee consisted of certain members of the Cabinet and the Small Business Administrator. In addition, other department and agency heads were designated by the Presi-

dent to participate on an ad hoc basis as seems desirable.

This committee has made recommendations for both administrative and legislative action. Many of these recommendations have become law.

The Small Business Administration during the past year has continued to be an advocate for small business with many Government departments and agencies. It has been possible by consultation at early stages in the formulation of regulations and policies to make certain that artificial impediments are not placed in the way of the growth and expansion of small business.

INTERAGENCY COOPERATION

To illustrate the broad range of activities in which this administration has participated, here are a few examples of interagency cooperative effort:

In its new responsibilities for increasing small business participation in sales of Government property, the Small Business Administration is working closely with those Government agencies having disposal activities. A cooperative agreement was developed with the Department of Agriculture to assure small business an increased share of Federal timber, and the agency has completed a similar agreement on forest land controlled by the Department of the Interior. The agency also plans to develop cooperative agreements with all other departments having responsibility for the sale of real and personal property.

Representatives of this agency have conferred with representatives of the Federal Aviation Agency about financial assistance to small airlines and loans to private business concerns for hangar facilities.

SBA has also collaborated with the Business and Defense Services Administration of the Department of Commerce in helping small business concerns obtain access to scarce materials.

With regard to small business participation in the President's highway program, the agency has worked with officials of the Bureau of Public Roads in the Department of Commerce.

The Small Business Administration in collaboration with other agencies has reviewed the labor standards provisions of Government construction contracts in an effort to simplify the procedures and thus facilitate the participation of small business in Government procurement.

SBA is collaborating with the General Services Administration, the Department of Defense, and other agencies in a study of Government procedures, policies, and regulations which may adversely affect small business. Agency employees are participating with the General Services Administration in the preparation of a single set of Government procurement regulations.

Recommendations have been made to the Department of State about hardships imposed on small business in cases such as the export of ferrous scrap and other materials in short supply, and restrictions imposed on goods shipped from the United States.

These are but a few of the instances in which this agency has been working with other departments to strengthen small business.

A CONTINUING PROGRAM

In summary, therefore, it can be said that the Small Business Administration has made progress in its responsibility to give financial procurement, management, and technical assistance to small business. These programs have solved and are continuing to solve many of the individual problems of small business concerns.

The Federal Government, the Congress, private business, and the country at large all recognize the vital contributions that small business makes and must continue to make

to the national economy and to the American free enterprise system.

It is the purpose of the Small Business Administration to improve and strengthen the agency's established programs, and, if appropriate, to devise new ones which will encourage and develop the potential capacity of small business to contribute to our competitive economy. SBA also must and will bend every effort to the creation of an economic climate in which small enterprises can be started and can grow and flourish.

A Helping Hand

EXTENSION OF REMARKS OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a recent editorial from the Wallowa County Chieftain, of Enterprise, Oreg. It deals with the general question of economic aid:

[From the Wallowa County Chieftain, Mar. 17, 1960]

A HELPING HAND

One of the greatest misconceptions about communism is that it makes its greatest gains through force, subterfuge, and pure propaganda. Actually, the appeal of communism lies in its promise of a better life to people who live in desperate straits. For those living without hope on a bare subsistence level almost any program which offers a chance for something better seems worth trying. People at this level cannot possibly lose by a change. The worst that can happen to them is to continue on the same animal standards.

Even a change, without any gain, offers some escape from the deadly monotony involved in putting out a maximum effort merely to stay alive.

Hundreds of millions of people in the world live at this bare subsistence level. Many of them are illiterate and very few of them, if any, are even remotely interested in the theories of capitalism, socialism and communism. They are interested only in concrete offers for more food, better clothes and homes, and a chance to move up toward the standard of living of the more fortunate classes.

Foreign aid, if it is designed for anything more than to buy anti-Communist guns and manpower, must reach the poorest people in a way which will bring work constructing land reclamation, irrigation and improvement projects, which will build industries, clear out slums and erect decent homes, which will build and staff schools and which will be aimed at helping people at the lowest level become constructive workers with a plan for a much better life and a helping hand to make that plan possible.

If we were using all of our surplus money, manpower and resources in a program such as this we could make friends all over the world and we would be able to see substantial gains, which are difficult if not impossible to find in foreign aid which provides only the munitions of war.

But we will find that it is impossible to make capitalists in days, months or years out of people whom we assist upward from the bare subsistence level. It would not be economically possible to supply every subsistence tiller of the soil, with a privately owned farm, an individually owned home

and an adequate list of equipment and livestock. And even if it were financially possible, the uneducated and untrained worker would not have the skill and the knowledge to operate successfully on his own on the farm or in business.

When masses of people are to be helped in their rise from a subsistence level the effort must necessarily be a cooperative one. A minimum amount of everything—housing, land, tools and technical assistance—must serve a maximum group. This may be simply cooperation, or it may be socialism or even communism, but it is the only way. If adherence to an ideal and a principle holds us off from extending a helping hand on this basis the day when there will be a better world for millions of helpless people will indeed be a long way off.

The Challenge of Youthful Leadership

EXTENSION OF REMARKS OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. HECHLER. Mr. Speaker, in the past few years there has been a stagnant complacency in national leadership. At the very time when this Nation and the free world face serious threats which endanger freedom and democracy, we have looked in vain for the President of the United States to speak out and grasp the reins of leadership.

During the dreary fifties, students on the campuses of our Nation—terrified at first by McCarthyism, and then lulled by the disease of national complacency—turned their attention to more frivolous pursuits and began training for their grey flannel futures. Those of us who went to college in the 1930's and were participants in the intellectual ferment of the Roosevelt era began to despair about the future of our Nation.

Fortunately, however, we are seeing signs of a new intellectual awakening on the campuses. Students are waking up, are grappling with the major issues we face, and are talking and thinking about the great problems which some of our national leaders have refused to acknowledge.

As a sample of the inspiring activity of one campus group, the following article from the March 26, 1960, issue of the Nation magazine shows that many students today are moving "ahead of their adult advisers, both in desire and imagination." To me this activity is immensely heartening and may portend a fresh and realistic national leadership in the years ahead.

The article follows:

CHALLENGE ON THE CAMPUS (By Dan Wakefield)

NEW HAVEN, CONN.—At the tables down at George and Harry's restaurant-bar in New Haven, a handful of Yale undergraduates who suspected that neither the Whiffenpoof Song nor the howl of the beats provided the ultimate answer to the young generation in America, conceived and initiated an idea called "challenge." Now, a year later, the

challenge idea has not only become a primary topic of talk and activity at Yale, but has stirred more interest in dozens of college campuses throughout the country than anything since Gus Dorais and Knute Rockne invented the forward pass. Its aim is to "confront individuals with the crucial issues of today's world" and challenge American college students to stand up and take a part in dealing with them.

Last week, Challenge held its second colloquium at Yale on the topic of "American Democracy: Myth or Reality?" featuring such varied interpreters of the American dream as A. Philip Randolph, Barry Goldwater, Harold Taylor, and Thurgood Marshall. The first colloquium, held last December, presented "The Challenge of the Nuclear Age," with interpretations by Hubert Humphrey, Carlos Romulo, Gen. James Gavin, and geneticist Dr. James Crow. The featured participants not only act as lecturers, but attend coffee seminars with the students to answer questions and present their views in a manner more informal than is possible from a platform.

The colloquiums are the feature each semester of a program that begins with evening gabfests, down at George and Harry's, meetings and discussions among students of each of Yale's 10 colleges, discussions with campus professors on the semester's challenge theme, and leadup speakers to provide background information. The full-house audiences of last week's colloquium were made up not only of Yale students, but of more than 500 visiting undergraduates, from 40 or so colleges around the country, who have started, or hope to start, challenge programs on their own campuses.

This spring's program began with some words by William C. Devane, dean of Yale College, who explained that when several students came to him last year with the idea of challenge, he told them he didn't think it would work, and he was glad to see now that he had been wrong. So much for the inspirational stimulus of the older generation. The three students who conceived the challenge idea—Sam Bowles, Ralph Bryant, and Richard Celeste—eventually got backing from Dean Devane and leading Yale faculty members, as well as important Yale alumni and New Haven civic leaders; but originally they were greeted by friendly skepticism on the part of their elders.

The students seem to have been far ahead of their adult advisers, both in desire and imagination. The Reverend William S. Coffin, Yale chaplain and one of the first faculty people to whom the students went for help, recalled recently that when they contacted him, "These fellows had thought of everything. They wanted to get the best people for the first colloquium, and they weren't kidding when they said the best. When they started out they wanted Camus, Schweitzer, and Bertrand Russell. They were asking me last spring about how to go about getting Camus—they'd already written letters and had friends of his write letters—and I suggested that they get in touch with Germaine Brée, in New York, who wrote the book on Camus' work. One of the fellows said, 'Oh, yes; I'm having lunch with her tomorrow.'"

The three challenge originators finally called a meeting with some of the faculty members to "pool ideas." Ralph Bryant, one of the student trio, explained that "We bought a jug of sherry and got 8 or 10 faculty members in and told them what we wanted to do. The faculty was pessimistic—because of a lack of funds."

The students refused to share the pessimism. One of them, Richard Celeste, had won a \$1,000 Yale undergraduate prize, and he contributed \$700 of it to get the challenge movement underway. That summer all three worked to raise funds, and through

contributions from the New Haven Foundation and the Danforth Foundation, plus interested Yale alumni, they had \$7,000 by November. They also had a list of sponsors, including Connecticut Gov. Abraham Ribicoff, Representative Chester Bowles (his son, Sam, was one of the movement's originators), New Haven Mayor Richard Lee, faculty members such as Henri Peyre and Harold Lasswell, and alumni including Arthur Watson, president of IBM, and Henry J. Heinz II, president of H. J. Heinz Co.

The challenge originators were also far ahead of their elders in conceiving the operational aspect of the movement. The most obvious thing, of course, would have been to name a president, secretary, and treasurer—the usual American procedure for getting things done whenever three people get together. But the students felt that it then might turn into just another campus political group, with factions and internal politics detracting from the real purpose. The three originators weren't looking for campus prestige—their records at Yale had already won them offers of Rhodes scholarships—and they decided to work on an informal basis, without official titles or offices, in nightly sessions at George and Harry's which anyone interested was welcome to attend. The maturity of the students involved can best be measured by the fact that this has worked.

Stephen Kass, a Yale junior who was one of the organizers of the challenge spring colloquium, explained to a visitor that "We didn't want an 'empire.' Everyone's welcome to our meetings, and the guys who come most often and take the most interest take the jobs that have to be done. But nobody has a title, and the work is passed around. The guys who organized the winter colloquium were mostly seniors, and they've stepped aside now and mostly juniors have done the work on this one. There are freshmen, sophomores, and grad students, too. A graduate art student designed our literature and stationery. The fellow who's introducing A. Philip Randolph today is a freshman."

The common ground on which these students of different ages, educational interests, and political ideas have met is best summed up in the words of Challenge's own statement of origins and goals:

"As university students we are concerned with understanding the world in which we live. Yet we find that our environment is narrowing and fragmenting our awareness of the contemporary challenges. Our concern and sensitivity have become intellectualized and sophisticated to the point where we are unable to respond creatively to those crucial issues which are so complex that they often seem remote."

This sense of remoteness that so often hangs, like Fitzgerald's romantic mist, around the spires and towers of college campuses was vigorously dispelled during Yale's spring challenge weekend. Although the featured speakers recited from the podium the same basic texts that they offer to all public gatherings from the Baptist fish fry to the Phi Beta Kappa luncheon, they were brought down off their oratorical heights in the coffee seminars—one of the most important aspects of the weekend colloquiums. In a quick stop-in tour at some of these student-speaker sessions, a visitor heard a Yale undergraduate question Philip Randolph on how a white college student could help bring about the integration of the segregated musicians' union locals in New Haven; Harold Taylor, the Leonard Bernstein of progressive education and former president of Sarah Lawrence College, was asked if he didn't think most American college students had to be forced into learning anything; BARRY GOLDWATER, who, in his formal speech, had recommended the breakup of unions into autonomous local units, was

asked if he would recommend the same program for General Motors.

On the Sunday of the challenge weekend, more than 50 visiting students got together with some of the Yale men to discuss the problems and prospects of organizing a challenge program on their own campuses. They were there from Antioch, Columbia, Smith, the University of Texas, Sarah Lawrence, Oberlin, Russell Sage and other schools of all types and sizes now involved in one stage or other with starting a challenge program. Some wondered how such a program could be made successful on a small campus not as well known as Yale. Ralph Bryant commented:

"The most expensive thing is the colloquium, with outside speakers, but that isn't necessary, and we don't feel it's the most important thing we've done. Most colleges aren't able to throw a big colloquium, but they can get seminars and discussions going with professors on their own campus. We decided that our success shouldn't be measured in how many big names we got for colloquiums, or how many people attended, but how many individuals at Yale radically changed their lives—like deciding to go to work in Africa, or actually doing something about what's going on in the world."

Yale students have already begun to make that kind of response to the challenge they have been presented with. Twelve undergraduates are going to Africa this summer to build schools; a half-dozen have applied to teach in Nigeria next year; eight Yale students were the first northern collegians to initiate a sympathy picketing for the Negro sit-in strikes at southern lunch counters. On the weekend of the challenge colloquium, Yale student Al Lowenstein spoke at a rally which raised several hundred dollars for the Negro students expelled from Alabama State College.

There is, according to the student leaders, a marked increase in political activity on all sides. "Before," one of them said, "it was just a small clique that took part in political activities. All the political groups have come to life this year, both on the right and the left. We got Bill Buckley for a challenge speech before the student conservative society did, and they had to get on the ball. The same kind of thing has happened with the liberal groups."

The aim of challenge has not been to build up any particular partisan group, but to destroy what it calls "privatism"—the withdrawal into one's personal affairs to the neglect of the world around them. In a résumé for other colleges called "Organizing a Challenge-Type Program," the Yale students explained that one of the basic problems is deciding "whether the program will advocate openly a particular political point of view or will remain aloof from expressing a preference for one side or other of the political spectrum." Although "all of us have strong political ideas," the Yale students decided to keep the movement nonpartisan, in order to appeal to a wider group of students and sponsors. "By seeming to rise above purely political issues, the program will influence many people who consider politics somewhat unworthy of their attention. . . . It will be somewhat frustrating not being able to advocate your own political feelings, since you will have to try to present both sides. Also, the group will not be able to take political action as a group, but only as individuals."

This is the course that the Yale students decided on, and it has already proved its success. Editorials in many college newspapers have praised it as the answer to the way up from apathy, and institutions which have not yet begun similar programs have sounded notes of guilt and hope. Perhaps the most eloquent came from the Sophian, the Smith College newspaper, which announced plans for a challenge program at

Northampton beginning next fall. Speaking of the vital need for it, the Sophian said:

"So, sometimes we write home to mummy and daddy about the world situation, and occasionally we mention it to dear ol' Joe. Dear Joe smiles and asks us to dance."

"We think of the money America spends on beer and cigarettes and we worry about the economy, and democracy, and things, when we see another TV antenna go up across the street. We remember 'The News of the Week in Review' as we reread Vogue. We frown about our culture and its values as we tip the Negro waiters, and we promise we'll talk about the image of America sometime to somebody when we tour Europe this summer."

"We muse, and shake our well-brushed heads, and say America's challenge is Soviet communism, and we can't fight that, can we? When we get out of school, maybe. In the meantime it can all slide off our shiny heads, our feminine shoulders, our manicured hands. Bravely we can look to the future, stars in our eyes, thinking that someday we, too, shall do great things."

"We're the very picture of American youth. We gaze at the wide horizons of the world before us, with a questioning mind, filled with faith, hope, and charity. We forget that challenge, like charity, begins at home."

The best critique of this "silent generation" has come not from Kenneth Rexroth or the editors of Time, but from one of its own undergraduate observers; the best challenge to its role in the future has come not from parents or professors, but from its own campus leaders.

Peiping's Fatal Error

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very sincere and truthful statement that appeared in the editorial column of the Daily Evening Item of Lynn, Mass.:

PEIPING'S FATAL ERROR

The whole Christian world has been aroused by Red China's action in sentencing 68-year-old Bishop James E. Walsh to 20 years' imprisonment on a trumped-up charge of espionage.

Here is a man who has devoted a good part of his adult life in the service of his church and the Chinese people. A Maryknoll missionary for nearly 40 years, he had come to know the Chinese people very well and, in the words of Archbishop Cushing has "loved them very deeply and served them faithfully."

Bishop Walsh had absolutely no interest in politics. He never had any connection with the American Government. His interest has been solely in the religious life of the Chinese people. He has received sorry repayment for his love and devotion.

The utter ridiculousness of the charges against Bishop Walsh is convincingly revealed by the fact that Peiping radio, in the same broadcasts announcing his sentencing, also accused Francis Cardinal Spellman of New York of having joined with Bishop Walsh in carrying out subversive activities.

Cardinal Cushing, who was intimately connected with the Catholic mission before becoming an auxiliary bishop of the Boston archdiocese, says the Chinese Communist

regime, in this latest travesty on justice, may well have sounded its own death knell. The reason is that a wave of anger has swept the globe at what amounts to a death sentence for a man who has given his life to the Chinese people and whom Cardinal Cushing hails as "the finest American in my lifetime."

The United States plans to protest this tragedy. If protests are of no avail, let us have stronger action. Otherwise, we may well become the laughing stock of the world.

At least, let us hear no more fatuous drivel about admitting these bandits to the United Nations.

Resolution by Crook County, Oreg.,

Stockgrower's Association

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I wish at this time to insert into the RECORD the following resolution of the Crook County, Oreg., Stockgrower's Association regarding the important matter of range rehabilitation on our public domain:

RESOLUTION BY THE CROOK COUNTY STOCK-GROWER'S ASSOCIATION

Whereas the potential development of Oregon's public range, watersheds, and game habitat has been sadly neglected because sufficient funds have not been allocated to the Department of Interior's Bureau of Land Management for public range project needs; and

Whereas the results of range experimental development work on typical and suitable range areas have conclusively demonstrated that the carrying capacity for game and livestock can be economically increased up to fivefold or more. For example on an average dry range ordinarily requiring 20 acres per animal unit for the allowable grazing period, five animal units can be supported on the same 20 acres after eradication of sage, rabbit brush, and juniper, and accomplishing a reseeding program with adapted perennials such as Whitmar's beardless wheat grass (domestic version of native Oregon blue bunch grass) Crested wheat grass, Russian rye and others, costs vary from \$4 to \$6 per acre; and

Whereas the cash receipts from the sale of natural resource products provided by public lands has exceeded by approximately seven to one the amount of money being reinvested in public lands, including the expenses of Bureau of Land Management administration. It is realized a substantial amount of the funds received are from non-renewable resources such as gas, coal, minerals and oil. This fact however emphasizes the urgency of reinvesting these receipts in development of the renewable resources such as range grasses, edible plants and forests; and

Whereas funds allocated for development of public ranges, watersheds, and game habitats should be considered as a profitable investment in lieu of an expense because of increases in grazing fee receipts that will accrue due to increased animal unit carrying capacity of the range, increased recreational values and as the logical offset to compensation for the direct loss of revenues and the indirect losses in other related taxes being brought about by the increasing number of withdrawals and cutbacks encountered: Now, therefore, be it

Resolved, That a long-range master plan of development for said ranges, watersheds, and game habitats be initiated and accelerated, to be financed by a greater apportionment of the receipts from public resource products sales; and

Resolved, That said long-range master plan should contemplate at present values a minimum investment of \$4 per acre. Only suitable areas to be considered. The Government funds be expended on a matched basis with private moneys, provided a reasonable security of tenancy is assured for those persons holding permits and participating in the expenditure of private moneys; and

Resolved, That the sense of this resolution be communicated to the Oregon congressional delegation, other livestock associations, conservation and outdoor groups, and the Secretary of the Department of Interior.

Medical Care for the Aged

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. CURTIS of Missouri. Mr. Speaker, on September 27, 1959, I gave a speech before the American Academy of General Practice—physicians—at Kansas City, Mo. Three weeks later I gave the same speech before the convention of Missouri insurance agents in St. Louis, Mo.

I had prepared this speech for delivery to these seemingly diverse groups intentionally. Both groups are concerned with the problem of medical care for our people. The doctors are primarily concerned with the problem of the adequacy and the quality of medical care. The insurance people are primarily concerned with the problems of cost of medical care to our people.

We, the people's representatives in the Federal Government, are concerned with how well we are meeting all the problems of medical care in our society and what part, if any, the Federal Government should or might play in moving ahead toward a solution of these problems.

This speech serves as background for a further and more detailed discussion of the problem of medical care for the aged which I shall undertake tomorrow under a special order to speak, which I have been granted.

The above-mentioned address follows:

ADDRESS BY HON. THOMAS B. CURTIS BEFORE AMERICAN ACADEMY OF GENERAL PRACTICE STATE OFFICERS CONFERENCE, KANSAS CITY, MO., SEPTEMBER 27, 1959

The American people seem to be genuinely concerned about inflation. The genuineness of their concern is borne out by the fact that they now relate inflation to Federal governmental expenditures and Federal taxes.

There was a time when a political philosophy of tax and tax and spend and spend did mean elect and elect. That was in the days when the wealth in the United States was distributed in sufficient disproportion that those on the short end of the stick looked upon the Federal Government as an efficient device for redistributing the

wealth. And those on the short end of the stick were in sufficient number when, united by a common purpose, they became the majority at the elections.

However, today with the wealth more evenly distributed and certainly the Federal taxload being placed primarily on the overwhelming majority of the people instead of on the rich, it has become apparent that the Federal Government is no longer the efficient device for redistributing the wealth that it once was. At least the Federal Government in bringing about redistribution is no longer redistributing from richer to poorer, but in accordance with no recognizable formula, unless it is of one from those who have learned to use political power to those who have not learned to use political power. However, redistribution in accordance with such a formula is hardly one that will gain the support of the majority of the people at the polls. Quite the contrary—as it becomes more widely known that this is the effect of Federal Government redistribution of wealth, the majority of the people will oppose the political philosophy of Federal expenditures and Federal taxation, unrelated as it has been to what the expenditure is for and unrelated to the efficiency with which Federal expenditures achieve the purpose sought.

What I have said here, if true, and I believe it is true, should be a source of great comfort to the medical profession in its fight against what it has properly defined, in my judgment, as socialized medicine. If what I have said is true, then we can begin to discuss the question of Federal expenditures on the basis upon which they should be discussed and not upon the emotional and irrational basis of the past which springs from the cultivated belief that almost any Federal expenditures meant a redistribution of the wealth from those who have to those who have not.

I have not said that the medical profession has won its fight against the various projects to have the Federal Government spend federally collected taxes in the medical field; I have merely stated that now the medical profession can have a rational public debate on the merits and demerits of Federal expenditures in these areas. They will no longer be fighting against a hidden but powerful emotion in the breasts of the majority of the American people which looked upon Federal expenditure as being of some personal benefit inasmuch as they were not the ones who paid for it.

It will be noted that the old New Dealers, today's reactionaries who want to go back to the old days of spend and spend and tax and tax, still use indigency as the vehicle to get most of their programs enacted into law. Although some of the younger, in years, members of this reactionary crowd, realizing that indigency in the United States has not the meaning that it had in the 1930's, have latched onto another vehicle upon which to carry their program of spend and spend and tax and tax. The new vehicle they seek to employ is the fear of Russia.

It is important to realize that these middle 20th century reactionaries are not so lacking in intelligence or so full of wistful thinking as to construct their vehicle out of an impossible pumpkin. There still is such a thing as indigency and it is a real social problem. There is such a thing as the Russian threat. The important question is whether they will be able to use the problem or the threat in such a way that rationality again gives way to emotion so that Federal expenditures becomes synonymous with solving the problem or the threat.

Does anyone question that this is occurring? I am certain if they sat and listened through the congressional hearings and the floor debate on these issues over the past 10 years they would see this subtle switch on

the part of many of the same people from indigency to Russia.

It is true that there is another emotion tied into Federal health programs—that is the emotion of all human beings to regard death and disease as a social and, even more important, a personal enemy. What must be done with this emotion is the same that must be done with these other human emotions. Channel it into the right direction and not let the neo-Federalists, the mid-20th century reactionaries I have previously referred to, make Federal expenditures synonymous with fighting the enemy. I am afraid they have already made considerable advancement toward achieving the synonymy. The enormous increases in the appropriations to the National Institutes of Health, in my judgment, rests primarily from their achieving this end.

But, in meeting this problem, it is important to realize that counteracting the emotion is only the first stage of action. Counteracting the emotion only puts us in a position of rationally debating the question of how does our society best meet the social enemy, disease and death? If not through Federal expenditures, how?

Indigency, Russia, and disease. The quacks say the patent medicine Federal tax money, if taken in sufficient quantity and often enough, will cure all three and a number of minor ailments as well. An analysis of this patent medicine reveals that it is heavily laden with opium and the well-being that seems to follow after immediate dosage stems from a deadening of the senses, not a deadening of that which alarmed and activated these warning senses. Opium is a valuable drug when used properly and under careful direction and, coming out of the metaphor, it is important that we don't condemn Federal spending per se simply because some of us see the damage it has caused and may cause. It is important only that we rationally consider when Federal spending can and should be used and when it should not be used.

I want to discuss another public emotion which the doctors must face in dealing with the problems involved in the relationship of their profession to the Government. Now that the people are alerted to the dangers of inflation, they have become concerned with the cost items of the goods and services they purchase which go to make up the cost-of-living increases which they assume are identical with inflation.

Indeed, the general public is not alone in considering cost-of-living increases as inflation per se. Many professional economists seem to view the two phenomena as interchangeable. I shall discuss the difference between the two with particular reference to medical costs. I am certain the medical profession is aware of the fact that the doctors, hospitals, pharmaceutical industry and other industries related to health have become, to some extent, the *bête noire* of those who are now shouting about the cost-of-living increases.

Indeed, the neo-federalists perversely use this increased cost item as a further argument to concentrate more power in the Federal Government. Nothing that will serve to increase the power of the Federal Government seems to escape their hungry eyes. They are in the forefront crying that the Federal Government has to regulate in some way or other these costs to keep them down. At the slightest indication of an economic disturbance they urge price controls. So effective have they been in their propaganda that in a recent Gallup poll the majority of people who, when asked which political party they thought was most concerned about keeping prices down, stated the Democratic Party over the Republican Party. The neo-federalists, being almost completely within the Democratic Party, can

claim credit for this image through their propaganda in advocating price controls.

Costs of hospitals, doctors, drugs, nursing service all have increased more rapidly since World War II than probably any other set of costs in the cost of living indexes. But costs are only one side of the coin. The other side of the coin is the quality of the product or the service one buys. In the cost of living index a day at a hospital is the same, whether the day was spent in 1920 or 1959. But does one get the same results for a day in the hospital in 1959 that one got in 1920? Hardly so. Improved equipment, medical knowledge, drugs, etc., mean that the average stay in a hospital is quite a bit less, and the number of those who come from the stay on their own feet instead of in a box is considerably higher. Furthermore, the vast majority of our people utilize hospitals today when formerly it was almost a luxury reserved for people with adequate means and people located near the urban areas.

Inflation in its economic sense means debasing the currency. In theory, the same thing costs more because the dollar has changed its purchasing power. Increased cost of an item might be inflation, but it also might be the result of the quality of the item having been improved. If the item has been improved it is axiomatic that there has been some cost for that improvement. This cost will be reflected in the price of the item, or absorbed in the saving resulting from increased productivity in the manufacture and distribution of the item, or absorbed in the saving resulting from a greater quantity production of the item (which is similar to increased productivity).

Undoubtedly there has been some saving in the human health industries resulting from increased productivity and from the efficiency gains of larger productions because more people buy health services these days. On the other hand, this is a field in which there has been a tremendous technological improvement. The rate of improvement has been so great that it can appropriately be called a revolution. Rapid economic growth of this sort (technological improvement) carries with it an increased amount of obsolescence. Not just obsolete equipment and tools, but also obsolete human skills. Furthermore, rapid growth such as this is based upon increased research, development, and education. All of this costs considerably. It costs a great deal more at the time it is going on than the savings resulting from increased productivity. This is the period in which we presently are.

The question the public should be asking themselves about medical costs is not the question of what the increased cost is but, is what they are getting worth the cost. In the field of health I doubt if anyone, upon analysis, regrets the \$10 a bottle we pay for one of the new mycins. Certainly, he could still buy a patent medicine for a dollar a bottle which makes even greater claims to health than the wonder drugs. But he spends the dollar, or either the \$10, out of choice.

So having discussed the factors which the advocates of socialized medicine have been using as arguments for their program, indigency, Russia, disease and cost, and having pointed out that these are emotional and unreal arguments, the question still remains how does our society move ahead in combating the real problems of indigency, Russia, disease and costs?

First of all, we must recognize that the path to attaining these goals are not in all instances the same path. Indeed, the path to decreased costs is definitely going in a different direction from that of combating disease and staying ahead of Russia. Combating disease and staying ahead of Russia requires more, not less, technological advance-

ment. It requires more education, research and development and will bring in its wake more obsolescence, not less. All of these items are bound to increase costs and so aggravate the problems of indigency as well as the problems of cost.

In respect to the first two goals, our society through the private hospitals, privately operated medical profession, the private pharmaceutical industry, the private nursing profession, has done an amazing job over the past few decades. Never in the history of the world has there been such advancement in combating disease. I see no argument or reason whatsoever for stating that we are not "going fast enough" in advancement through our present setup. Therefore, the arguments for more Federal expenditures in this area seem without foundation.

Indeed, by going as fast as we have in this area we have aggravated the problems of cost and indigency. Our people now live 10 years longer due to the advancements in technology in the health field, but there has been little planning for financing the extra 10 years our citizens now have. Indeed, when our people over 65 today were starting out their productive lives they based their savings (consciously or unconsciously) upon the average life expectancy. Increased cost of living both from increased standard of living as well as unadulterated inflation has badly damaged what planning they could do entirely apart from the extra 10 years they unexpectedly have been called upon to finance.

The Federal Government by its own default in properly handling the fiscal affairs of the Nation has aggravated the problem almost as much as the technological advancement has. The Federal Government's basic contribution to economic affairs is to maintain the dollar as an accurate measuring stick of human labor, ideas, and savings. I think before we call upon the Federal Government to do anything more in the field of solving the problem of cost we need to call upon it to do its basic job to preserve the dollar as an accurate measuring stick. If the Federal Government does not do this, it is almost impossible to solve the problem of cost.

The advocates of the Federal Government entering the field of solving the problem of increased cost claim that this must be done to spread the costs among all of our citizens. I asked the AFL-CIO representative at the recent hearings on the Forand bill what difference there was between Federal Government insurance and private insurance. Although he had been spending a great deal of time testifying on the subject of the Forand bill, he suddenly discovered that he was taking time from other witnesses. He stated that he didn't think he had time to answer this question.

Well, this is a basic question. What is the difference between spreading the risk through Federal insurance and spreading the risk through private insurance companies? Well, first of all, the private insurance companies must deal with people who can afford to pay for the insurance and, therefore, cannot be solving the problem of indigency. Should the problem of indigency become involved in the problems of spreading risk among the bulk of our citizens who are not indigent?

I think not. In fact, by failing to separate the problem of indigency from the problems of insurance we damage our progress in meeting both the problems of indigency and the problems of cost.

There is a second difference between Federal insurance and private insurance. Whichever sector of the society is used, Government or private, an insurance program requires capital formation. There is only one way for the Government to acquire capital, that is through taxation. But anytime Government provides the capital formation, it withdraws both the capital and the in-

surance operation itself from the tax base. It leaves the problem of future taxation more difficult. Furthermore, and possibly even more important, in insurance capital formation, the capital must be invested. Government cannot, or let's say, has not up to date, invested in anything other than its own securities. Private enterprise, on the other hand, properly invests in the economic growth of the society. The Government investment is sterile as well as withdrawn from the tax base.

Furthermore, there is a great danger in Government capital formation. A realization of the sterility of Government investment in its own securities has stimulated the neofederalists, always looking as I have stated, for any argument to place more power in the hands of the Central Government, to suggest that they invest in Federal public works bonds. Up to date, I have always left this subject with the statement I leave it up to your imagination the complications and economic damage that would result from the Government going into the investment field. I still leave it up to your imagination, but I am afraid the time is not far off when somebody is going to have to spell out in detail just what this damage is. The neofederalists are pushing their theme.

I am satisfied that the private insurance companies have been doing a tremendous job in meeting the problem of spreading costs in the field of health. However, the job has not been sufficiently good to keep up with the needs resulting from the great technological revolution in the field of health. On the other hand, I believe we are reaching a plateau and future advancements will not be as great as those in the past. This will give us some chance for a breather. In all of the advancements in extending the length of life expectancy there has been no extension of the total life span of man. It still remains around 115 years. All of the advancement has been in the area of having more men and women approximate the goal of 115 years. Death rather than disease is the social enemy. But now that death is being unmasked, the philosophers are again raising questions as to whether death is the social enemy we have all assumed it is. We have made these assumptions in direct conflict with the religion we profess which does not regard death as a social enemy. Sudden death through accident or disease, yes, but accident and disease are the enemies, not death.

Finally, I come to the question of indigency. I was greatly impressed with the testimony of the AMA representatives at the Forand hearing when they pointed out that inadequate health services were peculiar on a geographical basis, not on a basis of human chronology. In other words, where there were inadequate hospitals and doctors' care, all persons regardless of age felt the brunt of this inadequacy, not just the aged. Where the medical facilities were good in a community, all the community benefited from these good facilities, regardless of age.

This, to my mind, quite clearly points out that treating indigency on the basis of age is a wrong way to attack the problem. For this reason, the Forand bill which does seek to treat inability to pay for health facilities on the basis of age is basically in error. It will hurt rather than help in treating the problem of indigency. Furthermore, as I have previously suggested, because the Forand bill mixes indigency up with spreading the costs of those who are not indigent, it hurts the solution of indigency and it also hurts the solution of the cost problems which the 98 percent not indigent have.

Indigency should not be proliferated according to age or according to health, housing, education, food, or anything else that is a human necessity or human want. If a person is indigent, that person is in need of whatever housing, health, food, and love and

affection, too, possibly. Indigency must be dealt with on an individual basis and it must not be confused with other social problems, else it will damage the solution of these other social problems and not be helped itself. What are the causes of indigency? It can be community indigency or it can be individual indigency. The two are separate problems and likewise should not be confused if we wish to solve them. Community indigency is largely a problem of economics and should be kept in the field of economics for solution. The Federal Government can be of real assistance in solving the problem of community indigency, but primarily by working on the economic climate not through direct intervention. Direct intervention can create more problems than it solves.

Individual indigency is a separate thing and we must ponder over it more than we have. Jesus said the poor shall be always with us. I believe I understand what he meant and it wasn't community poverty he was referring to. I believe he was referring to the poor of mind or those poor in talents. We do have and always will have many people with IQ's below 90. People who are capable of mingling in society appearing to be as normal as anyone else in the society and yet, due to their poverty in human talents, a prey to anyone who would take advantage of them. I believe the poor must be cared for on an individual rather than upon a political basis. Administering to the poor has always been a great weapon for politicians in controlling elections. Administering to the poor should be a matter of charity, not politics, and I use the word charity in its finest sense.

I believe the poor, or the problem of individual indigency should be left essentially to our community chest agencies, to our churches. Government can help the indigent through the medium of these private agencies.

Fortunately, the problem of community indigency is being solved in the United States. There is much still to be done, but I believe our society is getting on top of this problem. The problems of human indigency are by no means beyond the abilities of the 98 percent of our people who are not individually indigent to care for. To do this, we must keep our thinking straight and keep the problems of the poor from being confused with other problems.

Much needs to be done in the field of health, but much is being done. The goose which produces the golden eggs must be nourished and cherished. Impatience and greed which the neo-Federalists exhibit and only in death and no more golden eggs.

Balancing the Budget and Reducing the National Debt

EXTENSION OF REMARKS OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. PELLY. Mr. Speaker, I take this means of calling to the attention of my colleagues that I have introduced House Joint Resolution 656 which proposes an amendment to the Constitution of the United States relative to the balancing of the budget.

Similar legislation, I should explain, has just been introduced in the Senate by the Senator from New Hampshire

[Mr. BRIDGES], the Senator from Nebraska [Mr. CURTIS], and the Senator from Virginia [Mr. BYRD].

This proposal if adopted and made a part of the Constitution would end Federal deficit financing or, to put it another way, it would establish a policy of a balanced annual budget with a net annual reduction in the national debt of not less than \$500 million a year. The amendment would require that Congress not adjourn until provision has been made to balance the Government's annual revenue with its annual expenditure plus a minimum payment on the national debt. In the event of war or other grave emergency under the provisions of this proposed amendment to the Constitution, by vote of Congress operation of the balanced budget and reduction of debt could be suspended.

In previous remarks to the House, I have pointed out that paying off the national debt takes less taxpayers' dollars per year than continuing and paying interest over a period of 100 years.

All sorts of suggestions have been made to stiffen the backbone of Congress and force Members to either vote for more taxes or to vote for reduced appropriations. The only workable answer that I can envisage is embodied in House Joint Resolution 656 because it would write the policy into the Constitution and make fiscal responsibility mandatory.

Here is a plan in which every young American has a vital interest. I dedicate it to the grandchildren of America. In addition, let me add, it would assure victory in our forthcoming economic struggle with communism.

I hope other Members in both House and Senate will join in support of this important proposal.

Fair Labor Standards Act

EXTENSION OF REMARKS

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. DENT. Mr. Speaker, while the subcommittee of which I am a member is studying the extension of the minimum wage and maximum hour law it might be good to have in the RECORD pertinent facts and data pertaining to the subject.

With the problem assured of some action this session, I believe the following information to be invaluable to the Members of Congress:

FACT SHEET ON THE FAIR LABOR STANDARDS ACT BY THE AFL-CIO DEPARTMENT OF RESEARCH

The Fair Labor Standards Act (wage-hour law) should be revised to (1) extend its coverage to millions of workers now not protected, and (2) increase the minimum wage to \$1.25 an hour. This sheet lists briefly several of the basic background facts. The following pages present additional details.

EXTENSION OF COVERAGE

To how many workers? Some 20 million workers are not now covered, but about 11

million of them are in small business or purely intrastate operations essentially outside the scope of Federal law. The remaining nearly 9 million should be covered.

Why? They are largely in industries with low wages or excessive hours. They need the protection of fair labor standards. Over 3 million of them are today being paid less than \$1.25 an hour.

Who are they? They are mainly workers in large firms or in certain specially exempted operations. The largest group are some 4½ million workers in large retail firms. Details on the different groups are on the following pages.

What bill would meet the need? The Kennedy-Morse-Roosevelt bill (S. 1046 and H.R. 4488) has been endorsed by the AFL-CIO. It would extend coverage of the wage-hours law to cover 7½ million workers.

INCREASE IN MINIMUM WAGE TO \$1.25

Current minimum outdated

The existing minimum of \$1 an hour, enacted 4 years ago, should be updated to keep in step with rises in wage advances received by most of the country's workers, the cost of living and increases in the Nation's productivity.

Current minimum inadequate

The \$1 minimum is not enough to permit a decent American standard of living. Moral and social considerations require a more adequate minimum.

Increase would benefit the economy

An increased minimum wage would provide increased buying power for low-income families and thereby generate needed increases in business activity and employment.

Extension of coverage—overall picture

	Number of workers
Now covered by FLSA.....	24, 000, 000
Not covered because in intrastate or small business.....	11, 300, 000
Agricultural workers on large farms.....	1, 100, 000
To be covered by Kennedy-Morse-Roosevelt bill.....	7, 600, 000
Total not covered.....	20, 000, 000

¹ Special separate legislation is to be considered on extending coverage to farmworkers.

² This does not include certain other groups also uncovered: (1) proprietors, self-employed and unpaid family labor, (2) Government employees, and (3) executive, professional, and administrative employees.

WHO WILL BE COVERED BY KENNEDY-MORSE-ROOSEVELT BILL

The more than 7½ million workers who would be brought under the FLSA by the Kennedy-Morse-Roosevelt bill are largely (a) employees of large firms in industries (notably retail and services) which have escaped inclusion under the act so far, and (b) employees in parts of industries which have held on to special exemptions (such as logging and canning) or which have succeeded avoiding coverage because of the acts restricted definition of coverage (as in the case of wholesale trade).

About 60 percent of the workers to be covered are in retail trade. Some 25 percent are in hotels, laundries and other services, wholesale trade, and construction. The remainder are in such varied industries as logging, local transit, taxicab, telephone, and water transportation.

The Kennedy-Morse-Roosevelt bill would cover them by (1) changing certain unduly narrow definitions of coverage; (2) specifically including large enterprises in certain industries; and (3) eliminating various exemptions.

The large retail and service enterprises to which the bill would extend coverage are those which do \$500,000 or more annual business (or if they do over \$50,000 business with industrial customers). So-called "mom-and-pop" shops are also explicitly excluded; smaller retail and service firms would remain uncovered.

WHY COVERAGE SHOULD BE EXTENDED

Denial of legal protection has meant that many uncovered workers are paid pitifully low wages or are required to work excessive hours without overtime pay. Their wage and hours standards have lagged far behind those of the economy as a whole.

Of the over 7½ million workers to whom the Kennedy-Morse-Roosevelt bill would extend coverage, about 3 million still are paid less than \$1.25 an hour.

Theoretically, uncovered workers are (a) in small local operations and (b) are supposed to be protected by State minimum wage laws.

Actually, (a) many of them are not in tiny enterprises but in large retail, service, and other corporations which can well meet the national minimum wage and hours standards and (b) the States have with few exceptions been unable or unwilling to provide adequate minimum wage protection for workers not covered by the Federal law.

SUMMARY OF GROUPS OF WORKERS COVERED BY KENNEDY-MORSE-ROOSEVELT BILL

The following is a brief listing of specific groups of workers not now covered by the FLSA who would be brought under its protection by the Kennedy-Morse-Roosevelt bill.

Retail trade:

Not now covered by FLSA.....	6, 920, 000
Covered by Kennedy-Morse-Roosevelt bill.....	4, 500, 000

Special exemption for retailers and the present definitions of interstate commerce now exclude some 97 percent of retail workers from coverage.

The Kennedy-Morse-Roosevelt bill would cover workers in large retail companies. It defines large retail enterprises as those with annual sales of \$500,000 or more (or which have \$50,000 annual sales to industrial customers).

Hotels:

Not now covered by FLSA.....	461, 000
Covered by Kennedy-Morse-Roosevelt bill.....	240, 000

Hotels now have the same exemptions as retailers, regardless of their size. The Kennedy-Morse-Roosevelt bill would extend coverage to about half of all hotel workers by applying the FLSA to large hotel operations, those which do an annual business of \$500,000 or more (which would mean an average of \$1,400 every day).

Wholesale trade:

Not now covered by FLSA.....	797, 000
Covered by Kennedy-Morse-Roosevelt bill.....	270, 000

Over two-thirds of the Nation's wholesale workers are already covered by the act, but the present restricted definition of interstate commerce excludes the others. The change proposed by the Kennedy-Morse-Roosevelt bill would bring protection to about a third of those now excluded.

Laundries and dry cleaning:

Not now covered by FLSA.....	522, 000
Covered by Kennedy-Morse-Roosevelt bill.....	210, 000

Laundries now have the same exemption as retailers. The Kennedy-Morse-Roosevelt bill would extend coverage to workers in the large commercial and industrial laundries and cleaners, those which do \$250,000 or more annual business or those with industrial business at least equal to 15 percent of their volume. The small home laundry and the

neighborhood dry cleaner would continue exempt.

Construction:

Not now covered by FLSA..... 1,616,000
Covered by Kennedy-Morse-Roosevelt bill..... 1,205,000

The present acts coverage of construction workers is limited mainly to work on facilities used in interstate commerce. The Kennedy-Morse-Roosevelt bill would cover construction firms which do annual business of \$50,000 or more.

Logging:

Not now covered by FLSA..... 86,000
Covered by Kennedy-Morse-Roosevelt bill..... 86,000

The present act exempt logging firms with 12 or fewer employees, supposedly because such small companies could not otherwise compete with large companies. In practice this exemption for small firms has been used by large ones to evade the purpose of the law: they have subcontracted their work to small, uncovered firms instead of giving it to their covered workers.

The Kennedy-Morse-Roosevelt bill would correct this evasion by eliminating the exemption and thereby covering all logging employees.

Telephone exchanges:

Not now covered by FLSA..... (1)
Covered by Kennedy-Morse-Roosevelt bill..... (1)

*The Labor Department has estimated that 47,000 telephone operators are exempt. The communications workers estimate that 22,000 are exempt. A major proportion would be covered by the Kennedy-Morse-Roosevelt bill.

The original FLSA did not exempt any telephone operators. In 1939, the law was amended to exempt operators working in exchanges with less than 500 stations and in 1949 the exemption was extended with 750 stations. Large independent companies have taken advantage of the exemption.

The Kennedy-Morse-Roosevelt bill would modify this exemption to apply only where telephone service is provided through a switchboard located in the operator's home.

Seafood processing:

Not now covered by FLSA..... 22,000
Covered by Kennedy-Morse-Roosevelt bill..... 22,000

The present act covers fish canning workers but exempts other fish processing workers. The Kennedy-Morse-Roosevelt bill would eliminate this differing treatment by covering all seafood processing workers.

Other uncovered groups:

Among the other uncovered groups to which the Kennedy-Morse-Roosevelt bill would extend coverage are workers in miscellaneous service industries (365,000 workers), financial firms (120,000), newspapers (17,000), water transportation (100,000), transit (65,000), taxicabs (50,000), miscellaneous manufacturing (100,000), and miscellaneous transportation and warehousing (110,000).

INCREASE IN MINIMUM WAGE TO \$1.25

Current minimum outdated

The present \$1 an hour minimum lags behind the times in many respects. An increase to at least \$1.25 is needed to up-date it.

(1) General wage movements: The minimum should be raised to keep pace with advances in the wage structure generally. In 1949, when the minimum was put at 75 cents, the average hourly pay for industrial workers was \$1.40, so that there was a gap of 65 cents between the minimum at the average.

In the 9 years since then, the minimum has been raised only 25 cents to \$1, while the average has gone up 79 cents, to \$2.19. The gap is now \$1.19.

Even an increase in the minimum to \$1.25 would only reduce the gap to 94 cents (\$1.25 minimum as against \$2.19 average), a gap still substantially larger than in 1949.

(2) Cost of living and productivity: The \$1 minimum has also fallen out of date because of increases in the cost of living and advances in national productivity.

If Congress does nothing more than merely adjust the minimum to take account of cost-of-living rises and national productivity movements, it would have to raise the minimum to about \$1.25.

From mid-1955, when Congress enacted the \$1 minimum, until January 1959, the cost of living has increased 8.2 percent. On productivity, the U.S. Labor Department has calculated the annual rate of productivity improvement in postwar years as 3.4 percent to 3.9 percent. Applying the annual rate compounded for the 4 years 1955-59, the allowance for national productivity advances would be 14.3 percent to 16.6 percent.

Applying the cost of living change (\$1 times 8.2 percent equals \$1.082) and the productivity trend (\$1.082 times 14.3 percent equals \$1.237 and times 16.6 percent equals \$1.262) the \$1 minimum should be adjusted to about \$1.25.

It should be noted that in major higher-wage industries, this rise in the cost of living has meant compensating wage adjustments of over 18 cents, and increases to share in productivity advances over the same period have been over 26 cents, to make a total of 44 cents an hour, as compared to the 25 cents increase involved in raising the minimum to \$1.25.

Current minimum inadequate

The objective of the minimum wage law is to enable a "standard of living necessary for the health, efficiency, and general well-being of workers." The present \$1 minimum is far short of this standard.

For a full year's work of 2,000 hours, the \$1 minimum means \$2,000, which is less than the minimum income estimated by various States as necessary for a minimum living standard for a single self-supporting woman with no dependents. The State of Washington's calculations, for example, indicate that at least \$2,900 a year is now necessary for a single woman's minimum budget. This is \$1.45 an hour for a full year.

The income needed to support a family decently is of course larger. The Labor Department's "City Worker's Family Budget," which measures how much is needed for a "modest but adequate" standard of living for a family of four, indicates that \$2.25 an hour is necessary for such a standard.

Moral and social considerations require that the \$1 minimum be raised. Decent family life is all but impossible on such a minimum or if several members of a family are forced to work in order to eke out a mere subsistence for the family.

Moreover, low wages are a drain on society. Low income and its miseries breed disease, slums, and degraded living, crime, and other social ills, the costs of which are borne by the public. An increased minimum wage is a significant element in combating such social problems.

INCREASE WOULD BENEFIT THE ECONOMY

A higher minimum wage would also benefit the Nation economically. It would provide increased buying power for low-income families. It would mean enlarged markets for consumer goods, increased business activity for small retailers and for the economy as a whole.

This type of boost for economic activity would aid the recovery from the 1957-58 economic recession and help provide job opportunities to reduce the present high level of unemployment.

A Proposal To Establish Clinics for Narcotic Addicts

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. ANFUSO. Mr. Speaker, I am today introducing a bill which provides for Federal assistance to the States for the establishment and operation of outpatient clinics for narcotic addicts. These clinics would follow the British practice with regard to the gradual reduction method of the treatment and the furnishing of narcotics to persons whose addiction seems incurable.

Much has been said and written about the narcotic problem in this country, but we are no nearer a solution of it today than we have ever been. The illicit traffic in narcotics seems to increase from year to year, despite the fact that the Federal Narcotics Bureau and its agents are conducting a relentless fight against drug smugglers, peddlers, and pushers.

Mr. Speaker, I should like to cite some interesting statistics which give us a picture—though not a pretty picture—of this problem. These are official figures taken from testimony presented to the Subcommittee on Treasury-Post Office Departments Appropriations of the House Appropriations Committee at its hearings on January 26, 1960, by Dr. H. J. Anslinger, the Commissioner of Narcotics, and his immediate assistants.

The total number of active narcotic addicts in the country as of December 31, 1959, was reported to be 45,391, divided as follows:

	Percent
Negro.....	26,146 57.6
White.....	11,703 25.8
Puerto Rican.....	3,889 8.6
Mexican.....	2,823 6.2
Others.....	830 1.8

They are divided into age groups as follows:

	Percent
Under 21 years.....	1,743 3.8
21 to 30 years.....	24,343 53.6
31 to 40 years.....	14,058 31.0
Over 40 years.....	5,247 11.6

On page 145 of the hearings cited above is a list of the number of addicts in all the States, from which I quote the following:

	Percent
New York.....	20,732 45.7
California.....	6,471 14.2
Illinois.....	6,191 13.6
Michigan.....	2,366 5.2
All others.....	9,631 21.2

Other States with a fairly large number of addicts are: Texas, 1,566; District of Columbia, 1,116; Missouri, 1,030; New Jersey, 892; Ohio, 619; Pennsylvania, 557; Louisiana, 434.

I might add that the exact number of addicts in the country is not known. It has usually been estimated at about 60,000, based on the number of persons who have been in contact with law-enforcement agencies. Dr. Charles W. Nick, secretary of the National Advisory Council on Narcotics, has cited one au-

thority who estimates "that there are three addicts who have not been in contact with the law for every one who has." The noted sociologist, Prof. Alfred R. Lindesmith, points out the interesting though regrettable fact that "even if one accepts the minimum estimate of addiction given—namely, the 60,000 figure—there appear to be more drug users in the United States than in all the rest of the Western World combined."

This is a very sad commentary on our society and civilization. Why should the United States, which has the highest standard of living in the world, have such a large number of drug addicts? Of course, I am especially perturbed over the fact that nearly half of the addicts in the country are in New York State. Where are we falling down on the job? Is it our approach to the whole problem that is wrong? Is it the treatment or lack of treatment that constitutes a major factor? Should we place the emphasis on jails, as we are presently doing, or on institutions? If institutions, what kind should it be—hospitals, clinics?

Mr. Speaker, I am no sociologist and do not consider myself an expert in the field of narcotics. My interest in this field stems from the time when I served on the bench as a city magistrate in New York where a number of narcotics cases came to my attention. Much of my information comes from reading some of the literature in this field, discussions with former colleagues on the bench, attorneys, and others. I was particularly impressed with a book on this subject "Who Live in Shadow," written by my very dear friend, Judge John M. Murtagh, chief city magistrate of New York, in collaboration with Sara Harris. On page 166 of the book we read:

Despite their own transgressions, and expressed decent sentiments toward addicts, the enforcement agencies vigorously demand ever harsher penalties and ever stiffer laws against addiction. What can they hope to accomplish with their stiffer laws? After all, the punitive, prohibitory approach to the drug problem has been the official policy of the United States for 40 years. No other country in the world has been so sadistic in dealing with addicts. Still there are more addicts in the United States today than in all the other western countries combined, and more juvenile users in New York City than in all of Europe.

Judge Murtagh believes that our present policy is ill conceived and that we should consider a change in attitude. I am strongly inclined to agree with him. In 1951, Congress passed the so-called Boggs law which increased penalties against narcotics violators, but the penalties seem to be hurting more the addicts than the dope racketeers. Our aim should be to break up the drug rings, the big operators and the illicit dealers, while those who are themselves victims of the drug should be aided in every possible way to regain human dignity and become rehabilitated.

Right now we have only two Federal hospitals in the whole country for treating narcotic addicts, one at Lexington, Ky., and the other at Fort Worth, Tex., with combined facilities for less than 2,500 addicts. The only other narcotics

hospital in the country is Riverside Hospital in New York City, which can accommodate about 180 addicts and is used exclusively for those under 21 years of age. Oddly enough, New York State, with 45.7 percent of all active narcotic addicts in the country, does not have a single rehabilitation center for the treatment of adult victims. It is well worth noting that the great majority of these people are never rehabilitated because the State courts cannot commit New York residents to Federal institutions.

Mr. Speaker, it is high time that we begin to recognize the drug addict what he really is, namely, a sick person who is badly in need of help and medical treatment, and not as a criminal who is to be thrown into jail and left there to rot. In other words, let us rightly consider it as a medical problem and separate it from the criminal phase of the overall problem. Let us provide the medical care and the rehabilitation for those who are themselves victims, and we shall be in a better position to check the whole problem, including the criminal phase of it.

Many experts in this field have in recent years called for the establishment of clinics to help in the care and rehabilitation of drug addicts by dispensing drugs, either free or at low cost, to those who cannot do without them. Commissioner Anslinger, however, is opposed to this experiment on the ground it would not work, citing an experience back in 1919. The fact is that that experience was of brief duration, but, even at that, some of the clinics were showing good results, yet the Treasury Department closed them all in 1924.

Since then 36 years have gone by and the Treasury Department has not changed its position in the matter. In the meantime, the number of addicts in the country has grown, the problem is greater than ever, and we are still pursuing the policy of jail treatment instead of a policy of medical treatment. I believe it is time for Dr. Anslinger and the Bureau of Narcotics to reconsider its stand on clinics, in the light of events since then, in the light of the seriousness of the problem, in the light of experiences abroad.

Let us look at the situation in Great Britain. There are no specialized institutions there for addicts. Treatment may be obtained in some public hospitals and several private nursing homes. An addict may obtain his supplies for the price of 1 shilling—about 14 cents—per prescription from a registered medical practitioner. One would think there would be wholesale abuse under this kind of a system, but how widespread is narcotic addiction in Britain? In its annual report to the United Nations Narcotic Commission, Britain reported in 1956 a total of 359 known addicts. The year before the total was 335. Washington, D.C., has more than three times as many drug addicts as all of Britain, while New York has 58 times as many. The United States has about three times the population of Britain, but more than 125 times the number of narcotic addicts. We should give serious thought to these facts.

Judge Murtagh in his book raises these questions:

Is there really anything in the moral law that suggests that we cannot ease the misery and suffering of an addict by the temporary, or if medically indicated, the continued administration of limited quantities of drugs? Indeed is it not rather a violation of the moral law to deny the addict the solace and comfort of the medical practitioner and thereby drive him into the hands of the underworld?

I think the answer to these questions is obvious. I am firmly convinced that if we establish clinics to treat the addicts and to give them limited quantities of drugs under medical care, we could certainly make considerable headway toward a diminution of this problem and toward eventual elimination of the drug menace which is threatening our youth in the larger cities.

Another achievement would be that we would be well on the road to driving out the racketeers and their billion-dollar racket which is thriving on human misery. This could be done by taking the profits out of the illicit drug trade and making it impossible for the racketeers to push their poisonous wares, because the addicts would no longer be dependent upon their mercies and would get the necessary help through legalized clinics.

Mr. Speaker, it is because of all these facts and reasons cited above that I am introducing a bill to establish clinics for drug addicts, somewhat along the British practice for narcotic treatment though not their system which is exclusively in the hands of the medical profession. My bill provides for the establishment of "narcotic addition clinics" for the treatment of addicts on an outpatient basis. Under this system, drugs would be made available under medical supervision to two types of addicts: First, to those who are capable of leading a fairly normal and useful life as long as they are forced to take a certain drug but not otherwise; second, to those who are undergoing treatment for addiction by the gradual reduction method.

The bill calls for an appropriation of \$5 million for the coming year to be used as grants-in-aid to States for the construction and operation of such clinics. These grants are to be made to the States on the basis of their addict population, financial need, and State effort. The States receiving such grants will be required to provide an equal amount of funds for the same purpose. In other words, this is to be a joint Federal-State endeavor. The bill also provides that the Surgeon General shall have the authority to make grants to the individual States on the basis of regulations prescribed by him in consultation with State health authorities.

Of special concern to me is the safeguarding of the youth of our country. Young people will not become victims of the racketeers and be subjected to their solicitation if those already tainted can be treated at the clinics, turned into useful citizens and prevented from becoming habitues of the drug habit. My bill aims to prevent drug addiction of youths by removing the profit motive in narcotic trafficking by racketeers.

Mr. Speaker, it is my view that adoption of this bill will help to curtail the havoc being created in thousands of families where some member becomes the victim of dope peddlers. If we can succeed in eliminating the profit motive from the drug market, even partially, we will have made great progress on the road toward eventual curtailment and elimination of this dreaded menace. I urge the committee to give early and very serious consideration to this measure.

Irvine C. Porter Presented Rifle

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. BOLAND. Mr. Speaker, an elaborately engraved and gold-inlaid rifle bearing the serial number 1,000,000 was presented by President Joseph V. Falcon, of the Savage Arms Corp., at Chicopee Falls, Mass., to President Irvine C. Porter, of the National Rifle Association of America, during a luncheon yesterday at the Sheraton Park Hotel here in Washington.

This rifle, which will become part of the permanent firearms collection at the National Rifle Association headquarters in Washington, commemorates production of the millionth Savage model 99 lever-action big-game rifle, invented in 1893 by Arthur W. Savage.

Among those witnessing the presentation was a 62-year-old gentleman, Lucien Dugre, of Chicopee Falls, who had helped to produce this one millionth rifle for Savage Arms Corp. Mr. Dugre is the oldest Savage Arms employee in point of service, having been with the corporation for 47 years.

Mr. Speaker, under leave to extend my remarks in the RECORD, I ask that the speeches of Mr. Falcon and Mr. Porter be printed in the Appendix.

REMARKS BY MR. JOSEPH V. FALCON, PRESIDENT SAVAGE ARMS CORP.

President Porter and distinguished guests, we at Savage welcome you today and appreciate deeply your joining us to celebrate this milestone in the history of the Savage Arms Corp., the manufacture of our millionth Savage 99.

We are especially grateful, Mr. Porter, to you and the National Rifle Association for cooperating with us in commemorating this event.

This cooperation is altogether fitting when we consider the aims and goals of the National Rifle Association as stated each month on the masthead of their official journal, the American Rifleman. This reads, in part:

"The NRA's purposes are to educate and train citizens of good repute in the safe and efficient handling of firearms; to foster a knowledge of small arms and the ability to use them among members of law-enforcement agencies and the armed services, and all other citizens who would be subject to service in the event of war; to promote social welfare and public safety, law and order, and the national defense. Membership in NRA is available to any reputable citizen of the United States."

These are exemplary goals. They are goals to which we at Savage and the users of our products—many of whom are NRA members—can heartily subscribe. In fact, the Savage 99—a sporting rifle for civilian sportsmen—could have been developed and have enjoyed such outstanding success only in a society of free men, whose right to bear arms is unimpaired.

This rifle is part of the American tradition of recreational shooting—a tradition based on the premise that the lawful ownership of firearms must not be denied American citizens of good repute, so long as they continue to use such arms for lawful purposes.

Charlie DuBuisson has touched upon some of the highlights of the history of the 99. Vice President Jack Knobe has spoken of a few aspects of its manufacture.

I believe the deep significance underlying the production of the millionth Savage 99 is especially apparent to all of us here today, as well as to Americans, generally. The millionth 99 perhaps is indicative of important basic values in the life of Americans.

The 99 was designed by an American and has always been made in America. Production of 1 million 99's has been made possible because of our American way of life in which management and labor work side by side for mutual benefit. If I may put it another way, the Savage 99 is the result of the happy combination of American inventiveness and craftsmanship which flourishes under our free enterprise system.

Production of the one-millionth 99 rifle is an event of considerable importance to us at Savage. Beyond this, we feel that it is a landmark in the American sporting arms industry. The lever action rifle, of which the 99 is one outstanding example, is a type indigenous to this country. It was designed and built by Americans for the needs and preferences of American sportsmen. That the 99 is known and respected the world over reflects credit on the entire American sporting arms industry.

With this in mind, we at Savage are proud and happy that the one-millionth 99 will be in the care of such an outstanding and representative organization as the National Rifle Association of America.

President Porter, on behalf of the Savage Arms Corp., I present to you the one-millionth production model of the Savage 99. It is most appropriate that this symbolic model be presented to the National Rifle Association of America to become a part of its historic collection at national headquarters here in our Nation's Capital.

REMARKS BY IRVINE C. PORTER, PRESIDENT NATIONAL RIFLE ASSOCIATION, UPON RECEIVING THE MILLIONTH SAVAGE MODEL 99 RIFLE

Mr. Chairman, president of Savage, distinguished guests, and friends of NRA, this is, indeed, a historic occasion, and those of us from the National Rifle Association, who are privileged to be here today, are deeply grateful to Savage Arms Corp. for making this event possible.

I agree with you that the production of the millionth model 99 Savage rifle represents a landmark in American sporting arms industry, and that it does truly indicate that which is possible under the system of free enterprise which now exists in our country.

The production of the millionth model 99 by Savage points the way for America in the years ahead. What has been done in the past by vigorous and enterprising men in a free country charts with more than reasonable certainty what can and likely will be done in the future under such a system.

The constitutional right of law-abiding citizens to keep and bear arms is a substantial and integral part of that system. This fact is important to Savage. It is likewise important to the National Rifle Association and it is basically important to this country.

Any inroads which are made on this right, however slight, circumscribe and undermine the ability of the people to protect and maintain the system of free enterprise under which it has been possible for Savage to develop, manufacture, and sell a million rifles of this particular model.

If this right had not existed in this country, it is reasonably certain that we would not have had the privilege of participating in this memorable event today. Likewise, it is certain that if this right is nullified or destroyed in the future, it will be difficult, if not impossible, for America to long thereafter remain free.

I am happy and delighted, therefore, on behalf of the National Rifle Association, its officers and members, to accept from you and Savage Arms Corp., the millionth model 99 lever-action rifle produced by your company. This rifle will become a part of the collection of historic firearms maintained by the National Rifle Association at its national headquarters in the Capital City of a great race of people known as the free and the brave.

We've Got To Have Junior Colleges

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. ULLMAN. Mr. Speaker, I have long regarded the junior college idea as one important approach to our Nation's growing educational needs, particularly at the post-high school level. In this Congress and in the preceding Congress I introduced legislation to provide assistance to the States in expanding their systems of community junior colleges. My bill, H.R. 967, is currently before the Special Education Subcommittee of the House Education and Labor Committee. Under leave to extend my remarks, I wish to insert in the RECORD the following editorial on the subject of junior colleges which appeared recently in the East Oregonian, published in Pendleton, Oreg., March 8, 1960:

WE'VE GOT TO HAVE JUNIOR COLLEGES

"He went to Oregon State College. He flunked out there. Then he went to Eastern Oregon College. He learned to study there and got good grades. Now he is back at Oregon State and he isn't having a bit of trouble." The young man's mother told that story recently. We hear it frequently, the only alterations being "she" instead of "he," and "Southern Oregon College" instead of "E.O.C."

What are educators learning from this story? There are varying interpretations. There is one common conclusion. It is that Oregon should be getting into a junior college program. California has a great number of junior colleges. Washington has 10. Oregon has only one institution that serves as a junior college, Central Oregon College at Bend. It is, under Oregon law, identified as a community college rather than a junior college.

Why has Oregon been so slow to get into a junior college program? Oregon's community college law places, we think, a burden upon local school districts that they have not been willing to assume. A school district or combination of school districts must furnish the buildings for a community college and must pay one-third of the operating costs. The Bend School District has had

a most difficult time keeping its community college in operation.

School districts throughout the State have had to build many additional elementary school classrooms and more recently additional high school classrooms. They have had to employ more teachers for those classrooms. The burden upon property taxpayers in many districts has been immense. They have shown either no interest in community colleges or a violent reaction to the program.

If a junior college program is going to develop in Oregon it must have the encouragement of executives of all the State's 4-year institutions of higher education. There are two aspects of this. In a recent issue of the Oregonian, Malcolm Bauer, associate editor of that newspaper, wrote of one:

"Unless college plant and faculty establishments of both private and public colleges can be expanded much more swiftly than anyone thinks possible, an increasing proportion of those who want to go to college and who could benefit from college study, will and the normal paths closed to them."

No one would seriously question the colleges' policy of basing admission standards on ability. But it should be a matter of public concern that hundreds of boys and girls qualified for education beyond high school may find opportunity closed to them in coming years. And they won't be ready for the labor market at 18; employment age is rising.

This prospect should be of particular concern in Oregon, because this State has lagged in providing productive alternatives to the conventional 4-year college career.

The other important aspect of the junior college program which cannot escape executives of 4-year institutions is the opportunity it affords to care for the student who is not ready to undertake a well defined program in a 4-year college, not ready because he does not know whether he can do college work, not ready because he is not sufficiently adjusted to leave home, or not ready because he has not decided upon a major course of study. The 4-year institutions in Oregon are admitting hundreds of students every year who have one or more than one of those deficiencies. It is costly for the college to register those students, provide teachers, classrooms, laboratories and dormitories for them, struggle with their problems, and flunk them out.

They can be put through the process at much less expense at home in junior colleges. Most important, the chances that they will go beyond a term or a year of education beyond high school are far greater in a junior college than in a 4-year college. And the chances are good that many will be so well prepared in junior colleges that they will do good work when they move on to 4-year colleges.

The Oregon Legislature and Oregon's 4-year colleges must take a new and harder look at this. Every means possible to encourage local school districts to establish junior colleges must be found.

Restoration of Freedom to the Captive Nations of Central and Eastern Europe

SPEECH
OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. DERWINSKI. Mr. Speaker, I wish to join with numerous Members of Congress by introducing the concur-

rent resolution relating to restoration of freedom to captive nations. My action, like those of my colleagues, is intended to show the peoples of the world our constant desire for freedom for all mankind by holding out the firm and unshakable hope in the eventual triumph of freedom over tyranny.

Certainly, it is fitting and proper for Congress to remind the President, as he approaches the forthcoming summit conference, of our constant interest in the restoration of freedom of the nations now held against their wills behind the Iron Curtain. I especially remind the President of the tragic consequences—not only for the United States but for millions of free people—of the diplomatic failures of our Presidents at Teheran, Yalta, and Potsdam. Certainly, the policy of firmness that President Eisenhower will display at the coming summit meeting with Soviet Dictator Khrushchev is necessary so that worthwhile progress might be achieved. Appeasement is always a failure. President Theodore Roosevelt, in his policy of "speak softly but carry a big stick," set sound fundamental precepts for our conduct of foreign affairs that, when followed, always have been successful.

The people of the world must not be misled by any Soviet propaganda statements before, during, or after the coming conference. The Communists' plans for worldwide conquest are so apparent to all of us that we must not mistake their pious gestures of peace to mean a change in their fundamental philosophy.

Teachers' Salary Amendment Needed to House Committee-Approved Education-Aid Measure

EXTENSION OF REMARKS

OF

HON. FRED WAMPLER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. WAMPLER. Mr. Speaker, on March 15, 1960, the House Committee on Education and Labor ordered reported a commendable, if slightly inadequate, education-aid measure providing for a 3-year, \$975-million program of grants to the States for school construction. Regrettably, the bill makes no provision for funds with which to assist the States in bringing teachers' salaries more in line with wages paid in comparable professions.

The \$1.8 billion school aid bill approved by the Senate on February 4, 1960, calls for, I think, a much more meaningful and realistic program. Providing aid for school construction and teachers' salaries at the rate of \$917 million a year for 2 years, the Senate-passed measure would contribute materially to attracting and holding the caliber of qualified teacher required to meet our ever-increasing national educational needs and demands.

It has been said, and I would like to echo, with emphasis, that too often persons appointed to teaching positions are unprepared, and if they do learn to teach well they very often learn at the expense of our children.

There not only is a painful shortage of school classrooms, of which I am sure all are aware, but there also is an acute shortage of qualified teachers. Why? To a large degree, because of low teachers' salaries. Low salaries frequently mean low morale, and the subsequent loss of good teachers.

It is a well-known fact, I believe, that in our economy, as well as any other economy, salaries are a major factor in determining choice of career. Unless the American public consents to elevate the salaries of its teachers to a professional level, the field of education will continue to lose talented, qualified, and interested personnel to other fields of endeavor.

As school enrollments relentlessly grow, we must meet the formidable, but not insuperable, challenge, of providing the necessary classroom space, facilities, and qualified teachers.

Teaching currently offers too little economic return and professional opportunity to recruit the number and quality of college graduates needed; and, the problem will become greater as enrollments expand and more teachers are required.

As a former educator, I know that teachers, as has been reported, are the most school going group in the country. Although their salaries for many years have been lower or only slightly higher than the earnings of all workers, the training of the majority of teachers is at a professional level.

Three out of four classroom teachers are expected by their school systems to take additional college courses periodically, with little or no added compensation. However, in other fields advanced education merits greater reward. Outside the field of education a premium is given for college study, particularly beyond a bachelor's degree. In school systems differentials for advanced training are small.

Based on reliable studies, many college graduates in other professions, 10 years after graduation, earn more than double the salaries of beginners. On the other hand, classroom teachers after 10 years earn less than 50 percent above beginners.

Mr. Speaker, I strongly urge my colleagues to consider very seriously the absolute advisability of amending the education-aid measure recently approved by the House Education and Labor Committee to include a teachers' pay provision.

Mr. Speaker, I include for the study and consideration of my colleague a factually interesting study prepared in 1959 by F. J. Seidner of the Public Affairs Institute relating to the Nation's current classroom and teacher shortage:

CLASSROOM SHORTAGE

In January of this year the U.S. Office of Education released the findings of its annual survey of public schools. The results of the survey indicate that despite an increased effort on the part of the States, the school situation is still deteriorating.

The survey showed that 5.4 percent of the 33,936,000 pupils in the Nation's public schools, or 1,843,000 students, were in "excess of normal school capacity."¹

Of the 1,843,000 students in excess of normal capacity 67.8 percent were in elementary schools and 32.2 percent were in secondary schools. A great reduction in excess pupils in Alabama from 1957 to 1958 had a major effect on the national total. The country as a whole, excluding Alabama, showed an increase of 7.5 percent in excess pupils over the previous year. The reduction of 225,000 excess pupils reported by Alabama, however, caused the national total to show a decrease of 5.1 percent. The Office of Education's survey also demonstrated that although 71,600 classrooms were completed last year the classroom shortage was reduced by a mere 1 percent.

Anticipated total classroom construction for this year is only 68,400, 4.4 percent less than last, even though classrooms are being abandoned for obsolescence at an accelerated rate. In the 1957-58 school year 17,300 instruction rooms were abandoned, 10.3 percent more than the year before. The survey was completed before the catastrophic parochial school fire in Chicago on December 1, 1958. That disaster spurred a drive to eliminate potentially hazardous buildings, and large numbers of classrooms have since been condemned as unsafe. The Office of Education's compilation reports a need for 140,500 additional classrooms, 65,300 for enrollment increases and 72,200 to replace unsatisfactory facilities.

It is clear even from these figures compiled by the administration that school buildings are not being built at a fast enough rate to keep up with rising school enrollment, not to mention reducing the backlog or improving school standards. Annual increases in enrollment are currently estimated at 1.3 million.

The 68,400 classrooms scheduled to be completed this year will almost certainly fall short of the requirement for enrollment increases (estimated at 44,500 rooms in the survey) and to replace obsolete classrooms.

The usefulness of the data given by the Office of Education is limited by its reliance upon varying State standards and application of definitions. Because States report conditions according to their own interpretations of "normal" conditions, it is likely that the figures presented understate the extent of actual need.

The figure of 140,500 given for classroom shortage is considerably below estimates made by other sources, some of which put the number of additional classrooms needed at over 300,000. In a study financed by a \$3 million congressional grant, the Department of Health, Education, and Welfare itself placed the figure at 312,000 in 1952. The mysterious decline in the intervening years is not attributable to school construction.

¹ The Office of Education sets no standards of normal capacity itself. Its statistical data are based on reports from the States and are dependent solely on State and locally determined standards of class size, capacity, etc. Local standards generally prevail as few States attempt to set overall standards. The questionnaire sent to the States by the Office of Education says, "the number of pupils in excess of normal capacity includes pupils exceeding the number that can be accommodated without multiple sessions, in the instruction rooms of accessible publicly owned school plants in use, according to State and local standards of normal capacity. For the purposes of this report, the excess enrollment in one school is not to be reduced by any unused capacity in another."

Overcrowded schools are not a problem restricted to any section of the country, to low income areas, or to urban centers alone. It is true, however, that due to population shifts urban and suburban areas and some parts of the country have been particularly affected. Especially badly hit are States like California to which there has been a vast migration of population. A large percentage of school buildings in use in our larger cities are obsolescent firetraps built before 1900. They often have no libraries, cafeterias, or other basic facilities.

It is well known that the effectiveness of classroom instruction is drastically reduced when crowded conditions prevail. Educators generally agree that elementary school classes should be no larger than 30 pupils per class and that secondary schools should have classes of no larger than 25. Yet a National Education Association survey of the 1957-58 school year showed that 6,800,000 elementary school pupils in urban school districts, or 55 percent of the total, were in classes of more than 30 pupils each. Over half a million students were in classes of over 40 each. And about 300,000 children were on half day sessions. These numbers are continuing to grow.

It is important to point out, even at the risk of belaboring the obvious, that overcrowded classrooms affect every child involved. Statistics tend to be misleading by stressing "excess" pupils. But in a class of 40, while only 10 children are labeled "excess," the remaining 30 are equally affected.

TEACHER SHORTAGE

The shortage of qualified teachers is at least as pressing as the shortage of classroom space. The Nation has been unwilling to offer sufficient financial remuneration or status to draw enough qualified persons into the teaching profession. In the fall of 1958 there were 1,301,000 full- and part-time public school classroom teachers, 812,000 in the elementary schools and 489,000 in the high schools. The Office of Education estimated the total teacher shortage to be 132,000, or about 10 percent of the total. The quantity deficiency of teachers has been over 100,000 every year since World War II.

All States require certification of persons teaching in the public schools. Because of the shortage of qualified teachers, emergency or "substandard" certificates are issued to teachers who fail to meet regular standards. The standards themselves vary from State to State. In the fall of 1958, according to the Office of Education, there were 92,000 persons teaching on an emergency basis with substandard certificates, a slight increase over the previous year. Of these, 68,156 were in elementary schools and 24,181 in secondary schools.

On the basis of 30 pupils per classroom in elementary schools and 25 in secondary schools, the Office of Education estimates that 2,649,000 pupils—7.8 percent of total enrollment—were taught by teachers with emergency credentials. Twenty-nine percent of elementary school teachers do not have bachelors' degrees. Even some of these, however, meet State certification requirements. Two years of college is sufficient for an elementary school teaching certificate in a fourth of the States.

The large number of emergency teachers does not, by itself, present the whole picture of the teacher shortage. The number of additional teachers needed to fill vacant positions and to reduce class size and workload must also be considered.

The total number of persons preparing each year at the bachelor degree level for a teaching career is insufficient to meet the quantitative need for teachers, let alone to upgrade standards. In 1957-58, 95,000 public school teachers left the profession. At the same time, the colleges graduated 116,000

qualified new teachers, but only 84,000 of these actually entered teaching.

For a number of reasons, of which low pay is certainly not the least, only about 70 percent of those preparing to teach become teachers. Of those prepared to teach high school physics or chemistry no more than 60 percent become teachers. These graduates are obviously lured to more lucrative fields of employment. There is generally a greater shortage of elementary school teachers than secondary school teachers. Here again, pay is a factor, high school salaries generally being the higher of the two.

The average salary of all classroom teachers in the United States is less than \$4,800. Only 20 percent of all teachers earn as much as \$5,000 and 17.5 percent of all teachers are paid annual salaries of less than \$3,500. The average annual salary for elementary school teachers for 1958-59 was \$4,575, the average for high school teachers was \$5,110.

Salaries vary considerably by States and sections of the country. The average annual salaries of instructional staff (teachers, principals, supervisors, etc.) in 1958-59 was \$5,992 in the far Western States including Alaska, but only \$3,882 in the Southeastern States, a difference of \$2,110. The New England States averaged \$4,981, the Middle Atlantic \$5,709, the Middle West \$4,978, the Southwest \$4,642, and the Northwest \$4,186. Alaska's average salaries were the highest at \$6,400, followed by New York State at \$6,200 and California at \$6,050. Mississippi was the lowest at \$3,070, Arkansas the second lowest at \$3,270.

There is a direct relationship between teachers' salary levels and amounts of training. School districts with higher salaries have better qualified teachers. As a teacher can transfer locations with relatively small difficulty, higher salaries or other incentives draw teachers to the better school systems. The teacher shortage is most acute among rural school districts where salaries are generally lower and working conditions not as favorable.

The average income of teachers is far below that of most other professional persons. Only the income of clergymen, librarians, and dietitians is less. It is lower than the average income of all employees in manufacturing as well as the average income of all the civilian employees of the Federal Government. It is only slightly higher than the average income of all persons working for wages or salaries.

Beginning salaries offered teachers are also far below those paid to college graduates in other fields. Graduates in teaching could expect an average starting salary of \$3,650 in 1958. Average beginning salaries paid college graduates—both men and women—in all fields was \$4,758, over \$1,000 more. For graduates with a scientific background starting salaries averaged well over \$5,000. With differences of this magnitude the prevailing shortage of teachers becomes easier to understand.

Studies made by the National Education Association conclude that teachers' salaries should be at least 60 percent above the present average level to meet any reasonable estimate of a professional level of compensation. And Dr. Arthur Flemming, Secretary of Health, Education, and Welfare, said recently that a 100-percent increase in teachers' salaries within the next 5 or 10 years was a reasonable national goal.

Until salaries are raised to an adequate level it will continue to be exceedingly difficult to draw competent young persons into teaching, or to retain qualified teachers. Standards for teachers have been held down by salary levels, and will not go up until salaries are raised.

About 118,000 teachers left the schools in 1957-58. Although 20 percent of them re-

mained in teaching, others left for a variety of reasons, a substantial number entering other employment. Many trained teachers now working in other professions could be brought back into teaching by raising salaries. The same is true of many nonworking housewives who are qualified teachers and who would return to work if provided with adequate incentives.

**Greater Boston, Mass., Labor Council
AFL-CIO Supports H.R. 9070**

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Stephen E. McCloskey, executive secretary of the Greater Boston, Mass., Labor Council, AFL-CIO:

GREATER BOSTON, MASS.,
LABOR COUNCIL, AFL-CIO,
Boston, Mass., March 21, 1960.

HON. THOMAS J. LANE,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN: I am writing in behalf of the 30,000 building and construction tradesmen who, in addition to being members of the Building and Construction Trades Department of the AFL-CIO, are also members of our organization in the Greater Boston area.

We are concerned with one of the principal defects of the Taft-Hartley Act; which places inequitable restrictions on the economic activity of building and construction trades unions, at the site of the building and construction job.

Building trades workers are presently denied the basic freedom of peaceful picketing accorded to other union members, as the result of the U.S. Supreme Court interpretation of section 8(b)(4) of the Taft-Hartley Act in the *Denver Building & Construction Trades Council 341, U.S. 675*.

We are in accord with the views expressed by President Eisenhower, when he first recommended the reversal of the *Denver Building Trades* rule in his message of January 11, 1954, wherein he stated:

"I recommend that the act be clarified by making it explicit that concerted action against . . . an employer on a construction project who, together with other employers, is engaged in work on the site of the projects, will not be treated as a secondary boycott."

We believe that the broad language of section 8(b)(4) is not consistent with the economic facts of the building & construction industry and in connection therewith, we call to your attention the language in Senate Report No. 1211, 83d Congress, 2d session, the following part of which we approve:

"Where two or more employers are engaged in operations on the site of a single construction project, each performing some phase of the work necessary for the completion of the project, be it a building, a bridge, a tunnel, or some other structure, it cannot be justifiably maintained that they stand in a strictly neutral relationship to each other. Rather, despite their existence as legally independent entities, they must be regarded realistically as partners in a single joint or common enterprise in which the individual interests of each are necessarily

dependent on the success of the undertaking as a whole. In such a situation the committee believes that a labor dispute originating between one of these employers and his employees in fact constitutes a dispute with all of the employers just as if all were co-partners in the legal sense in a single business enterprise."

Therefore, we urge you to support H.R. 9070, which was introduced by the Honorable FRANK THOMPSON, Jr., Congressman from New Jersey.

Please give this legislation every consideration.

Very truly yours,

STEPHEN E. McCLOSKEY,
Executive Secretary.

Our World in Miniature

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the *Methodist Story* of August 1959. It was sent to me by Mr. Harvey Beckendorf of Franklin, Tex., a member of the Methodist Church before whom I had the pleasure of speaking not too long ago.

Mr. Speaker, I believe the following article has a moral, and I commend it to my colleagues:

A PICTURE OF MANKIND'S RELATIVE SHARES OF MATERIAL PROSPERITY

(By Henry Smith Lelper)

If, in imagination, we compress the present population of the world, now over 2½ billion, into a group of a thousand persons living in a single town, the following is the picture of contrasts we would then vividly see.

Sixty persons would represent the U.S. population; all others would be represented by 940. The 60 Americans would have half the total income of the entire town; the 940 would share the other half.

Thirty-six of the Americans in the town would be Christian Church members, and 24 would not. In the town as a whole, about 300 would be Christians and 700 would not. At least 80 persons in the whole town would be believing Communists and 370 would be under Communist domination. Possibly 70 in the whole town would be Protestant Christians.

Three hundred and three persons in the whole town would be white; 697 would be nonwhite. The 60 Americans would have an average life expectancy of 70 years, all the other 940 would average under 40.

The Americans would have 15½ times as much per person as all the rest on an average. They would produce 16 percent of the town's total food supply, eat up 14½ percent of that total supply and keep most of the remaining 1½ percent for their future use in expensive storage equipment. When it is remembered that most of the 940 non-Americans in the town would always be hungry and never know quite when they would get enough to eat, the situation created by this disparity in food supply and the existence of vast reserves becomes fairly apparent, particularly in view of the fact that the Americans already eat 72 percent above the optimum food requirements. They could actually save money by giving

away excess food because of the cost of storing it; but they think that would be a dangerous giveaway program of self-headed dogooders.

The 60 Americans would have of the town's total supply: 12 times as much electric power as all the rest; 22 times as much coal; 21 times as much petroleum; 50 times as much steel, and 50 times as much in general equipment.

The lowest income groups among the 60 Americans would be better off than the average in much of the rest of the town.

Literally most of the non-American people in the town would be poor, hungry, sick and ignorant. Almost half would not be able to read or write.

More than half would never have heard of Christ or what he stood for. But very soon more than half would be hearing about Karl Marx.

In view of these facts it is interesting to think that the average Christian American family would be spending \$850 a year for defense in force, and less than \$3.50 a year to share with the rest of the people in the town the knowledge of why there is any Christmas.

OUR ANSWER TO THE WORLD'S NEED FOR CHRIST

The position of Christian America is vividly shown in "Our World in Miniature." The chart below measures the value the American people are placing on their churches.

A Methodist expresses his concern for the evangelization of the world, the Christian nurture of its people, and service in Christ's name all through world service. This is basic. He may enlarge on this foundation through advance specials and offerings or gifts for many specific causes.

Where we put our money

Personal consumption expenditures in the United States of America in 1957:

	Billion
Crime	\$22.0
Clothing and accessories, except footwear	20.8
Gambling	20.0
Education	19.7
Medical care and death expenses	16.3
Recreation	15.9
Automobiles (purchases, new and used)	14.5
Accidents	11.9
Alcoholic beverages	10.7
Advertising	10.3
Tobacco	6.0
Religion and welfare	3.6

Hungarian Freedom Day

SPEECH

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. SANTANGELO. Mr. Speaker, the Hungarian people have not always enjoyed freedom, but they have always had the burning desire to be free and have always been ready to fight for their freedom. In 1848 they were prepared to revolt against their Austrian oppressors, but fortunately that was not necessary because they gained their goal without a revolution.

The revolution of 1848 in Europe was a severe blow to all autocracies there, and the despotic regime in Vienna was no exception. Early in the year the Govern-

ment in Vienna seemed to be toppling, and the Hungarians knew it. In Budapest a band of Hungarian patriots, instead of staging a revolt against the Government, prepared a list of their complaints, presented it to the Government, and demanded freedom. The Government, realizing its weakness and helplessness, proved conciliatory and granted the Hungarian demands on March 15. This was a significant victory for the Hungarians, and thus March 15 became their day of liberation, the Hungarian freedom day. On this 112th anniversary of that memorable day let us hope that Hungarians will again regain their freedom and enjoy liberty in their homeland.

War-Seized Assets an Old Headache

EXTENSION OF REMARKS

OF

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. WAINWRIGHT. Mr. Speaker, last year, I introduced H.R. 5636, designed to afford relief to certain American nationals whose property was damaged in central Europe as a result of World War II, and for return of a limited amount of assets to Germany, providing the West German Government honored certain long-existing debt obligations to American nationals. Last Sunday, March 20, 1960, the New York Times reported the most recent developments in connection with war assets which would be used to satisfy American claimants and the limited return of German assets in an article entitled "War-Seized Assets an Old Headache." In connection with the return aspect of German-held assets, it was well noted that West Germany had been somewhat less than scrupulous in fulfilling longstanding obligations to the international community, especially in connection with the Reichsbank's guarantee to non-German investors in the Golddiskontbank, whose dividends are still in default and remain unpaid solely because of delay in the liquidation of the Hitler banks, all of which has been to the great prejudice of many American investors. By your leave, I include the New York Times article as part of my remarks:

[From the New York Times, Mar. 20, 1960]

WAR-SEIZED ASSETS AN OLD HEADACHE

(By Paul Heffernan)

Nineteen years have passed since the United States and Germany, as World War II belligerents, seized the assets of each others citizens as "enemy property."

Despite a series of treaties and other international agreements and six legislative bills submitted to Congress between 1943 and 1959 but not voted on, the foreign-domiciled private property rights injured by such seizures and by other acts of war—injured rights of both Americans and Germans—are still unsatisfied. Evidently official thinking in both nations about the issue is further apart than ever.

Just as after World War I Germany failed to keep her word about compensating Amer-

ican nationals for property rights, so, too, after World War II, has the Bonn Republic failed to live up to post-war promises to compensate her own nationals for the losses they suffered through the U.S. seizure of their property in 1941. Germany agreed to do this at conferences in Paris in 1945 and 1954 and in Bonn in 1952.

Instead, the West German Republic now wants the United States to return the war-seized property to the owners abroad. This procedure was followed after World War I for about 80 percent of the German property then seized in this country.

DILEMMA AGGRAVATED

Germany's official change of mind about what should be done about the enemy assets seized 19 years ago is aggravating a lasting Washington dilemma about the matter.

Should the United States return the war-seized German assets and negotiate with Germany by treaty for a lump-sum indemnity for the satisfaction of claims of U.S. citizens?

Or should the proceeds from the sale of the German assets—the stock of such enterprises as Schering, Rohm & Haas and Hugo Stinnes, for example—be distributed among U.S. nationals with claims against Germany? Is not this proposal—admittedly a 1945 expedient to get blood out of what everybody thought would be a postwar stone—against historic U.S. policy and the established principles of international law?

There is now before Congress another bill whose evident first purpose is to get action on the matter before the claimants die of old age. The bill is H.R. 2485.

The bill has passed the House and is awaiting consideration by the Senate.

PAYING BOTH SIDES

It would authorize disbursement of moneys from the sale of the German assets primarily to pay the claims of Americans. But it is estimated that there would be enough left over in the fund to pay German claims of up to \$10,000, an indemnity that would satisfy 90 percent of the interests with claims against the United States. Germany still demurs.

A recent report of hearings before a subcommittee of the House Committee on Interstate and Foreign Commerce presents a succinct summary of the essential facts, going back to World War I days. The committee report, submitted by its chairman, Representative PETER F. MACK, Jr., Democrat, of Illinois, recommends adoption of the bill.

However, a minority report, signed by the three Republican members of the subcommittee—JOHN B. BENNETT, of Michigan, and PAUL F. SCHENCK and SAMUEL L. DEVINE, of Ohio—argues strongly against the means advocated by the bill to serve the undisputed end.

The minority report contends that the burden of paying for the losses and injuries sustained by U.S. nationals should fall on German and Japanese taxpayers, and not, as the bill proposes, on "those German and Japanese nationals who happened to own property in the United States."

While disclaiming any wish to debate the question, the minority committeemen implied that the signatories to the Paris and Bonn agreements of 1945, 1952, and 1954 were in violation of international law and that any conversion of the seized assets would be a wrongful act of confiscation under international law, under the U.S. Constitution, and under statutory domestic law.

If the House-approved bill is a slight to the lasting international sanctity of private property rights, it is mostly because of the resolve of Congress that there shall be no repetition of the World War I war assets fiasco, in which the war victors indemnified

the losers and got nothing in return. The Congress may be more willing to face up to the ticklish issue of international law once the claims of U.S. nationals are satisfied.

West Germany has indeed performed a great service in the interests of international equity as well as in rehabilitating its own name by restoring millions of dollars of defaulted external debt to an interest-bearing basis. As a result of this constructive move, there will soon be a payoff of the first bonds of the 1924 Dawes loan. Under a sinking fund agreement stemming from the 1952 London conference on Germany's external debts, \$1,333,000 of the old dollar loan will be paid off on April 15 at the principal amount upon presentation to Morgan Guaranty Trust Co.

In certain other respects, however, the West German authorities have been less than scrupulous in fulfilling longstanding obligations to the international community. Some instances follow:

Although more than 14 years have passed since the end of the war, the Bonn government has still to fulfill the guarantee that the Reichsbank gave to non-German investors when their holdings of Reichsbank stock, were by official dictation, converted into preferred stock shares of a subsidiary institution, the Golddiskontbank. The Reichsbank-guaranteed dividends on the Golddiskontbank stock are still in default and action is still being delayed on liquidating the official banks of the Hitler regime that no longer have a function but only assets.

Although the deadline for holders of Young and Dawes loan bonds for accepting the West German Government's debt settlement offer expired more than a year ago, the Bonn republic has taken no steps to implement its treaty commitment to designate a time when nonaccepting holders of the defaulted bonds would be able to sue in the German courts for the fulfillment of the original debt contracts.

The West Germany of today is not a debt-ridden nation rationing foreign exchange to pay external debts; rather it is the biggest single lender to the International Bank for Reconstruction and Development. Why should not bondholders who have not accepted settlement offers hold out for fulfillment of the original contract and be able to enforce that right in the German courts?

The time it is taking to settle such issues is casting a disquieting reflection on the appeal of the West German officials in behalf of the sanctity of property rights. Just because foreign nationals are unable to prod a government to action is no reason why that government should abuse the privilege of its sovereignty by giving its sanction to unconscionable delays.

S. Res. 94 Opposed by Members of the Long Island Knights of Columbus, Brooklyn, N.Y.

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. DORN of New York. Mr. Speaker, I believe the following resolution which was unanimously adopted by the members of the Long Island general assembly, fourth degree—patriotic—Knights of Columbus, Kings County, Brooklyn, N.Y., at their meeting on

February 24, 1960, is important enough to call to the attention of my colleagues:

Resolved, That the members of the Long Island general assembly, fourth degree (patriotic), Knights of Columbus, Brooklyn, N.Y., emphatically oppose Senate Resolution 94 and all other attempts to extend an unwarrantable jurisdiction over us through the United Nations World Court. We, as citizens of the United States of America, who swear to support the Constitution of the United States, consider all such proposals to be in violation of our Federal Constitution since the judicial power of the United States shall be vested in one Supreme Court (art. 3, secs. 1 and 2). We will not combine "with others to subject us to a jurisdiction foreign to our Constitution and altering fundamentally the forms of our governments" (Declaration of Independence). We are confident that our elected representatives in the Congress, "The Senators and Representatives shall be bound by (their) oath or affirmation to support this Constitution" also (art. 6, clause 3).

Respectfully yours,

JOHN A. BREGLIA,
Faithful Navigator.

Gleam Wears Off on Hound's Tooth

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks I should like to include in the RECORD a timely editorial from the St. Louis Post-Dispatch. Eight years of hound's tooth crusading have produced a record that is something less than enviable. With a cloth-coat crusade in the offing this year it might be well to preserve the following editorial as a reminder of what such crusades can produce:

GLEAM WEARS OFF ON HOUND'S TOOTH

The quick replacement of John C. Doerfer by Frederick W. Ford as FCC Chairman indicates that the administration was not unhappy to see Mr. Doerfer go. A Federal Communications Commissioner who accepted favors from interests subject to FCC regulation was hardly a good advertisement for the Republican Party in a campaign year.

Still the Doerfer case remains an unavoidable reminder that this administration came to power promising to clean up the "mess" in Washington and improve official ethics. It is not the first such reminder, as the record shows:

C. Wesley Roberts resigned under fire as chairman of the Republican National Committee in 1953. It was disclosed that not long after Mr. Roberts had been Kansas GOP chairman, he had accepted a fee in the sale to the State of a hospital which the State already owned.

Hugh W. Cross resigned as Chairman of the Interstate Commerce Commission in 1955. Mr. Cross, a Republican appointee of the Truman administration, had talked to heads of railroads subject to ICC regulation about giving a Chicago transfer contract to an old Republican friend.

Adolphe H. Wenzell in 1954 served as consultant to the Bureau of the Budget on the Dixon-Yates power deal. As an officer of the financial agent for the Dixon-Yates power

combine, Mr. Wenzell was exposed as trying to advise both sides.

Harold E. Talbott quit as Secretary of the Air Force in 1955. A congressional inquiry showed that he had retained his partnership in an engineering firm and had used Air Force letters to try to promote his company's business.

Peter A. Strobel departed in 1955 as Commissioner of Public Buildings for the General Services Administration. Mr. Strobel had held on to a 90 percent interest in a firm which had a claim on the Army Engineers, and he negotiated privately with the Army for his firm.

Edmund F. Mansure resigned as Administrator of the GSA in 1956. Explaining why political favoritism had affected insurance brokerage awards subject to GSA jurisdiction, he said "practical politics" dictated that such awards should not go to firms which "did not help this administration get into office."

Murray Chotiner was dropped by the Republican National Committee in 1956 as director of its campaign school. The former campaign manager for Vice President Nixon had interceded at the White House and with the Civil Aeronautics Board in behalf of his private clients.

Robert Tripp Ross resigned as Assistant Defense Secretary in 1957. Congress learned the Army had given an \$834,000 clothing contract to a firm headed by his wife and brother-in-law.

Sherman Adams quit in 1958 as President Eisenhower's chief administrative assistant. Mr. Adams, it was found, had accepted expensive gifts and hospitality from Bernard Goldfine, whose companies had cases before the Federal Trade Commission and Securities and Exchange Commission.

Richard A. Mack left the FCC in 1958. He later was indicted with Thurman A. Whiteside, of Miami, on a charge of conspiring to influence the FCC award of a Miami television license in which Whiteside was interested. Their first trial ended in a hung jury.

John C. Doerfer, to bring the record up to date, resigned from the FCC last week after it was shown he had twice accepted favors and hospitality from the owner of 12 stations subject to FCC regulation.

Other administrations, of course, have suffered from conflicts of interest. But these 11 cases occurred in an administration which was specifically pledged to better the record of the past and was committed to the cleanliness of the hound's tooth.

That tooth is showing cavities.

U.S. Battle Monuments

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. TEAGUE of Texas. Mr. Speaker, may I call to the attention of Congress and the American people a few facts which are in deep contrast? We have placed in Europe inspiring memorials and memorialized cemeteries at an expenditure of about \$40 million to record the sacrifices and deeds of those who served in Europe in World Wars I and II. These memorials are beautiful, inspiring and of deep meaning to the thousands who view them and will view them for

generations to come. These American memorials are revered and cherished by the countries in which they are located.

In the Far East there were 4 million Americans engaged in World War II. The front was 8,000 miles from our shores and extended almost halfway around the world. To record that service and to perpetuate the memory of the sacrifices and history of that American effort we have one memorialized cemetery only, in the Far East.

In many countries of Europe the Congress of the United States has honored our dead and preserved for posterity the visual history of World War I and II, as follows:

MEMORIALS (NOT CEMETERIES)

Audenarde, Kemmel, Belgium.
Bellicourt, Cantigny, Aisne Marne, Belleau, Blanc Mont, Meuse Argonne, St. Mihiel, Services of Supply, France.
Naval memorial, Gibraltar.
Naval memorial, France.

MEMORIALIZED CEMETERIES—MEMORIALS (WITH NEARBY CEMETERY)

Brookwood, England.
Flanders Field, Belgium.
Somme, Aisne Marne, Olse-Aisne, Meuse Argonne, St. Mihiel, Suresnes, France.
Cambridge, England.
Normandy, Brittany, France.
Netherlands, Netherlands.
Henri Chapelle, Ardennes, Belgium.
Luxembourg, Luxembourg.
Lorraine, Epinal, Rhone, France.
Florence, Sicily Rome, Italy.
North Africa, Tunisia.

All of them are inspirational, meaningful, and a credit to the United States.

I am not including other memorials in the United States.

The contrast is that the only American recognition of what occurred in the Far East is the one memorialized cemetery near Manila for the American dead.

Congress created the Corregidor Memorial Commission. It was deemed desirable to place upon the hallowed ground of Corregidor one impressive significant and inspiring memorial to preserve the history of those who sacrificed and died in the far Pacific and of our entire service in the Far East. The Philippine Congress by resolution requested that it be placed on Corregidor. The Government set aside Corregidor as a shrine and to use it for the purposes of the memorial. A shrine commission was created and directed to confer with the American Corregidor Commission. The Philippine commission came to America for that purpose and among other things approved of the chosen design. One thing remains—to pass the \$7½ million authorization bill. The House of Representatives passed such an authorization bill late in the 85th Congress but Congress adjourned before action was taken in the Senate.

The request for the authorization is expected to be before Congress in the near future.

In my opinion, since about 15 years have elapsed since the retaking of the Philippines, we should not further delay the erection of this American memorial on Corregidor.

Resolutions of the Coffey County, Kans., Farmers Union

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. REES of Kansas. Mr. Speaker, under unanimous consent granted by the House, I am including herewith resolutions I received from Mrs. Frank George, acting legislative director of the Coffey County, Kans., Farmers Union. These resolutions express the views of a substantial group of farmers in Coffey County Kans.:

RESOLUTION ON FEDERAL FARM PROGRAM

Whereas annual net farm income has fallen from \$15.3 billion in 1952 to \$10.3 billion in 1959; and

Whereas the 1959 prices received by farmers for their output were 16 percent below the 1952 level, and prices paid by farmers rose nearly 11 percent during the same period; and

Whereas since the administration has lowered support prices, surpluses have increased, which indicate that the present administration policies are a huge failure; and

Whereas USDA economists predict net farm income will fall to \$7 billion in next few years—less than half that of 1952 level, if price supports are withdrawn—as the present administration and a few others, advocates, which, we believe, would wreck our total economy as in 1930's: Be it

Resolved, That we, the Coffey County Farmers Union in session this 11th day of March 1960, at Burlington, Kans., favor a Federal farm price support bill, that provides:

1. Farmer-elected committees from county to national levels, with requirements that actual farmers have control.

2. A national food-use program, which would bring domestic consumption and foreign surplus utilization programs, into gear with the price support program.

3. Support level at not less than 90 percent of current parity for any commodity, whose producers have not disapproved a market supply adjustment program as worked out by the Secretary of Agriculture, and submitted to a two-thirds referendum.

4. A wide variety of methods to carry out these programs, including Government loans, marketing orders, allotments, incentive payments, and a strong soil conservation program.

RESOLUTION ON FEDERAL EDUCATION PROGRAM

Whereas according to the National Education Association, and other study groups' reports, U.S. expenditures for school year 1958-59 for public schools, totaled \$14.5 billion, and at this same time, our expenditures for alcoholic beverages and tobacco was \$15.5 billion; and

Whereas according to these same study groups, 56 percent of the cost of public education is paid by local government, 40 percent by State government, and only 4 percent by Federal Government; and

Whereas a big increase in taxes will be necessary if we are to develop an adequate and effective educational program; and

Whereas most all local school, and some State taxes, are raised by a tax levy on real and personal property; and

Whereas farmers cannot add the cost of taxes onto the price of their products, and pass them on to consumers—as industrial

and commercial enterprises do—and, since an increase in local school taxes, would be a great burden on farmers: Therefore be it

Resolved, That, we, the Coffey County Farmers Union in session this 11th day of March 1960, at Burlington, Kans., favor a substantial increase in Federal aid to public elementary and secondary schools for school construction, and Federal aid for school instruction, to at least \$25 per child of school age, in these same schools, as provided in bill H.R. 22, by Representative METCALF.

Ike Answers Own Query on "Mess in Washington"

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. MOSS. Mr. Speaker, in view of the strange shyness that has in recent months prevented Republican leaders from reminding the public of what they termed in 1952 the "mess in Washington," under leave to extend my remarks, I ask to include the following editorial from the Sacramento (Calif.) Bee, Wednesday, March 16, 1960, in the RECORD. The editorial is entitled "Ike Answers Own Query on 'Mess in Washington'":

If ever an issue came home to roost it is that of the Republicans who bellowed their way to office with the cry about the mess in Washington.

After a directed look at the milk coats, deep freezers, and frozen hams given to some persons in President Harry S. Truman's administration, Dwight D. Eisenhower in 1952 asked: "What is the system that allows the appointment of such men?"

With the resignation under fire of John C. Doerfer as head of the Federal Communications Commission, Eisenhower has become quite a veteran as an appointer of men who mess things up in Washington.

The President also appointed Richard A. Mack to the FCC. Mack has been indicted on a charge of conspiracy to defraud the U.S. Government relative to awarding a television channel in Miami. After a jury failed to agree early this year it was reported Mack was undergoing psychiatric treatment with his second trial in abeyance.

Vicuna coats, rugs, and free hotel lodgings have reached right into the White House and forced the resignation of the first Presidential aid, Sherman Adams.

Then there was the infamous Dixon-Yates deal which was aborted when the people discovered Adolphe H. Wenzel was cozily placed in the Budget Bureau while an executive of the First Boston Corp., a financial agent for the deal.

The President himself asked Congress to study the turning over to private interests of the Elk Hills oil field naval reserve. It was just such a proposal in the Warren G. Harding administration which led people to say "a new broom sweeps dirty."

And there have been nearly a dozen other such incidents, such for instance as the resignation of Air Force Secretary Harold E. Talbott after it was learned he was soliciting private business from his powerful office.

What history will say about the President's acceptance of gifts of valuable farm machinery and stock for his Gettysburg farm can be surmised.

Oh, for those fond hopes evoked when the President assured an audience in Brookings, S. Dak., no mess makers would get into his administration.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Time To Clean Up the Boxing Mess

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. KEATING. Mr. President, in recent months there has been increasing agitation all across the country for action to clean up the mess in professional boxing. An article appearing in the April edition of Reader's Digest by James Stewart-Gordon entitled "Abolish Professional Boxing" contains a good deal of food for thought for all concerned with the future of the sport.

This article is a revealing and instructive treatment of the problems confronting professional boxing, although in all due candor I must say that I do not agree with its main thesis. It does, however, underscore the need for a prompt and thorough investigation by Congress. Such an inquiry should be delayed no longer.

Mr. President, any objective observer of the sports scene must admit that much in professional boxing in America today is rotten. The sport is sick, but we need not give up hope of curing the patient.

There is no question that there must be a thorough housecleaning from top to bottom. The crooks must be eradicated, the mob eliminated, and exploitation of contestants done away with as much as is humanly possible. I would hope that any congressional inquiry would also explore the rather serious medical problems discussed in this Reader's Digest article.

What is needed eventually is some kind of nationwide control of the sport, preferably under the guidance of an iron-fisted czar. I would hope this can be done by an organization outside the Federal Government. Baseball has tried this approach and it has worked with great success.

In the long run, an international organization must be established to police boxing, because even a cursory glance at the list of present world champions reveals the distinct global coverage of professional boxing. Mr. President, these are not impossible goals, and I believe they are worth striving for and are attainable.

Because it contains interesting information on the problems confronting boxing today, and because I hope it will prod action for the cleanup which is essential if the sport is to continue as the pastime of millions of fans, I ask unanimous consent that the article in the Reader's Digest to which I have

referred be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Reader's Digest, April 1960]

ABOLISH PROFESSIONAL BOXING

(By James Stewart-Gordon)

On March 5, 1959, Johnny Saxton, 28 years old, a former world welterweight champion, stood before a New York City judge, charged with housebreaking. The proceeds of the burglary: \$5.20. Saxton, who had reportedly earned more than a quarter of a million dollars during 8 years in the ring, was destitute, he said, and owed the Government some \$16,000 in back taxes.

The judge looked down at Saxton. "Johnny," he said, "where did your money go?"

Saxton answered in a slurred, barely audible voice, "I didn't get much of it."

"Why did you give up fighting, Johnny?" the judge went on.

Saxton dropped his gaze to the floor. "They didn't need me no more."

Today, after a suicide attempt, Saxton is a patient in Ancora State Hospital in New Jersey. With extensive psychiatric help, he is beginning to clear the cobwebs from his brain. "When I came here," he told me, "I wanted to get out of life. I knew I couldn't fight no more. I was supposed to have got big money from fighting on TV, but I never saw it. No one ever gave me more than a couple of hundred dollars at a time. Now I'm here in the hospital. That's what boxing did for me."

That's also what boxing did for Johnny Bratton, another former welterweight champion, who at 30 years of age had become an old man in an Illinois mental hospital.

The frightening truth is this: Professional boxing is the down-at-the-heels prostitute of organized sport. The cases of Johnny Saxton and Johnny Bratton are no rarities. They serve merely to illustrate the racket's outstanding characteristics: Brutality, and the venality and crookedness of boxing's managers and promoters.

When you watch a fight on TV, the odds are overwhelming that you see two muscular young men who are nothing but puppets of the mobsters who control the business. Often the fighters are subnormal mentally, either because they were born that way or because they have practiced their trade too long. They know who is to win and who is to lose—and when and how. And at the end of their ring careers they are usually both battered and broke, robbed by the men who have used them.

Considered coldly and on the basis of the evidence, professional boxing has absolutely no excuse for continuing to exist. It is time we were civilized enough to abolish this shabby game, on both medical and moral grounds.

The medical proof is hard to deny. Sometimes a single hard blow to the head causes death by massive cerebral hemorrhage. This was the case in four recent deaths: Walter Ingram in Guadalajara, Mexico; 19-year-old Golden Glover Antonio Lopez in New Mexico; German lightweight Karl Bick; and South African Jimmy Elliott. Since World War II, some 165 boxers have died of injuries suffered in the ring.

As Thomas Gorman wrote in a publication of the American Medical Association: "Boxing is the only sport where the head is the chief target, where the aim is to punish an opponent by knocking him out. But a boxer doesn't have to be knocked out or have his skull broken to be seriously injured. He may suffer pinpoint hemorrhages or other harm to his brain not apparent even to the trained physician."

Tests made by the U.S. Naval Hospital in Bethesda, Md., and by Dr. Ward C. Halstead, of the University of Chicago, show how dangerous these injuries can be. Dr. Halstead says: "Most of the bruising from a head blow occurs in the frontal lobes, the parts of the brain which control coordination, restraint and self-control. These lobes rest against a sharp, bony ridge; when the brain bounces inside the skull, this ridge bites into the frontal lobes and destroys their tissue. The brain, unlike some other parts of the body, cannot replace its own tissue. Damage is permanent."

This results in what is known medically as the "punch-drunk syndrome"—a shuffling gait, tortured speech and the inability to think clearly. Other common boxing injuries include damage to the eyes, kidneys and the heart.

If anyone questions the vicious effects of the so-called game of boxing, the experience of ex-heavyweight champion Gene Tunney ought to supply the answer. "One day when I was training," Tunney says, "I got a blow on my head. I felt as though a hole had been bored in my skull and a stream of hot water poured on my brain. A hot film came in front of my eyes. For the next 3 days I couldn't remember the names of even my closest friends; I was unable to orient myself. When I returned to normal, the possibility of becoming punch-drunk haunted me for weeks. The first seed of retirement was sown then."

On moral grounds, the truth is that professional boxing is not a sport at all. It is a sordid business designed to yield maximum profit to the men who control the fighters, the arenas, and the TV outlets. The fact that men can be permanently injured or killed in its practice is of little concern to the behind-the-scenes manipulators. Through their monopoly, known as the "Octopus," they decide for virtually every boxer fighting today—regardless of his skill—when he will win or lose, when and whom he will fight next.

This situation has come about largely because of TV. Before TV, professional boxing was generally confined to small fight clubs scattered across the country, a setup which made the sport too diffuse for control by one man or group of men. But TV made it possible to dominate the entire business.

For one thing, the TV network people were obsessed with the idea that in order to sell their broadcasting time to sponsors they had to make sure of a minimum of two fights a week throughout the year and enough championship contests to attract viewers. They could obtain these only through the "Octopus." And they made only one small request that the boxers be evenly enough matched so that the fights would usually go the limit—to provide ample time to get the commercials on the air.

Apparently the network people were not satisfied with the results. The National Broadcasting Co. recently decided to dis-

continue its Friday night fights as of September 1960. According to an editorial in *Sports Illustrated*, "The sponsor was happy because the fights were selling razor blades. The advertising agency was happy because the sponsor was. But the network was unhappy"—presumably, as columnist Red Smith surmises, "because it is not possible to offer 'exciting' matches with brandnew performers every Friday."

There will, of course, still be boxing on television, and the people who present it will undoubtedly still have to deal with the "Octopus"—with such men as Frankie Carbo, a convicted killer; James D. Norris, ex-president of the discredited International Boxing Club; Truman Gibson, Joe Louis' onetime tax lawyer; Mickey Cohen, Gabe Genovese, "Blinky" Palermo and, in Europe, Jack Solomons. Below them are the fronts, men like Hymie "The Mink" Wallman, Willie "The Undertaker" Ketchum, and Al "The Vest" Weill. Today some of these men, like Gibson, Genovese, Palermo, and Carbo, are under indictment in New York or California, or have pleaded guilty to illegal manipulation.

On October 30, 1959, Paul John Carbo, known as Frankie Carbo, Mr. Gray, "The Superintendent" and under various other aliases, pleaded guilty in a New York court to being (among other things) an undercover matchmaker in the bout between Isaac Logart and Virgil Akins, who tackled one another for a chance at the welterweight title in March 1958. The Logart-Akins production, a televised feature, was to have been preceded by the same careful preparations that had been made for many fights Carbo had staged before. This time, however, there was a difference: several strategic wire-taps, sanctioned by court order, were made by investigators for New York district attorney Frank S. Hogan, who has been fighting the boxing racket since 1947. Hogan's men were able to show how Carbo issued orders to Hymie Wallman and to Bernie Glickman, Akins' manager of record. They could prove that Jim Norris, sometime partner, sometime associate of Carbo, servilely took Carbo's orders. When they had enough evidence to bring indictments, they sprang the trap.

Carbo threw himself on the mercy of the court. He got 2 years in jail and a \$2,000 fine. His attorney, Abraham Brodsky, made a revealing remark: "The so-called sport of boxing should be abolished in this State. If boxing is a racket today, it always was and always will be."

He was right. Jailing Frankie Carbo will not kill the Octopus. Its tentacles are too long and too deeply embedded to be shaken loose by one conviction, even as important a conviction as Carbo's.

Jim Norris came into boxing with a \$50 million fortune inherited from his father, a midwestern and Canadian wheat manipulator. By purchase or inheritance he gained control of Madison Square Garden, the Detroit Olympia and Chicago Stadium. When he needed fight bills to fill his arenas, he found that Carbo could fix him up.

In time they gained control of the champions in all the important divisions and were able to pick opponents and make deals. To insure their continued control, they forced outside managers to agree that, in the event of a championship's changing hands, the new champion would fight under the aegis of the International Boxing Club.

John Bonomi, assistant district attorney of New York and assistant counsel to the Kefauver Committee, which recently announced plans to expose some of boxing's dirty laundry, says: "In 6 years of investigation I have found few fighters who are not wholly or partially controlled by the mob." Middleweight titleholder (in New York and Massachusetts) Paul Pender has spoken in less restrained fashion: "Boxing is rotten clear through, infested by gangsters and thieves."

The Octopus not only has built up a reliable stock company of fighters who obey scripts and who are seen regularly on TV as a reward, but has tried to reach referees and judges as well. As this is written, Bert Grant, a judge licensed by the New York State Athletic Commission, is under indictment for accepting bribes from Hymie Wallman. Grant, the indictment charges, was paid \$100 to vote for one of Wallman's fighters. While so far only Grant has been named, other indictments are pending.

When the Octopus does not have control of a fighter, it uses direct methods to remedy the defect. In the case of welterweight champion Don Jordan this has led to the indictment in California of Truman Gibson, "Blinky" Palermo and strong-arm men Louis Dragna and Joe Sica.

Last year in Los Angeles, Jordan defeated Virgil Akins for the welterweight title. Shortly thereafter, according to promoter Jackie Leonard, he and Don Neseth, Jordan's manager and a nonmember of the Octopus, received a visit from "Blinky" Palermo. "We want our cut of Jordan," Palermo demanded. Neseth and Leonard would not go along. One night about 2 weeks after testifying to this effect before the California Athletic Commission, Leonard was badly beaten as he was putting his car in his garage.

The athletic commission called Palermo, Gibson, Sica, and Dragna for a hearing, and turned the matter over to the U.S. attorney's office in Los Angeles for grand-jury action. An indictment was returned, and all four, along with Carbo, are now facing trial on charges of conspiracy and other crimes.

There is no place in the United States today for a sport that is as brutal and crooked as the boxing racket. Harold Barnes, retired official of the New York State Athletic Commission, a boxing judge for 38 years, says, "I consider boxing legalized murder. I would outlaw it."

Isn't it high time the United States banned this public butchery?

Where the Shoe Pinches

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following editorial from the *Wall Street Journal* of March 22 may help some of us to revise our thinking on raising interest rates on long-term Government bonds.

The theory that to do this would help the rich and hurt the poor will definitely not go down today with anyone trying to borrow money to build a home.

The National Association of Home Builders have finally waked up and rubbed the sand from their eyes and reversed their position. They now realize what many of us have long known, that many would-be homeowners simply cannot get financing at acceptable interest rates in today's market.

The article follows:

[From the *Wall Street Journal*,
Mar. 22, 1960]

WHERE THE SHOE PINCHES

The National Association of Home Builders, we see by a letter to its members, has found out that it makes a lot of difference where the shoe pinches.

For many months now Secretary Anderson has been trying to persuade Congress to change the law which forbids the Treasury to pay more than 4½ percent interest on long-term Government bonds. The chief opposition has come from those who say that, while this might make things easier for the Treasury Secretary, it would be a severe blow to ordinary folk who have to borrow money on long terms, such as on mortgages. Aren't mortgage rates already high enough without the Treasury "pushing" them higher?

So the Democrats in Congress, who profess a deep concern about homebuyers and the building industry, have told Mr. Anderson "No." If he's pinched for funds, let him stick to the short-term market.

But now the homebuilders have had some second thoughts. The association has just called on all members to write their Congressmen at once giving "strong support" to a change in the interest-rate limitation "at the earliest possible date." If the change isn't made quickly, say the homebuilders, it "could well mean tighter mortgage money and higher interest rates."

Behind this about-face is an interesting lesson in the economics of interest. It's one that might even be instructive to the self-styled "liberal" Democrats in other ways too.

The basic situation here can be described fairly simply. Because of the tremendous demand for the Nation's lendable funds, from both private and governmental borrowers, the price of money has been pushed up. Uncle Sam may offer to pay 4½ percent interest, but no lenders come forward for the reason that they can already lend their money elsewhere at a higher rate.

So with long-term money already "tight," the first reaction of many people was that to permit the Government, with its huge borrowing needs, to raise its interest bid would simply make the long-term money supply even tighter. The Government, so the argument ran, would then be competing even more directly with would-be mortgage borrowers, interest rates would rise further, people wouldn't be able to buy homes, the building industry would fall into the doldrums and that would injure the whole economy.

Of course this train of thought, however persuasive to the unsophisticated, overlooked one little detail. The U.S. Treasury had to get the money from somewhere, billions of it. And if it couldn't spread its borrowing over the long-term market, it had to borrow all the billions on the short-term market where there was no interest limit fixed by law.

What happened then was unforeseeable only by the kind of "liberal" Congressman who thinks statutory law will repeal the actual laws that govern economic affairs.

When the Treasury was forced to borrow its billions on short-term notes alone, short-term interest rates went skyrocketing. Last fall the Treasury had to pay 5 percent for notes maturing in less than 5 years. So, not unnaturally, people who had money in savings banks and building associations at much less interest drew out their money and bought the Treasury notes.

Hence the homebuilders discovered that "the Treasury's unavoidable financing activities are draining money out of the very institutions on which we must rely for mortgage credit." And they concluded that if the Treasury isn't permitted to meet the going interest rates in the long-term market, where it can spread its debt around, "we are all going to suffer severely."

So there you are. Those who refused to let the Treasury deal sensibly with the realities of the marketplace have brought about the very thing they professed they would avoid.

The political lesson should be plain when the Congressmen hear from the homebuilders. And the economic lesson might even remind some of them that when a shoe is badly made it's apt to pinch all over.

Tribute to the Late Senator Neuberger

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. MORSE. Mr. President, there appeared in the Government Standard of March 18, 1960, an article entitled "Neuberger's Death Loss to Employees."

I ask unanimous consent that this article, on the late Senator Neuberger, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEUBERGER'S DEATH LOSS TO EMPLOYEES—
SERVED ON CS UNIT

Government employees lost a true friend and staunch legislative supporter last week with the death of Senator Richard Neuberger. Senator Neuberger died in Portland, Oreg., of a cerebral hemorrhage. He was 47.

As a member of the Civil Service Committee, the Oregon Democrat was in the forefront of activity on Federal employee legislation. Last year he headed the subcommittee that handled Federal employee health insurance legislation and the bill that ultimately became law was cosponsored by him and Senator OLIN JOHNSTON, chairman of the full Civil Service Committee.

Senator Neuberger's deep interest in health legislation was considered one of the key factors in enactment of the employee insurance program after similar legislation had been stymied for a number of years. At the time of his death Senator Neuberger was pressing for enactment of health benefits legislation to cover already retired Federal employees.

The Oregon lawmaker also played a key role in the 1958 pay campaign that resulted in a 10-percent increase for Government workers. He was chairman of the subcommittee that handled the pay proposals.

Earlier this year Senator Neuberger wrote Civil Service Committee Chairman Roger Jones urging the administration to support pay increases for Federal classified and postal workers. He said that in the light of its role in negotiating a pay hike for the steelworkers, the administration should back an increase for its own employees.

Senator Neuberger often pointed out to his constituents the fine job done by Government workers. In his final newsletter to Oregon voters was an item titled "High Quality of Our United States Employees."

Senator Neuberger had recently announced that he would seek a second term. His freshman term in the Senate was due to expire at the close of this year.

The Oregon Democrat underwent a cancer operation in 1958. The surgery was successful, but a number of unrelated illnesses followed. The Senator said he would seek a second term after he was pronounced fit to run following a series of medical examinations.

Senator Neuberger was the first Democratic Senator elected in Oregon in 40 years. He had served on the Civil Service Committee since coming to the Senate in 1954.

He entered politics in 1941 when he won election to a 2-year term in the Oregon House of Representatives. In 1949 he was elected to the State senate, serving there until 1954 when he won a seat in the U.S. Senate.

No successor has been named yet to fill the vacancy on the Civil Service Committee

created by Senator Neuberger's death. Oregon Gov. Mark Hatfield will appoint someone to serve out the remainder of the Senator's unexpired term. Under the State law, he must name a Democrat.

The 139th Anniversary of Greek
Independence Day

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. VAN ZANDT. Mr. Speaker, the celebration of all independence days have profound significance but the celebration on March 25, 1960, of the 139th anniversary of Greek Independence Day, is of especial significance for many reasons. In the first place, the ancient Greeks, who are renowned for the very high premium they placed on freedom and independence, were in a sense the first citizens of the West and of the free world. They showed the world that they preferred to fight for the preservation of their independence rather than willingly submit to conquering oppressors. In the second place, when eventually they were forced to submit to alien tyrants, they proudly maintained their spiritual independence for many centuries. And finally, in 1821 when they saw a chance of regaining their freedom and national independence, they staged a revolt which in the course of many years of bloody warfare, led to the birth of modern Greece.

From the day the stouthearted Archbishop Germanos of Patras raised the standard of the cross over his monastic establishment in 1821 we have followed the course of events in Greece with keen interest and heartfelt sympathy. There never was, and let us hope that there may never be, any doubt as to where our wholehearted sympathy and national interest lie when freedom-loving Greeks have been pitted against foreign oppressors and totalitarian tyrants. We have always held them in exceptionally high esteem. Even before their war of independence we were fully conscious of our debt to Greece, the true cradle and nursery of many human values associated with our civilization. In a sense we have always regarded the Greeks as our cultural and intellectual forebears. When we attained our independence, helpless Greeks were suffering under alien oppressors in their homeland. And when the news of their revolt against the Turks reached us, it was natural for us to hope and pray for Greek success. President Monroe and many prominent legislators in Congress at the time voiced the overwhelming feeling of the Nation in their declarations. In his annual message on December 3, 1822, the President stated:

The mention of Greece fills the mind with the most exalted sentiments and arouses in our bosoms the best feelings of which our nature is susceptible. Superior skill and re-

finement in the arts, heroic gallantry in action, disinterested patriotism, enthusiastic zeal and devotion in favor of public and personal liberty are associated with our recollections of ancient Greece. That such a country should have been overwhelmed and so long hidden, as it were, from the world under a gloomy despotism has been a cause of unceasing and deep regret for ages past. It was natural, therefore, that the reappearance of these people in their original character, contending in favor of their liberties, should produce that great excitement and sympathy in their favor which have been so signally displayed throughout the United States. A strong hope is entertained that these people will recover their independence and resume their equal station among the nations of the earth.

Famous orators and statesmen also voiced their concern in the matter. Daniel Webster characterized the Greek War of Independence as part of a greater struggle "between absolute and regulated governments." He declared in no uncertain terms that America could not hold aloof from world affairs, and he insisted that it was time for us to take a firm and definite stand on the question of the Greek War.

As one of the free States among the nations—

He said—

as a great and rising Republic, it would be impossible for us, if we were so disposed, to prevent our principles, our sentiments, and our example from producing some effect upon the opinions and hopes of society throughout the civilized world. . . . Our side of this question is settled for us, even without our own volition. . . . Our place is on the side of free institutions.

The core of this ringing peroration is in the last sentence: Our place is, and has always been, on the side of free institutions, erected and vigilantly guarded by freemen.

Henry Clay was equally clear in expressing the true sentiment of our people in Greek affairs. At that time there was the feeling in some quarters that the display of excess sympathy for the Greeks would offend the Turks. Clay thought that such unworthy reasoning was unbecoming to freemen and independent, sovereign states. His indignant retort to those who advocated restraint and caution read:

Are we so mean, so base, so despicable, that we may not attempt to express our horror, utter our indignation, at the most brutal and atrocious war that ever stained earth or shocked high heaven?

If the great body of Christendom can look on calmly and coolly, while all this is perpetrated on a Christian people, in its own immediate vicinity, in its very presence, let us at least evince, that one of its remote extremities is susceptible of sensibility to Christian wrongs, and capable of sympathy for Christian sufferings; that in this remote quarter of the world there are hearts not yet closed against compassion for human woes, that can pour out their indignant feelings at the oppression of a people endeared to us by every ancient recollection, and every modern tie.

These few excerpts from two great representative Americans clearly illustrate the true sentiment of our people toward the Greeks in their desperate struggle against tyranny. At the time many philhellenic groups were formed in this

country for the purpose of aiding the brave Greeks; many extended material aid to the Greeks. And in the end when Greek independence was an accomplished fact, we all were overjoyed.

Nor have we wavered since then. During and after the last two world wars we have done our very best to save Greece from the ravages of war, from the clutches of totalitarianism, and have worked hard in helping to maintain their hard-won and well-deserved independence. Thereby we have gained a worthy ally in our present struggle against Communist tyranny.

Greeks have not only been a freedom-loving people, but they have also been adventurers, and as a seafaring people they have been, and still are, great merchants and tradesmen. In search of freedom as well as for free opportunities, they have been globetrotters. As such they have flocked to this side of the Atlantic, and today there are more than 600,000 sturdy, hardworking, patriotic, loyal and law abiding Greek-Americans in this great Republic. It is true that the beginning of Greek immigration dates back to some 400 years, but actually, the arrival of the bulk of Greek immigrants are of relatively recent date. Mass immigration had its start during the last decade of the last century, and attained its peak during the 1920's. Since then the number of Greek immigrants have declined, mostly because of legal restrictions, but they are still coming, sometimes under special legislative acts, at about 1,000 or more annually.

In this country Greeks have settled in many metropolitan areas and commercial centers, and they have been a boon to the commercial life in many communities. It is true that in their early days Greek immigrants were employed as farm laborers, construction workers, and in factories. But later many came to our cities and began new careers. There some began business on pushcarts, as fruit and ice cream vendors. Later they owned ice cream parlors, confectionary stores and restaurants. Thus gradually they moved from curb to stand, from stand to store, from little store to big store, and then to chains of stores. From very modest beginnings they have progressively moved up and have prospered greatly. In a few special lines of business they have been exceptionally successful—especially so in the ownership and management of movie theaters and in the motion picture industry. The Skouras Brothers are, of course, outstanding examples. And the Stephen Brothers, of Philadelphia, claiming to have one of the largest tobacco industry establishments in the country, is the best known case in our own State.

There is another line of activity in which Greeks are famous, and which owes its beginning to a famous Philadelphian, investor John Cheyney. Early in the 1900's he became interested in deep-sea diving and gathered about him a group of Greeks as divers and expert sponge fishers. They then moved to Tarpon Springs, Fla., and there within a few years the town became famous as the sponge market. Today the Sponge Exchange there is owned and operated, al-

most exclusively, by enterprising and hard-working Greek-Americans. Lowell, Mass., is another community in which Greek-Americans form not only one of the largest elements, but also the most active and enterprising civic leaders.

In the 20th Congressional District of Pennsylvania which I have the honor to represent, we have many fine families of Greek descent, the members of which have distinguished themselves by their high type of citizenship and their adherence to moral and spiritual values. The cities of Altoona and Du Bois, as well as the boroughs of Clearfield, Philipsburg, State College, Bellefonte, and Tyrone have many prominent Greek-American families whose contributions to the cultural, spiritual, business, and civic life of these communities are well recognized and greatly admired and appreciated.

Although the vast majority of the Greek immigrants came to the United States with little else but their desire to work and improve their economic and social status, they have proved to be a valuable asset in their respective communities. Hard working and thrifty, they set as their primary goal to give a higher education to their sons and daughters. They are thirsty for education and learning. And they have shown their talents in many fields. They have brought their contributions to the American arts and sciences in a number of ways. In the realm of music the name of Dimitri Mitropoulos stands high among those of immortal fame as conductors. Nicholas Moscona, a great singer, was a distinguished member of the New York Metropolitan Opera for many years. No less famous is Miss Maria Callas, another talented and gifted singer. Greek-Americans have also distinguished themselves as painters, perhaps the best known among them being George Constant, whose works are represented in the Art Institute of Chicago. There have been prominent Greek-American actors in the motion pictures and theaters. Thus through their industry and ingenuity, through their great gifts and talents, Greek-Americans have contributed greatly to our civilization. But over and above their material and cultural contribution, Greek-Americans are among our most loyal, law-abiding, and patriotic citizens. They have proved devoted servants of our democratic institutions and courageous fighters for the defense of the American way of life. And we remember these fine deeds on this 139th anniversary of Greek Independence Day.

The Budget Can Be Cut

EXTENSION OF REMARKS OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD an editorial from the March 22, 1960, issue of the Aiken Standard and Review, entitled "The Budget Can Be Cut." This newspaper in my hometown has staunchly supported economy in Government spending and has also produced many strong editorials against the trend in this country toward socialism and a welfare state. I commend this particular editorial, which was written by the very able editor, Albert Howell, to the attention of the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BUDGET CAN BE CUT

The average citizen wants a reduction in Government spending and lower taxes. But he's at a loss when it comes to recommending specific reforms. The budgets are enormously complex, and run to reams of finely printed pages.

There are, however, organizations whose business it is to analyze budgets and find where cuts are both possible and desirable. The Council of State Chambers of Commerce has done that with the Administration's 1961 budget. It proposes specific reductions totaling \$3.3 billion—all of a nondefense nature. Its report observes that the "proposals represent only a relatively modest but effective start toward control of Federal spending at a manageable level—that is, a spending level which will make practicable the tax reforms that are necessary to assure sound economic growth and at the same time permit reduction of the public debt."

The proposals cover a wide area—reduced spending on public works; reduced grants-in-aid of various kinds; curtailed loan programs; a cut in Federal civilian personnel forces, and so on down the list. Not everyone will agree with them all, and other studies stress additional areas of possible cutbacks. But the point is that we can have more economical government without undermining our defense in any way. And the main way to achieve it is by eliminating activities which can and should be undertaken by local government, by private enterprise, or by individuals.

Forty-second Anniversary of Byelorussian Independence

EXTENSION OF REMARKS OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. GREEN of Pennsylvania. Mr. Speaker, tomorrow one of the most dedicated, one of the oldest, and one of the most inspiring anti-Bolshevik, anti-Communist national groups in the world will celebrate the 42d anniversary of the Byelorussian Democratic Republic's Declaration of Independence. I am most happy to join with all white Ruthenians in commemoration of this monumental event in their struggle for freedom and independence.

For hundreds of years despite the facts that the Byelorussians have maintained their own traditions and cultures in a geographically distinct position on the great marshlands of the Dnieper, the

Dvina, and the Niemen they have been constantly harassed by powerful neighbors and overrun, occupied, and dominated by various Muscovite governments. Always, however, the spirit of the people has risen above the controls and brutal campaigns designed to stamp out their national existence and eradicate the Byelorussians as a free and independent state.

At the time of the destruction of the old czarist empire after World War I the Byelorussians seized the opportunity presented to create a new Byelorussian government and, on March 25, 1918, the National Council, Rada, announced the birth of the independent Byelorussian Democratic Republic. That is the event we celebrate today.

Almost immediately the new government was attacked by its powerful neighbors, the old familiar partitions of territory and abrogation of national rights came into being and, once more, the Byelorussians were a dominated and suppressed people.

But the old struggle still goes on. The Byelorussians are still firm in their belief in those principles of justice and morality which proclaim that governments can only derive their just powers from the consent of the governed. They know that freedom and national independence will one day be won against all the powers of terror and persecution.

Let us honor them on this anniversary of that glowing document which so glowingly expresses their magnificent hopes for national entity.

Outstanding Young Farmer in Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. WILEY. Mr. President, in a time in which the Nation is confronted by serious, complex problems in agriculture, I am always highly encouraged to find young folks who are willing to become farmers and are making a success of the job.

Today, I refer especially to Mr. Edward McFarland, dairyman of Dodge County, Wis.

Recently, our Badger State Junior Chamber of Commerce selected Mr. McFarland as the "outstanding young farmer for Wisconsin."

Currently, he is a successful partner, along with two brothers, operating a 315-acre, 85-cow herd dairy farm. He has the responsibility of managing the livestock and fieldwork.

In addition to dairying and an outstanding job of farming, he is active in community affairs; a 4-H leader; an officer of the Holstein and Guernsey Breeders Association; serves on local school committees; and is a member of the University of Wisconsin Farm Short Course Association.

As an outstanding farmer, Mr. McFarland will represent Wisconsin in the national contest in this field.

I wish him every success.

Recently, the Wisconsin Agriculturist published an informative article on the high qualifications of this young man as an outstanding farmer.

Reflecting the kind of creative, hard-working, enterprising effort needed today in agriculture, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE'S OUTSTANDING YOUNG FARMER— WISCONSIN JAYCEES PICK

Think it would be a big job to pick out the outstanding young farmer in your local community? It's even a bigger job on a statewide basis.

But the junior chamber of commerce in Wisconsin has come up with their State winner. The man with the title "Outstanding Young Farmer for Wisconsin" is Edward McFarland, dairyman from Dodge County.

Young McFarland is in partnership with two brothers. They operate 315 acres, of which 295 acres are cropland. The partnership includes a farm dairy and delivery route which are the brothers' part of the partnership. Ed McFarland has the responsibility of managing the livestock and fieldwork.

The 85-cow herd of high-producing Guernseys and Holsteins is the product of efforts since he first got his hands in the farm business after completing grade school.

Today's milking herd of registered cattle was only a small herd of grade Guernseys 15 years ago. At that time Ed McFarland had started foundation stock with registered heifers in 4-H projects.

BUILT HERD TO 85

He built the herd from 20 cows to its present size without having to purchase any adult cows. He did this by raising his own carefully selected heifer calves and buying young calves from successful breeders.

Today the herd averages 11,000 pounds of milk per cow annually. Part of the barn holds a Holstein herd and the other part the Guernseys. McFarland has the Holsteins bred artificially but keeps a herd sire for the Guernseys.

The constantly expanding herd has kept the McFarlands busy remodeling their barns. The barn has been lengthened twice, and last year a pole-type shed was added for young stock. Silage is fed from four silos.

Ed McFarland's feeding program is based on high quality, homegrown roughage. Early hay averaged 18 percent protein this year. He feeds only hay and ground corn until January. Cows get no other protein supplement until late winter when urea is mixed with the ground feed.

Alfalfa, brome, and ladino clover are the hay and pasture mixtures. McFarland practices rotational grazing, moving the herd to new pasture every 4 or 5 days.

Most new farming practices get their first try in Dodge County on the McFarland Farm. His was the first place to try seeding alfalfa between wide corn rows.

FIRST TO USE CHOPPER

All oats are harvested for silage which creates a bedding problem. McFarland was one of the first farmers to own a stalk chopper and to bale stalks in the field for bedding.

A hay conditioner has been regular equipment for several seasons. Much of the hay is stored in a hay keeper. Hay yields average 4 tons per acre.

Ed McFarland's share of the farm partnership gives him a net worth in land, equipment, and livestock of over \$50,000.

But his activities are not confined to the farm. He's active in many community affairs. He's a 4-H leader and an officer in the Holstein and Guernsey breed associations. He's served on local school committees and is a member of the University of Wisconsin Farm Short Course Association.

Besides the honor of the selection as "outstanding young farmer," McFarland will get a free trip to California. A Wisconsin farm machinery manufacturer gave a new manure spreader to the State winner.

McFarland will be Wisconsin's representative in the national contest for the Nation's outstanding young farmer.

America, the Special Interest

EXTENSION OF REMARKS

OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. MOORE. Mr. Speaker, last Sunday, evening I had the privilege of attending the annual banquet of the order of Ahepa at the Statler Hotel here in Washington and was much impressed by the speech made to the gathering by Mr. George E. Loucas, of Weston, W. Va., of my congressional district, who is supreme president of this fine organization.

Under unanimous consent I include this gentleman's remarks in the RECORD for I believe my colleagues will find them most inspirational:

AMERICA, THE SPECIAL INTEREST

I wandered into history as I sat looking around and listening to the plaudits of Greece by the distinguished speakers who preceded me to the rostrum. I came from across the seas—westward from the shores of the cradle of democracy. Her mainland and isles free 139 years. I thought, it is only fitting and proper, then, that the sons and daughters, a new generation, originating from the mother democracy should tonight be hosts in honoring the sons and daughters of the daughter democracy—America—and particularly those representatives of the most envied legislative body, the Congress of the United States.

Your host the Order of Ahepa represents the first movement of its kind in the history of the United States where a group of first generation Americans organized voluntarily for the sole purpose of inculcating upon themselves the ideals of this Republic. And they have proved by their achievements that it is more important that America be born in the man than that the man be born in America.

Throughout the 38 years of its existence, the Order of Ahepa has functioned as a non-partisan, philanthropic and patriotic organization. Because of this fact, it has been able to exert a constructive influence in the councils of American affairs. With unity of purpose and objectivity of approach, we have contributed, and shall continue to contribute, to the solution of the problems that confront our Nation.

One of these problems is the challenge to freedom by the Soviet Union. Another is how to fight freedom's battle in the context of comfort and prosperity. We must not allow the thin veneer of peace and security to obscure the issue or to lessen our zeal. We are fighting the same battle that was fought at Gettysburg, at Valley Forge, at Marathon, and at Salamis. Freedom's battle knows no boundary, no race, no time, no

price. It knows only the devotion of dedicated men. We in Ahepa are resolved to defend the legacy of freedom and culture which our ancestors bequeathed to the world. And we are equally resolved to win converts to this cause.

We shall thus participate the more effectively in the great process of shaping our national purposes to meet the ever-growing threat to the American way of life. The American way of life is also the Hellenic way of life.

In order that we may coordinate further these contributions we have fully subscribed to President Eisenhower's People-to-People Program and as ambassadors of goodwill and as American citizens we depart March 22, 1960, for Greece. We, as "diplomats from Main Street" are taking 25,000 American books as a gift of Ahepa to Greece for distribution to various libraries. It's better to give books than guns.

I am mindful tonight that I am speaking to the elected representatives of the American people. This is a privilege and an opportunity, and I shall take advantage of both. You are Republicans and Democrats. You the conservatives and liberals. But more important than either, is that you be courageous. It may sound a bit presumptuous for a humble naturalized American of Greek descent to lecture to the Congress of the United States, but that is precisely what I propose to do. Our country, with the challenge it faces, can no longer afford the luxury of special interests. It is time that industry, labor, and farmer subordinate their special claims to the primary welfare of the United States. We must close ranks and speak with one voice if we hope successfully to meet the challenges to democratic survival.

We are confronting a crisis that demands leadership and patriotism. The Congress of the United States can provide the example by subjecting every measure to the acid test: does it serve all of America, or just a part of it. Let us stop thinking of ourselves as supporters of business, of labor, the farmer, the veteran. Let us become supporters only to the great principles on which this Nation was founded. For what is good for America is good for every American, irrespective of the groove or category in which he seeks to classify himself.

Under our Constitution there is no classification of rights, such as the rights of labor, or the rights of business, minority rights or majority rights, or rights for this or that segment of the population. We all have the same rights as Americans and we shall all enjoy them together only so long as we guarantee them to each other without prejudice or discrimination.

When Jefferson wrote in the Declaration of Independence that there are certain "inalienable human rights" he did not restrict those rights to white or Christian human beings, nor to the rich or poor, but wrote of them as belonging to every human being, each and every man being "endowed with them by his Creator." Similarly, when the American Constitution was written, it opened with the phrase "We the people of the United States," not "We the working people" nor "We the well-to-do people" but "We the people," all the people.

These inclusive phrases were not the careless words of men striving for rhetorical effects but the expressions of the deepest convictions of men who had grappled with the whole concept of liberty until it became the profoundest motive and passion of their lives. Those who hold these convictions and practice them without patronizing or catering to any group of citizens will be marked in history as the statesmen of our time. They are the leaders America will need in the struggle to determine whether we or the Soviet Union shall guide the destinies of mankind.

Ladies and gentlemen of the Congress, this is my message. This is the message of the

Order of Ahepa to the people and to the Congress of the United States. This is our contribution to the fight for political courage and political integrity waged in the interest of a stronger and a greater America—an America that will continue to give its people liberty, dignity, and comfort, and to the less fortunate peoples of the world a solid hope that they too under our leadership and guidance will come to realize these precious blessings of Almighty God.

The Pressures for the Forand Bill

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able article by Arthur Krock, from the New York Times of March 24, entitled "The Pressures for the Forand Bill."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PRESSURES FOR THE FORAND BILL

(By Arthur Krock)

WASHINGTON, March 23.—There is a split among the Democrats, and in the Republican administration and Party, over whether Congress shall legislate an exclusive medical care subsidy for citizens over 65, to be paid for by a special tax levy on citizens in lower age brackets. Because the advocates of such proposals would further expand the scope of Federal spending in the direction of a welfare state, this should help to concentrate public attention on the great basic issue of this period: Where should the limit be set to the advancing centralization of Government in the United States?

That poses a fundamental dispute over political philosophy, of a nature and magnitude which in an ordinary legislative year would stimulate a clear-cut separation between the true believers in such expansions of the Federal function and the sincere disbelievers. But this is not an ordinary legislative year. In 1960 the next President and another Congress will be chosen. And politicians are convinced that a large majority of the votes of the rapidly increasing group of citizens over 65 will be cast for candidates who have helped them to solve the personal financial problem especially imposed by their growing need of medical care and its inflated costs.

ELECTION YEAR POLITICS

This professional political estimate has engendered sudden new pressures. Some are from Republicans on the President. He is opposed to a compulsory Federal subsidy, financed by an increase in the Social Security tax imposed on those still paying it for the benefit of those who have reached the age where they become noncontributing beneficiaries of social security. These Republicans fear that, if their party record on November election day consists only of the "exploration" the President has ordered into the potential of private financing of this medical care, the resentment of the group concerned could assure the defeat of their national ticket and many, many Republican candidates for Congress.

Consequently a number of Republicans who also reject the principle of this Federal subsidy may be expected to vote for it in some form. A widely accepted statistic is

that the American population over 65 years of age was 15.3 million at the beginning of 1959 and is increasing at the rate of 1 million every 3 years.

DEMOCRATIC VARIANTS

The Democrats are having less trouble in their ranks over legislating the principle. All of their Presidential aspirants have endorsed it, and Senator KENNEDY of Massachusetts (with Senator HART of Michigan as a cosponsor) has a bill to effect it. The only differences between this and the extreme measure sponsored by Representative FORAND of Rhode Island are of detail—such as the omission in the Kennedy bill of surgical fees FORAND would pay for. But KENNEDY claims his plan would cost less than FORAND's because of special inducements for home care, to relieve the additional burden on hospitals.

The Democratic chairman of the Senate Finance Committee, HARRY F. BYRD of Virginia, is presumed to look dimly on the entire concept, and to this committee any bill passed by the House would be referred. But the 1960 election pressures which will be applied to members of this committee, could prevail over its usually potent chairman. Among these pressures is organized labor's hearty support of the Forand bill.

AND THE OPPOSITION

The opposition argues in part: (1) A flat tax on workers, regardless of their ability to pay, to provide health benefits to all members of an age group, regardless of their economic need for it, is discriminatory. (2) It will produce like demands from other age groups, with socialized medicine the inevitable consequence. (3) It will undermine the project, at peril to the fiscal soundness of the social security system. (4) It will defeat current progress toward private financing, for which only time is needed to produce ways and means. (5) Hypochondriacs, and so forth, will crowd out of hospitals many needful of this care.

Examine those two sets of arguments, take also into account the failure of both parties to clarify for the people the limits each would set to the exercise of the Federal function, and it is easy to understand why most Democrats are driving for old-age health legislation in 1960 and why some Republicans fear to be left behind.

Forty-second Anniversary of Byelorussian Independence

EXTENSION OF REMARKS

OF

HON. JOHN H. RAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. RAY. Mr. Speaker, I am glad to join with other Members in recognition of the Byelorussian Independence Day.

The Byelorussian people are among the largest of the many ethnic groups included in the Soviet Union. Unfortunately they had been subjected to Czarist Russia's oppressive regime since early modern times and had thus lost their independence, but not their love for independence and freedom. For centuries they struggled against their oppressors, always against heavy odds, and they had no chance to free themselves until 1918.

Soon after the overthrow of the czarist regime by the Russian Revolution, these 10 million Byelorussians felt free, took

their fate into their own hands, and proclaimed their independence in March of 1918. Thenceforth for a little more than 2 years they waged a continuous war against their foes on many fronts, particularly against Communist Russians. In 1921, before Byelorussians could consolidate their strength, the country was attacked by Soviet forces, it was overrun, and then made part of the Soviet Union. Since then, for almost 40 years, some 10 million Byelorussians dream of the days when, for a brief period, their homeland was free and they enjoyed independence. Today they observe the 42d anniversary of their proclamation of independence, and hope that soon they will celebrate it in a free and independent Byelorussia.

Harry Schwartz Writes on Succession to Power in Russia

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. KEATING. Mr. President, the 1960 American presidential campaign is now well underway. Although the election itself is still some 6 months off, the press is already filled with news of the various actual and potential candidates and of the most recent developments in the several presidential primaries being held throughout the country. All of these feverish activities are essential parts of the American political process involved in the formation of an overall national consensus on the major issues of the day.

Mr. President, as is well known, the matter of succession to leadership in the Soviet Union is far different from that encompassed in an American election campaign. The various rivals compete in an atmosphere of secrecy and intrigue far removed from the man on the street.

One of America's most able experts on Soviet affairs, Mr. Harry Schwartz, has written a very interesting and informative article on the men most likely to be in the running to succeed Premier Khrushchev. Mr. Schwartz notes that the Premier's recent bout with influenza raises all of the many questions as to who is the most logical successor to the man who now fully controls all of the Soviet orbit.

Mr. President, I found this article to be extremely enlightening. I commend Mr. Schwartz for his careful treatment of a most difficult subject, and I ask unanimous consent that his article which appeared in the New York Times of March 20, 1960, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AFTER KHRUSHCHEV: SIX WHO MAY BE IN LINE TO SUCCEED—PREMIER NOW RULES STATE AND PARTY

(By Harry Schwartz)

Among other results, last weekend's announcement of Premier Khrushchev's influ-

enza reminded the world that he was subject to the same ailments and faced the same inevitable end as all other mortals. An immediate consequence of this reminder was strong interest in all major world capitals in the question: What and who comes after Khrushchev?

There has been comparatively little speculation on this matter before now for at least two reasons. One is that Premier Khrushchev's present eminence is of rather recent origin—it is still less than 2 years since he became Premier of the Soviet Union as well as First Secretary of the Communist Party. The second reason has been the seemingly boundless energy and excellent health the Premier has displayed in public at home and abroad, vitality not customarily associated with one who will be 66 next month. It was that image that the influenza announcement called into question.

Any discussion of the Khrushchev succession problem must begin with a definition of Mr. Khrushchev's role in Soviet society.

To appreciate fully that role it must be realized that the country as a whole and the Soviet Communist Party are both ruled by giant bureaucratic machines. Within the framework of the general line that has been set down, millions of people have intermediate managerial posts. They run factories, direct local fire departments, organize propaganda work in particular cities, conduct negotiations with foreign nations, and the like. The directives that guide these people are the composite work of many experts who draw up each year's economic plan, the annual national budget, and other key blueprints.

FOUR FUNCTIONS

Standing at the peak of both the Government and the party bureaucratic pyramids, Premier Khrushchev fulfills four main functions:

First, and most visibly, he is the chief salesman of the Soviet system both to his own people and the world. The importance of this role is evident from the great amount of his time the Premier spends traveling about the Soviet Union and abroad making speeches which automatically become a species of Soviet holy writ. He has fully grasped the potentialities of modern communications for projecting his personality into hundreds of millions of minds and souls ceaselessly at this propaganda task which he obviously regards as one of his key assignments.

Second, he is the chief arbiter and highest court of appeals when disputes arise in either bureaucracy he heads. This was brought out last September when the Soviet Minister of Higher Education, Vyacheslav P. Yelyutin, was asked what happened when he got into a dispute with the Minister of Finance over educational appropriations. "If the Minister of Finance and I can't agree," Mr. Yelyutin said, "We go before Khrushchev and he decides the fight. But it is dangerous to fight. Therefore we try to settle our problems amicably and usually do."

POLICY CHANGES

Third, it is he who must originate or be persuaded to accept any proposed major policy change and it is he who then appears publicly as the first advocate of any such change. Whether it be the new Soviet estimate of President Eisenhower as a man of peace which Mr. Khrushchev announced last September or the new Soviet educational system which combines classroom training with factory work, every major innovation must be his and be shown publicly to be his.

Finally, of course, Mr. Khrushchev is his own Minister of Foreign Affairs, the chief voice in Soviet foreign policy and the chief negotiator of the Soviet Government in the personal style of diplomacy which his travels

and meetings with world leaders this past half decade have made his trademark.

Against this background, it is instructive to compare Premier Khrushchev with his predecessor, Joseph Stalin.

Like Stalin, Mr. Khrushchev is now the public head of both the Soviet State and of the ruling Communist Party. Like Stalin, Mr. Khrushchev is the object of public adulation which attributes all major Soviet successes to his leadership and inspiration. Like Stalin, Mr. Khrushchev is the author of the speeches and statements to which Soviet writers look for appropriate quotations that are regarded as being authoritative dogma on all current questions.

Yet there are also some important differences between the Khrushchev and the Stalinist periods, which suggest that some caution is advisable before reaching the conclusion that the present ruler of the Soviet Union has simply mechanically repeated the pattern that existed when Stalin died.

The most important difference is that there is not in the Soviet Union now the terrible, stark atmosphere of terror imposed by the secret police that existed in Stalin's last years. Premier Khrushchev goes to great pains to mingle with the people in a manner reminiscent of an American politician seeking votes, something Stalin never did.

SPOTLIGHT ON HOPEFULS

Perhaps the matter is best summed up by the conclusion that Premier Khrushchev is the rational head of a bureaucratic dictatorship, while Stalin was the paranoid chief of a secret police system of total terror.

It is typical of the differences between the two men's style of rule that the key figures surrounding Premier Khrushchev—the obvious central characters in any discussion of the succession to him—have been far less in the shade in Soviet society than were Khrushchev & Co. while Stalin lived.

A few months ago eight names would have had to be included in any discussion of the Khrushchev succession problem. Since last December's Central Committee meeting, however, two of the eight, Nikolai I. Belyaev, former party boss in the vast Kazakhstan area, and Aleksei I. Kirichenko, former party personnel chief, have been demoted to the posts of provincial party bosses. They have presumably, therefore, had their future political prospects seriously dimmed, if not extinguished. Let us look at the half dozen who remain, the roles they occupy now, and their possibilities for maneuver.

ECONOMICS EXPERT

Oldest of the six is First Deputy Premier Anastas I. Mikoyan, 64, the top Soviet foreign economics expert. He has the prestige of having been a hero of the early days of the Soviet regime and of having been astute enough to survive a quarter of a century's vicissitudes in Kremlin factional battles. But his age and the fact that he is an Armenian suggest that his future is more likely to be that of an elder statesman than of a successor.

The youngest of the group is First Deputy Premier Frol R. Kozlov, 51. Premier Khrushchev told Averell Harriman last year that Mr. Kozlov was his choice to succeed him as Premier, but that job alone is not the center of Soviet power. He is still a relative newcomer to the Kremlin heights and so far as can be judged has not yet managed to build a personal power machine.

Next to the Premier, the most senior party secretary is Mikhail A. Suslov, 57, who has the reputation of being the leader of such Stalinist forces as have survived within the Soviet hierarchy. Primarily a theoretician and a propagandist, he seems to be the darling of Peiping's Communists and has managed to survive while still manifesting some clear signs of an independent attitude vis-à-vis Mr. Khrushchev.

Another party secretary, Averki B. Aristov, 56, may now again be head of the party's personnel division, a post of great potential power. Raised to the top by successful party leadership in Siberia, he is probably the leader of such "Siberian faction" as exists in the party machine.

Leonid I. Brezhnev, 53, a party secretary, has gone far by successfully carrying out Mr. Khrushchev's orders in the Ukraine and Moldavia in the 1940's and in Kazakhstan in the mid-1950's. He appears to be in charge of Soviet metallurgy, perhaps of all Soviet heavy industry, and his strength presumably lies in the industrial machine he commands.

AGRICULTURE DEPUTY

Finally there is Nikolai G. Ignatov, 58, who appears to be Mr. Khrushchev's deputy for agriculture. His closest party connections appear to be in European Russia, where he has held key posts, but whatever personal apparatus he may now have built up would seem to exist mainly among the bureaucrats who direct the nearly one-half of the Soviet population engaged in farming.

We know too little about the relationships among these six men, and among others who are less important, to predict in detail what would happen if Premier Khrushchev were to be replaced in the near future. But on the basis of what happened in the mid-1950's, in the period following Stalin's death, the likely future pattern would seem clear.

The immediate stress would be on collective leadership and on an outward show of solidarity among the heirs who were left. One of them, probably Mr. Kozlov but possibly Mr. Mikoyan, would be appointed Premier, while the key figures would have posts in the party's Presidium and Secretariat. Then the hidden rivalry and competition for power would presumably begin in earnest, culminating in a series of crises, in each of which some of those now great and powerful would be disgraced, until finally one person emerged again to exercise his version of one-man rule.

It is conceivable, for example, that Mr. Suslov would make a bid for power by appealing to the party bureaucracy to reverse some of the present leader's key policy revisions: the new emphasis on housing and consumer goods, the milder attitude toward the United States, and the like.

OPPOSING FACTION

If so, he would presumably be opposed by another faction, probably led by Mr. Mikoyan and some younger ambitious men, who might argue that Premier Khrushchev had not gone far enough. Such a revisionist group might try to appeal over the heads of the party bosses to the Soviet population, counting on the people's desire for a sharply improved living standard and for real peace to bring victory over the neo-Stalinists.

Should any such struggle arise, of course, the Chinese Communists might be tempted to intervene on one side or the other. And if they did, complications would arise for which there is no precedent in Soviet history and whose results no one can now predict.

Health and Old Age

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. McCORMACK. Mr. Speaker, the opposition of President Eisenhower and the administration to propose some

system of health insurance for the aged is most unfortunate and shocking to a great majority of our people.

In my remarks, I include an editorial "Health and Old Age" appearing in the Washington Post of March 24, 1960:

HEALTH AND OLD AGE

There is a distressing lack of sensibility and imagination in the administration's failure to propose some system of health insurance for the aged. The Secretary of Health, Education, and Welfare, supported by Vice President Nixon, is said to have tried zealously to win presidential approval for an alternative to the comprehensive bill introduced by Representative AMER J. FORAND which would finance medical and hospital care for retired persons through increased social security taxes. But the President is reported to be adamantly opposed to the Forand bill, or any other insurance plan, on the ground that it would amount to socialized medicine. This bogus label applied by the propagandists of the American Medical Association to any form of prepayment for medical care is plain nonsense. It is especially disarming to find President Eisenhower narcotized by it.

Old age is the time of life when, generally, income is lowest and potential and actual illness is at its highest. Why should it be called socialistic for Americans to provide for the health hazards of their retirement years by paying insurance premiums through taxation during their wage-earning years? This is not socialism; it is simple commonsense. It is a practical scheme for enabling citizens to face old age with confidence and self-respect—to know that they need not depend upon the charity of doctors and hospitals for whatever medical care they may require. This is no more socialistic than any other form of social security.

Apart from the obvious interest of the aged themselves in providing for the future, there is a no less obvious national interest in seeing them provided for. Senator McNAMARA's Subcommittee on Problems of the Aged and Aging offers some interesting statistics. In 15 years, it reports, the over-65 age group will increase from the current 16 million to 22 million; currently, moreover, 1 out of every 3 persons between the ages of 60 and 64 has a parent or close relative in his 80's or older—the medical care of whom represents a serious drain on income.

Insured medical care for the aged will mean more hospitals, more remuneration for physicians, better health for the Nation as a whole. Failure to see this is a failure of responsibility. What a tragedy that the AMA's myopia and callousness should have infected even the President.

Small-Farm Cost Plight Illustrated

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. CURTIS. Mr. President, it is always important that the Congress know what is going on on the homefront. Individuals connected with the Government have sincerely tried to better the lot of agriculture. We should keep in mind that a problem cannot be solved by pretending that it does not exist.

Net farm income is down to a point

where it is unfair to the Nation's farmers. I think there is a responsibility on all in dealing with this situation and is a responsibility on the administration and on the Congress, on the Republicans and the Democrats, and on the competing farm organizations. Politics and pet theories should be set aside and these groups should get together in a spirit of give and take in an effort to write helpful farm legislation.

In recent days, Mr. Don Muhm, farm editor of the Omaha (Nebr.) World Herald, in his widely read column set forth some facts and figures which merit our attention.

I ask unanimous consent that the column may be printed in the Appendix of the RECORD.

Their being no objection, the column was ordered to be printed in the RECORD, as follows:

SMALL-FARM COST PLIGHT ILLUSTRATED

A veteran Farmers Home Administration supervisor provides figures which pretty much show the plight of the cost-price squeeze on the small farmer.

Irwin J. Doane, supervisor for the FHA in Butler, Seward, and Polk Counties, summarized 1959 averages from customer's well kept records.

He found:

The average farm was 257 acres in size, had a 1959 income of \$6,882, cost \$4,486 in operating expenses and left \$2,396 net for the farmer.

The farmer averaged 51.9 bushels per acre of corn (figure includes irrigated corn), 6.8 baby pigs per litter and had a yield per cow of 172.9 pounds of butterfat.

EIGHTY FARMS

"The summary was based on 80 farms in the three-county area." Mr. Doane, who has offices in David City, told the World-Herald.

"It sure points out the necessity of good production. And it is pretty evident what is happening to the small farmer."

Mr. Doane, who has been with the FHA 17 years, feels the margin between farm income and farm operating costs is "about as rough as I've ever seen it."

"Out of that \$2,396 net income must come family living expense, debt payment and capital purchases," Mr. Doane added. "That shows you why so many go to town to work as much as they can."

ALLTIME HIGH

Farmers, ranchers, and their cooperatives borrowed \$4 billion in 1959, according to the Farm Credit Administration.

That is an alltime high.

And, according to R. B. Tootell, governor of the farm credit system, the 1959 figure is an increase of \$599 million.

Also, it marked the sixth straight year that a record was set.

Water—Key to Your Survival

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. BONNER. Mr. Speaker, under leave to revise and extend my remarks I include an address made by Maj. J. L. Murphy, U.S. Marine Corps, retired, be-

fore the Manteo Ruritan Club, Manteo, N.C., on March 21, 1960.

WATER—KEY TO YOUR SURVIVAL—WILDLIFE
WEEK, MARCH 20-26, 1960

(Talk delivered by Maj. J. L. Murphy, U.S. Marine Corps Reserve (retired), before Manteo Rotary Club, Manteo, N.C.)

Chairman Taylor, distinguished guests, members of Manteo Rotary Club, the last time it was my privilege to visit with you, shortly after having been retired by the U.S. Marine Corps, I recall having said, among other things, that our advanced technology and ingeniousness, our vast industrial complex, the improvement of our personal and political moral standards over those of the 1920's, skilled leadership, the indomitable courage of our fighting men and our rich inheritance of natural resources accounted in large part for our winning World War II.

Tonight, I shall confine myself to remarks regarding our rapidly vanishing renewable natural resources with emphasis on "Water—Key to Your Survival," the theme of Wildlife Week 1960, sponsored by the National Wildlife Federation.

A brief statement of just what the National Wildlife Federation is, might be in order. The federation has a membership of well over 2 million individuals affiliated through conservation organizations in each of the 50 States of this country. These persons are dedicated to the necessary and beneficial use of our remaining natural resources and the protection and replacement of our sources of supply. No dues are collected by the federation, the sole source of support for its widespread activities comes from the sale of these wildlife stamps and a few related items.

The policies of the National Wildlife Federation are established by a board of directors of 17 members. The 4 general officers and 13 regional directors. I am a member of this board representing the region composed of the States of North Carolina, Virginia, South Carolina, and West Virginia. Under a paid executive director, the staff of the several divisions, education, conservation, business, and field implement these policies.

Because the federation is inherently an educational organization, its opinion and support is frequently sought by Members of the Congress, by governors and State legislators, and by the several Federal, State and local agencies concerned with our tragic neglect and waste in resource administration. Currently, attention is concentrated on the scarcity of potable water due to pollution, deforestation, expanding population, waste and related adverse influences.

We in North Carolina are fortunate in that our Senators, SAM ERVIN and EVERETT JORDAN and so many of our Representatives in the Congress are members of important committees before which bills affecting natural resources are studied. Our own First District Congressman, HERBERT C. BONNER is chairman of the House Committee on Merchant Marine and Fisheries. It is to this committee that much of the legislation concerned with our natural resources is referred. Mr. BONNER, over the years, has demonstrated his deep concern and studied conviction that our remaining renewable natural resources must be saved from the despoiling hands of greedy men and from the waste that can be attributed to man only on the basis of ignorance or stupidity. Yes, we are fortunate to have Mr. BONNER in this important post where he has earned the confidence and respect of conservationists throughout the United States. You folks at home should know this.

The North Carolina Resources Commission, in frequent conference with our State federation, has one of the outstanding conservation programs and one of the most experienced, alert, and active staffs of any in

the Nation. It was my privilege to have a small part in the creation of this commission and in the passage of legislation establishing the Stream Sanitation Commission and our newly organized Water Resources Commission. Currently I am concerned with a program of broad resource conservation education at the national level.

With well over half of the area of Dare County made up of water, it would appear that there is little for you to worry about. However, we must remember that local economy is firmly based on our State and national economy and that any setback in these areas will seriously affect us here at home. The river systems that find their outlet in our broad sounds must be kept free from pollution if we are to be free from contaminated supplies. The scarcity of usable waters is national in scope. Just about the same amount of water from the heavens continues to fall on this country as before. Scarcity arises because we do not protect and wisely care for what we have and because of increased demands due to higher standards of living and rising population. In just about the time it took me to say that last sentence, a child was born in this country, a net gain of one over deaths every 11 seconds. One more mouth to feed, a body to clothe, one more to house and to educate, one more to consume water. We must also be prepared to meet increased requirements for agriculture and for industrial expansion. It is estimated that by 1975, in just 15 years, our consumption of water will more than double present rates. To meet these needs requires the close cooperation of Federal, State, and local agencies as well as individuals and private organizations with each performing their proper function. You and I have an obligation in this respect.

A headline in the paper this morning reads "Franklin Seeks Water Solution." Franklin, Va., is but a scant hundred miles from here as the crow flies. It is not a large community yet, to support its economy, requires 26 million gallons of water per day. The population needs 1 million and local industry uses 25 million gallons each day. The water table there has fallen from 26 feet to 114 feet and is still falling. We know of communities in this State where water is drastically curtailed during certain seasons and it just could happen here as we continue to grow and our water table lowers.

The necessity for clean waters that I have been speaking about have had to do with consumptive use. In this locality recreational use of water has a direct bearing on our economy. Fishing, hunting, and boating are important activities to us. It is therefore to our interest to concern ourselves with the pollution problems of upstate communities in order to insure the safety of the waters surrounding us for those who fish and hunt and bathe. To that end, we should encourage such programs as adequate sewerage treatment plants, increase in farm woodlots to provide a natural sponge for rainfall, assist farm agents in expanding improved agricultural practice to prevent continued erosion, don't cut down a single tree without replacing it. Encourage the planting of cover for wildlife as this will increase absorption and prevent runoff, give voice to your opposition to further drainage of pot-holes and submarginal lands that destroy waterfowl breeding areas. Assurance of an adequate, clean water supply requires constant vigil and cooperation. Earlier this month, I spent 10 days in Dallas, Tex., attending the annual meeting of the National Wildlife Federation and the North American Wildlife Conference. There I heard speakers from all sections of the country—South, North, East, and West—express deep concern for our growing water problems and the necessity for studied teamwork to solve them. In the final analysis, however, each of us

must give heed to the situation and thought to correcting it. Where there is waste there will be want is surely true of water and continued abuse of this essential resource will rise to plague us until the end of time.

Contamination from atomic fallout and the disposal of atomic waste in coastal waters is but the latest manmade threat to survival. In rivers, the water that you touch is the last of what has passed and the first of that which comes. Keep it clean, keep it pure, for water is the key to your survival.

Thank you.

Reform School Graduate to Intercollegiate Boxing Champion and Now Million-Dollar-a-Year Insurance Success a Real Inspiration

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. PROXMIRE. Mr. President, recently I have read a newspaper sketch about a young man who is a friend of mine who has achieved an inspiring personal success.

His life started off in a bleak direction, however, for as a chronic truant in his childhood, he was sent to the Wisconsin State Reformatory at the age of 10. Here he discovered a skill which he used to gain self-respect and follow to a fine education and a promising future. He was a good fighter. For this young man, Robert Hinds, boxing enabled him to win success as a Golden Gloves, collegiate champion, and as a professional boxer.

Bob Hinds' major at the University of Wisconsin might seem far afield from his boxing talents; he studied art and sculpture, and had one of his drawings exhibited in the New York Museum of Fine Arts.

After graduation, Bob became an art teacher at Madison East High School, and also coached the school hockey team to a championship. To me, the only unfortunate aspect of Bob's story is that he felt compelled to leave the teaching profession in order to provide for his wife and family as he wished. Bob is exactly the type of young man who is a proper and effective inspiration and mentor for our children. There is, of course, no profession in our society that is more important to our future and our children's future than the teaching profession, and every loss of a talented and qualified teacher is a great loss to our society.

Bob Hinds is now a great success in the insurance field. He has earned more in this profession in his first 6 months than he did in 4 years of teaching. Wisconsin citizens are sincerely proud of Bob's achievements.

Mr. President, I ask unanimous consent that a newspaper article published in the Wisconsin State Journal, of Madison, and reprinted in the Kenosha Evening News, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORMER BOXER, BOB HINDS, BIG SUCCESS
(By Samuel C. Reynolds)

MADISON.—Bob Hinds today is a sensational success.

Last August, Bob, a former heavyweight on the University of Wisconsin varsity boxing team, began selling life insurance, and by January 16 had written more than \$1 million worth.

In insurance circles this is not just success, but unbelievable success.

ONCE CHRONIC TRUANT

Yet at one time this cheerful, personable young man was a lost soul. He was a chronic truant and landed in Waukesha Boys' Reformatory at 10 and stayed for 15 months.

The reformatory provided Bob with one great skill, without which he believes he would not be a success today—how to fight with his fists, and the knowledge that he was good at it.

This gave him the peg to grab to wrench himself back to a position of self-respect. He was good at fighting. For a boy who didn't feel himself good for much of anything, fighting was, strangely, the key to a successful future.

After leaving Waukesha, Bob went to live with a photographer on the Kenosha Evening News named Marshall Simonson.

HELPS GROWING BOY

"Marshall did a lot for me," Bob recalled. "He pushed me toward getting a better education. He concerned himself with my dress and behavior. He chewed me out when I needed it, and every time he did I knew he was right."

"Everyone has something good about them which they can take hold of and exploit," Bob said.

"For me it was boxing."

And Bob was good at it. In 1947, at the age of 14, he won the State 147-pound Golden Gloves championship, and repeated in 1949 in the 160-pound class.

GAVE RECOGNITION

These successes gave him the recognition he needed, and never again did Bob jump the track headed toward success.

Another friend and helper was Alan "The Horse" Ameche, Kenosha's, Wisconsin's, and now the Baltimore Colts' great football player. Hinds lived with Ameche during his freshman year in college.

Bob played fullback on the same Kenosha High School team as Ameche.

"Al is a very steady, not a rowdy kind of guy, and was a good influence on me," Bob said.

DUBIOUS HONOR

Among the Kenosha boys coming to the University of Wisconsin in 1951, Hinds and Ameche had the poorest high school scholastic records.

Ameche was a scholastic All-American for 2 years in college and Bob finished with a "B" average.

His major, too, seems rather surprising for a man who established a record as one of the most bruising college pugilists in the 3 years—1953 through 1955—he was varsity heavyweight.

He majored in art, with special interest in sculpturing and graphic arts. A figure drawing he did was exhibited in the New York Museum of Fine Arts.

1956 GRADUATE

Bob married the former Joy Harrington in Mazomanie in August, 1955. They have a boy, Jef, 3½, and a girl, Jill, 2.

He graduated from college in 1956 and began as an art teacher at Madison East. He coached the school's hockey team in 1958 and 1959 and won the city championship. This

was not bad for a coach who had never skated in his life.

He continued boxing after becoming a teacher, much to the discomfiture of Madison school officials.

Bob fought his last professional battle in Kenosha in July 1958.

RESIGNS AS TEACHER

He resigned as a teacher last July and began selling General Life insurance, under the direction of Ralph Shillinglaw, agency manager.

"I know of no instance in the history of the life insurance business where one man sold a million dollars worth in 6 months," Shillinglaw commented.

Bob believes his early troubles and his interest in art are both a help to him in his new career.

They certainly seem to be. Bob estimates that in the past 6 months, he has made more money than in 4 years of teaching.

But the best part of success for Bob is not the money.

"The nicest thing is when I think of where I was, and what I could have been, compared with where I am now," he said.

Bradley Wins National Invitation Basketball Tournament

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. MICHEL. Mr. Speaker, on March 26, 1957, just 3 years ago next Saturday, I was given permission to extend my remarks in the RECORD, calling attention of the House to the fact that Bradley University of Peoria, Ill., had been crowned NIT champions. As an alumnus of Bradley, which is located in my congressional district, I was naturally very proud of this achievement, but today, I have, as a result of Bradley's recent NIT championship, even more reason to point up the signal accomplishments of Bradley's basketball Braves.

"Even greater achievements can be expected from Coach Chuck Orsborn and his Bradley Braves in years to come." These words concluded by previous remarks to which I have referred above, and no statement could have been made which would have expressed more accurately Orsborn's future.

In Chuck Orsborn's 4 years as head coach, Bradley has been in four national invitation tournaments. They missed the finals only once since 1957 and they missed a third championship only by the margin of an overtime loss in last year's championship game.

Bradley has been traditionally tough in tournaments. The Braves have a 9-won 3-loss record in the NCAA with two second place finishes included, and in the NIT, they own a 13-8 mark and 2 titles.

This past season's record of 27 wins against only 2 defeats marks the best in Bradley University history. It was, therefore, not surprising to see Bradley's coach, Chuck Orsborn named as the

Missouri Valley Conference's Coach of the Year.

Another item of import in Bradley's success was the predominance of sophomores and juniors, so once again we can look to the "years to come." Those who propelled Bradley to their second NIT crown and participated in the Herculean effort by the entire team in overcoming a 12-point deficit in the closing minutes of the championship game to win it going away are as follows: Dan Smith, Ed Wodka, All-American Chet Walker, Al Saunders, Mike Owens, Chuck Sash, Mack Herndon, Chuck Granby, Lee Edwards, Don Kissock, Mickel Tiemann, and Bill Roecker.

Texas Legislator Bill Kilgarlin Sees the Issue: Who Pays the Taxes—Main Difference Between Democrats and Republicans

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. YARBOROUGH. Mr. President, all of us have heard and read many definitions of the difference between Democrats and Republicans. Indeed many of us in the Senate have over the years debated this question with fervor and at considerable length.

One of the most penetrating, concise, and clear statements on the difference between our basic political party beliefs has been written by a brilliant young State representative in Texas, the Honorable Bill Kilgarlin, of Harris County. Representative Kilgarlin is a former professor at the University of Houston.

Mr. Kilgarlin says that for all practical purposes the "sole question is who pays the taxes." No matter how strong a preparedness program we forge, no matter how decent and responsible a public welfare program we institute, no matter how much as freemen we do to help the huddled, hungry, hopeless people of our own land and of other parts of the world, Mr. Kilgarlin's test is still a vital one. Who pays the taxes? Will it be, in a fair share, that 1 percent of Americans who own one-third of the Nation's wealth, or will it be, to a grossly unfair share, those one-third of the American people who own only 1 percent of the Nation's wealth? Representative Kilgarlin posed the question.

As one of Texas' most able and dedicated young statesmen, as State president of Texas Young Democratic Clubs, Representative Kilgarlin has written a column for the Texas Observer which is worthy of the thought and consideration of all of us in the Congress.

I ask unanimous consent to have printed in the Appendix of the RECORD the column from the March 18, 1960, issue of the Texas Observer entitled: "The Real Issue: Who Pays the Taxes."

There being no objection, the column was ordered to be printed in the RECORD, as follows:

THE REAL ISSUE: WHO PAYS THE TAXES

(By Bill Kilgarlin)

HOUSTON.—There is perhaps no comment more exasperating to me than "I really can't tell the difference between Democrats and Republicans," unless it might be, "I vote for the man and not the party." Both probably have their origin in Texas, at least, within that same family tree of communication media which as long as I can remember have urged the election of a Republican President in leap year Novembers while plugging for conservative Democrats in Texas every other summer. It is just this encouragement of party irresponsibility which has led to illegitimacy in the family tree of Texas politics.

All but the most casual observers recognize the existence of some differences in political parties and political ideologies, but the newspapers have been woefully remiss (and perhaps by choice) in failing to pinpoint the most basic distinction existing in American politics, the difference between liberalism and conservatism.

In its August 3, 1958 issue, the Houston Chronicle editorialized on the subject, using such phrases as "more and more power in the hands of the Federal Government" and "high level of taxing and spending for such purposes as foreign aid, domestic welfare programs" to describe liberals, and "preserving States' rights," "opposing giveaway welfare and subsidy programs," and "keeping government close to the people" to designate conservatives. Somebody ought to invite the editors of the Chronicle to take another look at the picture. They and their colleagues would find at the bottom of the distinction the sole question of who pays the taxes.

That "more and more power in the hands of the Federal Government" really means, "We don't want Federal aid to education because the Federal Government has demonstrated a philosophy of taxing in accord with ability to pay. We're for supporting education, all right, but we want State legislators to do it because they protect our advertisers by upping the sales taxes on those least able to pay, the consumers who spend almost all they earn. Of course, that goes for such things as county hospitals. While we think such things are socialistic in principle if we're going to have them, let's finance them with a big bond issue so more of our advertisers can make a profit. Besides, we all know that property evaluations along Main Street are not nearly as high proportionally as those out in the residential areas. At any rate, it's better than a Federal health insurance program, which would be paid for out of income tax revenues."

Without attempting to carry this semi-ridiculous paraphrase any further, the point can be strengthened by a glimpse back at the 56th Texas Legislature, where in each of the four sessions the paramount issue was taxation. The liberals were plugging for a program based upon ability to pay, and from the day the first howl of anguish went up to save the hallowed banking institution, it was apparent what the conservatives were plugging for. The State of Texas still cannot extract its own money from the banks of this State. The final law contained a few sops for the liberals but in the main generalized a little more our nongeneral sales taxes.

The big issue was not spending. There was no talk about cutting out all this waste. Neither conservatives nor liberals were thinking about the Chronicle's "high level of spending" thesis when they went to bat for the State hospitals and colleges back home or those wonderful farm-to-market roads. While in truth most of the liberals were dis-

appointed that the appropriations bill was not larger, particularly for places like Gatesville and State hospitals and special schools, they, too, were swept along in the tide of thinking that asked not how much, but who pays.

The resolution passed by the Texas Legislature calling for the repeal of the 16th amendment got scant notice, yet it was one of the most basic issues on which liberals and conservatives drew the line. I do not know what substitute the conservatives have to offer for the income tax, but I can visualize such things as a national sales tax in the offing.

I realize that all differences between these two ideologies cannot be categorized under tax philosophy, and yet the battle over who pays the taxes is certainly the central issue in controversy. And often if the issue is not taxes it is a related fiscal matter such as high interest rates, tax writeoffs for a favored few, awarding contracts and then subsidizing private power companies where public power would have been better. It is no secret that big business favors the Republicans because Republicans consistently help out big business where the latter are most concerned, the pocketbook.

So when I am asked about differences between liberals and conservatives, Republicans and Democrats, I no longer attempt a detailed analysis. I just say the question is, "Who's going to pay the taxes?"

**Geneva Conference on Discontinuance of
Nuclear Weapons Testing**

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. VAN ZANDT. Mr. Speaker, for over 16 months the British and United States representatives have reasoned and argued patiently with Soviet representatives at the Geneva conference on the discontinuance of nuclear weapons testing.

From the very beginning the Soviets have made clear their position and from this they have never budged:

First. They have insisted on a total and immediate ban on all testing.

Second. They have treated the inspection system as being something that can be worked out at leisure.

Third. They have tried to brush away the technical limitations of inspection.

Fourth. They would have us buy the test ban and worry about details of inspection afterward.

On March 19 the Soviets publicized and put forth what they claim as a new proposal. They have ballyhooed this as a great concession and one capable of breaking the deadlock. Yet it is obvious from a brief study of their proposition it represents no concession. It is one more attempt to force us into a total ban no matter the technical capability of detection, nor the degree of inspection they will allow in their country.

As you will remember the United States has for many months attempted

to reach agreement on a treaty which was as broad as possible, subject only to the condition that all its aspects must be capable of adequate monitoring.

We have established that tests in the atmosphere can be inspected and identified by technical means, as can those at altitude and with certain limitations.

We have established too, however, that the problem of monitoring underground tests, at least those giving a small signal, is much more difficult, if not impossible.

In recognition of these facts the President on April 13, 1959, proposed adoption of an atmospheric-only ban with joint research to improve detection systems. Khrushchev dismissed this proposal out of hand.

After further study and joint technical conferences on seismic detectability, the United States proposed on February 11, 1960, its threshold plan. Under this proposal tests in the atmosphere, in the ocean, and in space up to heights where effective controls can now be agreed, would be forbidden. More importantly those underground and which gave a seismic signal of magnitude greater than a certain value would be forbidden. Those of less than that value, because of the limitations of detection and inspection, would not be forbidden initially by the treaty. Joint research would be undertaken to determine the possibility of lowering the threshold as seismic detectability improved.

The Soviets have responded by claiming to accept the threshold principle and even the threshold value we propose. Yet they have conditioned this acceptance with limitations which make it meaningless. They accept only if there is a simultaneous treaty agreement to forego for several years those tests of less than the threshold value. Along with this they continue to indicate they will accept only the most limited and inadequate onsite inspection for investigation of suspicious events. In essence they continue to insist on a total ban and inadequate inspection.

I was convinced on my trips to Geneva to observe the conference that the Soviets were interested in a ban but only if no real penetration of their country was involved. I was convinced also, that as long as we continue our moratorium while discussions proceed, they are achieving in major part their objective.

We are now entering into a new era in disarmament negotiations, one in which the 10-power disarmament conference is considering many possible areas of agreement. The recent conduct of the Soviets in the test cessation conference has been far from reassuring in regard to real progress in these new areas. It would be tragic in my opinion for us to agree to a test moratorium treaty with the type of arrangements the Soviets visualize. To do so it would involve limitations in this area which were inadequately controlled. Moreover, it would furnish precedent for similar agreements on trust in other, perhaps even more critical areas.

Fidel Castro—Voice of Russia

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Latins Consider Fidel Castro as Voice of Russia," written by Jules Dubois and published in the Miami (Fla.) News of March 21, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LATINS CONSIDER FIDEL CASTRO AS VOICE OF RUSSIA

(By Jules Dubois)

Fidel Castro is being hailed as the voice of Russia in Latin America and there is every evidence that he is working overtime to justify the title and seems to like it.

It has been well earned, for the bearded, rabble-rousing revolutionary premier of Cuba has displaced all of Moscow's former stooges. The Communists have labeled him the "leader of America" and his inflated ego has made him believe it.

Castro may not have joined the Partido Socialista Popular, which is Cuba's Communist Party, but membership is no longer a requisite nor very important in the execution of the Kremlin's master plan.

Ex-Presidents Juan Jose Arevalo and Jacobo Arbenz of Guatemala never were known to have been admitted into Communist Party membership, but they led Guatemala into almost 10 years of Red rule.

A Spanish leftist career officer, Gen. Alberto Bayo, who says he's anti-Communist, trained Castro's initial invasion force of 82 men that sailed from Mexico in November 1956 to land in Oriente Province and set Cuba aflame.

Before that force left Mexico, however, Ernesto (Che) Guevara, young Argentine adventurer who had been friendly with the Communists in Guatemala, obtained a copy of a Russian book on guerrilla warfare tactics. Guevara cherished that book as a pious person would a Bible.

He attributed his success in the fighting in Oriente Province and later in Las Villas Province to what he had learned from that book.

Spanish leftist exiles made their way into the hills of Oriente Province and volunteered their services as gunsmiths and ordnance experts to Castro's forces. Their skill and ingenuity contributed greatly to supplying Castro with sufficient firepower for his small force to hold off dictator Fulgencio Batista's army until he could build up his own arms and munitions.

There is indisputable evidence, as I reported last October, that Castro either is a captive of the Communists or is in full agreement with them. The latter now appears to be the more logical assumption and is supported by the following:

He eliminated President Manuel Urrutia; Maj. Pedro Luis Diaz-Lanz, his chief of air force; and Maj. Hubert Matos, his military commander of Camaguey Province, because they were anti-Communist.

He used Communist smear tactics to discredit them before the Cuban people.

He has given increasingly free rein and positions of influence to Communists in the armed forces and the government.

He has refused to eliminate Communists from the officers' corps of the army.

He has made a documented Communist commander of the army ground forces, known in Cuba as the "tactical forces." He is Maj. Armando Acosta.

He has admonished the armed forces that any talk among troops against Communists or communism would be considered "counter-revolutionary."

He has allowed the Communist Party to organize and operate freely throughout the country while he berates plans of other parties or groups—all anti-Communist—to organize.

He made a trade and diplomatic deal with Russian Deputy Premier Anastas I. Mikoyan in which he promised Cuba's vote to the Communist bloc at the United Nations. That promise is implicit in the joint communique issued by Castro and Mikoyan as the latter ended his visit to Cuba.

He has made it extremely dangerous and unpopular to be outspokenly anti-Communist in Cuba.

He is seizing and confiscating private property, ranches, sugar plantations, sugar mills, businesses, and industries without any compensation whatsoever and much less the 20-year bonds required by the agrarian reform law.

He is directing personally the brainwashing of the Cuban people in the most concerted and concentrated "hate America" campaign in history.

He approved the publication and distribution as the official textbook for all high schools a geography written by Capt. Antonio Nunez-Jimenez, his Communist executive director of the Agrarian Reform Institute over which Castro presides. The geography rewrites the history of U.S. participation in the Spanish-American War.

It also preaches Communist economic social and political doctrine, although it does not mention Russia. And it advocates the U.S. evacuation of the Guantanamo Bay naval base in eastern Cuba.

He has ordered Cuban diplomats to spearhead anti-American activities throughout Latin America and especially in Panama.

He has organized a Latin American news service in which most of the staff and correspondents are Communists or fellow travelers.

He is fast eradicating all remaining freedom of speech and of the press.

He has seized or acquired all newspapers in the provinces and most of them in Havana. He also has seized or acquired several radio and television networks.

He has indicated there is little likelihood that free elections ever will be held under his rule.

He is leading the country into total dictatorship of the working class. When the chips are down and an inevitable opposition erupts into armed action, he might well become a bloodier dictator than any of his predecessors.

He deliberately and repeatedly accuses the United States of military and economic plotting against Cuba.

His newspaper, *Revolucion*, in violent language repudiated the American Embassy's statement of condolences over the recent disastrous explosion of a munitions ship in Havana Harbor.

His government cabled its thanks and appreciation for a message of condolence for the same blast from Russian Foreign Minister Andrei Gromyko, while angrily rejecting the protest by Secretary of State Christian Herter that Castro's accusations of U.S. responsibility for the blast were false.

Castro has gone full circle back to the days when, as a university student, he was teamed with Communists at the University of Havana. Today, just as then, he finds Communists useful and expedient for his objectives. Conversely, Communists feel the same way about him.

Prize-Winning Essays on "Conservation, Whose Responsibility?"

EXTENSION OF REMARKS

OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. THORNBERRY. Mr. Speaker, on February 26 there appeared in the Johnson City Record-Courier, one of the fine weekly newspapers in the 10th Congressional District of Texas, three of the winners in the 1960 Blanco County Conservation Essay Contest, the subject of which was "Conservation, Whose Responsibility?"

The essays were judged on the basis of originality, significance of content, and overall impact, and first place in the contest was won by Miss Joanne Lindig, second place by Miss Patsy Felps, and third place by Miss Corrie Ann Crofts.

Because of the timely nature of this subject, I know that the Members of Congress will be interested to note the perception of these fine young people, whose essays follow:

PRIZE-WINNING ESSAYS ON "CONSERVATION, WHOSE RESPONSIBILITY?"

(By Joanne Lindig, first place winner)

As I analyze this wonderful world of ours, I am confronted by two specific questions—What is the source of America's greatness, and to whom goes the responsibility for preserving her strength.

Freedom and personal liberty stand strong in America, but the basic ingredient of her greatness is the soil.

Our ancestors discovered this land, worked it, enriched it—yes, even wasted it. We cannot afford to gamble our resources, for unlike our grandfathers, there is no unexplored West for us to move on to, when this land is tired and spent. Money will not buy resources which have been wasted. They must be worked for, cultivated, and protected.

Moon rockets and conservation are to a great extent similar. Our continued world leadership depends not only upon our conquest of space but also the stewardship of our soil.

American agriculture is faced with grave responsibilities—her own increasing population, as well as countless foreigners are dependent upon our soil's prosperity.

Who can stand above a waving field of golden wheat, or newly harrowed field and not feel a deep sense of personal responsibility for its continued productivity?

People, evading their responsibilities, have attempted to shove conservation on to the shoulders of our Congressmen and the soil conservationists. These programs are doing more than their share. Conservation is too large a job to do alone. It requires the backing of all America.

It is time for the young people of America to wake up to the realization that as we are heirs to the land, we are also heirs to a responsibility for its conservation.

It is our debt and privilege, to ourselves, our forefathers, and our posterity, to leave the land richer and better for our having lived.

Natural resources are the basic source of America's greatness, and their conservation is a mandatory responsibility to everyone—the man behind the desk; the man with the hoe; students in college, and even the Presi-

dent of the United States. Indeed every man, woman, and child who warrants God's nearness, personal dignity, and national loyalty, has a responsibility to his God, to himself, and to his Nation for America's conservation.

(By Patsy Felps, second place winner)

Rich, productive soil helped us as a young Nation to produce more food and raw materials than we needed. Thus, productive soil contributed to the wealth of the United States and all it stands for. Agriculture, labor, and capital have become inseparable in our way of life. One depends on the other and natural resources continue to be a safeguard for our freedom.

Our land must be managed with "forever" in mind. We cannot take our resources without providing for the future. Put it another way; we preserve the capital and use the interest.

Now, in the mid-20th century, we have decided we had better start taking care of the precious topsoil which makes life possible for us. Our land is in direct connection with our future. It is our duty to keep our soil permanently productive if the foodstuff for our national family must yield from the land which we are preparing today. Healthy people must have healthy food from healthy soil.

Excess cropland has been wasted. This calls for the proper use and protection of every acre of land throughout America through the efforts of every individual. Our progress thus far is but a small fraction of what needs to be done.

When the American people understand a problem, they do something about it. Why, then, haven't more than the few dedicated persons done more about the vitally important work of conservation? It must become the accepted practice of all instead of just something we talk about. We can't risk any more cases of "too little too late." Every man, woman, and child must learn that the conservation of the Nation's resources is a major responsibility of theirs. And in the words of John Milton, "Accuse not nature. She has done her part; do thou thine own."

(By Corrie Ann Crofts, third place winner)

I am an American youth and I speak for conservation of America's land and its natural resources. For these are the symbols and essentialities of America's greatness and future existence.

Conservation is a present and future problem that faces not only the United States but every country in the world. We, as the future citizens of America, must awaken to this plague and meet our responsibilities. At present we must begin to familiarize ourselves with the basic methods of conserving nature. For example, in a government class one does not begin his study at the present age and travel back into the theory of his government, but rather begins with its basic fundamentals and later proceeds to advanced types of governing. Thus, as in the study of conservation we must first learn the basic ground works and then move on to advanced techniques.

As broadminded persons, we certainly realize that the responsibility rests on the shoulders of our citizens.

They are the backbone of America and the only force that can strike back against this great offender.

If we could only stress upon them the importance of knowledge—knowledge that can be gained through material offered to us by conservation experts. These people who have studied cannot be expected to do the job alone.

It takes each and every one of us. The urge to save our country's riches must come

from within. We must implant within ourselves a desire to attend our local soil conservation meetings and seek advice.

If we are as patriotic and peace loving as we profess, we will awaken to our responsibilities and not sit idly by and view the ruin of a land so great as this. For with knowledge as our armor and determination as our shield, triumph in behalf of conservation is inevitable.

The Law and the Profits

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. BUSH. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a review of the book entitled "The Law and the Profits," by C. Northcote Parkinson. The review, written by John Chamberlain, was published in the book review section of the New York Herald Tribune of Sunday, March 20, 1960.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

WHITHER ARE WE DRIFTING? SEE PARKINSON
LAW No. 2

(Reviewed by John Chamberlain)

When Woodrow Wilson was President he pecked out his own state papers on his trusty typewriter. When he felt the need of a wartime coordinator of public information, he employed one man, George Creel, for the post and told him to do the best he could on a severely limited budget. Though Wilson and Creel did creditable jobs, their day is gone forever. Modern complexity and efficiency require the existence of huge administrative staffs complete with batteries of ghostwriters, secretaries, stenographic pools, statisticians, per diem consultants, fleets of automobiles, and acres of filing cabinets. Or so we have been told.

One man, however, has presumed to doubt the modern faith in group dynamics as applied to the art of administration. When C. Northcote Parkinson, Raffles professor of political economy at the University of Singapore, formulated "Parkinson's Law" several years ago, it was obvious that political science had at last found its Sir Isaac Newton. Like any great principle, Parkinson's law has an elegant simplicity: "Work expands to fill the time available." Applied to government, this law means that the work of any bureau will be multiplied to the utmost limit of the budget which its chiefs are able to chivy out of Congress. Applied to private industry, the same law of bureaucratic expansion will tend to operate—but only up to the point of incipient stockholder rebellion.

When Professor Parkinson first stated his law of bureaucracy, he may have felt that governmental waste would forthwith be laughed out of existence. But—aside from the laughter—nothing happened. Momentarily nonplussed, the professor went to work gathering the information that has resulted in "Parkinson's Second Law." As duly explained in another rib-tickling book, "The Law and the Profits," the second law is most economically stated as "expenditure rises to meet income." With a private fam-

ily, this means that the more its breadwinner earns, the less it is apt to save. Out of this law, consumer credit has waxed fat. With government, the operation of the law has more sinister connotations than the increase of diners' clubs. If there is no legal limit to the taxing power, Parkinson's Second Law simply means that government will tend inexorably to take an ever-increasing percentage of the national income, arriving at last at the point where the economy must collapse upon the tax collectors' heads.

To show his second law in operation, Professor Parkinson has made research forays in two directions. He has rifled the records of civilizations, both ancient and modern, to determine the exact arithmetical point where governmental absorption of the citizens' energies must spill a nation into final decay. And he has collected telling illustrative material by gathering virtually every last scrap of idiotic material bearing on the growth of what he calls "the Anglo-Saxon waste line."

Out of his researches, the professor comes up with a magic figure: 35 percent of the national income is all any government can take in peacetime taxes without provoking complete and final disaster. Although the professor does some pretty fancy work with his slide rule to arrive at such a specific number, it is obvious from his historical citations that the taxation disaster point is somewhere in the neighborhood of a third of national income. This conclusion more or less corroborates the claims made by the Oxford economist, Colin Clark, after his studies of taxation, which make up in massiveness what they lack in Parkinsonian elegance of presentation.

Professor Parkinson does not advocate fixing the upper limits of the taxing power at 35 percent of national income. He would put the ceiling far lower, at 20 percent. This is all that a people will pay without succumbing to an exceedingly flexible interpretation of the idea of honesty, a corroding cynicism, and an unlovely envy. At 25 percent of national income, inflation will accompany the efforts of the tax gatherer to extort the required sum. And at 30 percent of national income, there will, says Professor Parkinson, be a notable decline in a nation's influence. People will cease to work at the top of their bent—and the resulting enfeeblement of the economy will become apparent both to one's allies and one's enemies.

To meet the argument that modern governments must take more than 20 percent of national income to pay for the exigencies of rule in the age of the jetplane and the hydrogen bomb, Parkinson falls back on his first law. With less money at its disposal, a government must automatically become more efficient. Any bureaucrat, says Parkinson, can do more work with fewer operatives to direct. Even the military would do better with a trimmed budgetary appropriation; as Parkinson points out, there is reason to complain when an Air Force bill for \$13.94, payable by a former employee, should have attached to it a 28-page invoice with the signatures of 2 lieutenant colonels, 3 majors, 1 captain, a first lieutenant, and 13 civilian department heads.

No fanatic, Professor Parkinson disclaims any sympathy with the anarchistic contention that all taxes are an abomination. He believes in the necessity and in the legitimate functions of government. We must have such things as armaments, courts, roads, and plague prevention, says the professor—and government, he insists, is the natural agency for the provision of such essentials. Nor would the professor dismantle all of the apparatus of the welfare state. He would merely limit the overall funds available to the state on his theory, which he

supports most ably, that the artist—in this case the government employee—must do an infinitely better job if he has to work against resistant material. By making the artist conscious of cost, you improve his work. "Where there is no ceiling to the cost," says Parkinson, "the architect merely goes off his head."

One of Professor Parkinson's pet gripes is the expense incurred in printing things in the CONGRESSIONAL RECORD as an extension of a Senator's or Representative's remarks. At the risk of the professor's displeasure, I am asking my Senator—he is PRESCOTT BUSH, of Connecticut—to insert "The Law and the Profits," or at least this review of it, into the CONGRESSIONAL RECORD. If such insertion could induce the Congress to act on the Parkinsonian recommendations, it would be waste well spent. And the professor might be willing to admit one exception to his rule.

Caribbean Games Straining Airlift

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times, March 16, 1960:

CARIBBEAN GAMES STRAINING AIRLIFT—MILITARY LEADERS CITE NEED TO MODERNIZE AND EXPAND THEIR TRANSPORT SERVICE

(By Hanson W. Baldwin)

SAN JUAN, P.R., March 15.—Four-engined planes of the Military Air Transport Service and troops and equipment of the Army's Strategic Army Corps were accumulating impressive arguments here today for a modernized and strengthened military airlift capability.

Operation Big Slam/Puerto Pine, which opened on March 14 and will last for 2 weeks, involves about 444 transport and cargo aircraft of MATS and more than 20,000 troops and 11,000 tons of supplies. About half the aircraft are being used in an unending stream of air life flowing here to Puerto Rico from 14 fields all over the United States.

The other half are working at an accelerated tempo to maintain normal MATS service on global passenger and cargo routes. For the 2 weeks of the exercise the average peacetime flight tempo of MATS of 5 flight hours a day for each plane, is being increased to 8 hours daily.

Pilots are about doubling their flight time for the maneuver. And maintenance men and ground crews are working about 12 hours a day 7 days a week.

The exercise is testing the capability of the Transport Service to increase its flight operations rapidly to wartime tempo and to maintain that tempo for a fairly protracted period.

So far the air lift to Puerto Rico has gone like clockwork, as it was expected it would do. By early this afternoon 94 trips had unloaded 1,638 troops and almost 1,310 tons of supplies. The landings were made at Ramey Air Force Base and at Roosevelt Roads Naval Air Station.

The troops disembark at these staging areas, move into bivouac areas, prepare plans for an imaginary airborne assault against a mythical enemy and, after an average of 2 to 3 days on the ground, reload and fly back to home stations. The maximum number of troops in Puerto Rico at any one time will be about 5,300.

Among the units arriving today were National Guardsmen from the 2d Battalion of the 22d Field Artillery, Utah National Guard. They were flown from Hill Air Force Base near Ogden, Utah.

The 13 other fields at which troops are being loaded are Pope Air Force Base at Fort Bragg, N.C.; Hanscom Air Force Base, near Bedford, Mass.; Dover Air Force Base, near Dover, Del.; Donaldson Air Force Base, near Greenville, S.C.; Lawson Army Air Field, near Columbus, Ga.; El Paso, Tex., International Airport; Kelly Air Force Base, near San Antonio, Tex.; McGuire Air Force Base, near Wrightstown, N.J.; Fort Campbell, Ky.; Scott Air Force Base, near Belleville, Ill.; McChord Air Force Base, near Tacoma, Wash.; Connally Air Force Base, near Waco, Tex., and Charleston Air Force Base, near Charleston, S.C.

Army reservists from the 3d Battalion, 15th Artillery, 79th Infantry Division, are also numbered among the 80 Army units being airlifted here from 31 home stations in the United States. The major Army units involved are from the 82d and 101st Airborne Divisions and the 4th Infantry Division, plus other units of the Army's Strategic Army Corps.

Both Air Force and Army authorities here have strongly emphasized that the operation so far warrants a number of general conclusions.

Troops being moved here spend anywhere from 5 to 18 hours in the air flying in propeller-driven planes, whereas the average tourist flying to Puerto Rico in jets reaches here in about half the time.

MATS, its officers say, badly need modernization. It has only 29 of the most modern cargo aircraft—the Douglas C-133 Cargo-master, and it flies no jets.

The National Civil Liberties Clearing House: Guardian of the American Heritage

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. KEATING. Mr. President, it is appropriate that the National Civil Liberties Clearing House is beginning a 2-day conference in Washington as Congress prepares to enact a civil rights bill. This outstanding organization, which over the years has pioneered with vision and vigor in the fields of civil liberties and human rights, has contributed much to the advancement of the American ideal of equality for all citizens.

Over 100 national groups are expected to participate in this 12th annual conference, and I am confident its deliberations will help all of us who are working for civil rights progress. This morning's Washington Post contains an excellent editorial welcoming the clearinghouse and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

GUARDIAN

Representatives of a great variety of national organizations will meet here today and tomorrow for the 12th annual conference of the National Civil Liberties Clearing House.

These assemblies have become a most important and useful capital institution. They serve to supplement the regular work of the clearinghouse in keeping its members informed about developments affecting the rights of Americans and the free character of their national community; and they afford an opportunity for discussion and the taking of common counsel regarding civil liberties. We welcome the conferees to Washington, congratulate them on their concern and wish them a more fruitful meeting. The clearinghouse stands as a guardian of the American heritage.

Second Look—Bentley Asks for It on Charges Against UAW

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of a wire service story which appeared in the Owosso Argus Press as well as the text of my remarks before a meeting of the Republican Town Club of Lansing, Mich., on March 18. I am inserting the following into the CONGRESSIONAL RECORD because of the discrepancy between portions of the newspaper account and the printed text of my remarks which was made available to the press:

[From the Owosso Argus Press, Mar. 17, 1960]

SECOND LOOK—BENTLEY ASKS FOR IT ON CHARGES AGAINST UAW

LANSING.—Representative ALVIN M. BENTLEY, Republican, of Michigan, has called for a second look at charges of corruption in the United Auto Workers Union.

BENTLEY said Friday night a Republican minority on the Senate Labor-Management Rackets Committee had shown there was "corruption, misappropriation of funds, bribery, extortion, and collusion with the underworld within the UAW."

"These charges brought out by Republican Senators are far too serious to be dropped or ignored" even though the Democratic majority gave the UAW a clean bill of health, BENTLEY added.

BENTLEY, who has announced for the U.S. Senate seat now held by Democrat PATRICK McNAMARA, spoke to the Republican Town Club.

He said the Senate committee, now out of operation, needs to be replaced by a similar group to pursue charges against the UAW "relentlessly until no stone is left unturned."

BENTLEY also said that Senator JOHN KENNEDY, a committee member and Democratic presidential hopeful, and his brother, Robert, chief counsel for the committee, "deliberately contrived to prevent any real investigation," of the UAW.

PARTIAL REMARKS OF CONGRESSMAN ALVIN M. BENTLEY, BEFORE REPUBLICAN TOWN CLUB, LANSING, MARCH 18, 1960

During the life of the Senate Select Committee on Improper Activities in the Labor or Management Field, a great deal of information was uncovered and brought to light regarding corruption, misappropriation of funds, bribery, extortion and collusion with underworld elements in labor organizations

such as the Teamsters, the Carpenters, the Hotel & Restaurant Workers and other unions. In these investigations, all members of the committee cooperated thoroughly, both Democrats and Republicans. The one exception was the senior Senator from Michigan who withdrew from the committee early in its history and, by that action, showed little evidence of interest or concern in exposing such activities in the field of organized labor.

Now, however, members of the committee have divided sharply in their findings involving the United Automobile Workers. Within the past few days, three sets of separate views have been filed by committee members on this question. They included the views of Senators CHURCH and KENNEDY, filed jointly, and also of Senators MCCLELLAN and ERVIN, also filed jointly. These are the four Democratic members of the committee, Senator CHURCH having replaced our senior Senator from Michigan.

In their views on the Kohler and Perfect Circle strikes, these two sets were critical of both management and the union. The McClellan-Ervin views were more critical of the union than were the Kennedy-Church views. Both, however, completely exonerated the United Automobile Workers insofar as corruption and allied charges were concerned.

In contrast, were the separate views of Republican Senators GOLDWATER, MUNDT, CAPEHART, and CURTIS. In the first place, they accused the chief counsel of the Senate committee, Robert Kennedy, of refusing to make a thorough probe of UAW activities. They stated "throughout the course of the investigation a double standard of committee morality prevailed—one procedure was employed for the unions not connected with Walter Reuther and a different procedure was employed for the investigation of activities of the United Automobile Workers."

This, of course, is a serious charge to be brought against an employee of a congressional committee, especially when that employee happens to be the brother of a leading aspirant for the highest office in our country. However, the minority views continue with reference to the United Automobile Workers: "We are convinced that corruption, misappropriation of funds, bribery, extortion and collusion with the underworld has occurred within the UAW."

Particular reference is made to the committee hearing of one Richard T. Gosser, formerly senior vice president of the UAW. The minority views continue "we have seen sufficient evidence during the Gosser hearing of kickbacks, terrorisms, collusion with gamblers, conflicts of interest, destruction of records, misappropriation of funds, falsification of records, and evasive tactics to convince us that a thorough investigation of the machinations of this individual and others would produce criminality on a scale comparable to that which has been previously exposed by this committee."

After referring to the damaging fact that two UAW witnesses, when questioned on this matter, took the fifth amendment, the minority views conclude by castigating the Democratic members of the committee for limiting the UAW investigations to participation in the Kohler and Perfect Circle labor disputes and for only making a cursory invited examination of a small part of the UAW's financial records. The minority views state that "from this fragmentary and entirely inadequate and incomplete investigation (the Democrats proceed) to issue a clean bill of health to Reuther, the UAW international, all of its officers and to its more than 1,300 locals and many joint councils."

These are grave and serious charges. If true, they would mean that while exposing graft and corruption in the Teamsters and other unions, the Democratic members of the committee, including Senator KENNEDY and his brother, the committee's chief counsel, deliberately contrived to prevent any real investigation of similar practices within the United Automobile Workers. Further, these charges, if proven, would completely abolish Mr. Reuther's claim that the UAW had received a clean bill of health from the committee in these respects. The charges are far too serious to be dropped or ignored.

Unfortunately, the McClellan committee has now passed into history and is now no longer a vehicle for further investigations of this nature. It is certainly not for me to criticize the Senate but I personally deeply regret that the existence of this committee was not prolonged or that it was not replaced by a similar organization.

For one thing, the committee was established to investigate improper activities in the field of management as well as labor but I have seen little, if any, evidence that there was much exploration in this field. Secondly, charges of as serious a nature as the foregoing against the UAW should certainly not be left unanswered but should be pursued relentlessly until no stone is left unturned.

Happily, we do have a vehicle for this second purpose. You will recall that some time ago Mr. Reuther announced the establishment of a public review board for the purpose of investigating all charges of graft and corruption against the UAW. It is my strong conviction that this board should immediately proceed with a thorough and detailed series of public hearings into the validity of these charges made by Republican members of the McClellan committee.

Naturally the board has no jurisdiction as to inquiring into whether there was a "white-wash" of the UAW on the part of the Democratic members of the committee. But where there are serious charges pending against this union, its officers, and members, I do feel that this board, which, I understand, was created for just such a purpose, should undertake a full and complete investigation of this matter. I therefore call upon Walter Reuther to request the members of his public review board to complete the job which it has now been charged that the McClellan Committee left undone. The United Automobile Workers, the largest labor union in our State, should not have these accusations of graft and corruption hanging over the heads of its officers and workers. There should be no shadow of doubt of the good name and reputation of this great organization.

I am certainly not in accord with many of the programs advanced by the UAW. I likewise do not concur fully with their methods of political activity even though I can appreciate and admire the success of their technique. But I am aware of the deep feeling on the part of the people of this country, whether a part of organized labor or not, against graft and corruption on the part of any part of organized labor. The UAW has commendably and properly undertaken to clean its own house. Charges of an extremely serious nature have now been leveled against it. I think the union owes it not only to its own members but to the public at large to have these charges thoroughly investigated by its public review board until the most hardened skeptic remains convinced of its unsullied reputation in this field. I ask Mr. Reuther and the members of the public review board to cooperate in this vital matter.

A New and Human Science

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD part I of a fine study of new problems in conservation policy appearing in *Sports Illustrated*. This is an unusually suggestive analysis. Together with the recent studies by William Whyte, this opens up to the public an outstandingly important issue.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PART I: A NEW AND HUMAN SCIENCE

(By Henry Romney)

In the year 1831 Alexis de Tocqueville, a 26-year-old French nobleman with a genius for observation, visited the United States. In his account, "Democracy in America," one of the greatest of travel books, he characterized the citizens and their New World as "that continent [which] still presents, as it did in the primeval time, rivers that rise from never failing sources, green and moist solitudes, and limitless fields which the plowshare of the husbandman has never turned. The physical position of the country opens so wide a field that man needs only to be let alone to be able to accomplish prodigies. Such is the admirable position of the New World that man has no other enemy than himself."

In the year 1959, only 128 years after Alexis de Tocqueville's visit to the "primeval continent," a distinguished American, Gen. Omar Bradley, surveyed his native land. "Year after year our scenic treasures are being plundered by what we call an advancing civilization," reported the general. "If we are not careful we shall leave our children a legacy of billion-dollar roads leading nowhere except to other congested places like those they left behind. We are building ourselves an asphalt treadmill and allowing the green areas of our Nation to disappear."

And in the year 2000, after a visit to the United States (there were 51 States at that time, including the Virgin Islands) under a study grant from the Rockefeller Bros. Fund (there were 8 Rockefeller brothers) Bagamisa Dankwa, a 26-year-old candidate for a doctor of philosophy degree from the Free University of Ghana in Africa, wrote in his resulting doctoral thesis, "Men of the Concrete Jungle": "Within the past four decades the population of this teeming country has almost doubled. In 1960 there were but 179 million Americans; there are some 325 million today. More than 35 million of these people are over 65, and the life expectancy of the average male citizen is 74, that of his wife 79. The average family income is \$15,000 a year, which is double the 1960 figure. The national average workweek is 28 hours. There are 220 million cars on American roads."

After a brief discussion of comparative data in Ghana, Dr. Dankwa continued: "To the American his leisure time has become his most treasured and sizable personal asset. His choice of a job and habitation is primarily influenced by where he will find

life most pleasant." Here, in one of the many footnotes that annotate his scholarly text, Dr. Dankwa cited a passage from an article entitled "Amenities as a Factor in Regional Growth" published in 1954 by the American Economist Dr. Edward L. Ullman: "For the first time in the world's history, pleasant living conditions—amenities—instead of more narrowly defined economic advantages are becoming the sparks that generate significant population increase * * *. In spite of the handicaps of remote location and economic isolation, the fastest growing States are California, Arizona, and Florida."

But in the year 2000 prosperity had become a two-edged sword—pleasant living conditions and the amenities of life were not to be found easily. "Eighty-five percent of the American people live in cities," reported Dr. Dankwa. "Ten great supercities, boasting 5 million or more inhabitants each, dominate the land and shelter one-third of the total population."

The pattern for the year 2000 is set today. There is a rapidly compounding awareness that for every city-based American it is becoming increasingly difficult to find open country; that on the east and west coasts the cities are agglutinating at an astounding pace, swallowing up the land that once separated them; that beaches are getting smaller and more crowded each summer; that it is getting harder to find or keep up a place to hunt or fish or play golf or spend a vacation. "Never before has suburbia seethed with so many protest meetings," writes William H. Whyte, Jr., editor of the Exploding Metropolis, "whether [highway] rerouting petitions, save-our-trees groups or stop-the-rape-of-the-valley emergency committees." We have already passed the critical point toward total urbanization of the United States—from now on more of the same means a radically different life for all.

Even 15 years from today, by 1975, the fundamental upheavals in population, leisure time, family income, mobility and urbanization of the land triggered by the years immediately following World War II will unavoidably have created a country radically different from what we still consider our heritage. The land as it was in Daniel Boone's time, or at the time of the great westward homesteading migrations, or even at the time the first automobile took to a rutted road, has become little more than a nostalgic memory.

All this being, so and seemingly irreversibly so, what is there to be done about it?

In the first place, is it necessary to do anything about it? The answer is a resounding "Yes." For no matter how urbanized and industrialized man has become—and increasingly will become—he is first and foremost an animal temporally rooted in the soil. Our fundamental heritage is not scientific or industrial but biological. "Man, despite the extraordinary mental accomplishments that have brought about his present-day civilization," writes the great naturalists and conservationist, Fairfield Osborn, "has been, is now and will continue to be part of nature's general scheme." Only very recently in terms of our biological inheritance and our own history on earth have we committed ourselves to that very specialized environment of the present day: The industrial society. We must provide room in that specialized environment for all of our needs, including those, such as communion with nature, which are not directly pertinent to our specialization, for if man cuts himself off entirely from the soil, his own character will change drastically.

To deny the simple human needs for open spaces, water and sky, to repress our humbler, soil-rooted past is dangerous. A psychiatrist recently put it this way: "An individual may not feel the need for occasional replenishment in unspoiled surroundings, but neither does he feel the need for vita-

min D, the deprivation of which produces rickets." The demand for outdoor recreation, by the year 2000, will have mounted toweringly along with the factors producing it, as the chart on this page shows.

It is obvious, therefore, that something must be done. But where are we to look for the solution?

Historically, man's relationship to his natural environment has been the special province of the conservationist. But man, to the conservationist of the past, was the enemy, the oppressor of wildlife and the squanderer of the earth's resources. It was the conservationist's mission to protect from man the bison and the whooping crane, the great stands of sequoias and the craters of natural geysers, safeguarding them from the barren consequences of man's conviction that he held a special place in creation and that the land and its creatures were an inexhaustible cornucopia. Later, when conservationists began to blend some scientific method with their evangelical fervor, it became the added function of conservation to protect important natural resources, such as soil and water, from the inroads of industrial civilization.

But today this historic responsibility of conservation has changed. Today it is man himself who is in danger of becoming a victim of the industrial civilization he has spread so vigorously across the land. The dilemma of man enmeshed in an asphyxiating environment of his own creation presents the greatest challenge conservation has ever known, one that calls for a fundamental change in attitude on the part of conservationists, a great broadening of conservation's socioscientific base.

Today the subject of conservation is people.

Today the object of conservation is to create and preserve our necessary natural environment for present and future generations.

Today the very name of conservation should be broadened to embrace the vastly broadened scope of its activities; henceforth it should be known as social conservation.

Social conservation implies responsibility for a whole range of man's pressing social problems—and social conservation has that responsibility. Social conservation must play a leading role in the social and economic effort to resolve the amalgam of related problems plaguing America—the senseless devastation of the countryside, the increasing dehumanization of the harassed and isolated city dweller, the resurgence of slum areas, the irrational violence of frustrated youth. Resources conservation, urban renewal, outdoor recreation planning, and city planning are all part of the broad attack on these overlapping problems. Concepts and techniques must be enlisted from many fields—from economics and sociology, from social anthropology and ecology and demography. The new people-oriented conservation discipline must encompass both nature and man.

All this is not to say that conservation's classic preoccupations with wildlife and wilderness are not as important as ever. They are—but they are no longer of primary importance. They represent today significant technical specializations within the total field of social conservation. Of primary importance are such things as the problems of the cities, or the fast-disappearing open space throughout the country, the increasing demands for outdoor recreation of all kinds, the mounting pressures on existing open land, public and private. Here the new discipline of social conservation can be used to full effect.

The results of population pressure and the lack of recreational land all over America show up dramatically in the predicament of our national parks. These most popular recreational lands are administered by an

agency within the Department of the Interior headed by Conrad Wirth. "Connie" Wirth's empire stretches from Yosemite in California to Acadia in Maine, from Alaska to Hawaii, and it is a rare week that does not see him pace a part of his domain. Behind Wirth are a \$75-million annual budget, a loyal band of influential men and a league of organized supporters 14,000 strong. Facing Wirth are some troubled times.

Historically, it is the mission of the National Park Service to "expose" as many Americans as possible to its scenic domain. Last year the parks recorded all of 62,812,000 visits from land-starved Americans who drove through the gates of the national parks for bumper-to-bumper communion with nature. Statistics show that the majority of these visitors spent less than a day within the parks themselves. Conrad Wirth, alternately appalled and delighted by the sheer number of his guests, feels he must make the effort to accommodate them by building new and wider roads, moving overnight lodgings outside park boundaries, and by discouraging such things as pack trips, which prolong visits. Many people interested in the genuine exploration and enjoyment of these extraordinarily beautiful areas feel they are being hustled through, almost as if our national parks are being turned into national parkways.

There is no letup in sight; on the contrary, over the past decades there has been a steady 8 percent annual increase of visits to the parks. By projecting this to the year 2000, Wirth can look forward to the alarming prospect of one billion visits, or playing host to every man, woman, and child in the United States three times a year.

Obviously this is not likely to happen. But just as obviously our great parks, representing as they do one of the few remaining opportunities for the weekending and vacationing urbanite to refresh and actively enjoy himself among splendid landscapes, cannot withstand these increasing pressures indefinitely.

A family should be able to find an opportunity for a day's outing, not necessarily in a great national park, but within reach of its home. It should not have to rely on the Federal Government for this, but rather on its own State and community. Certainly such local recreational facilities would take much of the pressure off the national parks, but this would be only an incidental benefit. More important would be the benefits which carefully developed and preserved open land would bring to the community itself and its residents. This apportionment of responsibility for the appropriate use and development of available open land in terms of people's varying needs is one of the fundamental concepts of social conservation. Everyone needs the stimulus both of readily available recreational opportunities and what Laurance Rockefeller has called "the cathedral experience" of truly magnificent landscapes.

In most of the country enough land is available so that a community need have only the will to insure the character of its environment for the future. But in the heavily industrialized parts of America it requires more than good will and a strong sense of purpose. In some areas the only hope of salvaging what still remains lies in the closest possible cooperation between government and community. However, there are difficulties inherent in this alliance, and they can best be illustrated by the dark history of a very present problem, that of the Cape Cod National Seashore.

In 1954 the National Park Service surveyed 3,700 miles of eastern seashore for the possible establishment of national seashore areas. A portion of Massachusetts' Cape Cod, running from Chatham to Provincetown and incorporating the Great Outer Beach, a

30-mile sweep backed by great cliffs where the dunes rise to a height of 50 feet, was given priority.

One of the most cogent reasons given by the Park Service in support of its choice was that this hitherto unravaged, dramatically beautiful stretch of shore was within a day's drive of one-third of the population of the United States. The Park Service pointed out that 11 percent of the population of the United States lives on the one-half of 1 percent of land that stretches between Massachusetts and New York City, the most densely populated, heavily industrialized area in the country. Yet there is not a single national park in this area and scarcely any public beach.

The arguments of need and availability struck as less than persuasive the residents of Cape Cod who were affected. After all, it was their land; what would happen to it and them if it became a national park? Looking around them, at their peaceful towns, at their weatherbeaten shingled houses which had often sheltered generations of the same family, at the stretches of beach backed by salt-water ponds, they saw no reason why they should share these pleasant things with invading hordes.

"Thou shalt not covet thy neighbor's goods," exclaimed one Cape Coddler spiritedly. "As a good Yankee and American citizen, I say that commandment is just as good today as it was in Moses' time."

Others thought purely of the fantastic figures involved. If the Great Outer Beach was within reach of one-third of the U.S. population, would that mean 50 million to 60 million people on their beach? "Who is to save us from rape and murder when those thousands who have never heard of us come wandering in?" cried a woman at a townhall meeting. Others were willing to disregard the criminal propensities of the visitors when they thought of their appetites. How many hotdogs, how many pizzas would 60 million people demand, and why should the National Park Service interfere with the natives' free-enterprise rights to feed them?

The Park Service made a gallant effort to explain why, beyond mere need, the Cape Cod Great Outer Beach was an area of national importance and should be preserved as such. It dwelt eulogistically on the beauties of the beach, the rare geological formations of the area, the unique flora and fauna, the wealth of recreational opportunities and the rich historic associations. It was, after all, the Pilgrims' first landfall in America before moving on to Plymouth.

An unimpressed descendant of these Pilgrims, Joshua Nickerson, a resident of Chatham, which his ancestors bought from the Monomott Indians in 1656, felt that the deeper meanings the cape had for the "natives" would be unappreciated by strangers. "You have to live here for 300 years as I have before you can see Cape Cod, let alone understand it," said Mr. Nickerson to E. J. Kahn, a sympathetic New Yorker writer who himself owns a summer house on proposed park land.

The Park Service, alternately wielding stick and carrot, pointed out to those anxious to save the cape that the newly completed highway down the spine of the cape would mean that the relative inaccessibility of the lower cape was not at an end and that the townships themselves would be powerless to stop developers from erecting the pizza palaces, bowling alleys, startling motels and lurid signs which have so completely despoiled the upper cape. Only the National Park Service, so ran its message, could really undertake to preserve the area and see that it was developed in keeping with its traditions.

A DOME-RATTLING FUROR

While pro-park and anti-park factions formed and argued on the cape itself, both

houses of the Massachusetts Legislature came out in favor of the park. Then in March of 1959 the Park Service issued two documents outlining the boundaries of the proposed park; it was to encompass 28,645 acres, almost 18,000 of which are privately owned. More than 600 homeowners would find themselves camping on park property, with the towns of Truro and Wellfleet suffering the greatest property loss. The furor which followed rattled off the golden dome of Boston's statehouse and echoed all the way to Washington.

"Everyone is in favor of a national park in theory," said a Senate staff member, "but wait until you want an acre of their land. On the other hand," he reflected, "how would you like a family with three children, two dogs, and a picnic basket romping across your backyard every day?" The cape is a place which breeds fierce loyalties, and so many of the families involved have lived in the same area, if not the same house, for generations that when Harvard Prof. Serge Chermayeff rose to speak at one of the public hearings, he apologized "for daring to love the cape after a flirtation of only 17 years."

Conrad Wirth, Director of the Park Service, came to the cape himself to explain what it meant to be a tenant on park land. Formerly private owners on public land had been given the choice of selling their property to the Government at a negotiated price or having a 25-year or life tenure. The towns involved might well be recompensed for their tax losses by a special grant of Congress.

Mr. Wirth's manner was a little insouciant for the cape's threatened residents. Mrs. Walter P. Chrysler, Jr., whose husband owns property in Wellfleet and who has just shelved plans for building an opulent house there, decided that "this seizure of property, however adequate or inadequate the compensation, differs little from the movement, displacement, and often annihilation of large populations in Communist countries." She likened Cape Codders to "the Dalai Lama of Tibet, exiled to a new land by the aggression of the Chinese Communists."

Cooler heads than Mrs. Chrysler's were working in the meantime to solve some of the problems involved. Senators LEVERETT SALTONSTALL and JOHN F. KENNEDY collaborated with Representative HASTINGS KEITH on a bill which, while advancing the park, asked for concessions to local residents unique in the annals of the Park Service.

Senator KENNEDY wrote of Cape Cod that although "it lacks none of the natural beauty and scenic splendor which characterizes most of the national parks, it is not an unsettled wilderness or forest area. Particularly since there are residents whose roots on the cape reach back far into the past, it seems important to adapt a bill in such a way as to meet the legitimate interests and sentiments of existing residents." The bill provided that homeowners should not be required to give up their property rights as long as "acceptable" zoning was enforced. Furthermore, the six lower cape towns would receive very substantial financial assistance and might in the future develop for residential housing up to 10 percent of the total private land within park boundaries.

In December 1959, a hearing was held in Eastham on Cape Cod, by the Subcommittee on Public Lands of the Senate Committee on Interior and Insular Affairs, with Senator FRANK MOSS of Utah presiding. The Kennedy-SaltonSTALL-Keith bill had done a great deal to alleviate the hostility of the anti-park faction by considering the human aspects. The dissidents still rallied chiefly around the economic threat to the towns. But some residents still had their personal reasons. Dr. Madalene Winslow, a tall, formidable woman whose ancestors arrived in Provincetown on a little sloop called the *Mayflower*, told the chairman that the proposed legislation made no provision for the picking of beach plums, blueberries, pine cones, bay-

berries, and rose hips, which cape families pick and preserve to supplement their income. She recalled a recent experience on a public beach when she was accosted by an official. "I was astounded when I was told to put my rose hips down," she said. "I did what a lot of people will do. I waited until that person had left. Then I picked them up and took them home and made my Rosa rugosa jam."

Joshua Nickerson still claimed that the cape is a homeland and not place to be gaped at. Francis Biddle, the former U.S. Attorney General, who divides his time between Cape Cod and Washington, declared: "You cannot have recreation and preservation at the same place at the same time" and expressed his aversion to the inclusion of the upland area, where he owns 20 acres. Professor Chermayeff, the self-confessed flirt, agreed that the recreational use of back-of-the-beach land should be strictly limited. "It's a miniature landscape," explained the professor. "A parking lot for 100 cars would leave a gash in the countryside. The very conservation of which you speak would fail."

Chermayeff went on to sum up what is perhaps the dominant feeling of the residents. "Whether we like it or not," he said, "the Cape has become accessible. The change coming to the Cape means it has to change. It is important to become reconciled. I am entirely for the park because it will give braking power to the change."

It is now 6 years since the land was surveyed by the Park Service. It may be another 2 years before the Service gets some of the land it wants. "I don't care which bill is passed," says Conrad Wirth, wistfully. "I'd just like to save some seashore."

The trouble is that on Cape Cod, as everywhere in the United States, time is running out. Given fair weather, bulldozers across the Nation will rip up another 3,000 acres of open land today. Another 4 million Americans will be born into this land this year. In the past conservationists have liked to quote Isaiah: "Woe unto them that join house to house" and to speak darkly of "rape," "plunder," and "frustrated futures." They may have been right—unless we take our point of departure from the evidence which is becoming clearer each day: there are no piecemeal solutions to the land problems of urban America.

Is there any solution at all? There is. In one of our great States, a small group of professionals has over the past 3 years taken a hard look at the people and resources of their State. In Washington, D.C., a group of distinguished citizens, working as a Federal Commission, is performing the same task for the country as a whole. The concepts of social conservation are being put to work right now. The results are of the greatest importance to every American.

Explanation of Provisions of Bill To Adjust Postal Rates, and for Other Purposes

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. KEARNS. Mr. Speaker, the bill increases the rates on third-class mail which consists of circulars, merchandise, books, catalogs, seeds, plants, and so forth, in parcels weighing less than 16 ounces.

When fully effective, namely, January 1, 1962, it is estimated that these rates

will produce revenues sufficient to cover the cost of handling third-class mail.

The single piece third-class rate is increased in two steps from the present 3 cents for the first 2 ounces and 1½ cents for each additional ounce to 4 cents for the first 2 ounces and 2 cents for each additional ounce, effective July 1, 1960. On and after July 1, 1962, the rate will increase to 4 cents for each 2 ounces.

The bulk rates are revised upward. The current 16 cents per pound rate for circulars and merchandise is increased to 18 cents per pound on January 1, 1961, and 21 cents per pound on January 1, 1962.

The bulk pound rate of 10 cents per pound for books, catalogs, seeds, plants, and so forth, is increased from 10 cents per pound to 14 cents per pound on January 1, 1961, and to 18 cents per pound on January 1, 1962.

The current minimum piece charges in the existing law are retained but increased from 2½ cents to 3 cents on January 1, 1961, and to 3½ cents on July 1, 1962.

The minimum charge for odd-size pieces is increased from 3½ cents to 4½ cents, effective July 1, 1960.

Communist Penetration in Latin America

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. SMATHERS. Mr. President, the danger of Communist penetration in Latin America is surely a real one.

Those of us who have been privileged to visit Latin America recently have seen clear-cut signs of the gains made by the international Communist conspiracy in several countries—and have spoken out about the danger. We have also seen the grave threat that Communist activity poses to several newly-established democratic governments of Latin America.

Even our President, on his recent tour of South America, was the target of a few ugly Communist-inspired incidents.

A short time ago I read a concise, and to my mind, accurate evaluation of the Communist situation in the Southern Hemisphere today. The article, titled "Moscow Marches Into Latin America," was written by Jack Anderson, and was published in *Parade* magazine.

I urge every Senator, who has not already done so, to read this article. I ask unanimous consent that the article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

MOSCOW MARCHES INTO LATIN AMERICA—ON THE EVE OF EISENHOWER'S VISIT, HERE IS COUNTRY-BY-COUNTRY REPORT ON THE COLD WAR TO THE SOUTH

(By Jack Anderson)

WASHINGTON, D.C.—President Eisenhower will begin his Latin American tour next week,

and not a moment too soon. For the whole area is seething with unrest. The angry mobs that greeted Vice President Nixon in 1958 still lurk in the slums. Their resentments have been inflamed by Cuba's Fidel Castro. And communism is making steady headway—creeping in some places, marching in others, but everywhere gaining ground.

One of the first targets of the Red offensive may be the toughest to crack. Recently, Moscow moved into Mexico with its famous Soviet trade fair. Mexico is better off than many of her neighbors and she is a faithful friend of the United States. But even Mexico offers cause for worry.

What about our other neighbors to the south? Recently a sober friend of the United States, Brazil's President Juscelino Kubitschek, warned the State Department: "Your problems with Cuba may seem a mild squall in comparison to what could happen here." Why are our amigos mad at us? Why is communism gaining ground, the United States losing it?

Recently, *Parade* investigated this question in depth. Reporters talked to State Department sources, Latin American diplomats, intelligence agents, economic experts. They read intelligence reports and visited several of the countries firsthand.

In general, Latin America has been caught up in a great social revolution. Since 1952, eight countries have overthrown dictatorships. But the people still are in an ugly mood. They judge their own poverty by U.S. standards. Theirs is a consumer revolution that democratic leaders, lacking the goods, cannot pacify.

Communists, quick to exploit dissatisfaction, offer Yankee imperialism as the scapegoat. Their campaign is directed from Soviet and satellite embassies, newly swollen with Latin American experts. Russia also is building cultural centers (latest count: 89 centers, 36 exhibits) and sending economic emissaries. And recently, Red China has become even more active than Russia in spreading subversion below the border.

This is the world's fastest growing area, and will finish the century with double North America's population. It is making rapid progress in education and technology. Thus it could be to us what Red China is to Russia: a friend for the present but a future challenge if the political tide should turn.

Here is a country-by-country report on the danger at our doorstep:

CUBA

Bearded, wild-eyed Fidel Castro, whose TV performances are rigged against the United States, has become a hero to Latin America's dirty-shirt crowd. Although he frenziedly denies he is a Communist, Communists have moved into his army, air force, police, and civil service. Of 17 trade unions, 4 are completely Communist-controlled and 6 are deeply infiltrated. Castro's economic boss is Argentine Communist Ernesto (Che) Guevara.

Havana has become a haven for known Communist agents—Russian, Chinese, Hungarian, and Polish—who are issued Cuban passports for travel through Latin America. In Havana's Chinese community the Chinese Communists now publish a newspaper.

From the idealist fighting for freedom, Castro has changed into an almost paranoid tyrant. He now exercises more control over the Cuban people than did his hated enemy, Batista. But, unlike Batista, Castro has the people behind him. Street mobs follow him blindly; the guajros, or peasants, look upon him as their Moses; chorus girls sing his slogans; even jailbirds have given up their cigarette allowances in response to his appeal for arms money.

Those who oppose Castro are winding up behind bars. Already 3,000 political prisoners languish in Cuba's jails—not a few of them his own revolutionaries, now accused of treason. By far the most sinister aspect

of Castro's rule, however, is his recruiting, training, and arming soldiers of fortune to plant his "democracy" on other soil. Recent expeditions against Panama and Nicaragua were Cuban equipped and Cuban directed.

What is behind Castro's violent, vicious anti-American tirades? Many experts believe his anti-Americanism is an inspired Communist maneuver to provide a cloak for his own chaotic administration and for further Communist infiltration of Latin America. Some authorities even suggest that Castro would like the United States to attempt to intervene so he would have an open excuse for inviting Russian help. The State Department is trying to be patiently tolerant toward Castro, but there is grave concern in Washington.

PANAMA

Inspired by Nasser's seizure of the Suez Canal and encouraged by Castro's defiance of the Yankee giant, Panamanian nationalists are demanding a bigger cut of the Panama Canal's \$83 million annual revenue. But even more, they want the right to fly their flag in the Canal Zone.

The few Communists in Panama have been happily stirring up the Canal strife. But the biggest source of agitation is the United Arab Republic's Embassy. It still is actively encouraging and coaching nationalists.

For years Panamanians have not been happy about the way the United States has run the Canal Zone. One cause of trouble was eliminated in 1955 when it was agreed there no longer would be different wage scales for Panamanian and American employees.

The President's brother, Dr. Milton Eisenhower, first recommended hoisting the Panamanian flag alongside the Stars and Stripes. But the army kept raising technical objections until anti-American rioting flared up. Surrender on the issue now would be interpreted as a mob triumph and might encourage Panamanians to substitute rioting for negotiation.

ECUADOR

Intelligence Chief Allen Dulles has warned that Communists mean to disrupt the Inter-American Conference in Quito this year. The aim is to repeat the Bogotazo uprising that marred the Bogota conference in 1948. Only the strength of the late Gen. George Marshall, then Secretary of State, kept that conference going when frightened Latin statesmen wanted to head for home.

The Communist design is to start with innocent political parades, fanning traditional jealousies between the cities of Quito and Guayaquil. Quito has the political power; Guayaquil is the main port and financial center. Three times last year Communists whipped local incidents into major riots, causing more than 100 deaths. Each one was born in Guayaquil's slums, one of the worst Red swamps in Latin America.

BOLIVIA

It is often said that Bolivia is South America's chronic sick man. Her ailments, deep poverty, and a depressed tin industry, have not abated. And Bolivia is particularly sensitive to U.S. criticism: Riots broke out last year when a U.S. magazine suggested the nation be parceled out among its neighbors.

Part of Bolivia's problem dates back to the 1952 revolution, a social revolution that upset the old structure of wealth and landholding. Reorganization after the upheaval still causes many wrenches and upsets. And Bolivians are angry at U.S. tariff policy, which serves to protect the American tin industry against Latin competition.

CHILE

Chile will be President Eisenhower's third stop. Her government is democratic, staunchly pro-American and anti-Castro. Last year, when Cuba's defense minister,

Raul Castro, flew to the Santiago conference, he was given a polite brushoff. A minor official came to greet him; his plane was kept waiting on the runway; his luggage was searched and his inoculations record questioned.

But unrest has hit Chile, too, and from an expected quarter: Santiago's Chinese community, which has become a haven for Red Chinese propaganda. Like their neighbors, Chileans are angry over U.S. tariffs, which hurt tin and nitrate industries. Inflation is another issue. The present government won the last election because of a split in the leftwing vote, but now there is occasional talk of revolution.

PERU

Although Vice President NIXON was heckled in Lima, Peru's capital, the government here is considered pro-United States and fairly strong. It is in danger, however, from both right and left. Communists have made some inroads among students, and the copper miners' union is believed infiltrated. And recently there has been talk that Gen. Manuel Odría, Peru's last dictator, may return and run for the presidency in a democratic election. He is still popular with some elements, and could win.

ARGENTINA

Once the richest Latin American Republic, Argentina, the President's second stop, is striving to ride out the most serious economic storm in its history—the legacy of dictator Juan Perón, who left no gold reserve and sent the peso plummeting. President Arturo Frondizi's belt-tightening policies have not been popular, and this has kept the nation on the brink of revolution, which constantly flares up in the form of strikes and riots. The Communists have formed a back-alley partnership with the Peronistas (Perón's old supporters) and are seizing every excuse to widen the breach between president and people. They tried to oust Frondizi last June, but they underestimated him. He is still in office; they are in hiding.

Frondizi, who has the backing of businessmen, brokers, and bankers, was originally supported by the Communists but now believes coexistence with them impossible. He needs 6 months of domestic peace before Argentina can begin to recover. If he fails, there may be no alternative but a dictatorship.

BRAZIL

U.S. relations with Brazil—the President's first stop on his trip—are at their lowest ebb in modern times. Brazilian leaders accuse the United States of treating their vast country as if it were a tiny Caribbean republic. As a sort of economic declaration of independence, they signed a deal late last year with Russia for \$200 million in foreign credits.

In this year's presidential election, soaring inflation and grinding poverty will be the campaign issues. The United States can expect to be roundly blamed for both. The Brazilian press is almost universally hostile to the United States. Brazilian leaders have appealed for a dramatic gesture such as the Marshall plan as evidence that the United States is not indifferent. If aid is not forthcoming, Brazil may start slipping away from the West.

VENEZUELA

Although Venezuela is enjoying an oil boom and has cash in the bank, Caracas, the capital, is ringed by slums whose inhabitants are nourished on Communist propaganda. Their frustrations could burst into riots, even revolution.

President Romulo Betancourt has given Venezuela a constitutional government, popularly chosen, for the first time in history. He has made headway in setting up new industries, selling oil abroad, and starting low-cost housing projects. Betancourt also

has brought leaders of other parties into his government. Only the Communists have been frozen out.

DOMINICAN REPUBLIC

For more than 29 years, Rafael Leonidas Trujillo has ruled the Dominican people as absolute boss and has rarely lost a night's sleep. Now Fidel Castro has him awake nights.

Although the Republic's economy slumped 20 percent from July to October, Trujillo went on an arms-buying spree. Army officers and civil servants were called on to donate a month's salary to foot the bill, following the example set by free-spending, film-star-loving Gen. Rafael Trujillo, Jr., who gave up a \$3,000 monthly pay check.

Trujillo's fears are by no means groundless. Two Cuban-based rebel forces have invaded the Republic. Although both were repulsed handsily, they rattled Trujillo badly. And intelligence reports have it that another invasion force is in training on Cuba's Isle of Pines. It is said to consist of 3,000 desperate men recruited from the ranks of common criminals.

NICARAGUA

President Luis Somoza, a dictator trying desperately to change his spots, has two crosses to bear: his father's name and Fidel Castro's ambition.

Somoza the elder, murdered by an assassin 4 years ago, ruled Nicaragua for 20 years. His sons, Luis and Anastasio Jr., have tried to erase old hatreds. But two rebel bands have drawn a bead on the Somozas. One is Cuban-trained, Communist-inspired, and Castro-directed. The other is anti-Communist and wary of the Cubans. The first tried an invasion by aid from Costa Rica. After a 4-hour fight three rebels and three Somoza soldiers were killed. The 45-man anti-Communist attempt at invasion bogged down right at the start.

The threat of invasion has prevented the Somoza brothers from relaxing their grip as much as they apparently would like. For hate of the family is rife, and Castro will not be curbed by one small reverse.

PARAGUAY

After a brief flirtation with democracy ("I am to perfect a durable democratic regime"), Paraguay's 46-year-old dictator, Gen. Alfredo Stroessner, abandoned the idea. The end came when 800 high school students, protesting a trolley fare increase, were beaten and tear-gassed by police. The government canceled the increase, but 1,000 students marched on Asuncion's largest school. They were met by police who flogged them.

When Congress voted to "condemn the police methods," Stroessner decided that democracy had gone far enough. Now he is back running an absolute dictatorship, one of the chanciest jobs in this age.

COLOMBIA

Colombia's rule is democratic but she also has economic problems, partly the result of looting by past dictators and partly because of her 1-crop coffee economy. Armed bands roam the countryside, attacking small towns. One source compared it to "the Wild West with machetes." The casualty rate from bandits is eight deaths a day. Neither the police nor the army in this troubled nation has been able to deal with them.

URUGUAY

This sound, sincere little democracy of wool-growers—the President's last stop—now is having troubles, for which the blame is placed primarily on the U.S. wool tariff. Quick to foment strife, Russia is pouring in propaganda.

And Montevideo, Uruguay's capital, seems to be a center of Communist intrigue. The Soviet Embassy has a staff of 70, gets more than 50 pouches of directives from Moscow every week. Five officials always meet the

pouches at Montevideo airport, hustle them straight to the Ambassador's residence. From here the Communist word is believed to fan out through the hemisphere.

GUATEMALA

Having once had entree to the presidential palace, Communists now are trying to get back in. A campaign of sabotage, bombing, and terrorism has begun in an attempt to oust conservative President Ydigoras Fuentes and replace him with former President Jacob Arbenz, a pro-Communist now in exile in Uruguay. Arbenz has declared himself ready to launch his coup from there.

HAITI

The U.S. Marines are back in Haiti, this time at the invitation of President Francois Duvalier. Duvalier invited them when he found himself caught between two strong-arm neighbors, Cuba's Castro and the Dominican Republic's Trujillo.

Duvalier seems to have been hexed since he took over the tiny republic. One of his chief problems—incongruous in this age—is that uneducated Haitians still believe in voodoo charms and his enemies keep trying to break his spell over his countrymen.

While few others of our Latin neighbors adhere to voodoo, Duvalier's problems in a sense typify those of the whole area. For every nation has its own difficulties with ignorance, poor education facilities, superstition, and disease. Almost the entire hemisphere suffers from abject poverty, crippling inflation, and underdeveloped resources. It is making progress, but there still are too many voids for many Latins. And where voids exist, quick-stepping communism is ready to march in.

HOW THE REDS WOO MEXICO

(By Thayer Waldo)

MEXICO CITY.—More than 900,000 persons flocked into National Auditorium here recently to see the 2,400 exhibits of the famed Soviet trade exposition, making its first stop outside the United States. At the same time, Soviet Deputy Premier Anastas Mikoyan came to call. Composer Dmitri Shostakovich gave concerts. A 26-member Soviet delegation showed up at the Acapulco film festival.

It was all part of a \$500,000 propaganda offensive directed from Moscow. What kind of impact did it have?

Parade was on hand to investigate this question with fair visitors. And as the answers above show, most Mexicans are too sophisticated to be bowled over by Russian attention. Typical was the balanced comment of Prof. Eugenio Argudin, who teaches math at National Polytechnic Institute:

"A marvelous display of scientific, industrial, and artistic achievement—but we produce better consumer goods right here in Mexico."

Josefina Chavez Zuniga was blunt:

"I didn't see one item that I'd buy in preference to our own products."

THE COLD WAR

Nonetheless, Russia's big show could prove the single most productive investment in the East-West battle for men's minds. For despite present good relations, Mexicans find it comforting to be reminded that the United States has a strong rival on the international scene.

"Just look at that oilfield machinery," said Angel Marquez, a hacienda field hand, after touring the exhibit. "Communism must be a fine thing and I'm sure Russia is a good place to live."

"For 30 years I've been driving capitalist automobiles, and I can tell you they just don't stand up," said a cabdriver, an admitted Soviet admirer.

And inside the exhibit halls were loose-leaf notebooks with signs urging visitors to

record their impressions. One book had 72 entries; 68 were laudatory. But they had a remarkable sameness of phrasing. "Symbol of the people's progress" was a favorite. The dissenters were outspoken: "Very impressive, very formidable," wrote one. "Now I would like to hear a few words from the Hungarians."

But of all those interviewed by Parade, only three had harsh words for the United States—even among those who spoke glowingly of Russia. "You Americans hold a unique place in history for having tried to be benevolent to all the world," said one left-minded lady.

Mikoyan, the old Armenian trader, was shrewd enough to sense this. There were no attacks on the United States, just the familiar themes of coexistence, peace-is-wonderful, socialism-will-triumph. But he was not above the sly dig: "One reason I love Mexico is that nobody's afraid of the word 'revolution'."

Revolution is a patriotic word in Mexico, where the last big one took place only 50 years back. But today revolution seems far away. For 10 years, Mexico has boomed. A whole new middle class has sprung up—hungry for the good life. In such an atmosphere, communism seldom prospers.

Against such a background, why did the Kremlin pick Mexico to launch its promotion campaign? One explanation was given by Mikoyan: trade. Another is that the exhibits were easy to move down from the United States. And certainly the idea of awakening envy among all Latin peoples was involved. The fair will remain in Havana all this month, and may appear soon in Caracas, Venezuela, and Rio de Janeiro, Brazil.

For all their present prosperity, many Mexicans came, saw, and were impressed. But what will happen in less prosperous nations? There, in the view of such experts as U.S. Ambassador Robert C. Hill, Russia's new propaganda drive could spell real trouble.

Red China: Another Atrocity

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. RODINO. Mr. Speaker, the most recent example of Red Chinese terror and inhumanity is the tragic treatment of Bishop Walsh. I should like to include in the RECORD a recent editorial from the pages of the Newark Evening News:

BISHOP WALSH'S FATE

Americans, regardless of religious persuasion, may hope, however faint such hope may be, that Red China will heed the U.S. Government's formal appeal on behalf of Bishop Walsh, the latest victim of Communist inhumanity.

At 69 and in failing health, Bishop Walsh is condemned to 20 years' imprisonment, in effect a life sentence, as "a longtime U.S. spy." Such is Peiping's way of rewarding this Maryknoll priest, who has served the Chinese people for 42 years. His real crime, of course, has been to spread the word of God to a people under the heel of a godless government.

For any who may have forgotten Red China's atrocities in Tibet, the fate of Bishop Walsh is a reminder of the evil nature of this government which aspires to sit in the United Nations.

More Social Security Means More Taxes

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. CURTIS of Missouri. Mr. Speaker, the Committee on Ways and Means is presently considering in executive session amendments to the Social Security Act.

One of the important issues before the committee is whether or not we will approve an amendment such as that advocated by my colleague from Rhode Island [Mr. FORAND], H.R. 4700 to bring within the framework of the OASI program a new program providing health care for the aged.

In the February 27, 1960, issue of the New Orleans Times-Picayune an excellent editorial appeared dealing with this subject. One of the important and perceptive points made in this editorial points out the great progress that has been made in providing health care protection under a free enterprise system of private insurance. The editorial goes on to comment that a governmental insurance program directed toward the Federal socialization of this protection would do much to either impair or destroy this free enterprise undertaking.

Mr. Speaker, as a part of my remarks I will include the text of that editorial from the Times-Picayune:

SOCIAL SECURITY AND MORE TAXES

Taxes are a primary function of the House Ways and Means Committee, and that is the reason most of the social security bills are before that committee. They are primarily tax bills. If enacted some of them would mean taxes—in capital letters.

A measure like the Forand bill, for instance, would probably hit taxpayers—by way of pay envelop deductions—for about \$2 billion the first year, followed by a big increase year after year. This is the one so drawn as to get the socialization of medicine underway. It would grant to all social security old-age pensioners and dependents (also those eligible for the pension) 120 days a year in hospitals and nursing homes and pay the physicians. The service would have to be obtained from hospitals and doctors listed by the welfare and health department. The Government would pay the money, not to the pensioners, but to the hospitals, nursing homes and doctors.

This venture into socialism would cost real money, of course. Its sponsors say that it would increase the social security pay envelope deductions only one-quarter to one-half of 1 percent—at first, anyway. But the fact is that the payroll cut is already up to 6 percent and in another 9 years will be at least 9 percent without any further liberalizations and without the Forand bill. The way things are going the deduction soon could be 12 or 15 percent (half from employee and half from employer). Add that to the Federal income tax deduction of 20 percent or more plus still more deductions to come, and it can be seen that the take-home could be pretty badly shrunken. Some States are working on the envelope deduction for State income taxes (which are tending to rise) and there is a bill in Congress now to authorize the Government to deduct city transaction or income taxes from the

salaries of Government employees for the account of the city governments.

As an election year gesture, Congressmen feel bound to do something in line of social security—at the public expense, naturally. Maybe they are not quite ready to take the leap into Forand socialism but there are plenty of other envelope-deduction plans they can choose from. Senator JOHN KENNEDY has one in to allow people 65 or over 90 days of hospitalization and 120 days of nursing. That would be very costly also.

The administration, acting through the welfare and health department, is expected to come up with a counterproposition to grant any person 65 or over a hospital policy (not surgery or medical) that would pay the hospitalization after the beneficiary paid the first \$200 or \$250.

In connection with these bills, the public, it seems to us, needs to consider two things: How much payroll deduction it can stand for these social security liberalizations and how far it wants the Government to go with its medical socialization.

Within a few years, we surmise practically everybody will be covered with private pre-paid medical and hospital policies, if the present trend is not interrupted with Federal socialization. The real problem here is to provide policies that will reasonably meet the soaring cost of medicine and nursing. Some hospitalization policies are now fairly adequate but generally insurance policies for medicine and surgery for people over 65 are either too costly or are inadequate.

The 1959 Crop Price-Support Commodity Loans

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. AVERY. Mr. Speaker, you will recall yesterday I included information on loans made under the 1959 crop price support programs by the Commodity Stabilization Service of the Department of Agriculture which amount to more than \$50,000 per producer.

At that time I stated that the \$50,000 limitation which I proposed is higher than desired. It should be reduced to \$25,000 or less, but from a practical standpoint the opposition to my limitation among the Democratic Members of Congress dictates the position of suggesting a \$50,000 limitation if one is hopeful to have such passed.

The following are the 1959 crop price support commodity loans for wheat only under \$50,000 but more than \$25,000 by producer. This report covers only wheat for the loanmaking period terminated on January 31, 1960; and the amounts shown represent loans made, without regard to whether the loans have been repaid or will be repaid before maturity.

If the limitation as suggested in my bill were reduced to \$25,000, the Federal Government would not be required to make similar loans next year. These loans result in a loss to the taxpayer, because it is not required that the repayment be made in money, rather repayment can be made by commodity. This results in a loss of millions of dollars to the taxpayer.

1959 crop price-support commodity loans under \$50,000 but more than \$25,000, by producer

A Report on Civil Rights in the South

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast of last March 16 by the very well known and respected commentator on the daily events of the world, Edward P. Morgan of the American Broadcasting Co. I was particularly impressed by this broadcast and certainly commend it to the attention of my colleagues. Mr. Morgan is recognized for the fairness and con-

ciseness of his very popular program. A transcript of the broadcast follows:

EDWARD P. MORGAN AND THE NEWS, MARCH 16, 1960

What is there, I wonder, which genuinely moves Americans these days? What is there beyond the departure of Jack Paar, the return of Elvis Presley, or the size of Mickey Mantle's salary which generates a real reaction from the public? Do we honestly care about anything, much, beyond the family front door? I would hazard a guess that sometimes, curiously, it is easier for us to identify with and become exercised about a far crisis than a near one—perhaps because the near one would, or should, command responsible action which we'd like to avoid.

If the daily news flowing from Orangeburg, Atlanta, Charlotte, Raleigh, Petersburg, and other southern waypoints were coming instead from New Delhi, Johannesburg, or Algiers, we might follow it excitedly as a major human drama and our top foreign

correspondents would be dispatched to the scene to write the latest graphic chapters in the unending history of men's struggle for freedom. But here at home we have a big segment of the American population in revolt, a moving spectacle which, before it is finished, may well rival the depth and power of Gandhi's shattering successful passive resistance campaign in India. And we react to this convulsion with about as much attention as we ordinarily give the National Safety Council's figures on holiday traffic deaths.

What we are actually facing here in these lunch counter "sit-ins" is only the latest manifestation of a revolution, peaceful so far, but a revolution nevertheless on behalf of 18 million American Negroes. Gradually but massively they are awakening to their constitutional rights and they are determined to get them fulfilled in a freedom they have never really had, either North or South. With sparse exceptions that are scarcely noticeable at the moment, the so-called

leadership of the South has completely refused to grasp the dimensions and the significance of the Negro liberation movement and are treating it with the flatfoot mentality of a country cop, a mentality which the British—with a little more polish perhaps, applied against Gandhi to their everlasting sorrow.

And what about the rest of us, how are we treating this dramatic phenomenon which is making history if not news? We are inclined to toss it aside as somebody else's problem and turn back to the television. If anything is happening in this country which is of profound concern to every one of us it is this heroic struggle of the Negroes to cut themselves loose from second-class citizenship.

Hardly a day goes by in this town but what some aspiring statesman or doom-cracking pundit issues a warning of heavy portent about the deterioration of the democratic system and the need to do something about it. But while we talk, a Negro teenager, not old enough to vote even if his election board would let him, is doing something about it. With quiet courage, he is daily braving tear gas, fire hoses, truncheons, jails, fines, taunts, threats, and grave bodily harm because he believes in something, as other American revolutionaries did before him. He is, as Thurgood Marshall said at Yale on Sunday, fighting our battles for us. What a monstrous pity it is that the white rock-n-roll set appears to have neither the guts nor the guidance to choose the meaningful side of the fight.

At his news conference this morning, President Eisenhower, who has always put such stock in the qualities of good will and human values, was asked whether he thought the current sit-in demonstrations at lunch counters and libraries were commendable examples of moral courage. Until he became entangled in legal technicalities, the President came closer than perhaps he ever has before to outright endorsement of the general Negro cause. He seemed to have been impressed by the discipline and peaceable determination of these participants. "I am deeply sympathetic," he said, "with the efforts of any group to enjoy the rights * * * of equality that they are guaranteed by the Constitution." But he condemned violence from any quarter and he was not sure of the legal rights of a Negro in a public place like a restaurant.

The lunch counter invasions are plainly infractions of local ordinances of State laws, some of them hastily put through. But lawyers differ over the ultimate validity of these statutes. They differed over the salt tax in India and the tea tax in the American colonies, too.

American Treatment of Cuba Shows a Policy of Weakness

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. SMATHERS. Mr. President, for some time I have been concerned about our continuing indecision and lack of firmness in dealing with the steadily worsening situation in Cuba.

My greatest concern is that the State Department policy toward the government of Fidel Castro is clearly a policy of weakness. Even worse, our policy has

now led to the appeasement of Fidel Castro.

The result, of course, is just what we should expect. Our appeasement has triggered more unfair and slanderous attacks against the U.S. Government from Castro's chief lieutenants.

A recent column in the *Palm Beach Times* of March 19, by George Sokolsky, makes this point very clear.

I will now ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN TREATMENT OF CUBA SHOWS A POLICY OF WEAKNESS

(By George Sokolsky)

In a world where power has replaced justice and where war and the preparation for war are constant, it is not surprising that the American attitude toward Castro is regarded as weakness, as cowardice, as accepting insults because the courage is lacking to reject them.

But there is more to it than that. Some American companies have operated in both the United States and Cuba. The principal companies with interests in Cuba are the Cuban American Sugar Refining Co., United Fruit Co., and American Sugar Refining Co.

It is to be noted that a part of the 2-cent-a-pound subsidy which Cuba's sugar receives from the United States goes to American companies growing and manufacturing Cuban sugar. Cuba has a quota which currently amounts to 375,000 tons.

Whatever goes to the Castro government from this subsidy is used to purchase arms for Castro's army, to support revolutionary movements in Latin America, and perhaps eventually to demonstrate an ability to strike at some American spot at a time when it may be inconvenient for the United States to engage in a mopping-up of Cuba.

The weakness of American policy is based on three theories:

1. The United States is morally a better nation than Soviet Russia and, therefore, will not treat Cuba as Soviet Russia treated Hungary.

2. Whatever action is taken against Castro must be taken by the Organization of American States (OAS) and not by the United States solo.

3. The United States does not wish to irritate Soviet Russia prior to the summit conference and, therefore, it is sound to let Russia or Russian satellites get away with crimes during the present ticklish period.

Unfortunately, the formulation of this policy has been left to weak hands. Obviously, it makes no sense and will ultimately lose for us leadership in the Americas as it has lost leadership for us in Asia. Nobody wants to follow a weak leader. John Foster Dulles pulled this country over many hurdles by moving from strength. He prevented the Russians from choosing the time and place for strained relations. The Suez Canal incident must be judged from that standpoint.

The present policy of the United States, which some attribute to the thinking of Dr. Milton Eisenhower, the President's brother, is an idealistic concept of international relations based on the assumption that if nothing is done, Fidel Castro will come to his senses. It reminds one of the ideas of Col. Raymond Robins, way back in 1917-18, who believed that if the Communists were not interfered with they would ultimately come to their senses. By 1960, we know, for sure, that Soviet Russia has become the objective enemy of the United States with industrial and military strength beyond your imagination in 1917.

The same kind of thinking is going into

our attitude toward Castro and we shall probably not wake up to our necessities until this bearded devil throws a bomb on the Panama Canal or on Miami just to show us that he can spit on us. For once and for all, the United States must show that it does not need to take guff from anybody.

The Eisenhower policy of weakness, after he had himself for so many years pursued a policy of strength, is frightening because so much of what is left of freedom in the world depends upon the United States for leadership against Soviet Russia's imperialism. Upon whom are the free and hopeful people to depend if the United States continues its policy of weakness?

Many used to criticize Dean Acheson, when he was Secretary of State, for pursuing a policy of weakness, but, in retrospect, Dean Acheson was a giant of strength compared to what we have now. He, at any rate, attempted to disentangle the United States from the errors of Teheran and Yalta, but now we are risking our national dignity and prestige over a trivial island in the Caribbean. Not only that but we continue to subsidize Castro's government.

What is such a policy expected to accomplish? Politically it is meaningless because Castro knows what Khrushchev knows, namely, that Eisenhower will only be President until next January; that beginning in June, all the political personalities in the United States will be so completely absorbed with the political campaign, that no external question will be considered seriously. It is a good time to make trouble.

Greek Independence Day

EXTENSION OF REMARKS

OF

HON. WILLARD S. CURTIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. CURTIN. Mr. Speaker, tomorrow marks the 139th anniversary of the independence of Greece.

I am very happy to join in the celebration of this day, because the idea of independence, as we understand it, had its birth in Greece, and the Greeks were the first to appreciate and enjoy its benefits. It is true that they lost it for many years, but they never lost sight of its value; and they continually struggled and finally regained their freedom and national independence.

Greece has had its share of misfortunes and miseries, especially during the last two world wars. However, today she is a strategic bastion of the free world against communism. On this 139th anniversary, let us all hope that she will face all dangers that may threaten her in the future with that firm determination and courage which have ever characterized the Greeks throughout their long and glorious history.

Freedom-loving people throughout the world have drawn inspiration from the long, hard, valiant, and epic struggle of the Greek people for their independence. This day has immortalized the bravery and devotion of this proud nation's warriors and martyrs.

Ancient Greece was the cradle of liberty; and apostles of freedom still look to Greece—both ancient and modern—

for those sturdy characteristics which make a people great.

On this anniversary, we of the United States salute the Greek people for their monumental contributions—both past and present—to our country and to our civilization.

Honorably Discharged Veterans With Less Than 90 Days' Service Deserve Equality of Treatment

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. SANTANGELO. Mr. Speaker in recent days many distinguished Members of this eminent body have raised their voices against the unfair treatment and lack of consideration which our country has given to certain segments of our population. To the list of groups unfairly treated, Mr. Speaker, I would add another. I refer to the veterans of the two World Wars and the Korean conflict, of less than 90 days' service, in the matter of non-service-connected disability pension. This is caused by section 521(b) of title 38 of the Code which prescribes 90 days of service, or a service-connected disability as qualifying factors for benefits.

World Wars I and II, and the Korean conflict, to which the pertinent section of the Code is applicable, were certainly no brush fires; they were, I submit, periods of the greatest emergency and peril. A grateful people should remember that every individual who entered the service of this country in those perilous times offered his life for the great principle at stake, and it matters little as to the period of time this Nation required his services. The time of 3 months, or 2, months, or 1 month, or a year furnishes no evidence as to the value of the veteran's services to his country in those precarious periods.

Many of these men had to tear up their roots in industry and in employment. Many men closed down their businesses, never to be regained. The economic harm suffered by them because of their entry into the service has never been properly compensated. Arbitrary distinctions for those who have served over 3 months and those who have served less than 3 months have accentuated the harshness and the unfair treatment. A man who has been inducted into service and who has been honorably discharged should receive equal treatment in the hands of the Government which calls him.

Mr. Speaker, I trust that in due course this body will approve the bill I am today introducing, the effect of which will be to remove from the law the provision which is unfair to veterans of World Wars I and II and the Korean conflict of less than 90-days' service in the matter of non-service-connected disability pension.

Proposed Legislation To Improve the Social Security Act

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. FINO. Mr. Speaker, there has been a great deal of discussion during the present session regarding the advisability of providing medical insurance for our senior citizens. It has been suggested that this might be accomplished through an extension of the social security program. It seems to me that the importance of this issue should not obscure other issues in social security, or the fact that many inequities and inadequacies still exist in that program. As the proportion of older persons in our Nation grows, the importance of providing them security against degrading poverty also grows. For the past 8 years, as a Member of this Congress, I have fought to humanize and liberalize our present system. Today, I would like to discuss five bills which I think will go a long way toward improving the Social Security Act.

First, H.R. 3901 would increase the minimum monthly benefit from \$33 to \$50. This is not a new idea. I urged that this step be taken in 1956, when the minimum benefit was only \$30. Of course, the \$3 increase voted in the 1958 amendments was a step in the right direction. But \$33 was certainly not enough to live on then and is not enough now, since the cost of living has continued to increase. This seems all the more distressing since the group receiving the minimum benefit is almost by definition the group least able to provide old-age security out of its own resources. Fifty dollars per month is little enough to provide food, clothing, and shelter, but it would come a great deal nearer to that goal than does the present minimum.

Second, H.R. 4799 would repeal the so-called retirement test. As I have already noted, the minimum benefit under the Social Security Act is not enough to keep body and soul together. The same is true where persons are receiving more than the minimum. The maximum possible individual benefit at the present time is \$1,524 per year, and the average only \$890. This means that many individuals must work to support themselves even after reaching retirement age. Yet, under the retirement test, we begin to take away the meager benefits when the individual begins to earn any significant amount. This seems basically unfair since it hurts the people who are most in need. An individual who has substantial income from investment may keep all of that income and his social security benefits too. It also seems unfair that we tax workers in order to provide security in old age, and then reduce or refuse benefits when they reach the prescribed age. But, even if it were necessary that we have a retirement test, present law op-

erates so inequitably and capriciously that I think we should at least repeal it and start over. For instance, if a man can bunch all of his earnings in one month or a few months, he can still get his social security benefits for all the other months, no matter how much his earnings totalled for the year. To my mind this needlessly discriminates against those individuals who can only work at steady jobs for steady wages.

On the other end of the scale, Mr. Speaker, a man who works steadily for steady wages can actually come out with less income from combined earnings and benefits than if he had never worked at all. For instance, if the man earned \$1,200.01 in a year, he would lose a full month's benefit, which could amount to over \$100. Although I have urged since 1954 legislation improving the retirement test so as to remove these inequities, we have not succeeded in doing so. Therefore, I think we ought to do away with it entirely.

My third bill, H.R. 5308 would eliminate the provisions of present law which reduce the old-age or wife's insurance benefits of a woman becoming entitled to such benefits before she attains age 65. This too is not a new idea and, in fact, was part of H.R. 7225 which passed this body in 1955. The report on that bill by the Committee on Ways and Means stated the situation quite clearly:

The principle underlying wife's benefits under old-age and survivors insurance is that a married couple should not have to get along on the same amount that is sufficient for a single person. Wives are generally a few years younger than their husbands. Thus, when the husband has to retire many couples have only the husband's benefit until the wife also reaches age 65.

The age of eligibility should be reduced to 62 for women workers, also. A recent study . . . showed that age limits are applied more frequently to job openings for women than for men and that the age limits applied are lower.

These principles have now been recognized, but have not been fully implemented. It is granted that the retirement age should be lower for women because to do otherwise would ignore realities. Nevertheless, present law seems based on the supposition that a woman who retires at age 62 requires a smaller amount upon which to live than if she retires at age 65. It seems to me this supposition is fanciful, and that the provision which is based upon it works undue and unnecessary hardship on women who are precluded from working past age 62 by conditions in the labor market over which they have no control.

I hope that my reference to the present retirement ages will not be construed as approval of them. In fact, I feel that the retirement ages for both men and women should be lowered to levels more in accord with the present condition of the labor market and the changes which are taking place in it. For instance, this Nation has already seen several great changes in its industrial makeup. The introduction of mass production was one. Each of these changes has been accompanied by the displacement of large numbers of workers who gained their livelihood in the older means of produc-

tion or the older industry. Those workers of advanced years suffered great hardship because they could not market their skills under new circumstances, and could not reasonably be expected to acquire new skills and learn new trades.

It seems clear to me, Mr. Speaker, that such a change is again taking place in this country. Automation is making itself felt in many industries today, and will in the near future affect many more. This change necessitates a reexamination of the present concepts of retirement. As men are replaced by machines, we will be faced with the increasing problem of workers of advanced years whose skills have become unmarketable, who cannot reasonably be expected to acquire new skills, who cannot compete with younger workers in the unskilled trades, and who are still under present retirement age. If the social security program is to provide adequate protection against such risks, it must make its benefits available when they are needed, and not after the worker has been forced to endure a period of poverty or dependence on his children. Therefore, I urge that this body pass my fourth bill, H.R. 2759, which would reduce the retirement age for men to 60 and the retirement age for women to 55. The need for such an amendment to the Social Security Act has already arisen, and will increase in the near future. I think we should do something about it before, not after, it reaches catastrophic proportions.

The fifth and last proposal which I intend to discuss is H.R. 5394. In 1956 we took a great step forward in social security by providing for social insurance against the loss of earning capacity due to physical or mental disability. This legislation partially closed one of the largest gaps in the protection afforded by the social security program. I say partially because present provisions fall a great deal short of answering all our present needs. For instance, only those disabled persons who are 50 years of age or older can qualify for disability benefits. This purely arbitrary dividing line excludes from benefits thousands of disabled workers and their dependents who are suffering great hardship because of the inability of the family worker to maintain them by working. In fact, it seems to me that the disabled persons under age 50 are more likely to be in need of such benefits than persons over age 50 since the younger workers are much more likely to have families, particularly children, dependent on their earnings. Therefore, my bill would remove the arbitrary age 50 requirement and make disability benefits available to any individual meeting the coverage requirements of the present law. I might add that the taxes we have already imposed on workers in order to provide disability insurance would defray the added cost of my bill so that no increase in the tax would be necessary. This fact was brought out at the recent hearings held by Subcommittee on the Administration of the Social Security Laws of the Committee on Ways and Means. In addition, representatives of the Department of Health, Education, and Wel-

fare testified that removal of the age 50 requirement would present no administrative difficulties. Since we are already taxing the people an amount sufficient to provide such increased protection, I see no reason why we should not give it to them.

It seems to me, Mr. Speaker, that the strength of the social security system depends on our ability and willingness to mold it to meet current needs. These must be evaluated to a realistic way. First and foremost we should always remember that the statistics we deal with must always at some point be translated into human situations. I think the five bills I have discussed today are based on a realistic evaluation of human needs and that they propose changes which must be made to meet those needs.

Weaknesses of the Referee System

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Mrs. A. Powell Davies, chairman of the Unitarian Fellowship for Social Justice, to the editor of the Washington Post and Times Herald, and published in that newspaper today. The letter points out the weaknesses in the referee system and advocates an administrative rather than a judicial process for restoring voting rights. Mrs. Davies is distinguished in her own right as the widow of the noted Rev. A. Powell Davies, formerly minister of the All Souls Unitarian Church, of Washington.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TEST FOR CONGRESS

It is almost 90 years since our Nation guaranteed in the 15th amendment, that: "The right of the citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color or previous condition of servitude."

The amendment did not limit its force to Federal voting. It specifically applied its prohibitions to "any State," and that means, and still means, Georgia, Alabama and Mississippi, and other States where large groups of even well-educated Negroes are being swindled out of the right to vote.

Yet the House of Representatives came within three votes last Friday of limiting the application of a watered-down voting-rights remnant of the civil rights program to Federal elections, which would have left local elections in the hands of the white officials who have been denying Negroes their constitutional rights.

Technically the gap may seem quite narrow between the proposal for Federal voting registrars appointed by the President and referees appointed by a Federal judge. Morally the difference is measured by the distance between law and the evasion of law. The referee plan, supported by the administration, even though it is advanced in good

faith by some of its proponents, would leave the Negro voter in approximately the same position he occupies today, because the legal machinery lends itself to continuous manipulation by those who do not believe in its purpose.

The President's Commission on Civil Rights, after long study of the problem, has recommended an administrative rather than a judicial process to restore voting rights. We believe that the Commission is right, and that the referee-judicial machinery is too costly and too complicated for the average voter to handle in prevailing circumstances.

Mrs. A. POWELL DAVIES,

Chairman, Unitarian Fellowship for Social Justice.
WASHINGTON.

An Open Letter to Teachers

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, my great friend and former classmate, the Honorable Edmund C. Bunker, vice president, Columbia Broadcasting System, has kindly called to my attention the article included, herewith.

I have asked Mr. BUNKER to allow me to place this fine article in the CONGRESSIONAL RECORD. This indicates what one of our great networks is doing to give America wholesome and cultural entertainment.

The article follows:

AN OPEN LETTER TO TEACHERS

If the great New York Philharmonic were going to play in your town tonight, would you urge the boys and girls in your class to attend? If Bernstein or Stokowski or Mitropoulos were going to conduct Beethoven or Mozart or Bartok, would you encourage your students to experience this important event? We feel that you would.

Every week the New York Philharmonic does play in almost every town across America, over CBS Radio. No one has to stir from home. No one has to buy a ticket. A radio is your front seat.

This is just one of many programs on CBS radio that make a deliberate effort to bring your community cultural, informative, educational and, just as important, entertaining events that awaken your students to new ideas and great occasions, that teach them that the arts are for enjoying, that learning is for living, and show them the work you do in class extends far beyond the schoolroom blackboard.

Every week your students can attend the concerts of the magnificent Cleveland Symphony under the direction of George Szell. They can enjoy a weekly performance of the Metropolitan Opera during its season. So many young people have learned from these broadcasts that "Faust" and "Carmen" are exciting stories; that opera singers have as much to offer them as popular singers, that intermission features like Clifton Fadiman's interviews or Edward Downes' "Opera Quiz" are great fun. Have you told them how fascinating such worthwhile programs are?

Has it occurred to you to tie in "The Hidden Revolution" series with discussions in current events and social sciences and government? Last year this series won the Peabody Award for outstanding public service.

The subject is the changes and upheavals taking place in the world today. History before it's history. History while it's still a news story. Edward R. Murrow and Howard K. Smith narrate these programs. Your pupils will get to know men like Vice President RICHARD M. NIXON, playwright Archibald MacLeish, Dr. Clyde Kluckhohn, professor of Anthropology at Harvard.

Do your students know how fascinating news can be when they hear it from a man like Lowell Thomas? He has been a cowpuncher, gold miner, college professor, newspaper reporter, editor, historian, lecturer, author of more than 45 books. His gift is an incomparable one. By telling the big, important stories colorfully and concisely, he makes them real and memorable.

Have you alerted your class to the fact that twice each day they can travel to the remote corners of the globe and get the news firsthand from the finest news reporters in the world—the CBS news correspondents? The programs are "World News Roundup" and "The World Tonight." And top newsmen like Eric Sevareid, David Schoenbrun, Daniel Schorr and Winston Burdett tell the story directly from the scene.

In your classwork in government or history have you suggested that your students listen to "Capitol Cloakroom," and "The Leading Question," broadcast each week on the CBS radio network? They'll meet national leaders, get to know their personalities and attitudes, get familiar with important public affairs as they take shape. Fine learning tool for future statesmen.

Is your class aware that by listening to "Face the Nation" on CBS radio they can hear, firsthand, opinions of world figures, as informed reporters question them? Great inspiration for future journalists, and voters.

Do your students know what they are missing by not hearing "Invitation To Learning"? Recently critic Alfred Kazin discussed Mark Twain's "Life on the Mississippi." Every week a well-known authority gives a new breath of life to an important literary work.

Do you realize how many CBS Radio programs are worthy of being made assignments for classroom discussion? Make it a habit to glance at your local daily radio schedules. For just to point out to the boys and girls who sit before you every day the opportunities they may be missing right in their own homes, just to hint that they might actually enjoy "Aida" or Haydn's "Surprise" symphony or a special news program might be opening a career, planting an ambition, enlarging life for them.

Not to open young minds to what lies so close at hand, so eager for use, so ready to serve, so worthwhile, might be to miss one of the great challenges of teaching. For what better way can we stir these young minds to think, to learn by doing, than by suggesting they use their time for something stimulating and constructive, that is theirs simply for the turning of a little knob.

If today radio stopped bringing such events to your town, if the New York Philharmonic no longer brought Beethoven, if "World News Roundup" no longer took you to Algiers and Tokyo, if the Metropolitan Opera performed only for New Yorkers, if intelligent worldwide news programs gave way to sensational headline flashes, if the only music available were rock 'n' roll recordings, then you and your community would be striving to improve the quality of radio. Fortunately CBS radio constantly strives to bring you educational, informative, cultural programs that assure your town the finest broadcasting fare.

It is you, by your interest, who control the quality of programming that is brought to your students, the men and women of tomorrow. Suppose, by your lack of enthusiasm, these wonderful things were no longer available, waiting to be heard. Wouldn't you as a teacher make every effort to bring them back?—CBS Radio Network.

Negro Civil Rights—Letter From Rev. Elmer Fowler and Article From the Chicago Sun-Times

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me by the Reverend Elmer Fowler. His letter deals with the question of civil rights. I also ask unanimous consent to have printed at the same place in the RECORD an article, published in the Chicago Sun-Times of March 21, which relates to a statement made by Gov. Leroy Collins, of Florida, about practices in restaurants in the South.

There being no objection, the letter and the article were ordered to be printed in the RECORD, as follows:

DORIE MILLER
MEMORIAL FOUNDATION, INC.,
Chicago, Ill.

HON. PAUL H. DOUGLAS,
U.S. Senate,
Washington, D.C.

DEAR SIR: From the day in 1619 that the Dutch ship landed the first citizens from Africa at Jamestown, Va., the Negro has struggled, without due compensation, to make the United States a great industrial Nation. From the time of the tilling of the soil, the harvesting of the cotton, the laying of the railroads—in every field of labor—the forebears of the present students in Negro colleges gave of themselves—with their sweat, blood, and tears—these contributions to the world.

Today, in every walk of life, we have descendants of these early Americans represented. These include Ralph Bunche of the United Nations Security Council, Adam Clayton Powell, Congressman from New York; James C. Evans, civilian aid to the Secretary of Defense; Dennis D. Nelson, high-ranking naval official, and thousands of others who are outstanding leaders in their respective fields.

In times when the end of the world is possible by virtue of an atomic war, these young Americans of the Negro race are not satisfied with second-class citizenship and are proving that nothing less than success will satisfy them in their quest for first-class citizenship. We not only praise them but we support them in all phases of their endeavor.

In an unprecedented display of courage in the face of intimidation, economic retaliation and physical violence, thousands of southern students have elected to "fill the jails of the South" rather than be forced or intimidated into turning back in their struggle to end all racial segregation in the Nation their forefathers died to make great.

March 15, in Orangeburg, S.C., more than 400 Negroes were arrested and herded into a compound and immediately trials were begun for breach of peace. Many of those herded into the fenced-in area had been thoroughly soaked from fire hydrants and hoses, then left to mill outside in 40° temperature.

Such action by policemen who are sworn to uphold the law of the land, is typical of the obstinate refusal throughout the South to allow these students means of peaceful pursuit of their goal.

Nine students from Negro Alabama State College were expelled on orders of Alabama

Governor Patterson for their part in an attempt to eat beside white men in the Montgomery courthouse lunchroom.

March 16, the day after mass arrests in Orangeburg and Nashville, Tenn., President Eisenhower stated he thought such demonstrations as are sweeping the South, if orderly and seeking to support the rights of equality, should be permitted. The President stated further he felt some of the demonstrations unquestionably constituted a proper expression of convictions. He said he was deeply sympathetic with the efforts of any group to enjoy the rights of equality guaranteed by the Constitution.

In our appeal to this great legislative body it is evident by the progress of the Negro people and the fight in Montgomery, Ala., and in all sections of this great country and the present sit-down protests below the Potomac that the Negro people will not be content until they are first-class Americans. And each man in the Congress of this Government is being watched as to his speech and his vote to rid this great Nation of the present and long-existing evil of segregation and discrimination because of race, creed and color. It is almost impossible for a Negro American to plead for the expansion of democracy throughout the world without being humiliated because of his status and treatment at home. This is an open plea to this body for men to stop "playing politics" and place the welfare of our Nation in serious consideration as you debate this civil rights bill.

With many thanks, I remain,
Sincerely yours,

Rev. ELMER L. FOWLER.

FLORIDA GOVERNOR HITS STORE TACTICS

The Governor of Florida said Sunday he thought it "unfair and morally wrong" for a department store owner not to allow Negroes to patronize one department while being permitted to trade at others.

Gov. LeRoy Collins spoke on the Negro sit-in demonstrations during a day marked by statements from National Association for the Advancement of Colored People leaders on civil rights and the sit-ins which have led to the arrest of more than 1,000 Negroes in the South since February 1.

Collins, who is known as a moderate on the race issue, spoke to a statewide radio and television audience in the wake of Negro sit-down demonstrations at variety store lunch counters in several Florida cities.

MAY BE LEGAL, BUT—

"As far as I'm concerned," Collins said, "I don't mind saying that if a man has a department store and he invites the public generally to come in his department store and trade, I think then it is unfair and morally wrong for him to single out one department, though, and say he does not want or will not allow Negroes to patronize that one department."

"Now he has a legal right to do this. But I still don't think he can square that right with moral, simple justice. Now you may not agree with that."

In an abstract distributed by his aids in advance of the Governor's TV appearance, Collins' remarks included a statement that Florida variety stores ought to close down their lunch counters unless they can serve white and Negro patrons alike. But Collins speaking without a text, did not say that in his broadcast.

TO NAME COMMITTEE

Collins took to the air in an effort to calm racial tensions stemming from the sit-downs.

The Governor said Jesus Christ warned in the Bible that "every kingdom divided against itself is brought to desolation, and every house divided against itself falls."

"Nothing can aid the Communists more to establish supremacy over this country than racial strife," Collins said.

He announced he would appoint a State biracial advisory committee on racial rela-

tions, and called upon Florida communities to take similar action.

AN UNEASY CALM

An atmosphere of uneasy calm prevailed in the South generally after Saturday's series of arrests and protest meetings against traditionally segregated seating arrangements.

At Savannah, Ga., a boycott of stores which operate segregated lunch counters was voted by a group of Negroes in the wake of 14 arrests, during demonstrations last week.

At Charlotte, N.C., Thurgood Marshall, the NAACP's chief lawyer, said his organization will defend with all its resources every person involved in a court action because of "a lawful and peaceful demonstration."

Marshall told newsmen he believed people taking part in sitdown demonstrations cannot rightfully be convicted of trespassing. But he admitted it is uncertain whether a store owner can be required by law to serve Negroes as well as white persons.

FINDS IMPATIENCE

Asked why sitdowns have spread so rapidly, Marshall said he believed Negro young people are impatient with the slowness of court action in furthering what he described as equality.

In Washington, Roy Wilkins, executive secretary of the NAACP, said he thought the Government lax in the "really great social crisis" of civil rights.

In a televised interview on ABC's Open Hearing, he suggested that President Eisenhower could call on Congress to enact his civil rights bill without trimming it down and could fight for it like he's fought for other measures.

A Depletion Allowance for Wage Earners

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. MACK of Illinois. Mr. Speaker, each individual is an exhaustible natural resource. Since I have always favored the principle of providing depletion allowances for those who extract oil and other valuable minerals from the ground, I believe we might consider applying the same principle to persons who work for a living and thereby exhaust their energies.

This could be accomplished by giving individuals a tax credit for earned income. This is not a new idea. The earned income credit appeared on our tax forms for 13 years before it was removed during World War II. The case for reviving this credit is concisely stated in the following article by E. J. Schmidlein, Jr., professor of accounting at Southern Illinois University, from a recent issue of the university's business bulletin:

EARNED INCOME CREDIT IS NEEDED FEDERAL TAX REFORM

(By E. J. Schmidlein, Jr.)

With respect to the national economy, economists and social philosophers agree that the healthiest form of income is earned

income. Fifty years ago, Hobson stated: "The quantity of wealth available for distribution depends upon the stimulus afforded to the productive energies of man: This stimulus in its turn depends chiefly upon the opportunity open to every member of the community to do his best work."¹ Consequently, under any system of incentive taxation, it could be expected that people would be encouraged to produce more, that is, to earn more by a tax structure that would impose less of a burden on the fruits of individual effort than upon unearned income.

Yet, despite all the reforms introduced in recent Federal tax legislation, the painful fact remains that no type of income is more heavily taxed today than is earned income. This despite the fact that we did have an earned income credit in our tax laws for a number of years. However, it became a casualty of World War II. Other wartime expedients have ended, but reinstatement of the earned income credit has been overlooked in favor of tax benefits elsewhere.

Provision has been made for both an exclusion of and a credit for dividend income so that this form of unearned income bears a lower effective tax rate than income that is earned. It may be noted also that a special provision for a retirement income credit has been introduced into the tax law. The result is that retired millionaires are afforded some tax relief while the worker who so laboriously earns his income is taxed in full. Then, too, capital gains have an effective tax ceiling of 25 percent. Moreover, the definition of a capital gain has been stretched to such an extent that income from coal, timber, and cattle operations often are limited to the 25 percent maximum rate of taxation.

Recently, there has been some agitation for an adjustment of the depreciation allowance permitted on business assets. The tax laws allow a deduction for depreciation of business assets that are consumed in the production of income. This provision aims rightly at preserving the capital invested in an enterprise. However, to date, the deduction has been limited to the recovery of the money invested in the assets, and in today's inflationary spiral, recovery of the money investment falls short of the desired goal. Consequently, it has been advocated that the money cost of business assets be adjusted for price level changes so that the depreciation based on the adjusted amount would result in the recovery of the real capital invested. Paton holds that "saving and capital formation are lagging and that this matter is especially serious in view of the continuing inflationary pressures."² He then adds that he is "firmly convinced that the most helpful specific change that might be made in the prevailing tax structure would be recognition, in some form, of the need for converting recorded plant dollars to a current basis in the computation of the depreciation deduction in the tax return."³ No doubt there is considerable merit to the proposal. However, it should be noted that, if inflation continues, as is anticipated, the effect would be lower business taxes due to increased depreciation deductions.

This latest proposal for tax reform points up the peculiarity that accountants do not depreciate the income of a workingman as they depreciate that from a machine since they cannot appraise the value of a human being. Hence, the income from labor, as stated in terms of money, is always larger than it would be if the computation of income from property were taken as the standard. Yet, the professional and laboring man earns an income which is part a salary and part a return on capital invested. From the point of view of an individual, an investment in education or training to acquire earning power is an alternative to the purchase of income-yielding property. As Robinson has pointed out, from the view of the economy as a whole, "The stock of teachers,

doctors, and trained workers of all kinds has to be maintained, by devoting resources to education, in much the same way as the stock of machinery has to be maintained by the engineering industry, and to increase the stock of trained personnel requires investment, just as much as to increase the stock of physical capital goods."⁴

To encourage business investment, the tax laws already provide for a depletion deduction in many instances. As a result, a single individual with earned taxable income of more than \$14,000 falls in the 47-percent tax bracket whereas a Texas oilman with investment income in excess of \$4 million ends up, after a 50-percent depletion deduction, with an effective rate of only 45½ percent on his income. Now, as described above, to further encourage business investment, it is proposed that business be allowed to adjust its depreciation deduction to recover "real" rather than "money" capital. Certainly our country should encourage the investor to invest. On the other hand, it would appear that equitably our country should, at the very least, encourage the earner of income to earn. This is not a new concept as witness the report of the Ways and Means Committee that accompanied the revenue bill of 1924: "The fairness of taxing more lightly the income received as personal compensation for services rendered than income from investment has long been recognized. . . ."

Conceptually, then, an earned income credit appears both equitable and desirable. Practically, there appears to be no reason to bar its reinstatement. The credit appeared on tax forms for 13 years and its return would not complicate the form any more than do the present special treatment items for capital gains, depletion deductions, dividend exclusion and credit, and retirement income credit. Then, too, the proposed reform of depreciation based on price level adjusted assets would complicate the tax return and would aid business. Now, the wage earner should have his turn. The next tax reform needed is an earned income credit for the individual.

The High Price of "Easy" Credit

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "The High Price of 'Easy' Credit," published in the Washington Daily News of today.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

HIGH PRICE OF EASY CREDIT

Senator PAUL DOUGLAS says millions of persons who buy on time, or borrow from some finance companies, are being deceived or misled into paying excessive rates of interest.

One gimmick in the system is credit insurance. Most people don't know they have it. It often is hidden in the costs of the car or appliance they buy on installments, or in the interest rate for the money they borrow.

Credit insurance is legitimate enough—it is the creditors' protection against non-payment of a debt or loan in case the buyer or borrower dies. It also is a protection for survivors. And credit insurance is available from many companies at reasonable rates.

But there are enough gougers to make this a highly profitable racket in most States. Scripps-Howard writer Jack Steele exposed this racket in a series of articles last year and since then insurance commissioners in many States have been trying to combat it.

Senator DOUGLAS now is holding hearings on a truth-in-lending bill he and 19 other Senators have sponsored. This bill would compel the easy credit boys to itemize their service charges, such as interest rates and premiums on credit insurance.

Most of us are careless about fine print. But in some of these loan or installment contracts there isn't even any fine print to tell the customer what he is paying. Since you can't very well outlaw suckers, the only way to protect them is to legislate against those who would cheat them.

This is another case where abuses of a few in a legitimate business probably will result in Government controls over the whole industry. It's a shame this is necessary, but since it is we say to Senator DOUGLAS—go to it.

Progress U.S.A.—Fairfield County, Conn.: Bright Star in U.S. Industrial Sky—No. 1

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. IRWIN. Mr. Speaker, it is with great pride in my district that I request permission to insert into the RECORD, beginning today, a series of articles entitled "Progress U.S.A.—Fairfield County, Conn.: Bright Star in U.S. Industrial Sky."

This series of insertions, Mr. Speaker, will highlight the high place Fairfield County occupies in the Nation's economy.

They will point up the fact that Fairfield County as a labor market ranks 22d among all U.S. manufacturing areas, outranking such centers as Kansas City, Rochester, Indianapolis, and Dayton.

I am indebted to the Fairfield County Trust Co. for the material upon which this series of insertions in the RECORD will be based and wish at this time to insert excerpts from an economic newsletter and fact sheet on the growth and development of Fairfield County as prepared and distributed by that outstanding organization.

The excerpts from the newsletter for September-October 1959 follow:

FAIRFIELD COUNTY: BRIGHT STAR IN U.S. INDUSTRIAL SKY

Fairfield County holds a high place in the U.S. industrial sky.

As a labor market, the region stands 22d among all U.S. manufacturing areas—out-

ranking such centers as Kansas City, Rochester, Indianapolis, and Dayton. Its prolonged housing boom also ranks its construction workforce 32d nationally.

The county's light, medium, and heavier industries produce a wide variety of goods, making it one of the most diversified industrial areas in the country. It ranks as a leader in the output of no fewer than 70 different products, according to Sales Management's Survey of Industrial Buying Power.

Business and industry know it as a center for aircraft frames and engines, copper rolling and drawing, machine tools and dies, office machines, electrical appliances, and rubber and plastic products.

Traditionally a leader in hats, Fairfield County also paces the country as first in the production of asbestos products and phonograph records. For around-the-home use, the county stands high in the production of sewing machines (second), vacuum cleaners (second), and cutlery (fourth).

Turning out products of men's minds has also kept the county on a high rung of the industrial research ladder. The area houses 133, or 37 percent, of the 358 plant laboratories of the research-heavy State, and employs 3,300, or 27 percent, of the State's 12,000 technical and scientific workers.

Come 1985, two heads for every one: A look into Fairfield County's future provided by a 3-year New York metropolitan region

study, conducted by Harvard University for the Regional Plan Association:

By 1975, roughly 1 million people in Fairfield County; by 1985, 1,300,000 or better. This would be double the present 632,000.

Greater shift of routine office activities from New York City, if transit difficulties continue.

Rapidly growing job opportunities.

Major economic growth in store for the more sparsely settled areas of the county.

The outward trek of the middle income groups from the city to Fairfield County is bound to continue, even accelerate.

Norden sets site in Norwalk: The well-known division of United Aircraft Corp. will spend between \$6 and \$10 million to develop an engineering research and manufacturing facility on an 80-acre tract in Norwalk. The site lies between the Connecticut Turnpike and the New York, New Haven, and Hartford Railroad. Division manufactures electronic equipment.

Fertile spot for plant growth: For the first 8 months of 1959, industrial and commercial building in Fairfield County amounted to 2.2 million square feet, according to F. W. Dodge Corp. In dollar terms, this came to \$35.6 million, up 14 percent from last year.

More and more plants are finding Fairfield County to their liking. Since New Year's Day, the Connecticut State Development Commission reported these companies have announced construction plans:

Town	Firm	Space in square feet	Cost	Proposed structure
Bethel.....	Harco Chemical Corp.....	18,000	\$180,000	Factory and office building.
Bridgeport....	Carpenter Steel Co. of New England, Inc.	49,000	340,000	Factory.
Danbury.....	Barden Corp.....	22,000	450,000	Factory addition.
	Collin Campbell Co., Inc.....	10,000	70,000	Factory.
	H. Wibling Tool Co.....			Factory and office building.
Greenwich.....	Homelite Corp.....	5,000	75,000	Office building addition.
	Tricon, Inc.....	12,000	120,000	Factory and office building.
Norwalk.....	Edwards Co. Inc.....	24,000	190,000	Warehouse.
	Winchester Electronics Inc.....	9,000	70,000	Factory addition.
	Zell Products Corp.....	8,000	80,000	Do.
Stamford.....	Barnes Engineering Co.....	17,500	175,000	Research laboratory addition.
	American Machine & Foundry Co.....		170,000	Laboratory addition.
	Polymer Industries Inc.....	21,000	420,000	Manufacturing, office and laboratory.
Trumbull.....	American Machine & Foundry Co.....	15,000	450,000	Office and laboratory addition.
Wilton.....	Tomlinson & Hawley Inc.....	12,000	90,000	Factory.
	C.G.S. Laboratories.....	35,000	425,000	Electronic plant.

Greek Independence Day

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. BRADEMAS. Mr. Speaker, tomorrow, March 25, is the 139th anniversary of the beginning of the struggle of the people of Greece for their independence from the Ottoman Empire. On March 25, 1821 the Greek War of Independence began when the archbishop of Patras raised the flag of freedom in the monastery of Aghia Lavra and the people of Greece dedicated themselves to the attainment of their liberty.

Though nearly a century and a half removed, the atomic age of America can profit greatly from the lessons of the classical age of Greece. These lessons, so basic to liberty-loving civilizations, are freedom, excellence, education and public service.

Upon just how well we learn these lessons may depend the survival of our

political freedom threatened as it is today by the tyranny of communism. In a world where the probable consequence of mediocrity is the enslavement of the human mind, we must strive always for excellence.

To mark the occasion of Greek Independence Day, I have today introduced in the House of Representatives the following resolution:

Whereas the democratic ideals that have made the United States of America the greatest free nation in the world were born many centuries ago in Greece; and

Whereas these ideals have kindled in the hearts of the people of Greece the determination that no sacrifice is too great for the cause of freedom and democracy; and

Whereas in every country people of Greek origin celebrate March 25 as Greek Independence Day, this day marking the beginning on March 25, 1821, of a 7-year struggle of the people of Greece to win their independence from the Ottoman Empire; and

Whereas free men in every nation rejoice that the principles of democracy are again firmly established in the land of their birth: Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be author-

ized and requested to issue a proclamation designating March 25 of each year as Greek Independence Day and that he invite the people of the United States to observe such day with appropriate ceremonies.

Help for the Cuban People

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1960

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Help for the Cuban People," written by David Lawrence and published in U.S. News & World Report for March 21, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HELP FOR THE CUBAN PEOPLE

(By David Lawrence)

Cuba is not just Castro and his clique. Cuba has 6,500,000 people—and they are in serious trouble.

Cuba is a nation in bondage. Relations with the outside world—especially with the United States—have been messed up by a dictator. He professes to be a friend of the Cuban people, but he is beginning to act as if he is their worst enemy.

How can the Cuban people get the truth? Almost without exception, the newspapers and the radio and television stations are controlled. The irrational outbursts of the Government—and little else—are broadcast inside Cuba. Communists are in positions of influence.

The Cuban people today do not know the dangers they face. The truth must be given them at once.

As President Eisenhower reiterated in speeches on his Latin American tour, we champion the right of self-determination. The President said:

"We believe in the right of peoples to choose their own form of government, to build their own institutions, to abide by their own philosophy. But if a tyrannical form of government were imposed from the outside or with outside support—by force, threat or subversion—we would certainly deem this to be a violation of the policy of nonintervention and would expect the Organization of American States, acting under several solemn commitments, to take appropriate collective action."

This is a warning to the Communists in Moscow who have been fishing in Cuba's troubled waters. Already Communist propaganda is widely distributed inside Cuba. Fortunately, we, too, have access to the minds of the Cuban people.

If the friends of Cuba throughout this hemisphere were to organize and supply funds for radio broadcasts in the Spanish language directed to all residents of the island—which is only 90 miles away from us—something might be done to save the Cuban people.

It is important for the facts to be set forth. Cuba's biggest crop is sugar—it brings in about \$500 million a year from sales abroad. Cuba imports much food that she herself could produce. But a balanced economy cannot be attained if unbalanced minds are allowed to run the country.

Many people in the United States are talking about reprisals—about cutting off the subsidy our Government pays now for Cuban sugar. This would be a mistake. The President, however, should be given a flexible power to handle the sugar problem.

If the Castro regime, on the other hand, by its tirades keeps on stirring up bad feeling in the United States, it may be difficult to prevent drastic reprisals by Congress. In such circumstances, while the Cuban people might for a little while live on the fat derived from confiscation of foreign-owned property, the net result might be an increase in our own sugar purchases from Peru, Mexico, and Brazil. This could in a few years make us completely independent of Cuban sugar. Why should the American Government be forced into such a punitive policy?

Only the Cuban people can rescue themselves. They are an intelligent people. Their universities have turned out eminent men. They know the difference between dictatorship and democracy. They would concede that the past dictatorships have brought the present debacle. As President Eisenhower said in his report to the American people:

"Another persistent misunderstanding which I sought to correct wherever I traveled is that we sometimes support dictators. Of course we abhor all tyrannical forms of government, whether of the Left or Right."

But as long as we extend diplomatic recognition to a dictatorship government, we are accused of supporting such a regime.

There are, therefore, two steps we can take now to clear up such misunderstandings.

First, we can break off diplomatic relations with the Castro government. It obviously does not represent the Cuban people, and it has shown itself incapable of discharging international obligations—two requirements for the continuance of diplomatic recognition.

Second, we can appeal by radio to the Cuban people. This need not be an action of our Government, but a people-to-people expression of sympathy and concern.

We have throughout our history proclaimed our support for oppressed peoples. Our political parties in their national platforms have time and again expressed sympathy with groups striving for independence—the Boers in South Africa, the home rule groups in Ireland, the Armenians in the Near East, the Mexicans, and the Cubans themselves under Spanish rule.

If the facts were given now to the people of Cuba, they would insist on free elections. They would choose a sane leadership to rescue them from the economic and political chaos into which they have been plunged by selfish men who have been duped by Communist influences.

Let's help the Cuban people by giving them the whole truth.

Referees and Storm Troopers

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. DORN of South Carolina. Mr. Speaker, the civil rights bill passed today is a blueprint for dictatorship. It is a bill against free voting rights. It is the opposite of a bill to protect voting rights. It will promote controlled and rigged elections. It favors the bloc

voter herded to the polls by goons and ward bosses operating under the watchful eye of Federal referees appointed by the political party in power. It will promote intimidation, discrimination, and fraud in elections. It can and will lead to a one-party system with Federal referees and party storm troopers. It will lead to a Stalin-Hitler type election with only one ticket on the ballot.

Unplanned Summit

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. COHELAN. Mr. Speaker, Mr. Walter Lippmann in his usual penetrating and analytical style brings us again to grips with the gnawing problem of Berlin and its future.

How long can we maintain the status quo without at the same time eroding our existing substantial resources for negotiation?

These and other related questions are posed in the article which follows and which I commend to the thoughtful attention of all my colleagues.

TODAY AND TOMORROW—UNPLANNED SUMMIT
(By Walter Lippmann)

On Tuesday Senator Gore was surprised and worried when Secretary Herter told him that there is no agenda, no understanding about what is to be talked about at the summit meeting in May. Instead of a planned negotiation the four heads of government are to hold 2 or 3 days of conversation, some of it so private that not even their foreign ministers will be present. Senator Gore did not seem to realize how much things have changed in Washington since the death of John Foster Dulles who used to insist that the foreign ministers ought to agree, or be in virtual agreement, before the heads of government are allowed to meet at all. Since the President has taken charge of foreign affairs, he has reversed this doctrine completely and has put his main faith in direct personal contact with the heads of all foreign governments.

This is not the only reason why, as Mr. Herter admitted, there is no plan for the summit. The other reason is that for the time being at least the President is not the leader of the Western alliance. He is unable to bring about an agreed Western policy on West Berlin and Germany, or indeed on any other substantial issue. For Bonn and Paris together have a veto on Western policy, and they do not want any negotiation on the German question.

This veto was first used effectively in October, shortly after the Nixon visit to Russia and the Khrushchev visit to the United States. The veto was used to prevent a summit meeting in December or January for the purpose of preparing the way for negotiations over Berlin. Both General de Gaulle and Dr. Adenauer were determined to avoid a summit meeting until the momentum of the Soviet-American conversations had been dissipated. So the date of the summit meeting was put off from January until May. During this interval diplomatic contact between Moscow and Washington was reduced to a minimum. At the same time pressure

was exercised on the President to tie his own hands before he went to the summit meeting in May.

This pressure campaign reached its climax in Dr. Adenauer's recent visit to this country. While he was not wholly successful—in that as Secretary Herter told Senator Gore, the President can still talk about anything at the summit—the campaign has succeeded in preventing any serious negotiation of an agreed Western position at the summit. There is none of the planning that Senator Gore would like because our French and German partners do not want any plan. They want to stand pat on the status quo.

Why? Because any genuine negotiation about Berlin, even though it guaranteed the freedom of the city, would in some form or another require an increased recognition of the East German Government. At present, the East German Government inspects and controls the civilian traffic between West Germany and West Berlin. It does not, however, control allied traffic. This traffic is controlled by the Soviet Union. A new agreement which guarantees freedom of access to West Berlin would almost inevitably have to bring in the East German Government.

This is the concession which Dr. Adenauer wants at all costs to avoid, especially before the German elections in 1961. He insists upon preserving the fiction that the East German state does not exist and is untouchable and unmentionable by the Western Allies. In this stand France, for its own reasons, supports him.

When he spoke at the National Press Club in Washington, Dr. Adenauer indicated why he thinks there is no risk in refusing to negotiate with Mr. K. about Berlin. It is "my firm conviction," he said, "that Khrushchev . . . does not want war . . . and will not risk his entire work, the development of the Soviet Union and the 7-year plan." Convinced of this, Dr. Adenauer does not fear the threat which Mr. K. has made about Berlin. The threat is to sign a separate peace treaty with East Germany and then to let the East Germans and the Allies argue with each other about the right of access. For in Dr. Adenauer's view, if the East Germans did in fact interrupt the traffic of the Allies, the Allies would push through the obstacle, and the Soviet Union would not go to war about it.

This is the calculated risk which Adenauer and De Gaulle are prepared to take. I think the calculation may be justified, especially if we think of the East Germans attempting an actual blockade and not merely a perpetual and varied harassment. Even then, I believe we could live with it. It is not because I fear the physical blockade of Berlin that I think we ought now to attempt a serious negotiation about its long-term status.

What I fear is the decline of the Western position as compared with the growing power, not only the growing military power, of the Communist world. It is going to take more than a few billion dollars put into missiles and a better airlift to right in our own favor the overall balance of power. It is going to take a national revival in this country which only the more far-sighted among us are beginning to talk about, a national revival which is far from having reached the point where it is being translated into popular language and political action.

The Western position in Berlin is not likely to grow stronger. It is already fragile and precarious. It will become more so the more the people of West Berlin realize that they are not likely to see in their lifetime the liberation of West Berlin from the military trap in which it lies, and its restoration as the capital of a united Germany.

Our position in West Berlin, like so many of our bases overseas, is a wasting asset. If it is a grave mistake to negotiate except from a position of strength, it is also a grave mistake not to negotiate while you still have real strength from which to negotiate.

Small Business Administration's 13th Semiannual Report

EXTENSION OF REMARKS

OF

HON. WILLIAM M. McCULLOCH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. McCULLOCH. Mr. Speaker, the 13th semiannual report of the Small Business Administration has just been issued. I recommend it as a most comprehensive review of this important agency of the Federal Government.

The agency has summarized the major portions of the report in a well-constructed press release. Knowing that many of my colleagues will not have time to read the full report, I suggest the press release as being worthy of attention. Under unanimous consent I insert this release in the Appendix of the RECORD:

The steady increase in American business firms, further development of a Government-sponsored Small Business Investment Division program and a continuing growth of services by the Small Business Administration were reported to President Eisenhower and Congress today by SBA Administrator Philip McCallum.

The agency's semiannual report for the first half of fiscal 1960 noted that the number of businesses in the country totaled 4,684,000 on December 31, 1959, a growth of 81,000 during 1959. It added that the increase in business population has been continuous since 1939 and has been at a higher rate than the percentage increase in human population.

Inasmuch as about 95 percent of American businesses are classified as small, this is "testimony to the vitality of small business in the national economy," the report points out.

Passage of the Technical Amendments Act in late 1958 had an invigorating effect on small business incorporations, the report said in citing that 1959 saw a total of 193,078 incorporations, 28 percent greater than 1958's total of 150,781.

The report noted there were 1,579 business loans made by the agency in the July 1-December 31 period, for a total of \$69,479,000. For the year 1959 there were 4,533 loans totaling \$216,797,000. There were 320 disaster loans for \$2,005,000 in the final 6 months of 1959 and 806 loans for \$6,365,000 for the full year. These loans are made at 3 percent interest to businesses, householders, charitable institutions and churches for damages incurred by storms, floods, excessive rainfall or similar natural disasters.

Since the start of its financial assistance program in September 1953, the Small Business Administration has approved 18,271 business loans for \$856,304,000 and 8,936 disaster loans for \$94,521,000.

Of the business loan total, SBA's share amounted to \$724.1 million. The remainder came from participating banks. Funds have been disbursed to borrowers by the agency and participating banks in a total amount of \$669.2 million, comprising Government

funds of \$476 million and bank funds of \$193.2 million. Loans outstanding at the end of this period held by SBA and participating banks total \$428.6 million.

SBA now is administering approximately 19,200 business and disaster loans, including loans transferred from the former Reconstruction Finance Corporation. This increase in the agency's loan portfolio has brought additional servicing and administrative responsibilities. Intensive training programs for newly assigned personnel have been conducted in SBA's regional and branch offices. This has made possible a decentralization of records and loan-servicing functions which means better service to borrowers, the report explains.

In the 6-month period SBA approved 44 percent of the loan applications on which it took action. The cumulative ratio of approvals, since the start of the lending operations, is 53.9 percent.

Private banks' participation in SBA loans increased in 1959, reversing a downward trend which had prevailed since 1955. Of all business loans approved in the 6 months covered in the report, 60.6 percent were in participation with banks.

The report states that SBA's actual and estimated losses on loans, cumulatively since the agency's inception and through December 31, amounted to \$6,093,505, equal to 1.1 percent of SBA's share of loans disbursed.

SBA assistance to hospitals and similar institutions which are privately owned and operated for profit continued to be considerable. Through December, 50 loans had been made to hospitals and 139 to nursing and convalescent homes. These totaled \$15,186,500. In addition, there were 134 loans for \$2,895,000 to doctors, dentists, clinics, and other medical and health services.

Small businesses' share in Government contracts with business firms increased in fiscal 1959 to \$4,767 million, or 18.2 percent of the total Government contracts. In the previous year small business contracts amounted to \$4,600 million. The total of Government procurement for 1959 was \$29,319 million, up from \$27,926 million in 1958.

SBA's report shows that in the first 5 months of fiscal 1960 the net value of military procurement actions with small business was \$1,253 million, compared with \$1,203 million during the same months of fiscal 1959.

Government purchases involving expenditures of more than \$25 by civilian executive agencies, excluding the Atomic Energy Commission, increased in 1959 to \$1,632 million from 1958's total of \$1,598 million. Awards to small business increased to \$840 million from \$768 million for a percentage level of 51.5 compared to 48.1 percent a year earlier.

A section of SBA's report is devoted to discussion of the agency's Small Business Investment Division which was created by an act of Congress in late 1958. The act also granted the agency specific authority to assist State and local development companies in the financing of small businesses in their areas.

Under provisions of the act, SBA licenses small business investment companies which are privately owned and operated. These companies, in turn, provide equity funds and long-term loans to small business concerns. SBA is authorized to buy subordinated debentures from the investment companies in order to assist in creating their initial capital. Also, the agency may provide additional funds to encourage formation and growth of the companies. SBA's functions include the regulation and supervision of such companies. Licensed companies are entitled to certain tax advantages under the Technical Amendments Act of 1958.

Since the program got underway in December 1958, and through December 1959, a total of 143 applications for investment company licenses had been received and 62 licenses had been issued. A number were in the processing stage at the year's end.

(In calendar year 1960, up to March 15, investment company licenses issued reached a total of 80.)

SBA's Information Office began the issuance in November 1959, of a newsletter titled "The Reporter," which deals exclusively with information concerning the Investment Division and long-term financing. It is distributed to Members of Congress, the press, Government offices concerned, and professional, trade and financial media.

More than 4,000 requests for current and future issues of the new publication were received by SBA after the first issue was circulated.

The report points out that under the Investment Act of 1958 the agency may lend a State development company an amount equal to the company's outstanding borrowings from other sources. The proceeds of such a loan may be used for the purchase of equity in or long-term loans to small business concerns.

The agency now is permitted to lend up to \$250,000 for each identifiable small business concern which either a local development company or a State development company proposes to finance under section 502 of the act. Such loans may be used for plant construction, conversion or expansion. This may include the acquisition of land. These loans may be made by SBA in participation with regular commercial lenders.

This widening of SBA's authority is regarded by agency officials, the report states, as "an important potential as a catalyst to stimulate the economic activity of small business in local communities."

Fourteen State development companies and authorities now are eligible to borrow, with three more scheduled to join the list as soon as incorporation proceedings are complete. These 17 organizations already have a borrowing potential in excess of \$50 million which SBA may match.

The report regards as "even more significant" the assistance that can be made available through loans to some 3,000 local development companies that may be eligible to borrow from the agency under the 1958 act. The number of loans up to \$250,000 each that can be made to these organizations is limited only by the number of credit-worthy small businesses for which the development companies agree to undertake construction, conversion or expansion projects.

Through 1959 the agency had received 42 applications for loans under the 1958 act, aggregating \$5,081,000, and has approved 31 for \$3,785,000.

To brief the public on the development company loan program, a brochure "Loans to Local Development Companies," was produced and has been distributed. It describes financial assistance under the act and gives the step-by-step procedure for organizing and making applications.

Notable progress for the reporting period is seen in SBA's programs for improving management skills of owners and managers of small businesses. Grants of varying sums up to \$40,000 each went to 52 educational institutions in all the States, Puerto Rico and the District of Columbia for 98 studies and surveys on topics of direct import to small businesses.

During the reporting period SBA distributed 859,000 copies of various management publications. Since the agency's inception, distribution of these publications has totaled 7,358,000.

The chapter on this phase of SBA accomplishments describes progress in several

other projects to aid small business executives.

There are reports also on SBA's Government procurement and property sales assistance program, on the production and technical assistance program, on the extent of cooperation with other Government agencies and other projects.

Our Monetary System: How New Money Is Created and Who Acquires the Assets Which the New Money Purchases

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. OLIVER. Mr. Speaker, on three previous occasions I have called attention to a series of articles published by the Texas Observer, of Austin, Tex., during the latter part of January and February of this year, dealing with our monetary system and the various ways the public interest is affected by the Federal policies concerning the operation of this system. These previous articles were included in my remarks of March 21, 22, and 23.

Today I wish to call attention to the fourth in this series of articles. It gives a readily understandable explanation of how our monetary system operates. And it traces the origins of our present fractional reserve system of banking back to the goldsmith bankers of Western Europe during the 17th century.

Those who would like an understanding of how money is created will find it in this article which is as follows. This appeared in the Texas Observer of January 29:

A THEORY OF MONEY—WHO CREATES NEW FUNDS?

AUSTIN, WASH.—How does new money get into circulation—and who gets the interest on the debt thus created?

WRIGHT PATMAN, of Texarkana, believes that neither Democratic nor Republican politicians understand the answer.

And if they did, he believes, the banker's house of gold would come melting down around them.

Congressman PATMAN says that the new money comes from the Government, but under the Republicans the bankers get all the interest, while under the Democrats the Government gets a goodly slice of it.

If that is too simple for you, then you, must be patient with him, for he can explain; but few follow him down the road of his reasoning to the conclusions at the end—conclusions momentous if correct.

With the press enforcing what PATMAN calls "a policy against reporting anything critical of the big bankers' policy line," some Members of Congress "have had the custom of saying that the only thing they know about money is they don't have enough of it." PATMAN finds it difficult to restrain his impatience with this attitude; but he does, always going on swiftly to the next point in his argument.

The Federal Reserve System is an agency of the Federal Government. Member commercial banks hold some stock in the System, but they cannot sell the stock, the Federal Reserve has no use for the money

the banks put up, and were the System to be liquidated, the banks would have to turn the stock back to the Government. All they get on it is a regular annual 6-percent interest. All the profits after expenses go into the Federal Treasury (except 10 percent which is held back for a surplus, but which also belongs to the United States).

Through the Federal Reserve, the Government creates the new money which the economy needs from time to time.

In an article published in 1958 by American Mercury, the rightwing monthly, PATMAN charged that "the present Federal Reserve banking system is manufacturing money in the bankers' interest and the banks' interest."

SOMETHING FROM NOTHING

PATMAN uses a simple illustration to explain how private banks "create money."

"If I deposit \$100 with my bank," he says, "and the reserve requirements imposed by the Federal Reserve are 20 percent, then the bank can make a loan to John Doe of up to \$80. Where does the \$80 come from?"

"It does not come out of my deposit of \$100; on the contrary, the bank simply credits John Doe's account with \$80. The bank's deposits are now \$180 where they were \$100 before. The bank simply created \$80."

"Furthermore, now that it has another \$80 of deposits, it may, by putting 20 percent of this in reserves, make still another loan in the amount of 80 percent of \$80, which is \$64. And so on, until the last loan it can make is zero."

"Or," PATMAN adds, "the bank can acquire Government obligations by the same process by simply creating deposits to the credit of the Government."

Money creating is a power of the commercial banks—it is not permitted savings and loan associations, insurance companies, credit unions, or other financial institutions, PATMAN explains.

What is true for the one bank does not, however, explain what has happened in the whole banking system. One bank's increased reserves decrease the reserves of the other bank. One must go back to the question. What is the banking system?

The goldsmith bankers operated in Western Europe in the 17th century before there was any banking system. Persons who had gold left it with a goldsmith for safekeeping. The goldsmith gave his depositors a receipt. These receipts were transferable, and they became, in effect, money. The goldsmith learned that people rarely brought back the receipts and demanded the gold, so he issued more receipts than he had gold—that is, he began making "loans." This was risky; each goldsmith was taking a chance, "playing the odds." Some were fortunate, others luckless. Sometimes a community's business life was disrupted.

"The goldsmith principle of issuing several dollars of money on each dollar of reserves (gold) is what we call the fractional reserve system by which commercial banking is done today," PATMAN says.

Today's commercial banking system differs however, two ways: first, the banks use a delegation of the Government's power to create money; second, PATMAN avers, "instead of paying interest on its reserve, as the goldsmiths did, the private commercial banking system gets its reserves as a gift, or at least an interest-free loan, from the Government."

PATMAN knows his language, "a gift," will be objected to. But, he says, "if this sounds fantastic, it is not nearly so fantastic as the phrases the bankers and some of the Federal Reserve people use to describe this matter. For example, the vice chairman of the Federal Reserve Board has objected to my saying the Fed has 'given' the banks reserves, particularly when the gift was made by reducing reserves. He prefers to say the Fed has

made more of the banks' reserves 'available' to them."

In fact, PATMAN asks, where did the reserves come from in the first place? He quotes a report by the key Federal Reserve bank in the United States, the one in New York, dated November 1953: "Actually, the Federal Reserve banks have been the principal source from which the commercial banks have derived reserve funds since the founding of the Federal Reserve System in 1914."

"In plain words," PATMAN says, "since 1917 the Federal Reserve has given the private banks \$46 billion of reserves. The banks have drawn out \$28 billion in cash—currency—and still have \$18 billion left in reserves today; and it is what is left in reserves that really counts. At the moment, the banks may create up to \$8 for each \$1 of reserves."

WHAT IS WHO?

PATMAN delights in quoting an exchange which vividly illustrates that the Federal Reserve, when it "buys" Government securities, creates money. Federal Reserve Board Chairman Marriner Eccles and a bewildered Representative Dewey were talking during some 1942 hearings.

"Mr. Eccles. Whenever the Federal Reserve System buys Government securities in the open market or buys them direct from the Treasury, either one, that is what it does—"

"Mr. Dewey. What are you going to use to buy them with?"

"Mr. Eccles. What is who going to use?"

"Mr. Dewey. The Federal Reserve Bank to make these purchases."

"Mr. Eccles. What do they always use?"

"Mr. Dewey. You are going to create credit?"

"Mr. Eccles. That is what we have ever done. That is the way the Federal Reserve System operates. The Federal Reserve System creates money. It is a bank of issue."

It was obvious to Mr. Eccles, but not to the Congressman; and it is not obvious to the citizenry to this day. Mr. PATMAN maintains.

The ordinary reader will not understand the next passage without a careful reading. The fact that few citizens have the patience to mull over such dry statements, PATMAN maintains, is the explanation of the possibility of "robbery in broad daylight." PATMAN tried to relate the substance of the matter by saying, "By a sort of magic, the money is created." But only the hard facts, as stated by Eccles in 1935, can explain how the banks are permitted to create money which they then can use for their own profit. Said Eccles:

"In purchasing offerings of Government bonds, the banking system as a whole creates new money, or bank deposits. When the banks buy a billion dollars of Government bonds as they are offered and you have to consider the banking system as a whole, as a unit—the banks credit the deposit account of the Treasury with a billion dollars. They debit their Government-bond account a billion dollars, or they actually create, by a bookkeeping entry, a billion dollars."

PATMAN objects that the banks then charge the Government interest on the bonds they have bought simply by "a flick of the pen" on their books.

He has approvingly quoted Thomas A. Edison, who had been asked, PATMAN said, whether the Government should borrow \$30 million to make repairs at Muscle Shoals Dam. "No," Edison had said. "Any Government that can issue a dollar bond, interest bearing, that is good can issue a dollar bill, noninterest bearing, that is good; the only difference is the bill is easier to redeem because it does not draw interest."

In other words, PATMAN says, the Government should not create debt bonds, give them to the banks, and then let the banks charge the Government interest on them; the Federal Reserve should buy the bonds itself, in which case the interest payments are returned to the Treasury.

CREATION OF NEW FUNDS

This phenomenon of creating money is discussed lucidly in an issue of Congressional Digest (November 1959) in which leading figures of the Government argued whether Congress should raise the interest ceiling on long-term U.S. bonds. (Arguing "yes" were Secretary of the Treasury Robert Anderson, Federal Reserve Board Chairman William McChesney Martin, Jr., Senators Prescott Bush and Hugh Scott, and Marriner Eccles. Arguing "no" were Senator PAUL DOUGLAS and Representatives PATMAN, HENRY S. REUSS, BYRON L. JOHNSON, and JOHN D. DINGELL.)

The editors of Congressional Digest explained, in an associated article, how the money supply is regulated. Credit, the editors explained, comes from savings (simply a transfer of funds from people who save to people who borrow), and from commercial banks.

"When the credit is commercial bank credit, there is a creation of new funds that did not exist before."

Suppose you go to a bank for a loan of \$1,000. The bank seldom pays out \$1,000 in cash; usually it credits your account with \$1,000. You can write checks against the account. The bank simply, on the books, increases its loans by \$1,000, and deposits go up by \$1,000.

Explained the editors:

"In the process of making the loan, the commercial bank has created a deposit. As banks expand their loans and investments, they create more deposits. As they contract their loans and investments, they extinguish deposits."

Anyone can see how important this fact is for the state of business and the economic health of the country.

The job of the Federal Reserve is to influence the flow of bank credit. As banks make more loans, people get more money to spend, and business picks up tempo. As banks pull in on their loans, people have less to spend, and the economy slows down.

MONEY CREATION PROFITS BANKS, PATMAN SAYS

The Federal Reserve influences what the banks do by the amount of reserves it creates or by changing how many dollars a bank can create for each dollar of reserves (that is, by changing the reserve requirements).

Suppose the reserve requirement is 20 percent. For every \$100 of deposits a bank has, it must keep in the Federal Reserve bank a reserve of \$20. The Federal Reserve can either increase or decrease the reserve requirements. In this way, it can permit the banks to loan more money, or require them to contract their loans.

This is the main mechanism by which the Federal Reserve tries to regulate how much money is being spent and invested.

Suppose the whole banking system has to have a total of \$20 billion in reserves. The banks have \$100 billion of deposits. The Federal Reserve then decides to increase the total amount of bank reserves in existence by \$1 billion. This means that the commercial banks, in the words of Congressional Digest's editors, "can use these reserves, making loans and investments and expanding their deposits (through the creation process) up to \$105 billion."

THE SAME EFFECTS EXCEPT

Once one understands that both the Federal Reserve and the private banks create new money, the issue becomes—at last, PATMAN sighs—which shall create it? He ex-

plained the issue in his August 13, 1959, newsletter to his constituents.

"The Nation's supply of money," he said, "can be increased in either of two ways."

"The Federal Reserve can acquire Government bonds, or other Government debt obligations, which cost the Federal Reserve nothing. The other method is for the Federal Reserve to amend its regulations so as to make it possible for the private banks to acquire more Government bonds. This costs the private banks nothing. Both methods increase deposits of the private banks, and the effects are the same, except for what happens to the interest payments on these bonds."

"When the Federal Reserve acquires them, the interest payments come back into the Treasury and help meet the expenses of government. When the private banks acquire the bonds, the interest payments go into bank profits. One of the big controversies now is over which method will be used in the months and years ahead."

In short PATMAN argues, the Government should buy its own bonds and take the interest for income, which expands the Nation's credit without increasing the Government's interest load.

If, however, the Federal Reserve reduces reserve requirements for the private banks, then the banks can use the created money to buy more Government bonds, and then charge the Government interest on them. He finds this senseless.

The banks, of course, see it another way. In a 1957 report, the American Bankers' Association's economic policy commission, foreseeing that "the needs of the public for currency and bank deposits will increase with the growth of the American economy," declared that the reserve base of the banking system would have to be expanded, "either by creating reserves through open-market operations or by reducing reserve requirements."

The American Bankers Association said the Federal Reserve, to follow the first Patman-advocated course, would have to further increase its investment portfolio, "which it is widely agreed, is already excessively large."

Where, PATMAN demands, is this wide agreement? "Only among the bankers, we can be sure, who wish to have a slice of this portfolio transferred to them."

ABA said that to keep up with the economy through 1961, the Federal Reserve would have had to buy \$7 billion in Government securities on the open market. PATMAN emphasizes that these securities would be interest free to the Government (that is, the interest would be used for the expenses of Government).

But ABA added, "It would be far better to provide for this growth by lowering the reserve requirements of member banks. It is true that the Government would lose a small amount of revenue, since about 90 percent of the Reserve banks' annual earnings after dividends are now being voluntarily paid over to the Treasury. However, the Reserve banks were never intended to be a source of revenue to the Government, and policy regarding the level of required reserves should certainly not be determined on the basis of the effect on Federal Reserve payments to the Treasury."

To which PATMAN angrily exclaims:

"If our policy on this question of giving away Government-owned securities to the private banks should certainly not be determined by what this will cost the Government, then may we ask on what basis should it be determined?"

"Who would like to explain why the banks should be allowed to use the Government's credit—free of interest charge—to extend credit to the Government at an interest charge? Who would like to explain why,

when the Federal Reserve decides to allow more money to be created to acquire interest-bearing Government obligations, it does not itself create the money and acquire the obligations? Who would like to explain why the interest charges should not go back into the Treasury instead of into bank profits?"

—R. D.

One Hundredth Anniversary of the Birth of General of the Armies John J. Pershing

SPEECH
OF

HON. W. R. HULL, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. HULL. Mr. Speaker, I wish to call attention to the forthcoming centennial celebration of the birth of a great American patriot, General of the Armies John J. Pershing.

General Pershing was born September 13, 1860, near the small community of Laclede, Linn County, Mo., in my congressional district.

A centennial observance worthy of this great American will be held next September 13 in this town of his birth and boyhood years. Plans for the celebration are going ahead rapidly under the able leadership of Mr. L. F. Moore of Laclede working in cooperation with veterans organizations and interested individuals.

A bill I recently introduced, House Joint Resolution 640, provides a vehicle by which all Americans may join with his friends and neighbors in Missouri in celebrating General Pershing's birth centennial.

The bill recognizes the significant contributions which General Pershing made to the Allied victory in World War I in organizing and leading the American Expeditionary Forces.

It recognizes the fact that his memory symbolizes the proud achievements and great sacrifices of the gallant men who served under him.

By authorizing and requesting the President of the United States to proclaim September 13 as a day upon which Americans should pay tribute to General Pershing and the men whom he led, it enables Americans everywhere to take proper note of their heroic contributions to the peace of the world and freedom of man.

I am deeply gratified that House Joint Resolution 640 passed the House of Representatives on March 21 and look forward to its approval by the Senate and the Executive.

Mr. Speaker, as long as men cherish the ideals of democracy, the memory of Gen. John J. Pershing will be revered. Although his reputation was forged in the furnace of war, he was a man of peace, a humanitarian.

General Pershing and his men destroyed the military power of his foes, but when the way lay clear to annihilate them and lay waste their lands, he and his comrades stayed their hands.

He gained victory without malice and justice without vindictiveness. There can be no greater achievement.

The Story of Gulf Oil—Reorganizing an Industrial Giant

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following articles from the Pittsburgh Post-Gazette, March 21, 1960:

REORGANIZING AN INDUSTRIAL GIANT—THE STORY OF GULF OIL
(By Alvin Rosensweet)

Quietly but effectively, the Gulf Oil Corp. in the last 6 or 7 years has carried out a reorganization as sweeping as any in American corporate history.

"Decentralization" is a word that William K. Whiteford, president of Gulf Oil Corp., would just as soon eliminate from the English language. This is a curious anomaly in view of the fact that, since becoming president of Gulf on April 28, 1953, he has continually carried out a program of reorganization and decentralization of the management of the giant oil company.

"Eliminate the word 'decentralization,'" he says. "We're talking about placing the necessary responsibility and authority at a level where it's carried out. We're giving the man with the power to say 'yes' or 'no' the authority to say it directly to the man who can carry it out."

Whatever it's called under Mr. Whiteford's guidance, Gulf has risen to seventh place among all U.S. corporations with sales totaling \$2,769,377,000 in 1958. Net profits that year were \$329,533,000, fourth highest among all American firms and second highest among all U.S. oil companies.

EARNINGS ESTIMATE

Although Gulf's 1959 annual report has not yet been published, earnings are estimated at \$290 million and sales at \$2,710 million. Since 1952, when sales totaled \$1.5 billion and profits \$142 million, the figures have just about doubled.

Training young men against the time when they will become senior executives of the big Pittsburgh-based company is one of Mr. Whiteford's major concerns. He describes a corporation as being similar to a nervous system and quotes an old professor who told him a corporation is a biological animal.

"Partners die," Mr. Whiteford explains, "but a corporation reproduces itself in strength and security for its employees and shareholders. Corporations fold up and die because they don't reproduce vigorously. When I went to British-American Oil Co. in Canada the man who hired me said, 'I never thought I'd hire an American, but there's nobody here to run it.'"

In 1951, shortly after Mr. Whiteford was hired out of the presidency of British-American and was named a director and executive vice president of Gulf, Fortune magazine said Gulf made the move "because of his demonstrated talents for reshaping the management of a corporation without upsetting it."

"We want to advise our men without making them so afraid of mistakes that they will be afraid of decisions," Mr. Whiteford said at the time. "We don't want to pull authority to Pittsburgh. The men down the line know what is happening before we do, and speed is critical in exploring for oil or purchasing it or handling it. We don't want to miss chances."

REFLECTS PHILOSOPHY

Although it probably never will be completed, decentralization—there's that word again—has been accomplished at Gulf under Mr. Whiteford's leadership. This has become, as he says, a reflection of the company's philosophy, in order to get authority down to people who can carry out the orders.

Since about 20,000 of Gulf's 55,000 employees work in countries other than the United States and are of many different languages and nationalities, the magnitude of the problem is not difficult to visualize.

"The policy starts in Pittsburgh," Mr. Whiteford says. "The board gives us the money and the tools. The officers get these to operating men all over the world. We give them the funds, the objectives, and the power to do the job. They have to have the ability."

When Mr. Whiteford came to Gulf, he points out, senior vice presidents were generally men in their sixties.

"They concentrated on one phase of the business," he recalls. "They hesitated to take a chance in other fields in which they had no great interest. As a result a few men at the top were swamped with 75 percent of the company's problems."

"When I first came to Gulf I could hardly get away from my desk. I couldn't get acquainted with our people. I didn't know them and they didn't know me. Working that way isn't the same as talking over problems face-to-face."

Mr. Whiteford found Gulf somewhat decentralized but growing so rapidly that it was essential to step up the process to break up the functions of top-level management.

WARNED TO CHANGE

This resulted in the selection of a half dozen officials designated as "administrative vice presidents and coordinators." There is one each for crude oil, financial, production, manufacturing, marketing, and transportation.

"We have here a group of administrators who make sure the money and the tools get to the operating people," Mr. Whiteford explains. "If a policy doesn't work out they warn us to change the policy. We plan the battle but if there's something there we don't see they let us know."

Mr. Whiteford places great stress on these half dozen officers who, on the organization chart, rank below the executive group.

"They're young fellows, mostly in their forties, who came up through operating, have a flair for administration and the ability to advise and counsel operating people. The success of the system depends upon them."

"They also get broad training in corporate problems, legal, financial, production, and so on. They gain experience in everything from getting the oil to ships, to pipelines, to refineries, to bulk plants, to service stations."

Under this breakup of top level functions, any officer covers any field of corporate activity. But once an order is decided upon, an individual officer signs it.

"I hate committee decisions," Mr. Whiteford says of what has become a growing practice in big business. "If something goes wrong nobody ever remembers who made the decision but if it's successful everybody takes the credit. Now, an order must carry the signature of the individual officer responsible for making it. This way, the men on the firing line can always get decisions. And our top people—the board chairman, president and vice presidents—have the authority to make decisions."

"This system allows the vice presidents-coordinators to handle the day-to-day administration of the company. They have 95 percent responsibility. If something goes wrong the operating men can always come to an executive for an immediate answer. There's always a top executive available in Pittsburgh."

Once an order goes out from the executive offices here, copies go to the half-dozen administrative vice presidents and coordinators. Within 24 hours the decision reaches every Gulf employee throughout the world whom it affects. As the Gulf president points out, a decision may be made to one individual employee anywhere in the world, but at every level others who are affected by the decision know about it.

Last week, for example, a Gulf representative flew in to Pittsburgh from Japan to discuss with top management a problem that had arisen. In this case it was necessary for him to present all the aspects of the situation.

"We asked him why he didn't do such-and-such and he told us," Mr. Whiteford explains. "Out of what at first was vague talk we add a chip here and a bite there and we arrive at something, at a solution. Then the important moment comes when we ask him, 'What do you think of it?' He tells us what he wants. We tell him he has to handle the situation and that it isn't a committee decision."

Once the decision was made and signed, the order went through the Gulf empire to those affected—to the ships, the crude oil people, and those in manufacturing and financial.

"But if he goes back and things don't work out he can call the executive who signed the order," Mr. Whiteford points out. "We must remain flexible. Staying frozen gets you in trouble in worldwide oil. By dealing directly with the executive who signed the order our man in Japan gets flexibility. We tell our operating men that an executive order is not a corset. As a result of our meeting with him, we're not surprised if we later hear from him that a change in policy is necessary."

This makes for more intimate dealings between Gulf executives and Gulf people throughout the world, Mr. Whiteford says. And at a comparatively young age, people are being trained to become future senior executives.

"We have multiple executives. If they're wrong, I'm wrong. If I make one, they make one."

THIS IS THE GULF TEAM

W. K. WHITEFORD

A ruddy-faced man of 59 who has grown up in the oil industry from roustabout to president of one of the world's largest corporations, William K. Whiteford has headed Gulf since April 28, 1953.

He was born November 28, 1900, in Los Angeles, where he was graduated from Polytechnic High School in 1919. He enrolled in engineering at Stanford, and helped pay his college expenses by running a milk route, washing dishes in an off-campus restaurant and teaching tennis at a girls' school. But when his father, Gustavus A. Whiteford, a mining engineer, was killed in an accident in Mexico, he left school without graduating.

Mr. Whiteford worked for Shell Oil in the summers and in 1923 was a roustabout in the oil industry, digging ditches, laying pipe and performing other laboring jobs. In 1924 he became a production engineer for Barnsdall Oil Co., and in 1932 was named vice president and general manager.

Three years later Mr. Whiteford joined British American Oil Co. and in 1942 went to Toronto headquarters as executive vice president. He was elected president in 1943 and chairman in 1951. Later in 1951 Mr. Whiteford left to become a director and executive vice president of Gulf. In 1954 he was given the additional title of chief executive officer at Gulf.

Mr. Whiteford spends about half his time out of Pittsburgh, in the Far East, Middle East, Europe, South America, Canada, the

Southwest, and elsewhere. "Our people know me personally and I know them," he says.

Mr. Whiteford long since gave up tennis, and in his spare time shoots skeet or traps. He is a director of a number of major companies and a trustee of the University of Pittsburgh.

Mr. and Mrs. Whiteford live at Park Mansions, Frew Avenue, Squirrel Hill, and have two sons, William, Jr., and Peter.

WILLIAM L. NAYLOR

William L. Naylor, senior vice president, is a member of the administrative committee and other committees. He has served with Gulf 37 years in financial and management affairs.

Mr. Naylor is a native of Kentucky, attended the University of Kentucky, and joined Gulf in 1920 in Houston, Tex., where he worked 3 years. After 5 years with a Gulf subsidiary in Mexico he was transferred to Pittsburgh in 1928, becoming comptroller and vice president.

A. D. GRAY

Archie D. Gray, senior vice president, joined Gulf in 1935. A native of Franklin, Tex., he entered Texas A. & M. College to become an engineer but entered the Army in World War I. Following his discharge he entered the University of Texas, where he received his law degree in 1923.

Mr. Gray was elected mayor of Ennis, Tex., served two terms as district attorney of Ellis County, at Waxahatchie, Tex., and was assistant attorney general of Texas in charge of oil and gas matters. His first job with Gulf was with the firm's law department at Houston as a trial attorney.

He was made associate general attorney for the corporation and its subsidiaries in 1947 and moved to Pittsburgh in 1953, becoming general counsel in 1956. He was elected a vice president in April 1957.

R. O. RHOADES

R. O. Rhoades, chairman of the board of directors of Gulf, was one of the first geologists in the Persian Gulf area. He performed much of the geological work that led to the discovery of the oil fields in Kuwait, a small Shakhdom of the Middle East.

Mr. Rhoades, 64, was born July 30, 1895, in Ulrich, Henry County, Mo., attended the University of Kansas, served with the Marines in Europe in World War I, and was graduated from Stanford in 1922.

He was a geologist in Mexico, Egypt, and in the Southwest before joining South American Gulf Oil Co. in 1926. He became a representative in Gulf's London office before coming to Pittsburgh in 1940 to be chief staff geologist. He was named senior vice president in 1955 and chairman, October 1, 1959.

I. G. DAVIS

I. G. Davis, a senior vice president of Gulf Oil Corp., joined the company in 1934 as a geophysicist and was assigned to Venezuela. Four years later he joined the geological department of Mene Grande Oil Co., Gulf's Venezuelan subsidiary, in Maracaibo.

He was named manager of the Western Division of Mene Grande in 1948, and later became vice president and, in 1956, president of Mene Grande. Mr. Davis was elected administrative vice president and coordinator of production in 1958.

C. J. GUZZO

C. J. Guzzo, Gulf's vice president in charge of domestic marketing since 1954, was promoted to a senior vice president June 1, 1959. He has served 46 years with Gulf, joining the company as a clerk in 1914 at Alexandria, La.

He served as an agent in several southern cities and advanced to division general manager of the New Orleans sales territory be-

fore being elected vice president in 1954, when he moved to Pittsburgh.

E. D. BROCKETT

Before being elected executive vice president of Gulf January 1, 1960, E. D. Brockett had been president of the British American Oil Co., Ltd., with headquarters in Toronto, since April 17, 1958.

He was graduated from Texas A. & M. in 1934 with a degree in Petroleum Engineering and joined Gulf as a roustabout in the West Texas oilfields. Two years later he was promoted to petroleum engineer at Odessa, Tex.

Mr. Brockett entered the Army in World War II as a lieutenant and was discharged in 1945 as a colonel. He served primarily in the Pacific.

He rejoined Gulf in the Fort Worth area and was transferred to Pittsburgh in 1949 as staff engineer in the production department. Later he was sent to Venezuela and upon election as a Gulf vice president was placed in charge of Houston production operations in 1955.

Hospitalization and Medical Care for the Aged

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. HOLLAND. Mr. Speaker, President Eisenhower, our No. 1 recipient of socialized medicine, has seen fit to turn his back on our 15 million other elder citizens in their quest for hospitalization and medical care.

Yesterday, March 23, his Secretary of Health, Education, and Welfare, Mr. Flemming, appeared before the House Ways and Means Committee and said that Mr. Eisenhower would not support the Forand bill or any others like it, nor would he present a substitute measure.

It is hard to believe that our President would take this stand when he has received free all the medical care, nursing care, and hospitalization he ever needed plus necessary medicines, since he was a cadet at West Point.

Not only has he, personally, received these free benefits, but so has his wife and, now since his son, too, is a major in the Armed Forces, his daughter-in-law and his four grandchildren receive like benefits. And the President can continue to enjoy these privileges until he and his wife no longer need them.

The legislation providing proper health care for our elder citizens could be enacted at a very small additional cost to the wage earners of today who would, in turn, be paying for their own benefits when they were eligible.

But, the President has spoken, and he has said that our elder citizens can continue to beg and borrow for proper medical care, and should they need hospitalization, they can always get it under the free clinics provided by the State with those less fortunate citizens we have on our relief rolls.

He forgets, or ignores, the fact that these 15 million are not as lucky as he was with a Government financed education, Government employment, Government pension plan, and Government retirement benefits that cover everything—even the cost of an aspirin tablet.

Some Case Stories of the Health Needs of Older People

EXTENSION OF REMARKS OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. MACHROWICZ. Mr. Speaker, over the past several weeks I have received a number of poignant case stories of the problems of older people in the Detroit area in obtaining and paying for hospital and medical care. My correspondents have been social workers employed in hospitals, family agencies, public welfare departments, and housing projects who, by the virtue of their positions, are in daily contact with the elderly and the sick. Said one social worker whose specific duty is to serve clients in her agency's department of services to the aging:

I daily encounter individuals who, for want of hospitalization insurance as a benefit included in their OASDI grant, are forced to do without necessary medical attention as well as experience extreme hardship due to ramifications flowing from this gap in our welfare structure.

This worker reports the case of a Mr. D who had been a skilled workman for over 45 years and expected, when he retired on OASDI, that his benefits together with the \$8,000 he had saved would carry him and his wife comfortably through their later years. However, a serious accident to Mrs. D took the entire life's savings in less than a year's time. Mrs. D's continuing illness requires that something like 25 percent of each month's OASDI check goes for drug costs. Despite the acute financial pressures on this family, they have managed, to date, to maintain themselves without applying for public assistance.

In still another case: Mr. A., after spending all of his savings to provide medical care for his wife who finally died of cancer, was obliged to apply for public assistance to supplement his OASDI benefit. He had, at one time, carried Blue Cross insurance but was obliged to give this up. Although a planful and prudent individual, Mr. A. had no recourse except to obtain public assistance because of the lack of hospitalization and medical care provisions under OASDI.

In another case: A social worker connected with a housing project reported on a survey of services needed among 1,100 residents in that project who are 60 years of age and over; 749 of these individuals needed medical care; while of this group, 693 could not afford such

medical care without some form of subsidy. Said this particular social worker:

It seems urgent that legislation be enacted at this time to provide adequate medical care for older citizens through Old Age and Survivors and Disability Insurance.

One of my correspondents carries important responsibilities for the Social Service Department of one of the largest hospitals in the Detroit area. Said this social worker:

In an effort to remain independent, many of these people have attempted to provide for medical needs by purchasing hospital insurance from Blue Cross or other private insurance plans. All of these plans are tremendously expensive in relation to the limited incomes of such persons and they are woefully inadequate in coverage to pay for the extensive and expensive care which many of these people require. We find that many of these patients are unable to pay for outpatient care and medications, as well as extended hospitalization. If they require nursing home care, they are forced to apply for public assistance with all of its humiliations including the encumbrance of their homes which constitutes a blow to their self-esteem out of all proportion to the money value of the property.

It would appear that the Forand bill offers the best plan for medical coverage of this age group. We would hope, however, that any legislation which is finally passed would provide some quality control over the care which is to be provided for older persons.

A report I received from a director of a family service agency in the Metropolitan Detroit area states as follows:

As director of a casework agency which deals with problems around the aged, I can readily attest to the need for more adequate health care of our aged population. Increasing cost of medical care and deflation of the dollar value has resulted for most aged individuals in a pressure and inability to meet even minimal health care costs. In most instances, it is all they can do to meet their basic maintenance needs.

Another social worker who specializes in working with older people provided me with four dramatic illustrations of the acute problems older people are faced with when expensive hospitalization and medical care is necessitated. I will only cite one illustration.

This was a couple, Mr. and Mrs. S, at the point of retirement, who had a combined monthly social security benefit and company pension of \$234 as well as \$6,000 in savings. Two years after Mr. S's retirement, Mrs. S developed a malignancy. A prolonged period of treatment, surgery and hospitalization used up all their savings. Shortly after Mrs. S's death, Mr. S suffered a stroke. He was hospitalized for an extended period of time. Since he had no one to care for him at his home, he was placed in a convalescent home which was not covered by Blue Cross. Mr. S had to apply for public medical care. He made the statement to me that all his life he prayed for financial independence in his old age and now he was forced to become a charity case for his care.

I am sure these case illustrations could be multiplied again and again not only in my district but throughout the United States. Perhaps the case that touched me most of all was one instance reported to me by another correspondent.

This was an elderly couple who had to move out of a desirable residential area into a slum area because their prolonged

illness used up their savings. It was necessary to mortgage their home which they finally lost because their social security benefits were inadequate to make the payments. In their retiring years, this couple who had lived in this particular section for practically all of their married life were compelled to undergo the tragic experience of losing all they had accumulated because of the costs of sickness.

I am pleased to note that the National Association of Social Workers, with which my correspondents are affiliated, in a statement called "Goals of Public Social Policy," urges that the Social Security System "contain a provision for medical service to covered persons and their dependents." I recall that, last July, when the Ways and Means Committee held its hearings on the Forand bill, Mr. Norman V. Lourie—chairman of the association's commission on social policy and action, and Dr. Charles I. Schottland—Commissioner of Social Security from 1954 through 1958, testified for the association in favor of the inclusion of health-care benefits in the social security system. At that hearing I asked former Commissioner of Social Security Schottland the following question:

Mr. MACHROWICZ. Do I gather that you think it is perfectly feasible to add such benefits (i.e., health care benefits), and that they can be administered very effectively?

Mr. SCHOTTLAND. Administratively, I think the problem is not as difficult as some of those we faced in the early days of the social security program when we had to start from scratch. I am firmly convinced, as I think are all the persons engaged in the administration, that this program can be very readily handled.

When I read of experiences of the sort I have cited as well as encounter daily old people for whom the cost of illness is devastating and tragic, I appreciate again the urgency of health care benefits for older people. Such benefits would fill the remaining large gap in our Social Security System.

It was evidence of the sort that I have cited here that caused Senator McNAMARA's Subcommittee on Problems of the Aged and Aging to put forth as its first recommendation the following:

As its first recommendation for action in 1960, the subcommittee recommends that legislation be enacted to expand the system of OASDI to include health service benefits for all persons eligible for OASDI.

Jane Addams

EXTENSION OF REMARKS OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DERWINSKI. Mr. Speaker, this afternoon I introduced a joint resolution to authorize and request the President to issue a proclamation in connection with the centennial of the birth of Jane

Addams, founder and leader of Chicago's Hull House. My purpose in this introduction is to join my outstanding colleague, the Honorable MARGUERITE STITT CHURCH of Illinois, who yesterday introduced the original resolution.

Having the honor and privilege of representing a district in the Chicago metropolitan area, I can testify to the honor and respect that is due Jane Addams, founder and leader of Chicago's Hull House.

Military Strength: Foundation of Peace

EXTENSION OF REMARKS OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I would like to include an address by Gen. Lyman L. Lemnitzer, Chief of Staff, U.S. Army, delivered at Atlantic City, N.J., on March 7, 1960. General Lemnitzer discussed, "Military Strength: Foundation of Peace." It seems to me that the General has much of significance to say to the Congress and to the American people.

The address follows:

MILITARY STRENGTH: FOUNDATION OF PEACE

(By Gen. Lyman L. Lemnitzer)

It is a real privilege for me to join you here in Atlantic City. The opportunity to address such a group is one which I profoundly appreciate. Together, the organizations represented in this conference are concerned with practically the entire range of activities and interests of the American people. In my remarks, I shall deal with a subject which is of compelling interest to the American people—that is, national defense.

Because my subject transcends any one military service, I shall speak tonight not as Chief of Staff of the Army. Rather, I shall speak as a member of the Joint Chiefs of Staff.

With regard to the Joint Chiefs of Staff, incidentally, someone recently commented that while the Supreme Court deliberates and the Senate debates, the Joint Chiefs bicker. Seriously, despite the publicity given our occasional divergencies, I can assure you that within the JCS, along with our honest differences of opinion, there is a vast body of agreement.

Certainly, every informed person—in or out of uniform—agrees on the existence of grave military danger to the United States, and indeed to the world. President Eisenhower described this danger very clearly in his state of the Union message when he said:

"With both sections of this divided world in possession of unbelievably destructive weapons, mankind approaches a state where mutual annihilation becomes a possibility. No other fact of today's world equals this in importance—it colors everything we say, everything we plan and everything we do."

The mere existence of this capability for mutual annihilation is alarming enough. What makes it even more menacing is the nature of the international Communist threat. International communism possesses military force of massive size and strength. It is global in its extent. It possesses a versatility which enables it to operate effectively throughout the entire spectrum of military activity—ranging from military

support of cold war, propaganda, subversion, and insurrection, through open military participation in geographically restricted conflicts, to general nuclear war.

Along with these characteristics, there is the Communists' ruthless pursuit of their long-range goal by whatever means are most expedient. There is ample evidence that when the Communists change their tactics, they are not necessarily changing their strategy or abandoning their ultimate objective. Lenin, himself, wrote that:

"The successful development of the Bolshevik doctrine through the world can only be effected by means of periods of rest during which we may recuperate and gather new strength for further exertions. I have never hesitated to come to terms with bourgeois governments, when by so doing I thought I could weaken the bourgeoisie."

On the subject of Communist tactics, I recently had an experience which had some rather interesting overtones. In an address a few weeks ago, I described the instruction given in Communist long-range tactics at the Lenin School of Political Warfare, as reported by a former student at that school. As soon as accounts of my speech were published, I began to receive a steady stream of letters. The tone of much of this "fan mail" was that I was being unfair to organized communism. From this reaction, I gather that any realistic discussion of Communist tactics strikes at a tender spot. All I can say is, let the Communists disprove the record—if they can.

That record since 1945 can be briefly summarized by a list of nations—Estonia, Latvia, Lithuania, Poland, Hungary, Albania, Rumania, Bulgaria, Czechoslovakia, Greece, China, Indochina, Korea, and Tibet.

At the end of World War II, we acted in the hope that the cooperation among the wartime allies would continue. We not only completely disarmed our former enemies, but we and all our allies—except Russia—literally dismantled our own Armed Forces.

By the time Czechoslovakia fell in 1947, the threat to freedom had become unmistakably clear. The United States and other free world nations realized that to halt this succession of advances they would have to develop arrangements, following the pattern of the Organization of American States, for their collective security.

Departing, to a marked degree, from our traditional peacetime foreign policy, the United States took the lead in initiating a number of very important steps.

Among these was the Truman doctrine, in 1947, for U.S. military and economic assistance to Greece and Turkey. You will recall that, at that time, Greece was under direct Communist attack, and Turkey was being subjected to heavy political and economic pressures.

Then, in 1949, the Vandenberg resolution was passed by the Senate. This action, which laid the groundwork for the formation of the North Atlantic Treaty Organization (NATO), was a great step forward.

Next was the initiation of our mutual security program. It was designed to assist the nations of the free world in developing their own strength. I shall have more to say about this later.

Since that time, we have joined in the Southeast Asia Treaty Organization (SEATO) and the Australian-New Zealand-United States Pact (ANZUS Pact). We have also entered into a number of bilateral security treaties with other important allies for mutual defense. These, with our membership in the Organization of American States, provide a global network of mutual security arrangements.

The magnitude of the Communist threat and of the means to counter it makes it obvious why military security today demands such a large share of the energy and resources of the United States and its allies. Although we are maintaining impressive

military strength, we threaten no nation. Certainly, all of us devoutly hope that world tensions can be reduced and ultimately eliminated by peaceful means. To this end, we must make every effort to seek solutions to the existing differences consistent with U.S. interests. However, we must approach any negotiations with our eyes open—bearing in mind the Communists' stated objectives, their capabilities, and their record of behavior. We must conduct negotiations from a position of strength. Finally, in the course of negotiating, we must not forget the strength of our position.

Regarding this question of relative military strengths, there are one or two points that I would like to make. Too often, some people follow a deceptively easy process to reach conclusions as to military power. They merely count up and compare totals of missiles, divisions, bombers, submarines, or some other item which they accept as a yardstick of strength. I admit that this method has the advantage of simplicity. However, it suffers from a grave disadvantage—it just is not valid. It ignores the fact that our military power is not determined by any single weapons system. Further, any assessment of military power which restricts itself to our own capabilities, ignoring those of our allies, can only be regarded as completely artificial and unrealistic.

To develop these points, I want to begin by discussing some of the chief characteristics of the military problem which faces us today. In order to understand what is needed, we must first view our problem as a whole. Because the Communist threat encompasses the entire range of military capabilities, we must be ready to meet it in any form or in any degree of intensity. The degree to which we are manifestly able to do so provides the measurement of our prospects of preventing war. We must be ready to conduct general war, because it obviously poses a direct danger to our territory and people. We must be ready also to deal with other forms of warfare because, otherwise, the collective strength of the free world may be nibbled away, laying us open to ultimate defeat.

One of the major requirements for deterring general nuclear war is to be capable of retaliating, with devastating force, for attack upon the United States. Our national principles and convictions are such that we would never be the aggressor. Therefore, the forces which give us the capability to retaliate must be as nearly invulnerable to destruction, even by surprise attack, as it is possible to make them. This is of the utmost importance.

Security against an enemy's initial attack can be attained by several means, in combination. These are both active and passive. They include early warning, the engagement and destruction of enemy attacking forces, diversification of types of our retaliatory means, and the mobility, dispersion, and protection of these retaliatory forces.

Our employment of these varied means complicates tremendously the planning problem for any would-be attacker. To bring out the scale of such a problem, I need only mention major elements of our retaliatory forces. We have operational long-range missile bases and we have long-range bomber units, not only throughout the United States but also overseas. Our tactical Air Force fighter-bombers in Europe and the Far East have a nuclear delivery capability. At sea, we have carrier-based aircraft with a nuclear capability. We anticipate improvements and increases in our missile strength—such as the submarine-launched Polaris—which will add still further to the mobility, invulnerability, and diversity of our retaliatory forces.

Now, a planner contemplating an all-out thermonuclear attack on the United States would require reasonable assurance that he

could destroy virtually all of these forces. Further, he would have to count on destroying them simultaneously. He would have to face up to the realization that if even a small portion of our retaliatory forces escaped his attack, they would still be able to inflict terrible damage on him. As one who has spent much of his life in military planning, I can appreciate only too well the restraining effect which this realization would exert on enemy planners.

Furthermore, as one familiar with our capabilities, I want to assure you that even if the Communists launched an all-out thermonuclear attack on the United States, tonight, nothing could prevent their bringing down upon themselves vast destruction from the retaliatory blows which we would still be able to deliver against them. My colleagues in the Joint Chiefs of Staff share this view. For that matter, so does Mr. Khrushchev. He himself has stated that, in the event of a general nuclear war, neither side could escape devastating destruction. In fact, the threat of such destruction, as the President has pointed out, is a common peril shared by both the Soviets and ourselves.

There is still another major aspect of our provisions for deterring general war, whose importance the Soviets also recognize. Marshal Malinovsky, the Soviet Minister of Defense, described this aspect recently in an address to the Supreme Soviet. He emphasized that success in modern war is possible only "on the basis of combined efforts of all types of forces." Marshal Malinovsky believes that, after a thermonuclear exchange, the issue would ultimately be decided by properly proportioned forces comprising land, sea, and air elements. Consequently, our strength in such forces is also an important factor in our capability for deterring general war.

To defeat attack, we must act promptly. Therefore, we maintain forces, combining all types, already deployed in key strategic areas overseas. We have the Seventh Army, Tactical Air Force units, and the Sixth Fleet in the European area. In the Pacific we have the Eighth Army, Tactical Air Force units, the Seventh Fleet, a Marine Corps division, and an Army division. For immediate reinforcement of these units in case of need, we maintain strategic reserves, including Fleet Marine Forces, Tactical Air Force units, and the Strategic Army Corps. As a basis for further reinforcement, all services maintain Reserve components, trained and ready to be called into uniform from civilian life.

These overseas deployments, strategic reserves, and Reserve components are also a vital asset for meeting the threat of attack on a scale less than general war—that is, the threat of so-called limited war. The deployed forces provide us with the capability to act promptly if a crisis occurs in the areas where they are located. The strategic reserves give us the capability to move rapidly to an area of crisis in some other part of the world. The Reserve components permit expansion to meet either threat if it should require an extended effort.

By maintaining our forces needed for a shooting war we are also contributing to the cold war in which the entire free world is now engaged. This observation especially applies to our Armed Forces overseas. Their presence in Allied countries provides incomparable psychological assurance of our readiness and willingness to share in the common defense.

In describing U.S. forces, I have not begun to give a complete picture of the military strength which is available to protect our national security. It is not the United States alone which is threatened, but all free nations. Furthermore, the United States has not been alone in taking steps to meet the threat.

Earlier, I listed the major international security agreements into which the United

States has entered. An extremely important contribution in this regard has been the mutual security program. This is the program whose military provisions enable us to assist allies to build up their own military forces. Under the program, we provide weapons, other materiel, and training assistance. Within the Department of Defense, I happen to have been the first director of the efforts to put the military portions of this program into effect. Part of that time I served under your chairman, Colonel Johnson, who was then Secretary of Defense. I have watched the program grow from its inception to its present state of tremendous value. With the passage of time, world events have strengthened my conviction that the mutual security program is based upon sound principles and that it greatly benefits the United States.

This program has frequently been misunderstood, and certainly it has been misrepresented. Its opponents have called it a giveaway program and have referred to it as foreign military aid—as though it were something given to other countries without return. Nothing could be farther from the truth. In fact, the mutual security program represents a realistic, hardheaded, cold-blooded approach to our very tough security problem—a problem which happens to be shared by other free nations.

I would like to take particular note of the allegation that this program has been substantially responsible for the outflow of gold that has disturbed so many fiscal experts. The fact is that, of the money appropriated for this program for the current fiscal year and for the fiscal year before it, 85 to 90 percent has been spent in the United States for U.S. products. Furthermore, during the past 3 fiscal years, Allied countries have bought from the United States, under the mutual security sales program, enough weapons and equipment to offset the value of our mutual security program expenditures made abroad.

Now, what has the mutual security effort helped to achieve since its inception in 1949?

The Allied ground forces which are receiving equipment, advice, and training under this program have increased from 3½ to 5 million men. Allied navies have grown from 1,200 to 2,200 combat ships. Allied air forces have expanded from 17,000 to more than 25,000 aircraft—and about half of these are now jets. All Allied forces are better trained, better equipped, and better able to perform their assigned missions within our total Allied strategy.

I want to emphasize that the global and collective threat makes imperative a global and collective strategy. We have such a strategy. It is a blueprint calling not only for collective action among allies, but also for positioning of forces right up against the Iron and Bamboo Curtains—ready to counter aggression on the spot as soon as it occurs. This latter part of our blueprint, we term a "forward strategy." Furthermore, thanks in large part to our mutual security program, our allies maintain a military strength of over 6 million men to help support that strategy.

To illustrate, 90 percent of the ground forces that would come under General Norstad's NATO command in case of war would be provided by our allies. In the Far East, the forward strategy is supported by a total of almost 2 million men, under Admiral Felt, the commander in chief, Pacific. However, the U.S. nucleus of this force consists of only a small percentage of the total. In Korea, for example, General Magruder commands 21 combat divisions, but 19 of these are Republic of Korea units.

As a sidelight, I might mention the immeasurable value of peacetime experience in working with allies. It permits the development of a body of common doctrine, common terminology, common weaponry, and

mutual understanding. In World Wars I and II, none of this was possible until after we actually got into war. Mutual understanding among allies in peacetime is particularly important. I well remember the attitude which prevailed during the years before World War II. Time and again I heard the statement: "If we ever have to go to war again, by all means we should do so without allies." This remembrance highlights one of the things which has always impressed me about President Eisenhower. I am sure he had heard the same statements of misgivings about allies. Despite such a peacetime indoctrination, he was able, during World War II, to adapt himself to a situation wherein the Allied effort was mandatory for success. His inspired leadership of that effort is history.

I could go on at great length to illustrate the importance of the mutual security program. However, more examples would just prove the same point. This point is that the mutual security program makes it possible for collective security to function. To my mind, there are only two alternatives to collective security. One would be for the United States alone to provide the entire force required to counter the Communist threat. This is clearly a backbreaking, pained, and probably impossible task. The other alternative would be for the United States to withdraw into a Fortress America. I am firmly convinced that such withdrawal would be the prelude to inevitable defeat.

In brief, the mutual security program is a cornerstone of our total defense effort and of our national security. All members of the Joint Chiefs of Staff share this conviction. No matter how much any individual member of the Joint Chiefs of Staff might like to have more resources allocated to his own Service, we are unanimous in our belief that not a single dollar should be added to our respective Service budgets if that dollar had to be taken away from the mutual security program.

Meanwhile, I appreciate only too well the demands which security requirements, in addition to the mutual security program, are making on our national budget. I am aware that defense costs constitute one factor contributing to the current effort to seek a workable disarmament formula. My own view is that reduction of defense costs, while a valid reason to seek disarmament, is strictly a secondary one. The overriding reason is the possibility that disarmament may be able to lessen, in some degree, the terrible threat of mutual destruction that hangs over the world. This is the threat which the President mentioned in his state of the Union message and which I quoted at the beginning of my remarks.

The United States has consistently advocated realistic disarmament, and has repeatedly taken the lead in trying to achieve it. We subscribed to the Washington Naval Agreement 40 years ago. Since World War II, we have intensified our efforts in this regard. I myself took part in disarmament discussions in the early days of the United Nations. To list only a few of our major attempts since World War II, there was first the Baruch proposal, in 1947. At a time when we still had a monopoly on atomic weapons, this proposal advocated formation of an international authority. Control or ownership of all atomic energy activities which were potentially dangerous to world security would be turned over to this authority. Next came the President's atom-for-peace proposal, in 1953. It also called for creation of an international agency. Nations would contribute normal uranium and fissionable materials to this agency which would devise methods to use these contributions to develop peaceful uses of atomic energy. With Communist cooperation and participation, this could have been a valuable step toward international atomic control.

Then, in 1955, President Eisenhower offered his "open skies" proposal. If this had been accepted, each nation would have given the other participants a complete blueprint of its military establishments; each would then have provided to the others full facilities for aerial reconnaissance throughout its territory.

The United States has made numerous other efforts in behalf of world peace. So far, however, the result has always been the same. The Communists have proclaimed the most high-minded goals, but they have invariably balked when it came to actual agreement on specifics. In this connection, it is a matter of grave concern to me that, although the United States has repeatedly taken the initiative to achieve disarmament, the Communists—who have consistently blocked agreement—have had some success in persuading world opinion that they are the leaders in this effort.

I believe that our attempts must continue. However, I believe that we must not accept disarmament on such a basis as to reduce our relative power position vis-a-vis the Sino-Soviet bloc. Also, to insure that agreements are honored, there must be—as an indispensable prerequisite—a sound, workable, verifiable inspection system. This consideration has been basic to all the efforts we have made. It is the only possible approach, especially in this day of nuclear weapons. Any nation which has a sincere, honorable desire to achieve disarmament cannot take issue with such a system being agreed to before disarmament takes place. Disarmament without an effective inspection system is doubly dangerous. First, violations could not be surely discovered. Second, our people and our allies would be lulled into a false sense of security which could cause us to lower our guard—with possibly disastrous consequences.

The United States has had one actual experience of trying to work with the Communists in operating an inspection system. That was in Korea.

Among other things, the Korean armistice agreement of 1953 provided that the existing levels and types of military strength of both sides in Korea would be fixed as a ceiling on the forces to be kept there from then on. The agreement also provided for inspection teams, furnished by neutral nations, in order to insure that these levels would not be exceeded. The United Nations nominated Switzerland and Sweden to provide members of the teams; the Communists nominated Poland and Czechoslovakia.

The Polish and Czech members of the inspection teams rapidly made a farce of the inspection system. It soon became abundantly clear that the Communists were consistently violating the armistice agreement by strengthening and modernizing their forces. In July of 1957, the United Nations command, because of the long record of Communist violations, formally suspended the portion of the agreement which prohibited the introduction of improved types of weapons and equipment. We did so because, to be realistic, we were the only ones who were observing it. We were thereby penalizing ourselves and our allies, and placing the forces of the United Nations command in great danger.

Despite the obvious failure to achieve effective inspection under the conditions imposed by the Communists, the Polish and Czech members of the teams had steadfastly maintained that the methods followed in Korea are not only sound, but represent the ideal—the classic—approach for achieving global disarmament. All I can say is that this system, with its restrictions on inspections and its requirement for unanimous agreement before investigations could be launched, provides a clear blueprint of an

approach to which we must never agree. It proved to be a complete fraud in Korea. It would be even more fraudulent on a global scale.

In concluding my remarks, I want to say that national security depends on many factors besides military strength. However, lacking a completely fool proof world disarmament, military strength continues as an indispensable prerequisite for that security. I subscribe to an old Hindu proverb, which says that the man without a stick will be bitten even by a sheep.

Military strength stems from no single weapons system. It cannot be measured realistically by counting up totals of any single type of military resource, but must depend upon the combination of our capabilities. This combination must be such as to enable us and our allies to meet the threat throughout the entire range of forms and intensities it can take.

Our efforts are designed to join with our allies to produce, in unison, the versatile and effective strength required. From this we derive not only the best hope of preventing war, but also the strength from which to negotiate effectively for a realistic reduction in the tensions which create the hazards facing the world today.

Such a goal is surely worthy of our most earnest thought and our most sustained effort.

Byelorussia

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. RODINO. Mr. Speaker, I take this opportunity to pay tribute to the captive peoples of Byelorussia, who commemorate the 42d anniversary of independence on March 25.

On that day, in the year 1918, the Byelorussian people took advantage of the chaotic situation in Russia to proclaim the establishment of the Byelorussian National Republic. Despite years of czarist attempts at assimilation, the Byelorussians refused to forget their status as a distinct ethnic group. At the first opportunity they proclaimed their national independence.

Their freedom was, of course, short-lived, and they were soon overcome by another Russian oppressor.

The new oppressor tried to do what czarist Russia had failed to accomplish for centuries: the forcible Russification of the Byelorussian people. For the past 40 years they have embarked upon a brutal campaign of extermination, dispersion, and exploitation. Byelorussians are today in colonial status; they are ruled by Russian officials; their schools use Russian books; and the major part of their production is exported for Russian consumption. Byelorussian youth are deported to obscure outposts, and are subjected to intense Russian indoctrination. The population as a whole has been subjected to such pressures that it has suffered the heaviest losses in Russian history.

Despite this brutal suppression the Byelorussian people have accepted the rule of the Soviet no more than history

shows they accepted the rule of the czar. They continue to cherish the hope for freedom and independence in the face of permanent political terror and tyranny. Let us join the people of Byelorussia today, and the people of Byelorussian descent everywhere in the free world, in the hope that one day their noble hope may come to fruition.

United States Should Go Back to Own System of Government

EXTENSION OF REMARKS

OF

HON. DALE ALFORD

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. ALFORD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the Arkansas Democrat of March 20, 1960:

UNITED STATES SHOULD GO BACK TO OWN SYSTEM OF GOVERNMENT

(By Karr Shannon)

At a recent newspaper conference, in trying to excuse the manner in which we have fallen behind the Russians, President Eisenhower said that "our people ought to have greater faith in their own system."

But what has Mr. Eisenhower done during his more than 7 years in office to bolster that faith? What has he done to strengthen our "own system" which Abraham Lincoln so aptly described as a "government of the people, by the people, for the people?" What has he done to restore and preserve such system?

Dwight Eisenhower took over the helm of government after a 20-year trend toward socialism under Roosevelt and Truman; he took over at a time when the government, founded upon the principles of democracy, was in a state of confusion and turmoil.

He has done nothing to stem the socialistic trend; rather he has encouraged, augmented and increased it. Under the Eisenhower administration, the annual cost of government has spiraled by the multiplied billions, the national debt has rocketed, inflation has gone beyond control, bureaucracy has sprawled and spilled over the borders of our own Nation, the U.S.A. is WPAing the world, and there has been less "government of the people, by the people, for the people" than at any time since the American Revolution.

WHAT IKE HAS DONE

Eisenhower urges that we have more faith in our own system of government. He urges this when the fact is that much of the loss of faith has been brought about by the many elements of compromise with the Russians which he himself has instigated.

What Eisenhower has done to enhance the socialistic trend and tax and spend and throttle the average voter's voice in the operation of his own Government makes Roosevelt and Truman look like pikers by comparison. He has maneuvered the New Deal and the Fair Deal into a Raw Deal.

He rolled out the red carpet to the world's most ruthless murderer—Khrushchev, and wined and dined him . . . and transported him all over the country at taxpayers' expense . . . showed him and informed him . . . This was the same Khrushchev who had said to the United States: "I will bury you."

Eisenhower has sent envoys into Russia—such as Agriculture Secretary Benson—to give the Communists billions of dollars worth of know-how—so they can bury us quicker.

WHY HELP THE ENEMY?

Why is our Government deliberately helping the enemy—our worst enemy on earth? Why do we give to this Communist nation—which hates us with a passion and is determined to destroy us—the secrets of our agricultural developments, our manufacturers, our know-how in just about everything? What is the reward?

Christ said: Cast not "your pearls before swine, lest they . . . turn again and rend you."

We do not need to change our system of government to meet the Russian challenge. We need only to return to the system founded by our God-fearing, freedom-loving forebears—our system.

This means that we must quit appeasing the mass murderer to whom our President extended the grand welcome. It means, as Otto Garr Tague, syndicated columnist, says, we must get out of this one-world trap which Eisenhower has helped set for us. It means, as Editor Tom Anderson of the Farm and Ranch states, we must quit subsidizing our enemies, destroying our markets and alienating our friends.

REPAIR THE DAMAGE

It means we must repair the damage done to the Constitution by the Warren-Myrdal court; restore States' rights; stop reconstruction of the South by the radical element in Washington; return to the people the right to run their own public schools; stomp out all societies and associations and other organizations, regardless of hue or cry, that are Communist dominated; stop the Civil War that is still going on—and worsening—between North and South.

To return to "our system," we must get out of the foreign aid racket; better still, get out of the United Nations; shuck the welfare state; reestablish the dignity of honest labor; sell the multiplicity of Government-financed, money-losing corporations to private enterprise; balance the budget; reduce taxes; begin liquidating the national debt.

If we do these things, then we can follow President Eisenhower's advice—regain our faith in our own system. There is little cause for pride or faith in the Government as it is now operated.

Greek Independence Day

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. RODINO. Mr. Speaker, we pay tribute today to a vital ally, a NATO partner, and an old and dear friend of the United States—the country of Greece. I join all Americans of Greek descent in celebrating the 139th anniversary of Greek independence.

The Greek War of Independence began on March 25, 1821, when Archbishop Germanos of Patras unfurled the national flag of Greece. This was the first step of the successful revolution against the rule of the Ottoman Empire. At first, the war was fought against great odds; but the determination and love of liberty of the Greek people won the sympathy and support of many other na-

tions, including the United States. This was the inspiring rebellion which brought men like Lord Byron from England to join the fight; similarly, it inspired other volunteers from other countries who also loved the cause of freedom. One of these volunteers, it is interesting to note, was an American colonel who brought back to the United States a Greek war orphan whose name was Lucas Miltiades Miller. Mr. Miller became the first Member of Congress of Greek origin. From the State of Wisconsin, he served in the House from 1892 to 1893.

The war of independence was partially successful in 1829 when Turkey recognized Greece as an autonomous principality. In 1832 the hopes of the liberty-loving Greeks were realized and Greece was recognized as a completely sovereign kingdom.

On Greek Independence Day we focus attention on the close ties between the United States and Greece, which date back to the Greek War of Independence and which are reaffirmed in our mutual alliance and friendship today.

Anniversary of Byelorussian Independence

EXTENSION OF REMARKS OF

HON. ROBERT R. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. BARRY. Mr. Speaker, it was 42 years ago today, March 25, 1918, that the people of Byelorussia cast off the rule of Moscow and proclaimed the independence of the Byelorussian democratic republic. I am happy to call attention to the anniversary of that date in remembrance of an oppressed people's struggle for freedom and self-determination. These are the principles for which the United States stands as champion across the world.

Self-determination remains the dream of men everywhere. Few people are more aware of this than the Byelorussians, or White Russians as they are also known to us. For centuries the Byelorussians have been denied control of their own destiny. They constitute a distinct national entity of 15 million people, in spite of persecution, war, deportation, and massacre. These people are united by cultural tradition, a common language, a history of struggle and most of all a common hope for freedom from foreign domination. They have been repeatedly denied this freedom. Ever since conquest by the Russian czars, there have been efforts to end their feeling of national unity, their Byelorussian language, their Byelorussian customs, and the teaching of free democratic principles.

Mr. Speaker, Byelorussians are not allowed to celebrate the occasion of their March 1918 declaration of independence. So it is for us, who are free, to remind the world. Byelorussians who have come to this country remember. Their en-

terprising spirit and industry have made a substantial contribution to the greatness of the United States. Our citizens of Byelorussian origin are characteristically doing their loyal share in the effort to keep our country prepared to maintain the strength of the free world. But when their thoughts turn toward the homeland of their ancestors, hearts must be heavy indeed.

We, and the rest of the free world, must keep alive the flame of hope and extend encouragement. So today let us pause and pay tribute to this determined and courageous people. We must do all we can to help Byelorussians everywhere strive for the day when these fine people will be able to practice openly the concepts of the four freedoms and true democracy.

More Good Work by United Nations Children's Fund

EXTENSION OF REMARKS OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. FULTON. Mr. Speaker, the United Nations Children's Fund has, over the years, been carrying on its good works for the children of the world in order to improve the conditions in which they are growing up. This will yield these children fuller, healthier lives and a better world in which to live.

The Children's Fund is pioneering new ways to improve the lives of these children. One of the recent developments by the United Nations Children's Fund is the development of high protein drinks for the children of areas where milk is scarce.

Under leave to extend my remarks in the Record I am including information about the introduction of these new products to the good friends of the United Nations Children's Fund in Washington, D.C.:

WASHINGTONIANS TO SAMPLE NEW INTERNATIONAL FOODS

The most effective answers to the population explosion so far developed by science will be presented to a taste panel at the Cosmos Club on April 1 before a meeting of the Washington, D.C., Friends of the United Nations Children's Fund.

They are hitherto undeveloped ingredients that can be added to children's food.

UNICEF has assembled a selection of them as samples to unmined wealth in a number of countries whose children suffer from protein malnutrition. They include milk made from soybean powder in Indonesia; buffalo milk from India; flours made from fish in Chile, and from peanuts in Nigeria and India; sunflower seeds from Chile and sesame seeds from Mexico; cottonseed products from Central America.

These simple substances contain between 70 and 80 percent protein. They are readily and cheaply available, and are easily transformed into edible foodstuffs in less developed areas of the world where they are most needed.

There are today an estimated 1 billion children in the world—750 million live in economically underdeveloped countries

which are the principal areas for UNICEF assistance. Hunger is the major enemy for most of these children. The new foodstuffs are one of the chief ways whereby UNICEF hopes to reach more of the severely undernourished millions of the world's children.

The foods have a long storage life in heat and humidity, and can be made acceptable and palatable for absorption into child diets. These foods are hidden assets of the lands where they are indigenous because they have never been utilized to any sizable extent as human food. Some of these new uses of unexplored food sources are still in the development stages, awaiting final confirming experiments before they can be produced in commercial quantities.

The Children's Fund, working with the United Nations' Food and Agricultural Organization, the Rockefeller Foundation, and other agencies, hopes to be able in the years ahead to help countries develop these resources and so cut down hunger among these millions of children. This is one way of assuring that they will grow up healthier, stronger, and more economically productive human beings.

On the tasting panel to sample the new foods will be congressional and Washington sponsors of the occasion. These include: Mrs. Christian Herter, Senora Dona de Sevilla-Sacasa, Mrs. Arthur Harman, Hon. and Mrs. Arthur S. Flemming, Senator Theodore F. Green, Senator and Mrs. Alexander Wiley, Senator and Mrs. J. William Fulbright, Representative Frances P. Bolton, Hon. and Mrs. Walter H. Judd, Hon. and Mrs. Chester Bowles, Mrs. Homer Ferguson, Mrs. Katherine B. Oettinger, Mrs. Harold H. Burton, Mrs. Francis B. Sayre, and Mrs. DeForest Van Slyck.

The reception will be held officially to honor Mrs. Guido Pantaleoni, Jr., president of the U.S. Committee for UNICEF, and Minister Dr. Felix Schnyder, Chairman of the UNICEF Executive Board, and his country's permanent observer at the United Nations.

The American Hellenic Congress

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. LINDSAY. Mr. Speaker, tomorrow marks the 139th anniversary of Greek independence. An added significance to this occasion is the recent founding of the American Hellenic Congress, a federation of leading nationwide American Hellenic Societies dedicated to meeting the challenges that confront our Nation. The Congress will henceforth speak as the united voice of some 2 million Americans of Greek descent.

This event is a milestone in their glorious history and under unanimous consent I include in the RECORD the letter of the Honorable Dean Alfange, chairman of the American Hellenic Congress, which appeared in the February 16, 1960, issue of the New York Times.

FEBRUARY 9, 1960.

To the EDITOR OF THE NEW YORK TIMES:

Though unnoticed in some quarters an important event, which gave substance to a long-cherished ideal, took place last week in New York City. It marked the launching of

a federation of Pan-American Hellenism under the aegis of the American Hellenic Congress. The distinguished churchman, His Eminence Lakovos, Greek Orthodox archbishop of North and South America, was named honorary chairman of the congress which will achieve de jure status upon ratification.

The component members of the new federation are the leading nationwide American Hellenic organizations, including those which are largest in numbers and oldest in point of service. Though each retains its identity, they will henceforth speak with a united voice in the councils of American affairs.

The American Hellenic Congress will strive, as stated in its charter, "to enlarge the areas of service to the United States and * * * to aid in the great process of shaping our national purposes" by coordinating the solid contributions to America by Americans of Hellenic descent.

That those whose ancestors lit the lamps of culture have seen fit, the more effectively to aid in confronting the challenges to a way of life bequeathed to us by ancient Hellas is, I think, a milestone which deserves to be recorded.

DEAN ALFANGE,

Chairman, American Hellenic Congress.

Civil Rights

SPEECH

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill H.R. 8601 to enforce constitutional rights, and for other purposes.

Mr. DOYLE. Mr. Chairman, January 27, 1960, in a brief statement when I signed the Civil Rights Discharge Petition as No. 14 thereupon and had done so the first day it was on the Clerk's desk, I also said that one of the reasons I had gladly and promptly signed that petition was because I verily believed in our constitutional form of government under which this Republic was founded and ordained, and which constitutional form of government I swore to uphold each of the seven times I have now taken my oath as a Member of this great National Congress of the United States of America.

The 15th amendment to our Federal Constitution provides as follows:

SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

SEC. 2. The Congress shall have power to enforce this article by appropriate legislation.

And now, having been personally present each of the days of this historic debate on bill H.R. 8601, and having voted on each and every one of the amendments and motions which have been put in place before we Members to vote upon during this debate, I will naturally vote against the anticipated motion to recommit this bill and will vote in favor of final passage of the Celler amendment.

Without consciously harboring any thought of ill will or antagonism or sectional feeling whatsoever toward any person or group of persons, or geographical areas of my beloved Nation, I nevertheless steadfastly believe that this bill will at least be some means of a considerable number of American citizens voting who are qualified under and in accordance with the laws of the States in which they reside, which citizens would otherwise not be given an opportunity to register to vote on account of their race, color, or previous condition of servitude. In other words, I believe this bill cannot help but make it an actual fact that the 15th amendment to our Federal Constitution providing that the right of American citizens to vote shall be implemented and given practical application in a substantial manner. I hope so. For, Mr. Chairman, to have the right of any American citizen, in any manner whatsoever, abridged in any State on account of race, color, or previous condition of servitude is actually destructive of our American way of life.

I cordially compliment the members of the House Judiciary Committee on both sides of the political aisle for the thoroughness and dexterity and fairness with which they have presented both pros and cons to us who are not members of that distinguished Judiciary Committee. And because I think we are all aware of the very great and strenuous changes which should result as result of the passage of this bill, assuming it becomes the law of the land, I trust that no sectional ill will will continue to be expressed, nor charged, nor made apparent by any person or any group of persons. This bill applies to all areas of our beloved Nation and to all persons in our Nation. I hope and pray that only fair, equitable, and just application of its history-making terms and conditions and provisions will be made and that its administration will normally result in great benefit to many people and the many difficult problems these many people have faced; all of this to be for the benefit of our national soundness and happiness.

Joint Federal-St. Louis Study To Determine Causes of High Strontium 90 Level in St. Louis Milkshed

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mrs. SULLIVAN. Mr. Speaker, the U.S. Public Health Service and St. Louis County and St. Louis City health officials today jointly announced the undertaking of a special study into the sources of the high levels of strontium 90 consistently being discovered in St. Louis milk supplies. I am extremely happy that this study is now going to proceed.

The people of St. Louis and surrounding areas have been understandably

concerned for several years over the high levels of environmental radiation being reported in that section, and particularly the high levels of strontium 90 in milk. Civic leaders in the St. Louis area have interested themselves in this problem in a very effective manner, and have joined with many of our outstanding scientists in St. Louis to try to find solutions for this invisible menace which threatens the whole Nation.

INQUIRY TO SURGEON GENERAL BY REPRESENTATIVE SULLIVAN

Last fall, I directed an inquiry to Surgeon General Leroy E. Burney of the U.S. Public Health Service asking what was being done or could be done to eliminate or reduce the amount of strontium 90 in our local milk supply. I said that I had read of encouraging research results in developing low-cost techniques for removing this dread contaminant from milk, through joint efforts of the Public Health Service, the Atomic Energy Commission and the Department of Agriculture, and asked when we could look for practical results from this research.

I also inquired if the Public Health Service needed any legislative authority or funds to proceed expeditiously with the development of a commercial process.

In reply, the Surgeon General's office informed me, last October, that they still had to do a great deal of checking into the strontium 90 removal process to determine if milk treated by the so-called ion exchange method or by other methods which have been studied would still retain its nutritional and sanitary quality. I was informed that this research would continue.

ATTEMPT TO FIND AND ELIMINATE CAUSE

Mr. James G. Terrill, Jr., Acting Chief of the Division of Radiological Health of the Public Health Service's Bureau of State Services, then notified me of the plan being considered to try to determine, in cooperation with local and State health officials, the reason for, and the sources of, the high levels of strontium 90 contamination persisting in the St. Louis area. It was the feeling of the Public Health Service that such a study could perhaps be far more practical in reducing the strontium levels in the milk supply than a process for taking it out of milk.

Today's announcement made simultaneously by the Surgeon General in Washington, by Dr. C. Howe Eller, commissioner of health of St. Louis County, and by Dr. J. Earl Smith, director of health and hospitals for the city of St. Louis, of the initiation of such a study in the St. Louis milkshed is therefore very welcome to me, as I know it is to everyone concerned about this serious problem. The Public Health Service press release is as follows:

PRESS RELEASE BY U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, PUBLIC HEALTH SERVICE, WASHINGTON, D.C., THURSDAY, MARCH 24, 1960

The second in a series of long-range studies of environmental radiation, now underway in various sections of the country, is being initiated in the St. Louis, Mo., area,

Surgeon General Leroy E. Burney announced today. Purpose of the studies is to determine the significance of previous findings concerning radiation levels in that area, according to Dr. Burney.

The project was announced simultaneously today by Dr. C. Howe Eller, commissioner of health, St. Louis County, and Dr. J. Earl Smith, director of health and hospitals, city of St. Louis.

The studies will begin in the near future with a preliminary survey of dairy farms in the various milksheds serving St. Louis. The survey will consist of investigations of water supplies, sources of animal food, climate, farming and animal feeding practices and other variables that may be associated with different types and levels of radioactivity in milk. The final phase of the milkshed study will consist of field experiments to determine whether, if necessary, the radioactive content of milk can be reduced by modifications in dairy farming practices.

One objective of this series will be to determine whether previous strontium 90 findings will obtain throughout the entire St. Louis milkshed, or only part of it. The levels of strontium 90 have been somewhat higher in the St. Louis milkshed than in other areas. However, the St. Louis average levels have been below those which the National Committee on Radiation Protection and Measurements (NCRPM) considers permissible for lifetime exposure by the general population.

Techniques developed in the St. Louis study will be applied to similar milkshed investigations being planned for several other major metropolitan areas in the United States by the Public Health Service in cooperation with State and local health authorities.

The St. Louis study is an outgrowth of negotiations over the past several months culminating in arrangements among the Federal, county, and city health agencies which are expected to become effective within a few days. Under these arrangements the Federal Government will reimburse the St. Louis County Health Department for the cost of personnel, materials, supplies, and travel directly involved in the first phase of the study. The county health department is authorized to enter into agreements with local health departments in adjacent States for the collection and delivery of samples of milk, water, cattle feed, and other materials needed for analysis. The Federal Government will furnish certain necessary laboratory equipment to the St. Louis group, and the Public Health Service's Sanitary Engineering Center, in Cincinnati, Ohio, will assist in laboratory analysis of samples.

The Federal financial share for the remainder of fiscal year 1960 will amount to \$35,700. The total Federal share for fiscal year 1961 will be around \$100,000.

Because of the wealth of general information that will be developed on environmental radiation in the St. Louis area, it is expected that more elaborate investigations will follow the initial milkshed study. Such additional research would be part of the nationwide effort of the Public Health Service and State health departments to interpret the significance of radioactivity in the environment. They will be concerned with radioactivity measurements in water, air, milk, and other foods as well as radiation exposures from medical and dental X-rays. Major emphasis will be given to obtaining precise measurements of the amount and kinds of radioactivity taken in by people and also the amounts retained within the body. Actual radioactivity of dietary, water, and air intake among large numbers of individuals will be analyzed, and, by measuring the radioactivity of body wastes, the amounts retained as total "body burden," determined.

The first of these comprehensive studies, in San Juan County, N. Mex., was announced last week by Surgeon General Burney.

The Public Health Service's Division of Radiological Health pointed out that the increasing use of nuclear, medical, and dental X-rays, and radioactive isotopes for industrial and medical purposes makes it mandatory for official health agencies to begin accumulating precise knowledge of the amounts, kinds, sources, and body retention of radioactive substances in many different population groups. Such knowledge is necessary in order that health officials may be able to determine when actual or potential health problems exist, and to develop methods for coping with such problems.

Fluoridation

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. BECKER. Mr. Speaker, I am inserting in the RECORD herewith a letter addressed to the Secretary of the Department of Health, Education, and Welfare. This letter deals with the matter of fluoridation of the water of our country. It is written by a lady that I have the pleasure of knowing very well, and I know that she is absolutely sincere in her belief.

Whether fluoridation is good or bad has been argued throughout the land. I do not know the answer, but I give the opportunity to everyone to read this letter and form his own opinion.

The letter follows:

AN OPEN LETTER TO ARTHUR S. FLEMMING ON FLUORIDATION OF PUBLIC WATER SUPPLIES

ASSOCIATION FOR THE PROTECTION

OF OUR WATER SUPPLY, INC.,

New York, N.Y., February 25, 1960.

Hon. ARTHUR S. FLEMMING, Secretary, Department of Health, Education, and Welfare, Washington, D.C.

DEAR MR. FLEMMING: It is gratifying to read in the public press your recent statements on the dangers of toxic chemical additives in our food supply and contamination with spray residues and other substances of doubtful safety.

Encouraging as your recent statements are, we are deeply concerned by the inconsistency between your position on these matters and your advocacy of the addition to our water supply of fluorides which are more toxic than the additives you have condemned. For example, the day to day ingestion of fluorides in our drinking water is of far greater harm than the occasional turkey feasts with cranberries containing aminotriazole. Besides no one is compelled to eat cranberry sauce but everyone is compelled to drink fluoride in their water.

Even the experts in your department cannot guarantee that drinking fluoridated water may not injure some of the people. You should be aware that an increasing number of responsible members of the medical and dental professions continue to report the harmful, cumulative effects of fluoride.

In a democratic nation which prides itself on the protection it gives to the rights of the individual, how can you justify fluoridation? The conveying of toxic, therapeutic agents via so indiscriminate a vehicle as the municipal water supply establishes a dangerous

precedent. The American people have already demonstrated their opposition; more than 1,000 communities have rejected fluoridation and close to 100 after trying it, have discontinued it.

We recognize the need for better laws, and better enforcement of present laws to protect the public from poisonous additives. The principle must be upheld that where there is doubt, that doubt must be settled on the assumption that the health of the American people is primary.

Very truly yours,

EMILY MLHR,
President.

Mess in Washington Grows and Grows

EXTENSION OF REMARKS

OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. BENNETT of Florida. Mr. Speaker, I read the March 12 editorial in the Florida Times-Union, entitled "Mess in Washington Grows and Grows," with a great deal of interest. It is not my purpose to point any finger of scorn at anyone. It is my purpose to emphasize that the Republican Party, in pointing a finger of scorn at the Democratic Party in recent campaigns did so without putting its own house in order; and that it would be a good thing if both political parties would devote their time primarily to correcting such things, rather than pointing out the deficiencies of their opponents.

There is pending before Congress at the present time a substantial number of bills relating to the conflict-of-interest field. The House Armed Services Committee, of which I am a member will soon have before the entire House a modest proposal in this field which should gain everyone's approval, in my opinion. The House Judiciary Committee has pending before it a substantial number of bills which would deal with some of these problems on a governmentwide basis. The Committee on Legislative Oversight has pending before it a substantial number of similar proposals dealing with specific regulatory bodies. I sincerely hope that some concrete results of a substantial nature may be forthcoming from these committees to assist in strengthening the moral fiber of our Government.

Several years ago Congress enacted a code of ethics for Government service. It took almost 10 years from the original introduction of this modest proposal before it was finally enacted. The Civil Service Commission is of the opinion that the code of ethics has done a great deal of good since it was enacted, but it needs to be strengthened by a Commission on Ethics which could hear specific cases in a judicial manner and recommend to the proper executive, legislative and judicial authorities appropriate disciplinary action to be taken in specific cases. Of course no amount of legislation will solve all of these problems, but legislation can help to solve the problems and we are derelict in our duties in not enacting legislation in this field

as promptly as possible. The editorial to which I refer reads as follows:

"MESS IN WASHINGTON" GROWS AND GROWS

Frederick W. Ford steps up to the top spot with the Federal Communications Commission on Monday in wake of John C. Doerfer's forced resignation as chairman of the agency.

Few people are inclined to disagree with President Eisenhower's opinion that Doerfer's decision to quit was a wise one. The same cannot be said of other actions by Doerfer while head of the FCC.

Doerfer's sin was in allowing himself to become beholden to a broadcaster, whose holdings his agency had the responsibility of overseeing. It's naive to think that a man's decision affecting another wouldn't be colored by the fact that the former received a 6-day yacht cruise and other amenities from the hands of the latter, as was the case with Doerfer and a Miami radio and television executive. This is a clear case where business and pleasure should not mix.

What's so discouraging about this expose, for those who had hoped maybe at last a cleanup was in the making in the radio and television industry, is that the Doerfer affair occurred last month. That's after the major TV scandals were revealed and since a lot of pious statements about reform.

Ford is going to be on the spot to overcome the handicap of having been a member of a lackadaisical Commission not disposed to policing properly the industry it's appointed to watch. Unless he moves fast and in the right direction, the public may be clamoring for a wholesale housecleaning of the FCC to straighten up this phase of the mess in Washington.

The last phrase stirs memories—memories that Eisenhower was elected to office on a campaign to clean up that mess in Washington. Now will we have to elect another cleanup man?

Plenty of dirt has cropped in the Eisenhower administration that has been marked by the resignations of eight major officials who have quit under fire. Two were on the FCC and one was the President's right hand man, Sherman Adams. The Truman administration had no scandal worse than that associated with Adams, who was accused of taking favors from a Boston industrialist and using his influence in behalf of the industrialist.

The Democrats have a campaign issue themselves this time and surely they won't fail to exploit it.

But what do the people have? They elect one group which promises to throw the rascals out, only to let other rascals in.

Accidental War

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. BLATNIK. Mr. Speaker, a most thought provoking open letter from Jess Gorkin, editor of Parade magazine, to President Eisenhower and Soviet leader Khrushchev regarding accidental war was published in the March 20 issue of Parade.

The danger of accidental war in this pushbutton, missile era is real indeed. Mr. Gorkin makes a simple and practical suggestion to help avert such a

tragedy. Under leave to extend my remarks in the Appendix I include a copy of Mr. Gorkin's open letter:

AN OPEN LETTER FROM THE EDITOR OF PARADE TO PRESIDENT DWIGHT D. EISENHOWER AND PREMIER NIKITA KHRUSHCHEV RE ACCIDENTAL WAR

GENTLEMEN: This open letter is respectfully written to make the following suggestion:

When you have your private talks in Moscow this June, I urge you to consider the establishment of a direct telephone line between you that will be open 24 hours a day, with standby interpreters. Its purpose: to prevent the possibility of an accidental war.

If you, as world leaders, are never more than a few minutes away from each other by telephone, then I believe the risk of accidental war will be immeasurably reduced.

Experts tell me that this system is not only technically feasible but inexpensive and could be established within a few days.

In response to this suggestion, one expert says: "Today President Eisenhower is seldom more than 1 minute away from some means of communication. By telephone, high-powered radio, even walkie-talkie, he can be reached almost instantaneously wherever he is—in the White House, in his plane, automobile, helicopter. I am sure that Premier Khrushchev is equally available for vital messages."

And what could be a more vital message than: "Mr. President, one of our missiles has gone astray. It is armed. We have been unable to destroy it in flight. I beg you to believe me, this is a terrible accident. It is not an attack."

Such a message would instantly alert U.S. defenses. It would also certainly give sufficient pause to the hand that presses the button for all-out retaliation.

An accidental war might be triggered by mechanical failure, human error, an innocent misunderstanding of orders, or plain ignorance. Such things happen every day in every walk of life.

One must add to this the possibility of sabotage, subversion, or the lunatic action of fanatics.

At least three of our missiles have gone awry:

1. In the spring of 1946, one of the most powerful rockets in the world at that time, an adaptation of the German V-2, was fired from the White Sands Proving Grounds in New Mexico. It went off course and crashed in a graveyard in Juarez, Mexico.

2. On April 14, 1955, a Nike missile accidentally took off from Fort Meade as a result of a short circuit. Fortunately, it landed just off a highly traveled road between Baltimore and Washington.

3. On December 5, 1956, a Snark long-range strategic missile took off from Patrick Air Force Base in Florida on a 3,000-mile closed circuit test mission. The missile missed its first turn and accidentally went into a Brazilian jungle.

You, Mr. Khrushchev, must know of Soviet missiles that have misfired or gone astray.

Today there are only four atomic powers—the United States, Russia, England, and France.

The highly reputable National Planning Association declares that in 5 to 10 years 25 more nations will be capable of joining the atomic club. Eleven of them, says the NPA, will be able "to embark on a successful nuclear weapons program in the near future." They are Red China, Belgium, Canada, Czechoslovakia, West Germany, East Germany, India, Italy, Japan, Sweden and Switzerland.

Eight more—Australia, Austria, Denmark, Finland, Hungary, Holland, Poland and Yugoslavia—have the key resources and are

only short on scientific manpower, which they are busily training.

The remaining six—Argentina, Brazil, Mexico, Norway, Spain and South Africa—have the cash, but must wait a little longer than the others to build up industry and scientists.

Rocket know-how is spreading just as rapidly as atomic know-how. Another great area for the risk of accident will thus be opened.

It is no exaggeration to say that a day may soon come when war by accident will be more of a menace to the world than war by design.

Today, only a relative handful of missiles stands armed and ready to go on the launching pads of East and West. In the near future there will be hundreds. They will be on the ground, underground, in submarines, in planes, on railroad flat cars, wherever man's ingenuity can put them. They will be on all five continents.

And as they spawn, the risk of accidental war spawns with them. Must they go unchecked?

Contact between you today, even on the most urgent matters, must wait on the cumbersome, slow-moving machinery of diplomacy, wholly unsuited to the lightning emergencies of the space age.

Gentlemen, I would respectfully remind you of that old saying paraphrased here: For want of a nail, a shoe was lost. For want of a shoe, a horse was lost. For want of a horse, a kingdom was lost.

Must a world be lost for want of a telephone call?

Respectfully,

JESS GORKIN.

The Missing Link

EXTENSION OF REMARKS

OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. BENNETT of Florida. Mr. Speaker, I recently read a very interesting editorial in the Waterways Journal published in St. Louis, Mo., on March 19, 1960, entitled "The Missing Link." The editorial points out the extreme importance of early construction of the Cross-Florida Barge Canal and it reads as follows:

THE MISSING LINK

Prospects for the addition of a modest sum to the civil works appropriation bill for preliminary work on the Florida Cross-State Barge Canal in the fiscal year beginning on July 1 appear favorable, particularly if a united front can be maintained by proponents while the question is being weighed by congressional committees, an informed source reports. With most of the former opposition, largely centered in the Miami area, now melted away and with unequivocal support expected from Florida's delegations in both Houses of Congress, there is little reason for stalling this long-planned project any longer.

Over the years the proposed 12-foot channel from Jacksonville to the gulf coast (Ingalls, Fla.) has gained support, as its significance has become better understood, not just in the area which would be the immediate beneficiary but throughout the inland waterways system. Indeed, the Mississippi Valley Association, which speaks for water resource developers and shipping interests in the entire mid-continent area, has in-

cluded advocacy of the Florida channel as one of the major planks in its platform. Almost a year ago, the association's executive vice president, Everett T. Winter, journeyed from St. Louis to Washington to testify on behalf of the project, along with some 60 Floridians, before the House and Senate Appropriations Committees. Another well-known St. Louis waterways authority, Capt. A. C. Ingersoll, Jr., president of Federal Barge Lines, Inc., also spoke in favor of the canal at that time.

The proposed barge canal has aptly been termed the missing link in the inland waterways system. It would enable barge traffic originating anywhere in the present system to reach the Atlantic Ocean directly. Traffic interchange with intracoastal, coastwise, and international shipping at Jacksonville would open new sources of business for inland carriers, augmenting new tonnage consigned to or from that city, points along the route of the canal and nearby ports such as Tampa. The channel would undoubtedly also assume an important role in the Nation's defense program, which already must rely in many cases on water carriers to move missiles from inland arsenals to such bases as Cape Canaveral.

Capt. F. M. Hendry, a leading maritime figure in Tampa and forthright champion of the canal, last April gave the congressional committees eight sound reasons why the project should be built. Among benefits to accrue from the channel, he said, would be an increase in the Nation's and his State's economy, development of industry in a lagging area, a boom in smallcraft recreation and a strengthened national defense potential—even the difference between survival and failure in the next major world conflict.

These and other cogent arguments in favor of the canal, together with the quantity and quality of support which it has attracted, should assure the project a place in the forthcoming budget. It would seem that only lack of unity, indifference or overconfidence could now bring about defeat. With victory so close at hand, nothing should be allowed to interfere. The waterways need this final link.

Family Farm Income Act of 1960

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. WOLF. Mr. Speaker, I would like to present my views on the Family Farm Income Act of 1960, of which I have the privilege to be one of the cosponsors.

The bill is designed to raise farm income, reduce surpluses, and slash Government costs. Perhaps it sounds difficult, but I believe it can be brought about. It provides for controlled production at fair price to producer and consumer. American farmers have been plagued by the present policies of the administration. Constantly lowering price supports and a weak control policy has greatly increased our surpluses. Farm income has been going down each year, with another 16 percent drop this year. I am told that the farm population has decreased by 15 percent; in 1952 there were 24.3 million people on the farm while we have only 20.8 million

people now. Similarly there has been a reduction of 15 percent in the number of farms; in 1952 there were 5.4 million farms while now there are only 4.6 million farms. Farm net income during this period has dropped from \$15.3 billion in 1952 to \$9.3 billion by January 1, 1960—that is, a fall of 40 percent. The parity ratio, the relationship between prices paid and prices received by farmers is at the lowest level in 19 years. At the end of 1959 the parity ratio stood at 77, a fall of 23 percent from 1952. This, Mr. Speaker, at a time when farm production expenses are up by 15 percent.

The farmer's share of the consumer's food dollar has declined from 51 cents in 1947 to less than 38 cents at the close of the year. Farm marketing charges have increased by about 40 percent since 1947. Inflation and rising costs have affected the farmers adversely. Prices paid by farmers for commodities used in production, interest, taxes, and wages have risen from 240 percent of the 1910-14 parity base period of 1947 to nearly 300 percent in 1959. Meanwhile, prices received for farm products have declined from 276 percent of the base period of 1947 to around 230 percent in 1959.

Mass movement away from the farms has not fulfilled the prediction that such a shift would solve agriculture's problem of declining income.

Instead the migration of such people has created new problems for rural communities. The movement to the cities has also caused problems in the cities due to competition for a limited number of jobs. The conservation program of this administration has not yielded the desired results. With the present program the farmers can manage to adjust their crop rotation in such a way that it does not result in lower production. Storage charges on the overabundance is costing \$1.5 million a day, a colossal drain on the taxpayer. We are in chaos with this program.

The supply of a wide variety of high quality foods is the very foundation of our vast economic growth during the postwar period. It is unfortunate that the farmers who provided that food have not shared fully in the country's prosperity to which they have contributed so much.

With a view to curing some of the ills of the present farm situation the Family Farm Act of 1960 has been introduced. We believe it holds a promise of relief. The salient features of the bill are:

First, it reduces the cost to the Government by reducing the surplus in storage and by paying farmers in kind with grain taken from the existing surpluses. Marketing quotas will be set at a level which will allow a discharge of 10 percent of the surplus stocks each year that are held by the Government. The present storage cost of \$1.5 million a day will be reduced drastically each year. It is fair to mention here that any direct monetary subsidy without controls will tend to increase production. Our farm programs of the last 7 years have built a great surplus that will continue to hang like a Damocles sword over the farm economy and the Nation for many years. This bill provides payment in

kind, from the overflowing bins, in lieu of cash payments for the land placed in the soil bank. This would eventually balance the supply and demand aspect and we would not have disproportionately large reserves. It is also provided that the estimated cost to the Government in any year for any commodity shall not exceed 5 percent of the estimated crop sales of any commodity in that year.

Second. Our bill includes a voluntary program requiring a referendum, needing approval of two-thirds of the producers of each commodity to effect a change from the current program. The two-thirds vote feature has been introduced in order to keep the noncomplacent farmers from upsetting the program by growing more than those who follow the program. This way all the farmers will be obliged to follow the majority opinion. But if two-thirds of the producers voting in any such referendum do not vote in favor of such a program, the program then in effect under the laws on the date of enactment of this act shall remain in operation. Thus, you see, it would be the farmers themselves who would decide their own program, which, in other words means the farmers are given freedom to choose.

The farmers themselves, will adjust supply to demand by means of nationwide marketing orders or other commodity-stabilization procedures.

Third. The bill includes a soil bank feature. To take advantage of this feature the farmer must voluntarily take out of production 10 percent of his tillable land. In addition, to the 10 percent he has the option of putting in up to 30 percent additional tillable land for which he will be paid in-kind from the existing storage stocks.

The bill combines all feed-grains as a group and it would enable the producers of feed grain to sit down and evolve a workable total feed grain program.

Fourth. Midwestern dairy producers will be benefited. The bill enables the producers of meat, butter and cream and producers of milk for manufacturing and fluid consumption, to work out a national program on milk and butterfat which would make sense nationally as well as locally.

Fifth. Under the proposed bill, the school lunch and needy direct distribution program now in operation will receive increased moneys for distribution of high protein foods, not only milk but poultry and meat products also. The Secretary of Health, Education, and Welfare is authorized to spend \$500 million each year to purchase these items off the markets and make them available to the needy.

The greater use of these foods would directly create a greater demand for feed grains, to feed additional livestock which would also help to reduce present stocks of feed grains.

Sixth. The bill prepares the way for the HUMPHREY-WOLF food-for-peace program. I have been an advocate of and have worked for a food-for-peace program for a long time. We will be able to continue to push this program.

This bill tends to eliminate the depressing effects on main street. Under this proposal the placing of entire farms in the soil bank will be eliminated. No farmer will be allowed to put more than 40 percent of his tillable land into the soil-building base; moreover, payments or benefits under the act will be limited to not more than \$5,000 to any one farm operator in one year. The present practice all too often is to put the farm in the soil bank and then go to the city to work. This eliminates the demand for many community services normally needed.

I do not believe this is a perfect bill, but it is a step in the right direction. Modifications here and there will undoubtedly improve it. However, it does contain a suggested solution for many of the ills of the present program.

I would like to dwell upon the following features a little more in detail: First, feed grain and livestock; second, distribution of high protein foods in schools; third, small town economic situation; and fourth, food for peace.

FEED GRAIN AND LIVESTOCK SITUATION

The bill combines all feed grains as a group and would enable the feed-grain producers to decide for themselves what production program they want. This would be done by referendum and a two-thirds majority of producers of a specific commodity will make the decision. The combining of all feed grains is very important. Such things as overproduction of wheat often up-set the feed-grain situation under the present program. The envisioned commodity-by-commodity approach will not adversely affect other commodities. For example, wheat grown for feed will not be used for human consumption and vice versa. Great market fluctuations of feed grains have many times violently affected the price of livestock. More feed grains mean cheap feed grains thus depressing prices, and vice versa. A shortage of feed grains means high prices for livestock. These fluctuations are not desirable except to the profiteer.

Mr. Speaker, I would like to suggest one perfecting amendment. The bill now provides that only those farmers can vote in the referendum who have in the past, in at least three of the immediately preceding 5 years, sold not less than \$500 worth of the commodity in question. Since most of the feed grain producers in my district feed livestock, the feed grains they produce are fed on the farm. The value of their grain production is not counted. These farmers will in many cases become unable to take part in the referendum. In order to cover this point an amendment is needed. The farmers who have produced feed grains of the value of \$500 or more, whether sold or fed to their own livestock must not become disenfranchised.

We believe our bill would also directly help the meat, dairy and hog industry. Without a proper feed grain production planning program, overproduction results, which eventually depresses the farmers price of the meat producing and dairy industries. It is hoped that the part of the feed grain production can be

adjusted by increasing production of protein products, part of which under this bill will go to the school program. This would create a significant increased consumption of these abundant feed grains and thus create an additional supply of protein foods for the needy people. It would also provide an opportunity to the midwestern dairy producers to work out a comprehensive national program for milk and butterfat. I would not care to see any change in present marketing orders until this program is effective. I believe this dairy marketing area will deserve very serious study to be sure that we improve on rather than disrupt present marketing orders.

DISTRIBUTION OF HIGH PROTEIN FOOD IN SCHOOLS

The bill provides for the increased distribution of high protein food—milk, poultry and meat to the schools and the needy. To many schoolchildren the only adequate meal is the one received at school. Many more children should be covered. Many of our needy senior citizens will also be aided.

The envisaged increased production of high protein foods—discussed under the feed grain and livestock—will be effectively consumed for the good of some of the people in areas in great need. Under this provision the Secretary of Health, Education, and Welfare is authorized to spend \$500 million each year to purchase these items off the market, and make them available to the needy people. Mr. Chairman, this is a tremendously important section and should go far in helping the folks in real need in America.

SMALL TOWNS ECONOMIC SITUATION

This bill will help improve the situation in small towns. Under the existing program farm families put the entire farm in the conservation reserve, thereby depriving the local farmworkers jobs. Demand for goods and services is thus in two ways greatly reduced. This has greatly upset many small towns where alternate employment or business opportunities are not available. Many small businesses are forced out. This bill safeguards against putting the entire farm in the soil building base. A family can only retire land up to 40 percent of the total cultivated area. Another balancing feature is that no farm family will get payment or benefit more than \$5,000 a year for the retired land. With still 60 percent of the land under cultivation the farmer will have to stay on the farm. This would avoid farm population movement to the cities by putting the whole farm in soil reserve. These redeeming features will aid the economy of many small towns.

FOOD FOR PEACE

I have long been an advocate and have worked hard for a food-for-peace program. Under this bill a provision is made not only to protect our present commitments abroad under Public Law 480 but also to clear the way for my proposed food-for-peace program to help feed some of the hungry people of the world. This provision aims at promoting the foreign policy of the United States by helping to build essential world con-

ditions of peace by the more effective use of our abundant agriculture commodities for the relief of human hunger. Food can foster economic and social developments in less developed countries through the United Nations or its appropriate agencies. Mr. Speaker, I believe our agricultural surplus should be accepted as a blessing rather than a burden. America should feel proud that she is in a position to help feed the millions of undernourished people of the world. This is the only field in which America is a clear leader. Let us broaden the original food surplus dumping program under Public Law 480 in such a way as to include the proposed ideas in the Humphrey and Wolf food-for-peace bills for helping to feed the hungry people of the world.

It is humane to feed our hungry fellow human beings. But when we have such an abundance, we have a very great moral obligation. At the same time it is cheaper to send a bushel of wheat to a needy area than to keep it in bins over the long haul. A workable plan can be developed with wheat surplus countries like Australia, Canada, and so forth. This would avoid ill feelings between the have nations. These countries should also extend a helping hand in this humane venture. Agreed, it will be difficult, but this does not constitute an excuse. No great accomplishment in history was ever accomplished without hard work. This solution of our surplus problem is morally, politically, and financially worth a trial. Let us act sensibly and boldly to win friends through food. Let us act now to help our American farmers and our Nation out of the present dilemma.

Forty-second Anniversary of the Proclamation of the Independent Byelorussian Democratic Republic

EXTENSION OF REMARKS OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. FRIEDEL. Mr. Speaker, wherever any white Russians or people whose ancestors came from Byelorussia gather, their thoughts are on their ancient homeland which is now suffering under the ruthless heel of despotic Communist oppressors.

It was on March 25, 1918, that Byelorussian patriots such as Lutskievich, Vatslav Lastovski, and others proclaimed their land as an independent republic. However, after the collapse of Germany, the Red army occupied the land and by February of 1919, all Byelorussia was in Communist hands. World War II ravaged that unfortunate country tremendously; 80 percent of all the houses at the cities of Minsk and Homel and 90 percent of Vitebsk were destroyed.

Byelorussia can be pointed to as an example of what befalls human beings

who are so unfortunate as to be under Russian bondage. Its leaders and intelligent persons were annihilated and others persecuted; its native culture suppressed and stifled; its religious life almost exterminated; and its people enslaved.

We in the United States, who take liberty and freedom for granted look with horror on the works of atheistic communism everywhere. As an American and as a Member of the Congress of the United States I strongly urge we support the worthy Byelorussian cause for liberation from the cruelties of Soviet Russia and that everything be done to assist them in their legitimate aspirations for justice.

Clarifying Jurisdiction in International Affairs

EXTENSION OF REMARKS OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. PORTER. Mr. Speaker, in the spring, 1960, issue of World Affairs there appears a review of Wallace McClure's book "World Legal Order" published by Chapel Hill, the University of North Carolina Press, 1959, sponsored by the World Rule of Law Center at Duke University. This review gives promise that the book will be valuable in clarifying the issues and the history of the relationship between internal U.S. law and the law of international treaties. I believe it will be a great contribution to a lasting peace through rule of law.

Under a previous unanimous consent, I am including the review here:

In a world in which political policies seem to be at conflict with fundamental principles of law, confusing their application and making us doubt their very validity, Dr. McClure comes forward with an analysis of American constitutional law so clear and forcible that one's faith in law is restored and the political obstacles seem to be less formidable than first appeared.

Here in the United States is a world legal order which might well be the contribution of the people of the United States to the solution of the problem. Our courts have proclaimed in case after case the supremacy of an international treaty over any national law to the contrary. As far back as 1796 the Supreme Court proclaimed, in *Ware v. Hylton* that an attempt on the part of the State of Virginia to convert debts owing to British creditors into debts owing to the State of Virginia was in violation of the higher obligations of the provisions of the peace treaty of 1783; and in *Cook v. United States*, as late as 1933, the Court held that the seizure of the *Mazel Tov* on the high seas, while legal under the later law of Congress, if dates alone were considered, was illegal under the treaty with Great Britain, which was not to be deemed abrogated unless an intention to that effect on the part of Congress was clearly expressed. In like manner, in part II of the volume, international common law is part of the law of the United States, and the decisions of the U.S. courts offer ample precedents upholding international customary law as the supreme law of the land.

In part III of the volume the author turns from national constitutional law to the legal structure of the world community, describing the United Nations as the international component of legal order, analyzing the United Nations both in respect to constitutional development through usage and explaining the policy of the United States and criticizing it in respect to the reservation entered to the jurisdiction of the International Court of Justice, describing the policy as a setback to international adjudication. The emphasis put by the author upon world order as distinct from immediate national interests is highly commendable.

A closing chapter deals with "Human civilization and the law," summarizing the thesis of the volume and emphasizing the need of harmonizing law and justice, citing in this connection the statement of the Secretary General of the United Nations that victories in the counting of votes are "likely to be illusory unless they are steps in the direction of lasting consent to a peaceful and just settlement of the questions at issue."

The World Rule of Law Center at Duke University in North Carolina is to be congratulated upon the first of its projected series of publications, which makes a constructive contribution to the greatest of modern problems, the establishment of the rule of law in international relations.

C. G. FENWICK.

The Religious Issue and the 1960 Campaign

EXTENSION OF REMARKS OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. UDALL. Mr. Speaker, I present a most interesting article, written by Ernest K. Lindley, which appeared last week in Newsweek magazine:

[From Newsweek, Mar. 21, 1960]

KENNEDY'S BIG ASSET

(By Ernest K. Lindley)

It is time for a blunt appraisal of the religious factor in the presidential campaign. Although Senator KENNEDY's Catholicism cuts both ways, the bulk of the evidence seems to me to indicate that it is a net asset—probably his most valuable practical political asset. How else can one explain the fact that in the public-opinion polls he has consistently shown up better than other Democrats when tested against Nixon, Rockefeller, and other Republicans? He has many assets, of course, but few which are unique. His intellect is first-rate but no better than that of several of his rivals, active or potential. He is a serious and generally well informed student of national and international affairs, but no more so than most of his Democratic competitors. Indeed, several can lay claim to longer and broader experience in public affairs. He is an astute campaigner. But, with allowance for Stevenson's limitations in this field, as much can be said of his rivals. His personality is exceptionally attractive, but the others do not lack magnetism.

BASE OF SUPPORT

Most of the other Democrats prominently mentioned for head of the ticket bear one or more special political handicaps, it is true. If KENNEDY's religion were such a handicap, he would not, I think, show up so well in

the public-opinion polls. Individually, these small samplings may err by a considerable margin but, nationwide, they have rather consistently indicated that KENNEDY is probably the best vote winner available to the Democrats. It is reasonable to suppose that this is because he attracts many of the Catholics who have recently voted Republican and that these outnumber the Democrats and independents who would vote against him because of his religion.

In appraising the religious issue, we should not be misled by the 1928 election. I "covered" that campaign as a reporter for the New York World and spent a good part of it traveling with Al Smith. His Catholicism was a factor but not in itself decisive. His opposition to prohibition, while an asset in the northern cities, hurt him in the South and rural and smalltown North and West. His East Side accent, lack of formal education, and brown derby had similar effects. (Senator Thomas J. Walsh, a good, dry Western Catholic Democrat, might well have held the South solid if he had been the presidential nominee.) The Republican Party was then more numerous than the Democratic. Herbert Hoover had long appealed to moderate independents and glowing prosperity practically guaranteed a Republican landslide.

BURDEN ON THE GOP

Although Smith lost 5 of the 11 Southern States, he carried Massachusetts and Rhode Island. Of the political handicaps he suffered, no more than two could apply to KENNEDY: Prosperity and Catholicism. Prohibition is a dead issue. KENNEDY is well-educated, indeed polished. Democrats outnumber Republicans, placing the greater burden of winning independent votes on the GOP.

Although the polls indicate NIXON will do well among independent voters, he lacks the nonpartisan background that Mr. Hoover had acquired through his relief activities and distinguished service under Mr. Wilson. Since 1928, especially in the last few years, the success of Catholic candidates for Governor and Senator in States with larger Protestant majorities indicates that fears about Catholic officeholders have diminished. It is doubtful if the interest of most Catholics in electing a Catholic President has diminished correspondingly.

I do not suggest that Catholics regularly vote for Catholic candidates. Certainly, many do not, especially when the non-Catholic candidate is obviously better qualified. But if I were a Catholic, I would seize the opportunity to break the barrier between Catholics and the Presidency—with the hope, too, that the Catholic, if elected, would by his conduct demonstrate that fears of a Catholic in the Presidency are unfounded.

Generally, conditions appear to favor a Republican victory in the 1960 presidential election. The Democrats may be able to win only by introducing a new factor. KENNEDY's Catholicism would be such a factor, and, in the net, probably a helpful one.

The Arab League—An Instrument of Peace?

SPEECH

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. ADDONIZIO. Mr. Speaker, the current issue of the magazine Prevent

World War III—No. 55, winter-spring 1960—published by the Society for the Prevention of World War III, Inc., contains a most interesting article entitled "The Arab League—An Instrument of Peace?" This article analyzes the history of the Arab League and its role in maintaining tensions in the Middle East. I believe this article would help to enlighten American public opinion with respect to Middle Eastern affairs, and I am accordingly inserting a condensed version in the RECORD below:

THE ARAB LEAGUE—AN INSTRUMENT OF PEACE?

In the world of politics, the use of catch phrases has a variety of functions. They may be employed to register a genuine achievement. Conversely, they can serve the ends of deception by proclaiming the attainment of an objective so as to conceal a dismal failure. The slogan of "Arab unity" would seem to fall into the latter category. It is forever on the lips of Arab politicians and propagandists. Indeed, it is repeated so frequently that even reputed experts on the Middle East accept this glittering phrase as though it were based on solid fact.

However, when one digs beneath the slogan of "Arab unity," one finds more substance to the charge that it helps to cover up profound and irreconcilable contradictions among the Arab states. A case in point is the Arab League, one of the few institutional setups which is supposed to belong to all of the Arabs. The Arab League, consisting of the United Arab Republic, Jordan, Lebanon, Libya, Morocco, Saudi Arabia, Yemen, Iraq and Tunisia, is regarded as the Arab's prize exhibit of "Arab unity at work." How true is this allegation?

THE LEAGUE AT CASABLANCA

A few months ago the Arab League met at Casablanca. Press reports quoted the Arab foreign ministers meeting there, that the conference "boosted Arab solidarity from the Persian Gulf to the Atlantic" (Christian Science Monitor, Sept. 9, 1959). Another report (New York Times, Sept. 6, 1959) termed the meeting "a new birth of unanimity." However, when one examines the work accomplished at this much ballyhooed conference, one finds that for all practical purposes it boiled down to the same old broken record, i.e., a pox on Israel. The Christian Science Monitor once noted editorially: "The best thing that the Arab League can say for itself is that it survives" (Sept. 10, 1959). The next best thing that can be said, is that the League's survival stems from its role as a breeder of hate and violence in the Middle East.

The whole world knows that unanimity vis-a-vis Israel is as simple as pie, and it is almost laughable that the foreign ministers from various Arab states had to travel all the way to Casablanca to reaffirm this rather dreary theme. In a very real sense, the fact that this was just about all that was "accomplished" gives negative proof of the deep-seated antagonism which beset relations among the Arab states. Indeed, before the League was able to convene the conference, the proposal to create a Palestinian Arab government (inspired by the Egyptians) was abruptly dropped. Knowing that Egypt's proposition would be at the expense of the Jordanian state, King Hussein's officials threatened to boycott the meeting unless the idea was discarded. It is also known that Jordan was willing to sit down with Egypt at the League meeting only after President Nasser informed the king through the league's secretary that he was not opposed to Jordan's claims to the throne of Iraq. In return, Hussein is reported to have pledged his support, should Nasser choose conflict with Israel. As one commentator described

it, the Arab League Conference in Casablanca petered out in the words of T. S. Eliot "not with a bang but with a whimper." The whimper is a pretty accurate description of the league's "accomplishments" since the day it was founded in March 1945.

LEAGUE'S BACKGROUND

What were the compelling factors influencing the establishment of the League? Perhaps the most important outside factor was British policy in the Middle East. During the war, Great Britain was very much concerned over the spreading Axis penetration into that area. This development created considerable difficulties for the allied states, both in Iraq and in Egypt. Apparently, the British felt that one way to counteract this danger, was to take the leadership in promoting the idea of Arab union. Thus, as Walter Z. Laqueur writes in his book, "The Soviet Union and the Middle East," the British believed that the League "would promote their interest in the Middle East." Furthermore, Mr. Laqueur points out that the British were also concerned with the French and Soviet influences in that strategic area. Consequently, the British Government encouraged the formation of the League and succeeded in pushing Egyptian leadership to the fore.

RIVALRIES

At first glance, the choice of Egypt is surprising. The history of Egypt's relations with other Arab States does not show an intimacy of purpose and action. Mr. Tom Little in his book "Egypt" observes that that country "being by temperament insular, was not pro-Arab, but history and Islam has made it Pan-Arab." The fact that Egypt had remained more or less aloof in her relations with other Arab States and yet showed a marked inclination to lead the Arab world, induced the British to involve her as a counterbalance to the Hashemite dynasty which ruled in Iraq and Jordan. This was particularly necessary in view of the fact that the Hashemites regarded the rest of the fertile crescent, i.e., Syria, Lebanon, and Palestine, as part of their natural domain. Therefore, the League, as the British saw it, was their means of preventing other countries from gaining influence while, at the same time, it was supposed to block any of the Arab governments from dominating the whole area.

The internal factors which brought the League into being, were the historical and cultural experiences shared by all of the Arab States. The dream of a United Arab empire was intermixed with the goals of a Pan-Islamic movement which also received powerful support in the Arab States. Furthermore, the League was looked upon as a potential vehicle that could be used against the West.

Yet, these very forces which seemed to make for unity, were burdened by contradictions. Thus, the idea of a united Arab empire is not exactly in harmony with Pan-Islam. Furthermore, the concept of a united Arab empire flies into the face of Arab nationalistic forces. Consequently, despite common bonds of language and religion, the Arab States have different historical developments, different traditions and memories, different physical environments, and different economic needs. It is clear then, that the very premises upon which the League was founded, was rent with contradictions from the very beginning. Egypt aimed at expelling the British forces and preventing the union of Iraq and Syria. Iraq, on the other hand, leaned more and more toward the West while, at the same time, seeking ways and means of gaining control over the so-called fertile crescent. Syria and Lebanon were both lukewarm to the Egyptians and the Iraqis while they sought their aid in expelling the French.

The clashes of interests among the Arab States were recognized in the league's constitution. Article 2 provides that the member states, while collaborating more closely with each other, are guaranteed their independence and sovereignty. Article 8 requires that every member state respect the forms of government prevailing in the other countries and to abstain from action calculated to change them. In short, the league, despite all of the fanfare attached to its creation as a symbol of Arab unity, could only be founded on the basis of the status quo. This means, it officially recognized that the member states had their own separate interests whose priority could not be denied. In a most enlightening analysis of the Arab League, Mr. J. S. Raleigh wrote: "The Arab League . . . is therefore—paradoxical as it may sound—not a Pan-Arab achievement but on the contrary a bulwark designed to protect the separate national independence of the Arab States, the inter-Arab status quo, against Pan-Arab union schemes" (Middle Eastern Affairs, March 1955). Discussing the rival schemes of the Hashemites versus the Egyptians, Mr. Raleigh further points out that this is clearly reflected in the constitution: "Constitutionally, therefore, the Arab League is based on an essential controversy that has been solved; in fact, it was only by leaving that decisive question open and ambiguous that the foundation of the league, cooperation between Egypt and Saudi Arabia on the one hand, and the Hashemite States on the other, was possible at all."

HOPES AND FAILURES

British hopes with regard to the possibilities of the Arab League have also fallen by the wayside. Here, too, the aim and result are not only wide apart but in a very real sense diametrically opposed to each other. This is seen by the fact though the British sponsored Egypt for leadership in the league, it has been the Egyptians who have been in the forefront in destroying British influence in the Middle East.

It is true that from its very inception, lip-service was paid to the idea of unity under the aegis of the league. However, in the actual workings of the league we find that the member states have more frequently ignored it on major issues. For example, Egypt did not consult the other members of the league on the nationalization of the Suez Canal. The league was not advised when Jordan grabbed part of Palestine in 1950 much to the chagrin and anger of the other Arab States. When Iraq signed the Baghdad Pact, she bypassed the league, as did Egypt when it annexed the Gaza Strip in 1949. One could cite many other cases where the member states entered into alliances, military and otherwise, where the league was left in the cold.

The divisions and squabbles among the member states became so bitter that within a few years after its founding it appeared to be a dead letter for all practical purposes. This was particularly true in 1950 when Jordan was denounced by Egypt, Syria and Saudi Arabia for having annexed Western Palestine. Only by resort to the old formula of "unanimity against Israel" was it possible to keep the League intact. Again the League's unifying power was found wanting in the fierce rivalry between Iraq and Egypt. To isolate Iraq, Egypt signed bilateral agreements with Syria and Saudi Arabia outside the League. Moreover, Egypt conceived the so-called Arab Collective Security Pact of April 1950. Ostensibly Israel was the target, but in reality, so Mr. Raleigh points out, it was an Egyptian move "to forestall any Iraqi-Hashemite schemes for union and aggrandizement."

The divisions and conflicts which have characterized inter-Arab relations, have put a damper on all major projects sponsored by the League. There have been a number of plans and blueprints for economic co-

operation and mutual aid. However, for the most part they have not been implemented. The decision to establish an all-Arab merchant fleet was never carried out. At one time, the League proposed to organize a civil aviation union as well as an all-Arab postal union. On another occasion the League recommended the development of an inter-Arab network of railway and roads. None of these plans have as yet materialized. Instead of economic harmony among the Arab States, one finds more rivalry and discrimination. Jordan is still at the mercy of Syria and Lebanon since she has no natural outlets to the Mediterranean for her export trade. The oil-rich Arab states are penny pinchers when it comes to helping their less fortunate Arab "brothers."

The difficulty of reaching agreement among the League members evoked an ironic comment by Boutros Ghali, professor of Cairo University, in his book "The Arab League." "Actually," Professor Ghali wrote, "the achievement of purely technical agreements among the Arab states involves a far more cumbersome process than the conclusion of political agreements with foreign states."

ROLE OF THE LEAGUE

Thus, we find that in all key spheres where the league was supposed to exercise an important influence, very little has been accomplished. Nevertheless, its advocates and supporters pretend that the league is a powerful factor in the life of the Arab States. The present secretary general of the Arab League, Abdel Khaliq Hassouna, is a very active man forever propounding the advantages of the league and assuring outsiders of its vitality and value.

Mr. Hassouna denies that the league is but a shell and vehemently rejects the charge that the league is the tool of any single Arab state. As an Egyptian, Mr. Hassouna's resentment against the accusation that the league is an Egyptian instrument, is quite understandable. But what are the facts? In the first place, the league from its very inception, was dominated by Egypt. The first secretary general was also an Egyptian. The permanent headquarters of the league is in Cairo and it is estimated that approximately four-fifths of the league's staff are Egyptian. It is also a fact that members of the league's staff have frequently been borrowed from the Egyptian Foreign Ministry. Moreover, the Egyptian Government foots the major portion of the league's budget.

The political aspects of Egypt's domination are perhaps more evident today than they were before Nasser took over. But even under the corrupt King Farouk the Egyptians dominated the deliberations of the league. It was under Egyptian inspiration that the league was prepared to expel Jordan in 1950. From the very beginning Egypt manipulated the league in such a way as to block the union of Iraq and Jordan. Obviously, Egypt aspired to play first fiddle in the Middle East.

NASSER'S TACTICS

When King Farouk was overthrown in 1952, the Egyptian officer clique headed by Nasser, was faced with important internal problems. There was the Moslem Brotherhood organization which yearned for power and therefore represented a dangerous challenge to the Nasser movement. This was complicated by the fact that the popular Egyptian General Naguib, who had become President of the newly established Republic, appeared to have ties with the brotherhood. Naguib himself, because of his popularity, was a figure to be reckoned with. There were other forces at work, both on the radical left and on the right, which created additional difficulties for Nasser. Therefore, Nasser's main concern in this period was to consolidate his hold on the Egyptian people. Once he was able to build a firm domestic

base, then he could take bolder measures in foreign relations.

Under these circumstances, the Arab League marked time while its future role awaited Nasser's evaluation. With all of the difficulties at home, Nasser was in no mood to stir a hornet's nest abroad. Therefore, he tried to assure rival states, particularly Iraq, that his government was seeking friendship and had no designs on others.

In August 1954 Nasser told a friend: "Nuri is in power in Iraq. This is the time to reach an understanding with him" (Tom Little, "Egypt"). In retrospect, this was a remarkable statement, because Nuri al-Said, the late leader of Iraq, has since been depicted by Cairo as the archtraitor to the Arab peoples. Of course, Nasser took this soft line toward Nuri al-Said in 1954 because of domestic difficulties which prevented him from taking a more aggressive stand. Other calculations may have entered into Nasser's tactical moves. Perhaps he hoped to make a deal with Iraq outside of the league which would result in Egypt's leadership of the Arab world. He knew very well that little could be done within the league because the Iraqi politicians had already come to the conclusions that it was nothing but a tool of Egyptian policy.

The extent to which Nasser tried to ingratiate himself with Iraq is illustrated by the fact that in May 1954 he told the Syrian Ambassador that Egypt would not object to Syria joining Iraq or Jordan "as long as there was public support for the policy." This was an astounding position to take, since it meant Egypt's endorsement of the Fertile Crescent scheme which had been the heart's desire of the Hashemite dynasty. However, before the year was up, Nasser's views had changed. His hope of winning over Nuri al-Said by smiles did not work. On the contrary, under Nuri al-Said's leadership, Iraq entered into talks with Turkey and Britain which eventually resulted in the Baghdad Pact of 1955. Four days after Iraq had entered into an agreement with Turkey which led to the pact, Nasser gave the signal for an unprecedented propaganda attack against Nuri al-Said, and the Iraqi government which he represented was overthrown.

He described Nuri el-Said as a collaborator and symbol of the old regime of oppression and corruption. By such tactics Nasser was able to incite wide masses of the Arab people and to distract his own people from their pressing problems. This made it possible for Nasser to embark on a bolder and more aggressive foreign policy. It was then that Nasser began to reactivate the Arab League as a means of isolating Iraq and carrying out Nasser's policies through the area.

"DEMOCRATIZING" THE LEAGUE

Nasser has tried in every possible way to polish up the Arab League so that it will appear as the shining symbol of "Arab unity." Membership in the League has been broadened although it still does not cover all of the Arab areas. Lately, the Secretary General of the League has tried very hard to win over Tunisia to participate in the League's work. Thus, Nasser's chief delegate at Casablanca proposed that the League's council quash the resolution by which the League last October (1958) condemned Tunisia for its dispute with Cairo. These gestures have not impressed President Bourguiba who has been one of Nasser's favorite whipping boys. Bourguiba knows that Cairo is still the headquarters of forces that are striving to subvert the Tunisian Government.

THE LEAGUE'S "NEUTRALITY"

In this connection it is noteworthy that both, Tunisia and Iraq, have avoided participation in the League's work for some time. It is obvious to them as it is to any

student of the League's operations, that it is in essence an instrument of Nasser's boundless ambitions. The Secretary General of the League told the Christian Science Monitor (October 14, 1959): "I challenge anyone to mention a single instance in which the organization has not been strictly neutral and impartial." Mr. Hassouna must have made this declaration with tongue in cheek. According to article 8 of the League's constitution, every member state is pledged to respect the forms of government prevailing in the other Arab countries and to abstain from any actions calculated to change them.

Yet, it is a notorious fact that the Nasser regime has systematically violated the spirit and letter of this article. Nasser has instigated assassination and revolt in the other Arab countries. His agents and propaganda mouthpieces are constantly striving to undermine Arab governments which refuse to kowtow to him. Practically every country in the Arab League itself has been victimized at one time or another by Egypt's flagrant subversive activities and brazen interference in their domestic affairs. The recent revolts in Iraq and the attempted assassinations of Premier Kassem revealed the long arm of Nasser. In September (1959) Nasser spoke softly to the King of Jordan; the following month King Hussein was called an imperialist tool. On October 12, Jordanian authorities announced the seizure of quantities of arms and explosives smuggled in from the UAR.

VIEWS ON THE LEAGUE

What has the league done to call Mr. Nasser to account? Failure to do so does not indicate genuine neutrality but, on the contrary, complicity. If the league were truly neutral, it would have acted long ago against Nasser, since the very essence of the league's constitution is based on the mutual respect that all member states were to have for each other. Without that mutual respect and pledge of noninterference the league would never have been born. The fact that the league has now failed utterly in this respect is perhaps the most convincing proof of its subservience to Egyptian policy. The subordinate relationship of the Arab League to the Nasser regime was described by the Lebanese newspaper *Al-Ahrar* which wrote that the Arab people "rejoice at the change in the policy of Abdul Nasser who has renounced violence in favor of softer methods in his efforts to regroup the states of the Arab League under his moral authority" (Sept. 13, 1959). The enthusiasm shown by this particular newspaper is in sharp contrast to the prevailing attitude toward the league and its mentor. Here are some examples:

The Jordan daily newspaper "Falastin" devoted a special article to the occasion of the League's 13th anniversary: "The League did not succeed in its mission and did not bring any benefit to the Arab peoples. From the day of its founding it became a shelter for idlers and dervishes who live at the cost of the Arab peoples and are financed by them. When worms devour the pillars of a building it is best to destroy it, and this is the case with regard to the decayed League. It is therefore fitting that the date of March 22 be observed each year as an annual day of lamentations of the League and not as a day of festivities" (March 22, 1958).

Yehya Hawash, a Palestinian refugee, wrote in "Falastin": "It is better that the League should mourn itself. It is over 10 years now that the League talks about Palestine. What did the Arabs of Palestine gain by this? The League should leave the refugees alone and not use their sad lot for public exhibition" (April 4, 1958).

"After the Egyptian revolution and the start of the struggle between Cairo and

Baghdad, the League gradually turned into an Egyptian tool. The chorus of opponents to this phenomenon spread from North Africa to Jordan and Iraq, and the demand was raised that the League's seat be transferred from Cairo to a neutral Arab capital such as Beirut or Khartoum and that the post of Secretary General be given, on occasion, to someone from another Arab country (than Egypt)" ("Al-Hayat," Beirut daily, August 9, 1959).

Thus, it is clear that "Arab unity" finds no solid basis in the Arab League.

Civil Rights

SPEECH

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill H.R. 8601 to enforce constitutional rights, and for other purposes.

Mr. DINGELL. Mr. Chairman, I regret that this civil rights bill comes before us so strapped by the rule of germaneness as to be almost impossible to strengthen by amendment.

I am the author and sponsor of a number of bills which I believe should be included in this measure and which this Congress should have an opportunity to at least consider. I will briefly list them:

H.R. 351: An omnibus civil rights bill to protect the right of individuals to be free from discrimination or segregation by reason of race, color, religion, or national origin in housing, employment, education and political participation.

H.R. 352: Permits Attorney General to initiate in the name of the United States civil actions to prevent conspiracies which interfere with civil rights of any person.

H.R. 353: Federal Antilynching Act for the protection of all persons from lynching.

H.R. 354: To prohibit discrimination in employment because of race, color, religion, national origin, or ancestry.

H.R. 500: To prohibit the shipment of explosives in interstate or foreign commerce for the purpose of endangering lives or illegally destroying property.

H.R. 501: To prohibit the use of Government property by any organization practicing segregation on the basis of race, creed, or color.

H.R. 4261: To amend the Civil Rights Act of 1957 to make the Commission on Civil Rights a permanent agency of the United States and to broaden the duties of the commission.

H.R. 9318: To establish an agency of the legislative branch of the Federal Government authorized to conduct the elections of Members of the Senate and the House of Representatives.

These measures should be included in the bill. They would be of enormous assistance in guaranteeing full equality to all of our people everywhere.

I originally intended to offer amendments to this bill substantially identical

to my bill H.R. 500 which outlaws transportation of explosives in interstate commerce to injure or destroy person or property of another. This would raise a presumption that explosives so transported were shipped in interstate commerce and permit Federal authorities to enter and assist State officers to apprehend and punish those guilty of the bombings of churches, schools and places of business and residence. This amendment was offered with my support by a member of the Judiciary Committee. I regret that it was not adopted. I had further intended to offer an amendment outlawing lynching as provided by my bill H.R. 353, but after careful study of the House rules find such an amendment would not be germane to the legislation now pending and so would be stricken on a point of order.

I am also sorry that the provisions of former title III, identical to my bill H.R. 352, offered by the gentleman from New York [Mr. Celler] were stricken on a point of order. Adoption of this language would have enabled the Attorney General to institute civil proceedings to protect any right guaranteed by the Constitution.

It is interesting to note that day after day we have heard Members of this body point out the almost unanimous support for every citizen having the right to vote. Yet we have observed strong opposition to effective legislation which would have permitted vigorous Federal action to effectuate that high purpose.

I supported the provisions to establish a system of Federal enrollment officers where necessary to act to guarantee citizens in their right to vote where there has been a pattern or practice denying that right because of race or color.

In my view that provision is superior to the voting referee proposal which raises certain constitutional questions. I will however support the voting referee proposal although I regard it as less suited to the purpose. The enrollment officer provision would be vastly more effective in guaranteeing citizens their right to vote. It would not require citizens to, in effect, run the gauntlet before they could properly secure their voting rights and would be available on a finding either by the courts or by the Civil Rights Commission that a pattern or practice of denial of right to vote existed because of race or color.

The need for effective action in this is obvious. Father Theodore Hesburgh, president of Notre Dame University, and a member of the Civil Rights Commission, at a civil rights conference at that great school recently, in which I participated, told of "literally millions of people qualified to vote who are not able to vote." Father Hesburgh went on to tell of these disfranchised millions who are veterans of long wartime service, lawyers, doctors, ministers, doctors of philosophy, college presidents, college graduates, all taxpayers and many of them property owners, whose only real disqualification is that the community in which they reside prevents Negro suffrage by many subtle and direct ways. For example, there were some 214,213

Negro citizens living in 57 counties without a single registered Negro voter.

The full report of the Civil Rights Commission is replete with numerous examples to convince even the most skeptical that American citizens are being denied participation because of race or color in the voting process which is so indispensable to real democracy.

I have been greatly concerned over the inability of Americans to solve problems of living together peacefully, and sharing the benefits of living in our great democracy without racial discrimination. For this reason I was one of the sponsors and the third signer among the more than 200 Members of the House who signed the discharge petition which compelled the Rules Committee to bring this matter to the floor. This problem must be solved by all right thinking men working together, but legislation is desperately needed to establish a climate in which the great principle of equality may grow and prosper. It must be faced vigorously on all levels of government; judicial, legislative, and executive.

We must learn to live together and to recognize a man for his individual worth and not for the color of his skin.

The bill before us with the amendments included on the floor is by no means as strong as I would like to see it. If it is vigorously and properly enforced I am hopeful that it will result in progress in this field of human rights. Certainly the Attorney General and President will have no excuse but to act vigorously and use the process of law now being enacted to carry out the real intention of the Constitution.

I pledge my unwavering support and continued vigorous efforts in behalf of effective and strong civil rights legislation.

Under unanimous consent I insert in the RECORD at this point my two statements on civil rights legislation before the House Committee on the Judiciary during the hearings held in the 1st session of the 86th Congress:

STATEMENT OF HON. JOHN D. DINGELL, A REPRESENTATIVE IN CONGRESS FROM THE 15TH CONGRESSIONAL DISTRICT OF THE STATE OF MICHIGAN

Mr. DINGELL. I am a member of another committee which is meeting this morning and although I would like to talk longer before you here I will have to be a bit brief, Mr. Chairman.

I have never known a man for whom I have had more respect and regard than the outstanding chairman of the great Committee on the Judiciary of the House of Representatives.

Mr. Chairman and members of the committee, I would like to say that many of these bills proposed have a great deal of merit. I would like to associate myself with the chairman of the distinguished committee and urge enactment of his bill which I feel would be a great deal stronger and which would offer a great deal more advance, much faster than the administration's proposal offered by our distinguished colleague, the gentleman from Ohio [Mr. McCulloch]. I want to say that any civil rights legislation if it be worthwhile and if it offers any concrete progress of course would be in the public interest. I think we should not waste our time, Mr. Chairman and members of the committee, in reporting out a piece of civil rights legislation which offers less than

a long stride forward in this particular field. I am sure the members of the committee are well familiar with the bills which are already pending. I would like to comment briefly on two of them, Mr. Chairman, and to let my written statement apply to the others.

The first that I wish to refer to is the bill which would amend the Civil Rights Act of 1957 to make the Civil Rights Commission a permanent agency of the United States and to broaden the duties of the Congress to include investigation of all civil rights anywhere. This bill is numbered H.R. 4261. It is my feeling, Mr. Chairman, that the Civil Rights Commission has been balked, blocked, delayed, harassed, and hampered by those who oppose its purposes and principles and who seek to narrow and limit its endeavor. Unfortunately Congress in its wisdom did not give sufficient thought to the problems that this Civil Rights Commission would meet when it first enacted legislation creating this Commission. The result was that the Commission has not been able to accomplish a great deal other than to make us aware of one basic fact which I think we all knew, that many of our citizens are being denied the right to vote in many parts of this great country and that there are many who are using all efforts to deny the Federal Government its right and its responsibility to see to it that its citizens are permitted to vote without regard to race, creed, color, or ancestry.

I would like to urge, Mr. Chairman, that if the life of the Civil Rights Commission is to be extended that it should be extended indefinitely. I would further urge that the Civil Rights Commission be permitted to extend and to broaden its field to include all civil rights.

Mr. Chairman, I am sponsor of another piece of legislation which I think this committee should very well consider, and that is H.R. 352. This would authorize the Attorney General to institute on behalf of and at the cost of the United States a civil action in equity for preventive relief whenever any acts have been committed which would give rise to a cause of action under section 1980 of the Revised Statutes. This would literally authorize the Attorney General to take any action to secure any rights protected and guaranteed by the Constitution of the United States on behalf of any individual or group of individuals. This section 3 of the administration's recommendation previously when it was in Congress was reduced and narrowed in the Senate of the United States. I think if we pass this particular measure or a substantially similar measure we will find that this will be a tremendous step forward.

Mr. McCULLOCH. Mr. Chairman, would the gentleman yield?

Mr. DINGELL. I would be glad to.

The CHAIRMAN. Mr. McCULLOCH.

Mr. McCULLOCH. Does the witness feel that there is any different attitude on this very controversial matter than there was when the House adopted it in effect last year or the year before?

Mr. DINGELL. I do not feel that there is any less need for a piece of legislation of this sort. I think certainly the House has established a very fine precedent in having adopted a piece of legislation of this sort. I know it is not included in the President's recommendation. I think it is an oversight since he said this is a good thing once before, and I don't think he would change his attitude on a matter so basic and important, nor do I feel any Member of this Congress who had previously voted for a matter of this sort could or should change his position. I am trying to answer the question, I want the gentleman to know. If the gentleman wants to ask me more questions or different questions or to elucidate on his question further I will be delighted to do my level best to do it.

Mr. McCULLOCH. I think that the answer up to this point has been clearly responsive to the question and I thank the witness very much. I interrupted when I thought the answer had been made, for the purpose of making this friendly comment. I think the gentleman will recall that a number of us on this subcommittee gave the best we had during one of the most difficult times we had in the House within my time when the title in question was enacted.

Mr. DINGELL. I would certainly like to compliment the gentleman on his vigorous efforts on behalf of this proposal during the last session. I am very well aware of his efforts and on behalf of the people of my district I want to thank and commend the gentleman. I want to express high regard for him.

Mr. McCULLOCH. And if I may go on, of course the gentleman knows the unhappy experience that was had after that time, when the bill was finally enacted by both Houses of the Congress and that title was not included. It has been my feeling that sometimes the only way that any progress can be made is by moderation and compromise and give and take and I have never thought that it served a useful purpose, if I can paraphrase a famous statement, to march them up the hill and march them down again. That is the reason I pursued this. I cannot speak for the President on this particular matter in any way whatsoever, but the experience that we had last time has left its effect on a number of people who marched up the hill and marched down again.

The CHAIRMAN. I would like to look upon it in a little different way, if I may. We should place in any kind of a bill that we present to the House as strong as possible a civil rights plan as we can muster up or conjure up. We may not be able to get all we want, but you know the Indians used to shoot at the moon with their arrows. They knew they could never hit the moon but they thereby became expert arrow shooters.

Now, we don't care what the Senate may do. We passed title III which is to my mind a very important segment of the Civil Rights Act of 1957 which I might modestly say bears my name. The Senate saw fit to delete title III. As far as I understood the administration approved title III and now I don't think it was mere oversight. I think it was deliberate for reasons best known to the administration and title III has been eliminated from the administration program. I am sorry about this, but I will do all I can to reinstate title III or something like it in the bill before us, the bill we will endeavor to present to the House. The House passed it in 1957, and there is no reason we cannot pass it again and I repeat the responsibility for taking it out, if they wish to take it out, lies with the Senate.

Mr. DINGELL. I would like to agree with the chairman and disagree with my distinguished colleague from Ohio. I feel that moderation entailed progress in the law and that there should not be vindictive action. Moderation certainly includes respect of the law, and must include progress toward equal rights for all. As the distinguished chairman said, shooting high is a necessary aspect of achieving success. If you shoot to be President of the United States you will rise high. If you shoot merely to become a streetsweeper—and I do not demean that particular profession—you will not necessarily reach higher than being a streetsweeper.

I think in this we should approach it with an awareness that section 3 was and is now good for America. It is my hope we will give the Senate a good, strong piece of legislation. Then if they want to weaken it or water it down, that of course is the Senate's prerogative. We will have the satisfaction of knowing that we in the House of Representatives have done the level best we

could. I once heard a saying that it is not necessary to succeed to persevere. I don't think—and I think the prior remark would buttress my statement—I don't think that section 3 was in any way a vindictive piece of legislation or that it was less than moderate. The President in one of his press conferences said it was a very moderate thing. It substituted for criminal penalties the gentle and mild persuasion and of equity and the mild, compulsive effect and the understanding which we find in equity as opposed to the harsh and perhaps vindictive approach that we see in a court of criminal jurisdiction.

Mr. Chairman, I would like to direct myself to a bill of mine, H.R. 500, which would outlaw the transportation of explosives in interstate commerce for the purpose of destroying or injuring the person or property of another without his consent. You will note, Mr. Chairman, that this is a good deal broader than some of the other legislation that has been introduced on the same point. It applies to injury or destruction of the person or property of another, which is a good deal broader than just churches or schools. For every bombing of a church or school there have been 15 or 20, and perhaps even 50 or 100, bombings of homes, private residences, and so forth.

You will note, Mr. Chairman, that this particular piece of legislation is bottomed on the interstate commerce clause. We have a long judicial tradition on this particular subject. You will note the Lindbergh law which has been discussed this morning. We also include under the Federal power the fleeing from one State to another to avoid testifying or to escape criminal prosecution. We include the carrying of a stolen automobile, or other stolen property, across the State line. We also have the well-known Mann Act which affects the transportation of certain other objects in interstate commerce. There is an adequate basis in judicial tradition for this particular piece of legislation.

I would say that we add to this provision of the bill of Mr. McCulloch which would result in a still more complete proposal in that we would attack both the carriage of the explosive in interstate commerce and the freeing in interstate commerce after having committed the act of destroying the person or the property of another in one State.

So, Mr. Chairman, I do want to congratulate the members of the committee and yourself for this early hearing, to commend you for your interest in this most important subject. I want to express to you on behalf of myself and my people back home the sincere hope that this committee will report out a strong and vigorous piece of legislation, that we will not temporize or be concerned with the fact that the Senate may vote down a piece of legislation or that it will be watered down. I have not doubt that the bill will be watered down in the ordinary course of pressure in the House and the Senate, and I would say that this is all the more reason why we should at this initial stage report out strong and vigorous legislation. We seek to secure a piece of legislation which will protect the rights of all people and which will include progress for all of us within the framework of the Constitution.

Mr. MILLER. Mr. Chairman.
The CHAIRMAN. Mr. MILLER.

Mr. MILLER. Mr. DINGELL, I was interested in your comments concerning H.R. 352 and allied legislation that you said was very mild and that it substituted milder provisions for the criminal provisions; is that correct?

Mr. DINGELL. Yes.

Mr. MILLER. In previous bills which the Congress considered it did not substitute those provisions for the criminal statutes. It repealed no criminal statutes. We already have criminal statutes on the books that cover all these things. This injunctive pro-

vision was an addition thereto and not a substitute therefore.

Mr. DINGELL. Perhaps I gave the wrong impression. I would agree with the gentleman, and I do not urge the repeal of any existing Federal criminal statutes. Our Federal criminal statutes on this subject, including those passed in the last civil rights bill of the last Congress, have been found to be sadly wanting in protecting the rights of all of our people. I do not see that the passage of H.R. 352 or any other similar legislation would result in a complete cure to the problem of securing full equality for all the people of our country that we face today, but it is a more lenient and a more gentle form of persuasion than the criminal processes which might be available but which our experience indicates would not be available under our existing criminal statutes.

I am sure that the gentleman will recall that the really strong civil rights statutes were either repealed or held unconstitutional by the Supreme Court for one reason or another back in the 1870's and 1880's, and even the really strong codes which we had on the subject of civil rights have been eroded away except to include a few statutes today which are virtually unworkable.

The CHAIRMAN. Any other questions? We are obliged to you, Mr. DINGELL, for a very interesting statement.

Mr. DINGELL. Thank you, Mr. Chairman. Thank you very much.

TESTIMONY OF THE HONORABLE JOHN D. DINGELL, 15TH DISTRICT OF MICHIGAN, BEFORE THE HOUSE COMMITTEE ON THE JUDICIARY AT THE HEARINGS ON CIVIL RIGHTS LEGISLATION ON MARCH 5, 1959

Mr. Chairman and members of the committee, I want to thank you for the honor and privilege of being here today to testify on the very important subject of civil rights legislation. I want to congratulate and commend the distinguished and able chairman of this committee for his long record as an outstanding civic libertarian, well known for his sincere espousal of the cause of full equality for all Americans, no matter what their race or religious affiliations.

My statement today will be brief. I am sure we all recognize that inherent in the Judeo-Christian religion is the concept that we are all children of God and are all created in His image. This is inherent in both the New Testament and the Old Testament.

In like manner we read in the great documents of American history that all men were created equal. The language of the Declaration of Independence is quite explicit on this and it reads as follows:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness."

We are all well familiar with the language of articles XII, XIII, XIV, and XV of the Constitution, and most specifically, the language of article XIV and its due process clause which reads "no State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law; nor deny any person within its jurisdiction the equal protection of the laws." Article XV provides "the right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude." The amendment further provides that "Congress shall have the power to enforce this article by appropriate legislation."

These general principles are basic to all of the beliefs which we have in this country. Citizens from many lands have come here in search of freedom which they were denied in their country of origin. In the orderly

course of time many of these citizens have found this freedom. Yet each group has found certain discriminations waiting on its arrival.

The Irish and the Germans of the 1850's found signs saying no Irish or Germans need apply. These and other races found discrimination placed against them on their arrival. With the passage of history we have found them to be among our most industrious and worthwhile citizens. Indeed we are proud both of people whose forebears came from these lands and of the contributions which they have made to our beloved America.

No less proud are we of the contributions of the others who came; the Poles, the Serbs, the Czechs and the hundred and one other nationality groups who have contributed to our growth, progress and to our defense of our liberties in time of war.

All of us, Mr. Chairman, recognize that real liberty in this country is not shared by all of us to the fullest degree.

Discrimination of all sorts, subtle and otherwise, still besets citizens of almost every racial and religious background in one part or another of our land. No part of America is truly free of this cancerous growth.

So long as this exists we must recognize that no man or woman in America is completely free, regardless of the color of his skin or his religious affiliation.

For this reason I have introduced legislation on the general subject of civil rights. I prefer to call it human rights. I will refer to them by number and briefly detail what they do. It is my hope that this committee will report out one or the other of these bills or all of them, if possible.

Certainly, the very least that this committee and this Congress can do will be to continue progress in the fields of human relations by bringing out vigorous civil rights legislation.

By number, my bills are as follows:

H.R. 351: An omnibus civil rights bill to outlaw lynching, segregation in housing and transportation, to establish a code of fair employment practices and a Federal Fair Employment Practices Commission. This bill also outlaws the poll tax and strengthens existing Federal civil rights statutes in a number of other ways.

H.R. 352: A bill to authorize the Attorney General to institute on behalf of and at the cost of the United States a civil action for preventive relief whenever any acts have been committed which would give rise to a cause of action under section 1980 of the Revised Statutes.

This bill would authorize the Attorney General to institute on behalf of and at the cost of the United States a proceeding for injunctive relief in the name of any citizen whose rights under Federal law or the Constitution are being abridged by any individual or group.

This is a very mild piece of legislation. It has already been included in the recommendations of the President under a previous Congress and was included under one of the so-called administration civil rights bills earlier. That bill, however, was modified and so-called section 3 was narrowed and limited only to the right to vote. It would substitute for criminal penalties the suasion of courts of equity and their milder compulsive powers, which could better handle complex problems of human relations involving intense emotions.

H.R. 353: This bill outlaws lynching or violence which injures, kills or maims its victims where used to terrorize and intimidate or harass members of religious or racial groups to prevent them from free exercise of rights guaranteed by the Constitution and laws of the United States.

H.R. 354: This bill is a compulsory Federal Fair Employment Practices Act. Its purpose

is to guarantee that a man shall be entitled to work for a living and to rise consistent with his ability. Its economic purpose is to outlaw racial discrimination which is a tremendous economic waste, computed by some to cost Americans billions of dollars a year.

H.R. 4261: A bill to amend the Civil Rights Act of 1957 to make the Civil Rights Commission a permanent agency of the United States and to broaden the duties of the Commission to include the investigation of all civil rights anywhere.

In addition to these pieces of legislation I have introduced a bill, H.R. 500, to outlaw transportation of explosives in interstate commerce for the purpose of destroying or injuring the person or property of another without his consent.

This bill is aimed at the protection of all citizens. Its purpose is to see to it that the bombing and harassment of harmless and oftentimes helpless citizens throughout this country, churches, homes, and schools will be matters of Federal concern. Under this bill the Federal Government may enter the scene immediately after destruction of property or person by explosives on the presumption that such explosives were transported in interstate commerce. It is such transportation that is criminal under the bill which is an exercise of the interstate commerce power and strikes at all those who seek to harass and intimidate our citizens by bombing because of their activities on behalf of full equality or because of their racial or religious background.

Mr. Chairman, I certainly hope that this committee under your able leadership will report out some workable civil rights legislation to continue the progress that we began during the last session of Congress with the passage of the civil rights bill of the 85th Congress.

To do less would be to stagnate and to pass up an opportunity for real advancement in one of the most important fields of citizenship.

Mr. Chairman, I thank you very much for the opportunity to be here today.

Behind the Beard

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Houston Post of March 17, which gives the views of a Catholic priest on the horrible situation in Cuba:

BEHIND THE BEARD—PRIEST BELIEVES CUBA MERELY "TRADED BUTCHERS" IN REVOLT
(By Joseph Martin and Phil Santora)

Father Juan Ramon O'Farrill has heard the last whispered confessions of at least 15 men sent to "the wall" to face Castro firing squads. He has accompanied the condemned along the "last mile" of dark corridors, trying to soothe their troubled minds with mere words, reciting the Litany up to the moment when his words were drowned out in the rattle of gunfire.

The experience has scarred him—even more so than the executions conducted by former Dictator Fulgencio Batista, because Father O'Farrill is one of the many men

who believed that Fidel Castro was the answer to Cuba's problems.

He has been thoroughly disillusioned. He has seen men condemned to die with little or no evidence of guilt against them. He has seen prisoners suffer cruel mental tortures in sadistic "execution rehearsals."

He says of Castro, whom he once followed: "Fidel is a magician, a master of simulation, of pretense. He says one thing today and the opposite tomorrow. He is a great actor. His ego has no limits and his cruelty has no limits. Compared to him, Batista was a benevolent man filled with understanding."

The 5-foot-6, brown-haired, brown-eyed priest was born on O'Farrill Street in Havana 43 years ago. The street is named for his grandfather, who fought with Jose Marti in the war against Spain. The little priest's father, also Juan Ramon O'Farrill, was a distinguished officer in the Cuban Army.

He was educated in Cuba and Paris and ordained in 1945 in the province of Cienfuegos.

During the Batista regime, Father O'Farrill was accused of secreting arms for Castro. He was taken into custody by the infamous Esteban Ventura, of the fifth precinct, and brutally beaten. Ventura's men smashed his ribs with rifle butts and partly destroyed the hearing in his left ear during a 9-hour grilling.

The youthful-looking cleric was forced into exile in Miami. On January 6, 1959, a few days after Castro's successful revolt, he obtained permission to go back to Cuba and visit the prisons to console and bring spiritual peace to the condemned men.

CRUELTY WAS SICKENING

"The Castro people thought I would obtain evidence against Batista followers," said Father O'Farrill, "but I refused to use my priest's robes for such purposes. My visits to the cells of the condemned, the kangaroo courts that passed capricious judgment on political prisoners, the cruelties and the utter disregard for human life and human rights sickened me."

"The Fidelistas became masters of the sadistic tricks. One of these was to tell condemned men they had been pardoned, that the president had signed their release from prison. While they were still rejoicing over the good news, an American, Herman Marks, would show up and tell them they were doomed to die."

Herman Marks is typical of the blood-thirsty Castro regime—the group that ironically came into power because Cubans were sick of being subjected to Batista's butcheries.

His police record includes 32 arrests on charges ranging from drunkenness, vagrancy, and assault to auto theft, draft-dodging and rape. Born in Milwaukee, Marks cut quite a criminal path for himself. In 1938, he escaped from a Wisconsin reform school. In 1946, he got away from an Ohio jail and 1950 from a California industrial farm.

He did 3½ years in the Wisconsin State Prison for raping a 17-year-old girl. Warden C. Burke remembers him as a "real stinker."

The 38-year-old soldier of fortune has a flair for the dramatic. On his left arm he wears a tattooed double heart inscribed "Love, Nellie." On his right arm is an 8-inch snake coiled about a dagger stuck through the top of a skull with the motto, "Death Before Dishonor."

And death is what Herman Marks has been dealing in; he has given the "ready, aim, fire" orders to more than 200 firing squads. He joined the Castro forces in the Sierra Maestra in December 1957, and has admitted executing as many as 11 men in a single night. He lost his job as executioner recently.

CASTRO BROKE PROMISE

"Many times in the final moments of truth, the condemned pleaded their innocence," recalls Father O'Farrill, "but these last words cannot be told, nor can the men be identified, because of the sacredness of the confessional. But there are some I can talk about."

Reinaldo Baro Merodio, for instance. Reinaldo was 22, one of the hundreds of Batista soldiers thrown into jail by Castro after the successful revolt. Castro had promised Gen. Eulogio Cantillo, head of the Batista forces, that he would not prosecute soldiers unless they had committed crimes of terrorism.

He ratified this promise in a speech in Santiago de Cuba on January 1, 1959. He repeated it in a speech at Columbia Barracks on January 28. It turned out to be a clear-cut betrayal; he was in this way able to win over the army.

"Reinaldo's only crime was that he had been a soldier, and at his age not a soldier for very long," said Father O'Farrill.

"His trial was conducted at night. I asked to be present and permission was denied. At 2:30 a.m. the trial was adjourned and he was taken to his cell. I presumed it would go on the next day and was about to leave when I overheard a group of officers say, 'Che Guevara has given a personal order that this man must be executed right now.'"

"I went to Duque Estrada, in charge of the tribunal, and asked him for the written sentence. He said the command came from El Che and what else did I need? He said there was nothing we could do. I asked permission to go to Reinaldo and break the news and give him absolution."

"He replied that he had no authorization to allow me in Reinaldo's cell. I told him he would have to arrest me if he wanted to keep me out and finally I was allowed to go."

"He (Reinaldo) could see in my face that I was bringing bad news. I started talking about religion, about the life after life. He began weeping and hugged me like a child. Then, feverishly, he began to put his cell in order."

"He gave his cellmate his belongings—a sheet, towel, a bottle of medicine, shoes and shirts. It was May 4, about 3:45 a.m. It wasn't raining and the stars were out. He shook hands with the eight men in the adjoining cells and told them, 'I hope you have better luck than I did.'"

"SOLDIER MURDERED"

"He left a gold watch for his mother. They had put handcuffs on him and now four bearded soldiers came for him. I walked by his side. Herman Marks was on the other side as we went down the dark corridors. The Cabana Fortress is a huge place and we had to take a car."

"Reinaldo had stopped crying and was quite composed at this point. I recited the litany as we walked, then rode, to the execution yard—'help of the Christians, refuge of sinners, mother of consolation, mother of mercy.'"

"The beacon from Morro Castle was splashing light and in the car Reinaldo alone gave the answer to the litany—'pray for us.'"

"We could see the huge Cristo de Havana in the rays of the beacon and I told Reinaldo that Christ is the only one who can penetrate the human soul. He replied 'for what, Father, if this Christ is made of stone it is useless—in a few minutes I'll present myself to the true Christ.'"

"We stopped at the courtyard. The wall was stained with the blood of countless others who had gone to their deaths. The firing squad was ready. I had heard his confession and I asked him if he had any last words. He said: 'Padre, I forgive them and I only hope my blood is the last to be shed.'"

"There was no blindfold. He stood there with his hands in handcuffs. I turned my face and didn't look again until I heard the shots. I turned just in time to see him leap convulsively into the air. He fell with his face on the ground.

"Marks gave him the coup de grace."

MENTAL TORTURE USED

Reinaldo was the last man Father O'Farrell ever visited in prison. Permission was withdrawn for the clergyman to console the prisoners.

On one occasion, before the Reinaldo incident, one of the political prisoners was taken out shortly before dawn, placed in front of the firing squad and "shot" in a mock execution in which blanks were used.

"They might as well have used real bullets," said Father O'Farrell. "He was more dead than alive when they brought him back. Later, they really did execute him."

A sample of the mental torture undergone by the prisoners is the case of Col. Rogelio Sopo, a navy physician. He had been acquitted by a revolutionary tribunal of having taken part in the Batista coup of 1952—but he was kept in jail.

"They destroyed him little by little," said Father O'Farrell. "I knew this man well. His conduct was above reproach. He was a dedicated doctor. He had studied in the United States.

"They kept him in a completely dark cell and they reversed his schedule so that he lost all track of time. His breakfast would be served at midnight. They would send guards to insult him, break his spirit.

"They would address him as Antonio Fernandez and kept repeating this until he almost believed he was Fernandez. Then they switched to other names. He lost all sense of time and self-identification.

"In 3 months he lost 25 pounds. They wouldn't allow him to sleep—another Communist trick. Finally, he went against the religion that had been a great part of his life. On March 18, 1959, he leaped to his death from the roof of the Morro prison."

The colonel's son, Edgar Sopo Granda, 20, lives in Miami with his mother, Josefina, 41, and a sister, Mariella. He still refuses to believe that his father was a suicide.

"I went to see Armando Lora, secretary of the Prime Minister," said young Sopo, "and he got in touch with Comdr. Juan Castineiras. When I got to Castineiras' office, he told me, 'Let him rot in jail.'"

"He whipped a pamphlet my father had written calling Castro a Communist out of his desk and repeated the threat of letting my father rot in jail.

"Lora protested, 'You cannot do this. The man is free—acquitted. This man must be allowed his freedom.' Castineiras told him, 'This is none of your business.' That was that.

"I was allowed to see my father. He told me to take care of my mother and sister. I put my arms around him. His arm felt as thin as a boy's under my touch. I said, 'Fuerte, papi' (chin up, keep strong). I never saw him alive again."

SNAPSHOT TREASURED

Edgar Sopo treasures a snapshot his father once gave him. It says on the back, "To Edgar, my best friend, son of my heart, who will surpass me in everything."

"There were no witnesses to his death," he says, "and no one can tell me what my father—who was in solitary confinement—was doing on the roof of the prison. My father was a very devout man, who said his rosary daily. He could not have committed suicide. Castro has eliminated others whom he did not like. My father is another of his victims."

In Memory of Franklin P. Adams

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. PATMAN. Mr. Speaker, it is with deep regret that we learn of the death of Franklin P. Adams. He was a great journalist, an entertaining critic, and a wise man. The country owes him a great debt. Whether we know it or not, his good works will long continue to influence our thinking and our attitudes in many ways.

Under unanimous consent I will insert in the RECORD a brief review of Franklin Pierce Adams' life and works from the New York Times of this morning:

FRANKLIN P. ADAMS, COLUMNIST, 78, DIES

Franklin P. Adams, the F.P.A. of many newspaper columns and the "Information Please" radio program, died last evening in the Lynwood Nursing Home, 306 West 102d Street, at the age of 78. He has suffered from arteriosclerosis for 5 years and been confined to the home for most of that time.

Mr. Adams' column, "The Conning Tower," appeared successively in the New York Tribune, the World, the New York Herald Tribune (successor to the Tribune) and the New York Evening Post (now the New York Post). He became an "Information Please" panelist in 1938.

A former insurance agent with 1 year's experience in a Chicago newspaper shop, Franklin Pierce Adams came to New York in 1903 and for the next several decades pounded out a daily column of wit and wisdom in verse and prose that endeared him to a large section of the citizenry of the metropolis of his choice.

In his later years Mr. Adams combined wit and erudition to win an enormous following among radio and television audiences as one of the panelists of the program "Information Please." Some of these programs, during which he and other experts answered questions on a variety of subjects, were made into movie shorts.

The direct intellectual descendant of Charles Sauret Calverly and Sir William Gilbert, he spent a lifetime gently chiding the mispronouncers of English, the "Nice Nellies" of literature and all those other persons whose minor foibles made life irritating to the man who would quote Horace to a bus driver.

Mr. Adams, whose utmost seriousness always seemed like humor, was one of the better critics of the day. He sounded casual judgments on books in a once a week column and he was often borne out by subsequent acceptance on the part of the public.

Newman Levy, with his pert and impertinent ribbing of opera, found an outlet in "The Conning Tower." For many more years than the cynical thought possible, Mr. Adams kept alive the tradition started in Chicago by the late Eugene Field and Bert Leston Taylor (B. L. T.) of "A Line o' Type or Two" fame, and in Boston by the late Philip Hale, whose "As the World Wags" was one of the country's earliest columns.

ENDED AT THE POST IN 1941

After a long period on the World, F. P. A. transferred to the Herald Tribune in 1931. He continued there until March 1937. For a time his work appeared in magazines and in

1938, he began his column again in the Post. He left in 1941.

Mr. Adams was a native of Chicago, where he was born November 15, 1881, the son of Moses Adams and Clara Schlossman Adams. He attended public schools and the Armour Scientific Academy and was graduated from the latter in 1899. Then, for a little more than a year, he was a student at the University of Michigan.

His first journalistic endeavors were with the old Chicago Journal, after which he found a post with the old New York Evening Mail.

F. P. A. changed titles and jobs in 1914 when he took his erudition to the New York Tribune. His column there was known as "The Conning Tower" and it bore this title until the end. It was an editorial page feature of the Tribune until 1922, when Mr. Adams went over to the World.

Each Saturday he turned his column into a diary. He called it "The Diary of Our Own Samuel Pepys" and, written in the style of Pepys, it recounted many trivial things that Mr. Adams made seem important.

But those he so often wrote or let his contributors write of minor affairs, Mr. Adams had high critical abilities. He was one of the first to discover merit in the writings of Ring Lardner, H. G. Wells, D. H. Lawrence, Somerset Maugham, Sinclair Lewis, and many others.

Mr. Adams' light verses and parodies were reprinted in the following books:

"Tobogganing in Parnassus," 1910; "In Other Words," 1912; "By and Large," 1914; "Weights and Measures," 1917; "Something Else Again," 1920; "Overset," 1922; "So There," 1922; "So Much Velvet," 1924; "Half a Loaf," 1927, and "Christopher Columbus," 1935. He also reprinted his Saturday morning columns in "The Diary of Our Own Samuel Pepys," published in 1935.

In 1909, with the late O. Henry, he wrote a musical comedy called "Lo," and with Montague Glass, George Kaufman, Ring Lardner and others he was a coauthor of "The 49ers," produced here at the Punch and Judy Theater in 1922.

Mr. Adams is survived by his widow, Mrs. Esther Sayles Root Adams; three sons, Anthony, Timothy, and Jonathan; a daughter, Miss Persephone Adams; a sister, Mrs. Abraham G. Schwab of Chicago and four grandchildren.

A funeral service will be held at the Frank E. Campbell Funeral Church, Madison Avenue and 81st Street, at 1 p.m. tomorrow.

You Can't Do Business With Castro

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the lead editorial from the Cincinnati Post and Times-Star of March 7 on the subject, "You Can't Do Business With Castro," which I think is pertinent and true.

The editorial follows:

YOU CAN'T DO BUSINESS WITH CASTRO

Fidel Castro's hysterical foaming at the mouth over the munitions explosion in Havana Harbor can only be compared with Adolf Hitler's when he told the world about

the Reichstag fire, or how the peaceful Danes, Dutch, or Czechs were threatening him.

After saying that "a North American consul and military attaché" had tried to prevent him from buying arms, Castro shouted Saturday that "since they tried by diplomatic means to prevent that arms be sold to us, we have the right to think they could have tried to prevent it by other means."

It is impossible to say precisely just who are included in Castro's pronoun "we" besides himself, but certainly no one questions the right of an idiot to float fantasies harmlessly around in his own head.

However, there is no doubt at all who Castro meant by "they." He meant the United States. And granting even the pathological nature of Castro's compulsive television rantings, this outrageous charge by the head of a government cannot be excused on the grounds of lost emotional control.

Castro knew very well what he was saying, just as Hitler did. True, Castro's libelous words did not specifically name the United States. He is too slyly devious and cute for that. Tomorrow, like Abe Kabibble in the old comic strip, he can say, "I didn't say 'positively.'"

Nevertheless, the fact is that this man coldbloodedly and falsely used a disaster that tragically took the lives of many of his countrymen to foment support for his crazy career as leading U.S. baiter in the Western Hemisphere.

By now, there is no reason to blink at Castro's present basic policy.

When the people of Cuba threw out Batista, the new provisional government—of which the 26th of July movement was a part—had the good wishes of the people of our country, of the U.S. press, which had consistently denounced Batista's corruption and excesses, and of the U.S. Government itself.

But the multiparty coalition that, led by Castro, provisionally took over in Cuba after Batista fled no longer exists today.

In one short year, all but one officer of ministerial rank have been booted out or forced to resign. Elections are further away than ever. But though there have been no elections, the boss is already on his second president. The first, chosen—said Castro—because he was honest, was fired for the same reason. The second is a docile party nonentity, who was in 1950 elected to the Camaguey city council on the Communist ticket.

Today there are more men under arms than Batista had. Today criticism of the government is dangerous. Today, nobody dares ask for an accounting of anything the government does, or of the funds it collects. The big lie is routine government dogma.

Thus, in one short year, has been lost the revolutionary reform that everyone hoped would reestablish representative government in Cuba. In charge today are a handful of 26th of July political adventurers and the Communists who use them, busy launching a bread-and-circuses social welfare routine to hide their real aim.

There is no indication that the Pled Piper leading this disaster at the microphone won't be around for some time, wrecking the economy of a rich, beautiful and friendly neighbor island, shooting up nearby countries and being a headache to our State Department. Indeed, he's already that.

But there's also no doubt how he will end. He will end just like his brethren—Hitler, Mussolini, Peron, Perez Jimenez, Rojas Penilla and all the rest. He has already managed to wreck more in a year than tyrant Batista did in a decade.

Maybe even the maritime insurance people have found out by now that you can't do business with such people, and that un-

derwriting gun deliveries to Cuba is a bad risk.

As to the Havana explosion itself, the saboteurs have not come forward to give themselves a name. But they probably call themselves Cuban patriots, and they probably are.

Share Automation Gains, Avoid Strikes, Kaiser Tells Employers

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, Mr. Henry J. Kaiser, Jr., made a speech before the Los Angeles Rotary Club on March 1, 1960, in which he discussed the relationship between management and labor.

The Kaiser company has always been one of the first to adopt liberal forthright labor policies and this is emphasized in Mr. Kaiser's speech.

A report of his address appeared in the March 18 issue of the Contra Costa Labor Journal. I am very happy to make it part of my remarks:

SHARE AUTOMATION GAINS, AVOID STRIKES, KAISER TELLS EMPLOYERS

Workers should share the benefits of automation; collective bargaining must be made to work without Government coercion; unions and management should have day-to-day communication; Taft-Hartley doesn't work and all this makes dollars and sense for management.

This, in essence, is what Henry J. Kaiser, Jr., told the Los Angeles Rotary Club on March 4. Stepping out as one of the Nation's leading enlightened industrialists, Kaiser asserted that showdown deadlines in union contract negotiations must be avoided.

The steel strike, he said cost the labor, industry, and the people of this Nation \$6 billion. "We cannot afford these nationwide shutdowns," he declared, "and I don't care what industry you're talking about."

"As long as both sides look on the contract expiration date as the signal for nationwide advertising campaigns, recriminations, and all-out war—we shall have no hope in this country of peace and stability, let alone the kind of growth that spells survival."

Warning that our economy is expanding only half as fast as that of the Soviet Union and that accelerated growth is needed to meet the needs of an increasing population, Kaiser looked to automation to provide the answer.

But, he added "I wonder if some of us in management aren't beginning to look on automation as a weapon? Not as an advance for the common good—but as a means of defeating labor?"

"You aren't the one who is boosting the production, we tell the worker—our machines are doing it. No wonder the worker, under this charge of being obsolete, turns to the union for help. No wonder he thinks of automation as a job competitor—an intruder out to uproot his family, rob him of his wages, send him drifting goodness knows where."

"I don't think management really thinks in this manner," Kaiser continued, "but because of our need to stack the bargaining-table deck, we have shortsightedly seized on

automation as one of our ace cards, on the turn-down of wage demands. The union, in turn, has no other recourse but to fight automation as an enemy and fight it the only way it knows how—with featherbedding practices."

"We have said to the union, 'You have no part in this'—forgetting that it has been the power of the working people . . . which has helped bring about our high production, our high earnings, and our ability to accumulate capital investment, and thus give birth to this new wonder child, automation," the California executive observed.

Focusing on the heart of his argument, Kaiser explained "I think it is incumbent on management and labor to search for a means of getting beyond the bargaining table—and work toward some method whereby fluid negotiations can be carried on the year-round. We've done it with income tax on a pay-as-you-go basis—now why can't we do the same thing in industry, by working out an adjust-as-you-go work contract? Why issue ultimatums when we should be communicating together now—not just on wage issues but on other matters, vital to production and the welfare of our country?"

Kaiser said that his brother Edgar, in settling early in the steel strike had tried to work out just such a plan for Kaiser Steel, through the establishment of two experimental committees. One will try to reach a step-by-step solution to various issues concerning work practices. The other, referred to as the "Fruits of Progress Committee," will look for a way to share future cost-savings, perhaps some kind of built-in escalator.

"What we are looking for," Kaiser explained, "is a sharing plan—not profit-sharing (which would) make one team out of two by giving our workers a stake—an in-the-pockets takehome stake—in improved efficiency and production . . . If we fail maybe we've got to give it a second try, or a third."

Belittling the prejudice of some management spokesmen against working with labor leaders, Kaiser said "It has nothing to do with an honor-system, or high-sounding resolutions, or brotherhood pacts. . . . It comes down to dollars and cents. Those who would argue our present way of doing things is efficient—have got to show us first, in dollars and cents, that this is so."

Proposal To Issue "Champion of Liberty" Stamp in Honor of Paderewski's 100th Anniversary

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. ANFUSO. Mr. Speaker, the Post Office Department has recently been issuing a series of stamps dedicated to "champions of liberty." These stamps are used here and abroad and serve not only to honor the heroes themselves, but also to encourage the peoples who have lost their freedom and independence.

I have recently written to Postmaster Arthur E. Summerfield suggesting that a stamp be issued in the "champion of liberty" series on November 6, 1960, in honor of the late Polish leader, Ignace J. Paderewski, to commemorate the 100th

anniversary of his birth which occurs on that date.

Under leave to extend my remarks, I wish to insert into the RECORD the text of my letter to Mr. Summerfield and his reply, dated March 23:

MARCH 15, 1960.

HON. ARTHUR E. SUMMERFIELD,
Postmaster General,
Washington, D.C.

DEAR MR. POSTMASTER GENERAL: It is my understanding that you have under consideration the suggestion to issue a stamp in the series on "Champions of Liberty" in honor of Ignace J. Paderewski, who was one of the world's great artists and the "Father" of the free Polish Republic that was established after World War I.

As you well know, Paderewski lived in the United States for a number of years and was a great friend of this country. He died in New York in 1941 and is buried in Arlington National Cemetery.

Paderewski was truly a great statesman and a Champion of Liberty of the era of the First World War and later. He helped organize a Polish Army in France from recruits in the United States, Canada, Western Europe and other countries where Poles live in large numbers. This army fought on the side of the Allies. After the war he helped organize the Polish Republic and for a time served as its President.

A special stamp honoring Paderewski is not only a wonderful gesture on our part in extending recognition to a Champion of Liberty who well deserves this tribute, but it would also serve as a great encouragement to the people of Poland in helping them to maintain their hopes for a free Poland. It should also contribute immeasurably toward the further growth of friendship between our two peoples.

Paderewski's birthday anniversary occurs on November 6, 1960. I urge you to give very serious consideration to the issuance of a stamp in his honor on that date.

Sincerely yours,

VICTOR L. ANFUSO,
Member of Congress.

OFFICE OF THE POSTMASTER GENERAL,
Washington, D.C., March 23, 1960.

HON. VICTOR L. ANFUSO,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN ANFUSO: I wish to acknowledge receipt of your letter of March 15, requesting the issuance of a "Champion of Liberty" stamp commemorating the 100th anniversary of the birth of the former Premier of Poland, Ignace J. Paderewski, and to inform you that the issuance of this commemorative stamp is now being considered by my office.

I am delighted to know that you are interested in the issuance of this stamp, and you may rest assured that I will give your request my very careful consideration.

Sincerely yours,

ARTHUR E. SUMMERFIELD,
Postmaster General.

Byelorussia's 42d Anniversary of Independence

EXTENSION OF REMARKS OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. ANFUSO. Mr. Speaker, the 42d anniversary of the proclamation of in-

dependence of the Byelorussian Democratic Republic is being observed on March 25. It was on March 25, 1918, in the city of Miensk, when Byelorussia was proclaimed an independent country and its people a free nation.

Three years later the Communist rulers of Russia extended their domination over Byelorussia and subjugated its people. They have remained subjugated ever since, but the date of the proclamation of their independence is traditionally observed by freedom-loving Byelorussians wherever they live, with the exception of their ancestral homeland where freedom is forbidden.

Today, the people of Byelorussia are a captive nation facing the threat of physical and cultural extinction together with the other captive nations of eastern and central Europe. It is therefore most urgent for us, in the United States and throughout the free world, to encourage these peoples, to give moral and where possible all other support, so that they can survive this dark hour in their history. We must keep alive their yearning for freedom, their hopes for a better day to come, their desire to shake off the bonds of enslavement and tyranny.

In the month of May the "Big Four" are scheduled to meet in Paris at an East-West summit meeting. This would seem to me to be a logical time, place and occasion to bring up the question of the captive nations so that they may again enjoy the fundamental freedoms and the human rights to which they are entitled, to live under governments of their own choice, and to continue to develop their culture and to worship their God without fear of reprisal. We cannot permit the Soviet Union to ignore this problem any longer.

In the meantime, in the face of all adversities, I feel it is of utmost importance for the American people to join the Byelorussian people in prayer and hope that Byelorussia will once again rise in our lifetime as a free, democratic and independent nation.

Brazil Marches Forward and Wants United States at Its Side

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. IRWIN. Mr. Speaker, I was privileged recently to be host in my office to seven members of the Brazilian Chamber of Deputies.

During the course of my very pleasant and lengthy conversations with my distinguished guests, it became evident that Brazil has embarked on an era of economic expansion and desires the cooperation of the United States.

In line with this belief, I would like to introduce into the RECORD a news story carried by United Press International, out of Knoxville, Tenn., where the Brazilian Congressmen visited after their stop in Washington.

In this story, the Honorable Antonio Sylvio Cunha Bueno, of São Paulo, one of the visiting dignitaries, made this statement:

It is quite needless, at this time, to emphasize the traditionally friendly character of the relations between the two great nations of the American Continent, since the recent tour of President Eisenhower afforded an opportunity for the reciprocal and definitive demonstration of that fact.

What I feel to be necessary, what all of us in my country hope will come to pass, is that the visit of the American Chief Executive will have served to make the American people aware that they should try and understand the Brazil of today: a Brazil which is, not only the same friend as always, but also a country in the process of creating an economy of its own and which has given proof of its capacity to develop and its determination to do so, even at the cost of considerable sacrifices.

Brazil's economic expansion is inevitable, as the expansion of the United States in the last century was inevitable. Would it not be better to share this task with us, instead of remaining in the sidelines as a spectator?

Brazilians are a sentimental people. They have always admired the United States as an example of respect for human dignity and material progress. At the moment when Brazil is going through a new phase of accelerated development in its economic life, that sentimentality in our makeup runs the risk of being shocked if our older friends, the Americans, hesitate to support the industrial growth of Brazil with the degree of cooperation that our common friendship warrants. That is justified by the pressing need to improve the living standards of the people and that is required by the economic and political doctrines of this hemisphere.

We, therefore, entertain the hope that the well-known sense of objectivity of this great country will enable it to understand the evolution of Brazil at this world juncture.

Brazil has entered an era of industrialization. What is happening today in my country is an authentic economic revolution which brings in its wake difficult problems of adaptation and adjustment, including those of a monetary character. Such problems, however, are always present when an underdeveloped country industrializes rapidly.

I can bear witness that Americans who know us are, both by temperament and friendly disposition, great enthusiasts on the subject of our progress. Brazilians, however, fall utterly to understand why some sectors in the United States insist in raising doubts about, and even in opposing restrictions to the economic surge of Brazil, by emphasizing the problems of adjustment and trying to ignore the substantial achievements of our development.

Brazil marches forward and nothing will prevent its expansion. We would like—and I say it again everyday—to have the United States at our side.

I would also like to insert in the RECORD a signed article by Mr. Harry W. Frantz, of the United Press International foreign department, on the occasion of the visit of the Brazilian Congressmen to Washington.

The article:

(By Harry W. Frantz)

WASHINGTON, March 18.—A party of seven Brazilian members of the Chamber of Deputies were guests at the U.S. Capitol today. They are beginning a U.S. tour concerned with multipurpose river development and the use of relatively arid lands through reclamation and irrigation.

All of the Brazilian deputies are members of the chamber of deputies committee on the San Francisco Valley development program, and this fact influenced their U.S. itinerary.

Representative DONALD J. IRWIN received the party in his office for a general informal briefing on congressional procedures and current legislation, including the civil rights situation. IRWIN was born in Rosario, Argentina, and later lived with his family in São Paulo, Brazil. The discussions today were in Portuguese.

The Brazilians were luncheon guests of Senator JOHN J. SPARKMAN, of Alabama, and later listened to congressional debates.

The Brazilian legislators are the second recent congressional party from that country, the first group having come to the United States in October-November last year.

The party consists of Luiz Medeiros Neto, deputy from Alagoas; Paulo Frieire de Araujo, from Minas Gerais; Jose Passos Porto, Sergipe; Edward Agnello Pereira, Bahia; Manoel Jose de Almeida, Minas Gerais; Oswaldo Ribeiro de Oliveira, Bahia; and Antonio Sylvio Cunha Bueno, São Paulo.

The party is being accompanied by William Simonson of the U.S. Embassy at Rio de Janeiro, and Neil Seidenman of the State Department.

Deputy Cunha Bueno of São Paulo told United Press International that the visit here forms one more link in a traditional chain of friendship between two peoples.

"An ever broader understanding between great countries of North and South America will strengthen the security of democracy in the world," he said.

"The visit of President 'Léu' to South America represented a solid contribution to good relations between all of the Americas. The simple manner of the President of the United States made him a very popular figure among Brazilians."

Cunha Bueno said that he was surprised by the intense interest of the people of the United States regarding Brazil, and particularly its new capital of Brasília.

The Brazilian party will go to Knoxville, Tenn., March 22 and to Nashville March 23. Arrangements have been made for their inspection of the important facilities of the Tennessee Valley Authority (TVA) program.

They will be received by Buford Ellington, Governor of Tennessee, at Nashville March 23, and will be given a luncheon by Dr. Harvie Branscomb, chancellor of Vanderbilt University. That university is celebrated for its inter-American activities, and for its publications concerning Brazil and Portugal.

The Brazilian party will be welcomed at Dallas, Tex., March 24, and at Albuquerque, N. Mex., March 25, with programs featuring soil conservation, irrigation and private electrical power installations of special interest.

At Bakersfield, Calif., on March 28, the Brazilians will start observations in the San Joaquin Valley, which is distinguished for large-scale farm operations, including cotton; extraordinary development of water resources including deep wells, and mechanization.

On a visit to San Francisco, starting March 4, the visitors will see the nuclear and steam electrical plants of the Pacific Gas and Electric Co., and visit a Ford assembly plant.

Arriving at Madison, Wis., on April 4, the visitors will observe the presidential primary election in Wisconsin on April 5. This is expected to be a major event in the race for the Democratic Party presidential nomination, measuring the strength of Senator HUBERT HUMPHREY against Senator JOHN KENNEDY.

A Luso-Brazilian colloquium will be held at Madison. The Chicago program, starting April 6, relates especially to heavy industry, housing programs, and renewal of urban areas.

The party will reach New York April 10, with a visit to the United Nations as a principal event; and will depart for Brazil April 16.

Another Co-op Leads the Way

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, a modern dairy plant in my home district in Wisconsin is the first in the Nation to produce grade A dry-milk powder. This new instant nonfat product is being made by the Turtle Lake Cooperative Creamery Association, of Turtle Lake, Wis.

Under the capable management of R. E. Miller, the dairy plant receives and processes 113 million pounds of milk a year. In addition to producing the new dry-milk powder, the plant manufactures butter and plastic cream and handles feed and fertilizer for its 700 patrons.

Under leave to extend my remarks, I would like to include in the RECORD a story about the many achievements of this cooperative which appeared in the March 1960 issue of the St. Paul Bank for Cooperatives News:

WISCONSIN DAIRY PLANT FIRST TO MAKE GRADE A POWDER

Turtle Lake Cooperative Creamery Association of Turtle Lake, Wis., last month produced what is believed to be the Nation's first grade A dry milk powder. The new instant nonfat product was packaged under a permit issued by the Wisconsin Department of Agriculture.

Such a product is possible through quality production of farmer members and the new additions to the association's plant and equipment. With the assistance of the St. Paul Bank for Cooperatives a completely new drying plant in addition was made consisting of new receiving, processing, and boiler rooms, a new warehouse, new spray dryer, and other equipment necessary for drying skim milk.

"One of the anticipated major uses of the product will be for the production of cottage cheese," according to Manager R. E. Miller. Grade A farmer members will benefit through this new market outlet since their surplus grade A milk will not be mixed with grade B milk for manufacturing use.

Major market outlets for the grade A powder will be in Mississippi and Louisiana for use in making food products requiring grade A milk. Prior to availability of grade A powder milk, such markets had to be supplied with skim milk in fluid form.

The large warehouse which will hold 54 carloads of powder will facilitate the orderly marketing of powder manufactured during the flush milk production period.

The association was organized in 1916 to process farm-separated cream into butter. From 1930 to 1940 the patrons gradually shifted from farm-separated cream to whole milk. Today the association operates a diversified milk plant receiving and processing both grade A and B whole milk and manufacturing butter, nonfat dried milk and plastic cream.

Milk receipts run about 130 million pounds a year with about two-thirds of it being

handled in the grade A plant and the other one-third in the separate grade B plant. The association has about 700 members and also handles feed and fertilizer for its patrons.

Buy American Act

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. BOW. Mr. Speaker, the failure of the Buy American Act to assist American firms seeking to do business with our Government has given me great concern. Last week I referred to the award of a contract for the Panama Canal Bridge, using West German steel, because the contractor using German steel underbid an American contractor by \$22,000. Yesterday I made reference to a new problem regarding locomotives for use in Panama Canal operations.

The locomotives required by the canal, and usually referred to as "mules," furnish the power to pull ships through the locks. They have a useful life of about 40 years.

At present the Secretary of the Army is considering a bid by a Japanese firm to supply new locomotives for a total of \$3,800,000. The lowest American bidder is the Plymouth Co. of Plymouth, Ohio, at \$4,700,000. To the Japanese bid, under various laws and regulations, may be added \$115,000 for special inspections that would be required, \$380,000 under the Buy American Act—10 percent instead of the 25 percent formerly allowed—\$228,000 because the Plymouth Co. is a small business, and certain other percentages so that the actual difference between the two bids is less than \$100,000.

However, as I pointed out with regard to the bridge contract, these figures tell only a part of the story. If Plymouth is awarded the bid, plate steel and stainless steel manufactured in my district will go into the machinery, and steelworkers in Canton and Massillon will realize direct benefits. Other subcontractors located in Chicago, Pittsburgh, Buffalo, and Detroit will receive orders, and some of these are areas of critical labor surplus. At least one million man-hours of employment for American labor will flow from the award of the contract to an American firm.

This does not take into account the transportation of the components and of the machines itself, which means additional business for Americans; nor does it take into account the direct returns to Federal, State, and local government that will come from this contract if it is awarded to Plymouth.

Finally, let me say that the Plymouth Co. is a recognized producer for the Defense Department with an excellent reputation. It can be depended upon to produce a quality product that will do the job that needs to be done. We cannot place the same faith and

confidence in the Japanese producer. Further, during the 40 years these engines will serve, the Plymouth Co. in peace or war will be readily available to supply renewal and repair parts, an assurance we cannot have from a producer in Japan.

Plymouth is the only remaining American company devoted to the design, engineering, and production of industrial locomotives of the size and type required in this procurement. If it is denied Government contracts, the Plymouth Co. may not be in production when some dire emergency befalls us.

For all of these reasons, it seems to me that award of the locomotive contract to Plymouth is clearly in the national interest and the Army should so decide.

Their Day in Court

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial on the subject of pensions for veterans of World War I from the National Tribune, Stars & Stripes.

The editorial follows:

THEIR DAY IN COURT

The Veterans of World War I of the U.S.A., Inc., were given an opportunity last week to present the views of that organization to the House Committee on Veterans Affairs relative to the subject of benefits for veterans of World War I, and particularly the need for adequate pensions for this fast-aging group.

The organization was represented by National Commander Charles A. McCarthy, of Ohio, National Jr. Vice Commander George Leary of Massachusetts, chairman of the national legislative committee of the organization, and A. E. Cross of Arkansas, chairman of the group's national hospital committee.

The full text of National Commander McCarthy's statement appeared in our issue of March 17. The statements of Leary and Cross are printed in this week's issue.

The appearance of the representatives of the Veterans of World War I of the U.S.A., was the first official appearance before the House Committee on Veterans' Affairs since 1956 to offer their program on needed veteran legislation to Congress. What struck us quite forcefully was the amity which prevailed between the chairman of the House Committee and the War I representatives. It is our hope that this friendly relationship once established may grow and expand. It is only by cooperation on both sides in a discussion can a sensible solution be reached.

Prior to National Commander McCarthy's presentation, Representative OLIN E. TEAGUE, House committee chairman, stated that he knew of no one better qualified to represent veterans' interests before his committee than Commander McCarthy.

The national commander's explanation of the needs of his membership was clear and to the point. He dwelt on the differences which existed between the discharged veteran of World War I and those of later wars. He pointed out that the discharged veteran of World War I had to go out and find a job at once, quite unlike the situation which

faced the younger veterans who had a cushion of 52 weeks of unemployment pay after discharge while seeking suitable employment.

Commander McCarthy painted an eloquent picture of the plight of the aging World War I veteran and explained why his group was seeking an adequate pension for them at this time. His presentation was not confined to pensions alone but he discussed the need for proper medical care, higher rates for the service-connected and other features of veteran legislation, including the elimination of the so-called pauper's oath from the application for medical care by the non-service-connected disabled.

All in all his talk was well received by all members of the House committee present and we feel that an "era of good feeling" has now been established between the World War I organization and the House committee.

It is true that Chairman TEAGUE did state that the organization could not hope for the passage of H.R. 9336—the pension bill introduced by Representative THOMAS J. LANE, of Massachusetts—in its entirety because there was some feeling in the committee that the principle of granting a pension to someone who doesn't need it "is not sound."

Chairman TEAGUE assured Commander McCarthy that the committee hoped to bring out a bill which would prove satisfactory to the World War I group and that there was a good chance of raising income limitations for pension purposes.

Without going into a discussion on the merits of H.R. 9336 or the statement as to "need" expressed by Chairman TEAGUE—all of which had been covered at length by the National Tribune in previous editorials, we are happy to know that there now exists a spirit of understanding between the leaders of the Veterans of World War I of the U.S.A. and the House committee chairman.

Being able to meet on a friendly basis is half the battle and we trust that this spirit of understanding will continue with the result that a worthwhile pension bill will be brought forth by the committee. If there must be some compromise in order to secure certain additional benefits, then let that compromise be made, but let it be made on both sides.

Chairman TEAGUE criticized what he called the all-or-nothing provisions of H.R. 9336. Has he forgotten how the Congress of the United States was given an all-or-nothing bill last year when H.R. 7650 was rammed down the throats of House Members? If he has not forgotten the maneuvers which brought about passage of H.R. 7650 last year, if he realizes that it is a principle which works both ways and if he is able to reconcile his all-or-nothing attitude on H.R. 7650 with his opposition to certain provisions of H.R. 9336 then we feel that the Veterans of World War I of the U.S.A. have made real progress.

We still believe that H.R. 9336 is a good bill and we hope it will be enacted into law as now written. At any rate the veterans of the First World War know now that at this time they have many supporters in the House of Representatives—Members who have introduced similar legislation as that proposed in H.R. 9336.

The National Tribune is happy about the progress of this comparatively new organization and it is happy to see that Chairman TEAGUE is not quite as obdurate on the subject of veterans' benefits for the World War I group.

We hope and pray that this feeling of mutual understanding and cooperation between the organization and the House Committee on Veterans' Affairs will result in the passage of a pension bill not only satisfactory to the Government but one which will prove of real aid to the group for which the Veterans of World War I of the U.S.A. and its leaders are working.

Civil Rights

EXTENSION OF REMARKS OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith two editorials from the Charleston News and Courier of March 22, 1960.

Since we are talking civil rights let us grant civil rights to all people—North, East, South, and West.

The editorials follow:

CIVIL RIGHTS LAW SHOULD GUARANTEE FREEDOM OF ALL FROM BLOC VOTING

If the Federal Government is determined to guarantee the civil rights of Negro voters in Southern States, it should guarantee also the civil rights of all the people in all the States.

Granting that promoters of civil rights bills in Congress are sincere in this respect, they are not going far enough in setting up Federal election referees to insure that southern Negroes are allowed to cast ballots. They should take steps to insure that Negroes, and any other kind of voter, are free to vote their convictions.

Voters in many parts of the country, notably in congested areas of the North and West, are not now free to vote as individuals. Rather they are herded to the polls and voted in blocs.

Labor union organizers, race leaders, goons who cajole or intimidate as the case may be, interfere with the orderly polling of free American citizens. Why has nobody proposed an amendment to the civil rights bills that will put real teeth into election procedures?

When Senator LAUSCHE, of Ohio, sought to broaden the Federal ban on bombing schools, churches, and synagogues to include labor union bombers, the Senate rejected the whole section. Civil rights were not recognized when labor unions became involved.

The same reasoning seems to apply to guaranteeing voting rights. Not only the right to register, but the right to vote without interference from anybody—Ku Klux Klan, NAACP, AFL-CIO, or any other pressure groups—ought to be spelled out in the bills.

Without such guarantees, the civil rights laws are not only meaningless, but actually misleading. We hope that Congressmen genuinely concerned for the welfare of the Republic will remedy the bills now under consideration.

RIGHT TO DO BUSINESS

The Missouri haberdasher, with characteristic vigor, says he would throw out any customer who tried to stop business. For this forthright comment on Negro demonstrations, former President of the United States Harry S. Truman has been criticized by a Negro bishop in Louisville. The clergyman favors the boycott to enforce demands for service.

In Florida, Governor COLLINS has confused the issue of lunchroom sitters by injecting morals. While a merchant may have a legal right to exclude some customers from some departments, Mr. COLLINS says he questions the moral rightness. A governor who mixes up laws and morals is treading on dangerous ground.

Senator KENNEDY, who has the inside track for the Democratic presidential nomination, says civil rights bills don't go far enough when they apply only to voting. By that we

gather he would extend the Federal power to other areas, perhaps to compulsory association at the dinner table.

We mention these three samples of opinion from representative spokesmen to illustrate the confusion now existing over the conflicting rights of customers and proprietors of business. In the same field is pressure on employers. An airline recently was forced to hire, against its wishes, a colored girl as a stewardess. The civil rights of business to operate peacefully and profitably enough to pay taxes are being steadily ignored.

Greek Independence Day

EXTENSION OF REMARKS

OF

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, 139 years ago when Archbishop Germanos of Patras raised the standard of revolt in his monastery at Kalavryta against the Turks on March 25, and his people joined him in this national struggle against their oppressors, his daring act ushered in a new day for the Greek people. That courageous deed by a stout-hearted dignitary of the Greek Church marked a sharp break from the events of preceding centuries when Greeks were subjected successively to the Romans, the Frankish kings and the Turks. That day became the Independence Day of the Greeks, and today on the 139th anniversary of that memorable event, Greeks mark it as their national holiday.

We, in this country, have always held the Greeks in exceptionally high esteem. We have always had great sympathy for them, and have done our utmost to help them whenever we could. In their fight for freedom and independence against the tyranny of the Turks, and especially in their desperate struggle to maintain their independence against fascism, nazism, communism, and all forms of totalitarianism, they have counted upon our sympathy and on our aid. We are proud to say that fortunately we have been in a position to help them and have not disappointed them. And this has been true in the past as it is at present.

In the early days of the Greek war of independence a number of philhellenic groups were formed in this country for the purpose of raising funds and thus extending material aid to the fighting Greeks. A wave of philhellenic enthusiasm swept over America. President Monroe himself was not immune to the contagion of this philhellenism. This is clearly shown in his annual message on December 3, 1822, when he gave some reasons for our interest in the Greek cause.

The mention of Greece—

He said—

fills the mind with the most exalted sentiments and arouses in our bosoms the best feelings of which our nature is susceptible. Superior skill and refinement in the arts, heroic gallantry in action, disinterested pa-

triotism, enthusiastic zeal, and devotion in favor of public and personal liberty are associated with our recollections of ancient Greece. That such a country should have been overwhelmed and so long hidden, as it were, from the world under a gloomy despotism has been a cause of unceasing and deep regret for ages past. It was natural, therefore, that the reappearance of those people in their original character, contending in favor of their liberties, should produce that great excitement and sympathy in their favor which have been so signally displayed throughout the United States. A strong hope is entertained that these people will recover their independence and resume their equal station among the nations of the earth.

This was an eloquent and welcome explanation. As the elected head of the Government of this country, he expressed the feeling of our people. No less eloquent was Daniel Webster, perhaps the most illustrious statesman-orator of his day, when he characterized the Greek War of Independence as part of a greater struggle "between the absolute and the regulated governments." He stated that America could not and should not hold aloof from world affairs, and it was time for the people and the Government of this country to take a stand.

As one of the free states among the nations,

He declared—

as a great and rapidly rising republic, it would be impossible for us, if we were not disposed, to prevent our principles, our sentiments, and our example from producing some effect upon the opinions and hopes of society throughout the civilized world. Our side of this question,

He added, referring to the Greek War of Independence—

is settled for us, even without our own volition. Our history, our situation, our character, necessarily decide our position and our course before we have even time to ask whether we have an option. Our place is on the side of free institutions.

There are many fine thoughts and noble ideals in these few sentences of that inimitable orator-statesman, but the core is found in the last sentence, for it reflects the full and free American spirit; our place is, and has always been, on the side of free institutions, erected and kept erect by freemen. And the Greeks were among the forerunners of freemen who founded free institutions and fought for their preservation.

Nor has our expression of sympathy and our show of kinship of ideas with the Greeks been limited to mere words and declarations. It is well known that whenever Greeks have been in trouble, in need of material aid, we have been generous in helping them. This has been particularly true at the end of the First World War, and of course more so during and since the end of the last war. Early in the course of that war, when Greece was overrun by the Axis forces, our wartime President, the late Franklin Roosevelt, declared confidently that Greece would be liberated and rewarded for her heroic fight on the side of democracies against the forces of barbarism and darkness. He certainly echoed the true

and genuine sentiment of the people of this country when he said:

I am glad to have the opportunity to reassure my friends of Greek origin and Greek birth everywhere that it is the desire of the American Government to help Greece to the utmost of its capabilities.

Our postwar role in Greek affairs, our aid to Greece, both financially and militarily, is rather widely known and I need not dwell upon them in detail. As soon as circumstances permitted, toward the end of the last war, we were more generous in aiding Greece than at any time in our history. In March 1947, when we were asked by the hard-pressed Greek Government for urgent emergency and military assistance, we felt that it was our duty to comply with this request. The then President Truman felt that it was our solemn responsibility to give all we could to save Greece from the tightening clutches of communism. In his message to Congress on March 12, the President declared:

I do not believe that the American people and the Congress wish to turn a deaf ear to the appeal of the Greek Government.

Here again the President was echoing the sincere wishes of our people. We could not turn a deaf ear to the appeal of the Greek Government, even though we had already expended more than \$500 million in the form of supplies, lend-lease aid, and under the United Nations Relief and Rehabilitation Administration. Fortunately, we had some more expendable dollars, and we did not seem to mind to add close to \$3 billion worth of aid to the Greeks. Yes, the Greeks have deserved well of us. I am indeed glad to say that we were able and willing thus to pay at least a part of our intellectual debt which we all feel humanity owes to Greece and to the Greek genius.

In their enthusiasm for creative things of lasting value the attainments and accomplishments of the Greeks remain unsurpassed and unequalled. In their fervent enthusiasm for liberty and democracy they have struggled against great odds, have fought bravely, and have guarded their democratic institutions tenaciously. For almost 2,000 years, from 146 B.C. to A.D. 1821 Greece was ruled by the Romans, the Frankish kings, and by the Ottoman Turks. From the Battle of Corinth in 146 B.C. when Greece was overrun by Roman legions to the Battle of Navarino, in 1827, when the tyranny of the Ottoman Turks was finally brought to an end in Greece, Greeks lived under alien rule, but during those centuries their spirit of freedom was not extinguished; their dauntless will to fight never deserted them. And the best proof of that was the long, often despairing, and almost endless fight which they carried on for 8 years before they could attain their freedom and independence. Today in celebrating the 139th anniversary of that memorable day, Greek Independence Day, let us hope that they have the will and the power to defend it against all impending and potential dangers of totalitarian tyrants.

A Broader Policy for Forests

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. BLATNIK. Mr. Speaker, hearings were concluded last week on H.R. 10572, a bill to authorize and direct that the national forests be managed under principles of multiple use and to produce a sustained yield of products and services. The bill was introduced by the distinguished gentleman from Alabama [Mr. GRANT] who is chairman of the Subcommittee on Forests of the House Committee on Agriculture. The gentleman from Alabama deserves our highest praise for the leadership he has shown in this field.

Mr. Speaker, the proper management of our national forests is vitally important to northeastern Minnesota. Mr. George A. Rossman, publisher of the Grand Rapids (Minn.) Herald-Review has long been active in the cause of proper forest management and development. Under leave to extend my remarks in the RECORD, I include an editorial written by Mr. Rossman which appeared in the March 15 edition of the Herald-Review:

A BROADER POLICY FOR FORESTS

People in this area will be interested in a congressional hearing this week on a bill to redefine the purposes and policies of the National Forests. The bill reads as follows: "Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it is the policy of the Congress that the national forests are established and shall be administered for outdoor recreation, range, timber, watershed, and wildlife and fish purposes. Nothing herein shall be construed to affect the authority of the Secretary of the Interior provided by law with respect to mineral resources."

"Sec. 2. The Secretary of Agriculture is authorized and directed to develop and administer the renewable surface resources of the national forests for multiple use and sustained yield of the several products and services obtained therefrom. In the administration of the national forests due consideration shall be given to the relative values of the various resources in particular areas."

"Sec. 3. In the effectuation of this act the Secretary of Agriculture is authorized to cooperate with interested State and local governmental agencies and others in the development and management of the national forests."

National forests were first established for preservation of timber resources and control of watersheds. As time went on, it became apparent that the forests also provide unusual opportunities for outdoor recreation, and that game and fish are renewable resources. The national forests in some areas also include large ranges suitable to grazing of cattle and sheep.

The Forest Service recognized these secondary values, and Congress appropriated some money for their development. During recent years it has become apparent that secondary uses of national forests are at some times and places as important as the primary purposes for which the forests were established.

The present bill has been introduced to obtain congressional approval for the prin-

ciple that all of the uses mentioned should receive the consideration which each merits. It would be recognized that forests can generally be most valuable if administered under multiple use plans.

Congressional restatement of the policy of the Federal forests will have several good effects.

One will be to recognize the "multiple use" and "sustained yield" policies of the Forest Service so that they cannot be set aside except by further congressional action.

Another benefit would be to encourage development of the National Forests to meet public needs in addition to forestry. For example the demand for outdoor recreational opportunities is increasing rapidly. With a broadened congressional policy for operation, the Forest Service will be in better position to meet these needs, and to resist possible pressure from those interested in "single use" of forests.

The importance of broadening the basic policy of the Forest Service can be well illustrated by what is happening on the Chippewa National Forest. Within the forest boundaries are 1,250,000 acres of forest lands. Many of the most attractive lakes of Minnesota are located in the forest.

As a result of more leisure time, higher personal incomes, greater mobility and more interest in outdoor recreation, the number of visitors to the Chippewa National Forest has increased rapidly. The number of recreational visits to the forest was estimated at 341,000 in 1955. By 1959 this had more than doubled to 706,000. By 1965, estimates place the number of visitors at more than 1 million and by 1970 at more than 1,500,000.

Growth of the recreational use of the Chippewa will not interfere with the growing of timber to any appreciable extent. However, to meet the growing demand for recreational opportunities will require that more funds be channeled through the Forest Service. Congressional delegation of responsibility should logically accompany increased activity.

During recent years the Federal Forest Service has been undergoing a thorough re-examination of its aims and programs. There is every indication that greater activity will be required in the future to meet needs in forestry, watershed, range and recreation development.

Congress has encouraged the Forest Service to meet the challenge of increasing and broadening demands for services. It is hoped that the hearings by the Subcommittee on Forests of the House Agriculture Committee will find support for broadening of the congressional policy to match the responsibilities which lie with those who administer large and important areas of public lands.

More Hawaii Flights

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Los Angeles Examiner:

MORE HAWAII FLIGHTS

Growth of Los Angeles as an air traffic center stands as one good argument in support of the application of Western Airlines to provide jet service to Hawaii, now under study by the Civil Aeronautics Board.

With travel to and from the islands rapidly increasing, commonsense also would seem to be a factor. Existing transpacific air service, excellent as it is, frequently finds schedules sold out and travelers, not only vacationers but those on urgent business, forced to wait.

Entrance of Western Airlines into the Pacific coast-Hawaii picture would mean more adequate provision for a travel demand that gives every promise of even greater increase in the future.

Furthermore, Western's plan for direct San Diego-Hawaii service and linkage with other western cities served by the line recognizes the practical value of fast, convenient travel.

For Los Angeles itself, every new airline coming in, every addition of service means better airport facilities, better passenger convenience, and many other advantages. Western Airlines' proposed service would be a step forward in our own progress.

Long Journey—Into Night or Day?

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mrs. GREEN of Oregon. Mr. Speaker, I am sure that most Americans are proud of the achievements of our civilian space agency in sending Pioneer V into orbit around the sun. Surely there is considerable potential for good in this accomplishment in terms of increasing our store of scientific knowledge. But at the same time, this achievement in rocketry has an implicit military implication.

Mankind's scientific discoveries are in themselves neutral, of course—usable for good or evil. All of us hope that the discoveries which may result from this one will not be put to destructive uses.

The Portland Oregonian recently carried the following excellent editorial on the significance and the possible eventful fate of Pioneer V that makes sobering and thought-provoking reading:

LONG JOURNEY

Space scientists say Pioneer V, the sun satellite, probably will remain in orbit for 100,000 years. This leads one to wonder what the earth and its inhabitants will be like when on that distant day the 90-pound aluminum ball reenters the atmosphere to end its long existence in a fiery flash.

One hundred thousand years is a long time in human experience. One hundred millennia ago, true man probably had evolved, but he had not yet left his bones and artifacts in the litter of Europe's caves. There the Neanderthals, possibly a subhuman species, held forth, chipping tools from stone and burying their dead with the most primitive of religious rites.

One would like to think that the human race will continue to progress and that 100,000 years from now all traces of its brutish ancestry will have disappeared. It is not at all certain, however, that when Pioneer V returns it will be greeted by intellectual giants to whom space will be as familiar as the air and seas are to us.

The button that sent this space probe and its predecessors on their long journeys are practically identical with those which

release potentially destructive intercontinental missiles. The flash that Neptune V makes in the sky when air and friction finally demolish it may be viewed with superstitious awe through a cave opening by a creature not much different from the hairy, chinless, apelike Neanderthaler of 100,000 years ago.

Those who control the buttons may decide within our time whether Neptune V's return will be witnessed by supermen or subhuman survivors of worldwide nuclear destruction.

Forty-second Anniversary of Byelorussian Declaration of Independence

EXTENSION OF REMARKS OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DERWINSKI. Mr. Speaker, we make mention today of the 42d anniversary of the declaration of independence of the Byelorussian Democratic Republic, which since then shares the fate of other nations by being subjected to Communist tyranny.

This date, however, demands special significance since the Byelorussian people at present are incorporated within the official boundaries of the Soviet Empire, and are often overlooked because they are not ranked as one of the captive Iron Curtain nations, but are assumed to be part of Russia proper.

The facts, however, bear concrete testimony to the constant struggle of about 6 million brave people against the oppressive policies of Soviet atheistic domination. These brave Byelorussian people find their traditional language and culture subjugated and area controlled in a police state condition, and, in addition, their religious life oppressed—as is the usual pattern—wherever Communists seize control, all faiths share equally in being persecuted—the Greek Orthodox, Roman Catholic, Jewish, and various Protestant denominations suffer the same persecution of their churches.

Mr. Speaker, certainly it is appropriate for me at this time to point out that these noble people are a constant reminder to us of the inherent evil in communism, and should serve as a stern warning to those few misguided Americans who might be tempted to swallow phony Communist propaganda.

Byelorussian Independence Day

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. MULTER. Mr. Speaker, the fate of the Byelorussian people and their history are so inextricably mixed with those of the Russian people that the distinction between the two peoples is sometimes misunderstood. This misunderstanding stems from the unfortunate fact that for centuries Byelorussians have been subjected to Russian rule, and the Russians have done their utmost to eradicate all Byelorussian national traits. But the Byelorussian people have not forgotten their distinct identity, and have always wanted to regain their freedom and independence. The year 1918 offered them the opportunity they awaited.

In that year, when the despotic czarist regime was gone, the Byelorussians felt themselves free and proclaimed their independence on March 25, 42 years ago. Then they set up the Byelorussian National Republic, and the 10 million Byelorussians were happy under their own government. But their independence was of very brief duration. Early in 1921 Soviet forces attacked and overran the country, and destroyed the Byelorussian National Republic. Fortunately, that did not mean the end of the spirit of freedom among the Byelorussian people. Even though for almost 40 years they have been enduring the oppressive yoke of Communist totalitarian tyranny, they still cling to their drive to be free and pray that at some future date freedom will be their just reward. On this 42d anniversary of their independence day, we echo their genuine sentiment and hope that they will attain their goal.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

Appendix

Where Do We Stand?

EXTENSION OF REMARKS
OF

HON. ERNEST GRUENING

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. GRUENING. Mr. President, last Tuesday, our distinguished colleague, the junior Senator from Arkansas [Mr. Fulbright], delivered a highly illuminating address at the annual dinner of the Harvard Club of Washington.

The title of his important speech was "Where Do We Stand?" It was a penetrating evaluation of the status of the United States in the world today. It was a sober and realistic appraisal of the decline of our Nation from its preeminence of leadership and power, a decade ago, to its present, far less influential position, when viewed against the phenomenal rise of Russia and of international communism in the world.

In a sense, our colleague's brilliant address was of something of an epoch-making character, which I think was summarized in his conclusion that the United States will not be restored to its position of influence, prestige, and leadership in the world, that our Nation will not recover its lost vantage, and will not do what is needed to be done in order to achieve that goal, unless and until the control of both the executive and the legislative branches is vested in one political party. Senator Fulbright said that unless the American people vest that control in only one party, the Nation will be courting disaster.

Not wishing to give a political connotation to his address, our able colleague did not tell the Harvard Club which political party he thought that should be, nor was it necessary that he do so. The fact is that never before in our Nation's history has the division of powers which Senator Fulbright deplors existed for so long as it has during the two Eisenhower administrations. Therefore, our colleague's dictum is both new in its affirmation of a transcendently important principle, and, coming in a year of a presidential election, timely and appropriate. It deserves wide recognition.

I ask unanimous consent that his eloquent and constructive contribution to our political science and to the national safety and destiny be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

SPEECH DELIVERED BY SENATOR J. W. FULBRIGHT AT THE 77TH ANNUAL DINNER OF THE HARVARD CLUB OF WASHINGTON, D.C., MARCH 22, 1960

Mr. Chairman, I consider it an honor to be invited to speak to this distinguished

audience of Harvard men. There are few who question the preeminence of Harvard University in the field of education. The influence of the graduates of Harvard upon the life of our country is unequalled by those of any other institution of learning.

Except for the fact that it descended from Cambridge University, rather than Oxford, there is little in its ancestry of which one may not be proud.

When Senator Gruening requested that I speak here tonight, I demurred most strenuously, as I was quite aware of the probable conflict in our points of view, inasmuch as I was nurtured on the conservatism of Arkansas University and Oxford. However, upon the earnest plea of Ernest Gruening that this group has never before had the opportunity of observing and of hearing a politician from the Ozark Mountains, my native reticence was overcome by my weakness for lecturing, acquired during the years when I was a professor.

I weakened in spite of the fact that I know many of us in public life talk too much.

In recent weeks I have had much sympathy with the point of view of the schoolboy who, when asked to describe Socrates, wrote as follows:

"Socrates was a Greek who spoke very often to the Athenians. They poisoned him."

It seems rather a shame to mar an otherwise festive evening by discussing serious and somber aspects of our national life, but such are my instructions. The most somber subject I can think of tonight is—what is our position in the world today, how are we measuring up to our responsibilities.

Where do we stand today?

A nation with a gross national product that will soon hit a peacetime high of \$500 billion and with a per capita income of over \$2500 (nearly double that of any other nation) is debating the extent to which our Armed Forces may be inferior to those of the Soviet Union.

If there is confusion about the facts, some things are clear. It is humiliating that the debate should have to occur. Its occurrence is evidence of our failures. It is a revelation of our lack of foresight, of possessing great riches, yet failing to use them to make ourselves, and keep ourselves, the world's strongest power, although to do less is to invite national extinction.

Mr. Khrushchev, having outrun us, is not one to let our grass grow under his feet. "It would be naive to think," he has said, "that we are going . . . to sit with arms folded" while the Americans "make every effort to raise their rocketry from the state it is now in and reach a better position." But before considering this, let us place the problem in perspective.

Men have anciently yearned for a universal commonwealth. Now we have it. But it is a commonwealth of fear kept going by a precarious balance of terror, a chilling oscillation between negotiation and incineration.

We endure in an era of total crisis. The great truths are denied. Black becomes white, the horizontal vertical. Whole states—as Estonia, Latvia, Lithuania, Tibet—sink from sight. Whole countries—as Hungary—languish behind bars. An ancient culture—as China's—is shattered and remade overnight into the largest anthill slave state men have ever known.

All the world's parts, for the first time, are simultaneously out of joint. And while

horrors stalk the earth, weapons of potential universal destruction are hurled to the stars, or into the Pacific not too far from our shores. Everywhere the implacable cage stalks the unwary bird.

Our communications instruments are superb. Yet over huge areas the telephone is silent, the postman is frozen in his rounds, the airplane dare not land. We cannot communicate with the Russian people who occupy one-sixth of the earth's surface nor with the Red Chinese who compose about one-fifth of the world's population. Perhaps half of humanity lies beyond our hailing.

Where do we stand? What is our so-called peace? Is it not a monstrous make-believe to which men lend credence so that thereby they may have the prospect of another day under the sun?

The captains and the kings depart. Yesterday's empires—from Britain's to Japan's—are today dust. The world's stage lately occupied by several powers has been cleared of all but two giant protagonists. They are engaged in deadly conflict even if they are not in physical combat. The one holds half the world in its fist. The other haltingly sustains the remaining half.

We have never faced an antagonist quite like this one. The Soviet Union swiftly leaped from the oxcart to the moon; rose from a second-rate underdeveloped country to loom menacingly over the world.

Master of complex technologies, primitive and advanced, her soldiers march with black bread in their hands and the awful secrets of nuclear fission in their minds. Their leaders are obsessed by a dedicated sense of mission to dominate mankind. It long antedates Karl Marx and it did not falter when the Germans stood at Moscow's gates. Even as we sent stupendous quantities of munitions to the Soviet Union during the war Stalin was plotting for our demise in the postwar period.

Elsewhere, a colossal specter rises in the Far East. It commands the world's largest labor force. At this time 100 million people—a group exceeding half of our total population—are building the world's greatest network of hydroelectric stations, irrigation canals, and dams. Red China is attempting within one generation an enterprise greater than any undertaken by man: that of catching up, in this short time, with the most advanced industrialized nations. Many experts believe she will become a major industrial power during the late sixties.

China's vast population grows. Soon one in three, or one in four, of all men will be Chinese. Awesomely industrious, tough, injured to hardship, China's millions are as the fingers of the hand manipulated by their determined and ruthless masters. They direct a revolution unparalleled in this dimension which, in its pitilessness, has swiftly destroyed a culture ancient when Christ was born.

We may expect that within foreseeable time the fingers will become a clenched fist prepared to smash all that stands in the path of China's domination of the Asian reaches, their resources, and the nearly three-quarters of a billion people who inhabit them.

Returning to the Soviet Union we find that Mr. Khrushchev, even as he bade goodby to these American hosts, repeated what he has often said: "Communism would take us over." Given communism's unrelenting objective—world domination—this goal is logi-

cal. We must be the first to go by one means or another. For when the free world's shield is broken those whom it shelters become defenseless.

We have been warned, but have we heard? If we should perish it will not be for lack of warning but for lack of the will to survive.

In this context there is something new under the sun. It is a newness illuminated by the fact that the sun itself is no longer inviolate and unattainable. For the first time a would-be conqueror could win the world; win it in perhaps 30 minutes. He might succeed where others, from Genghis Khan to Hitler, had failed.

How almost overwhelming, then, must be the temptation to such a one to act? How nearly irresistible the compulsion to use his ocean-spanning, catastrophic weapons? How intoxicating the vision that, winning, the world would be one state to do his bidding with its people as his puppets, its continents as his provinces and its seas as his lakes?

How must the aspirant conqueror be moved when he contrasts the position of his country and ours at the end of the war—only 15 years ago—and today? For among nations, as among individuals, what ultimately counts is not being but becoming.

At the war's end we were, incomparably, the world's strongest power, commanding the mightiest fighting force ever assembled, and a monopoly of atomic weapons. Our wartime casualties had been small, our homeland was untouched, our farms and factories had hugely expanded. The world's gold flowed to us. The world's trade fell to us as former rivals were removed from competition. We stood upon the heights of power, prestige, riches. We had arrived.

What of the Soviet Union in 1945? She did not announce her casualties lest they reveal her grave weakness. But they were on the order of 20 million people. She suffered an enormous loss of houses, factories, powerplants, domestic animals. Many thought that for years to come her energies would be absorbed by domestic reconstruction.

But she quickly repaired her war damages. Then she built a giant heavy industry, created new cities, opened vast new lands to cultivation. Above all she advanced education in a mighty surge of passionate and determined effort. For, writes Dr. Lawrence Derthick, U.S. Commissioner of Education:

"The Russians have decided that education is the best means of winning their place in the sun—and on the moon. . . . The Soviet Union is like one vast college campus on the eve of a football game with its greatest rival. That rival is the United States."

This is the mark of our antagonist:

Forty-four years ago communism was confined to a rented room in Zurich, Switzerland. Today it dominates one-third of the earth containing 40 percent of the population and a third of the industrial power.

The Soviet Union's trained cadres operate throughout southeast Asia, and are now appearing in countries on our doorstep. Promoters of communism swarm over Africa and Latin America. In Egypt the Soviet Union is constructing spectacular works that will dominate world headlines for years to come and enable her to tighten her grip on the strategic Middle East where no former Russian regime had ever been able to penetrate. At the same time she lends money to free-world countries and builds great mills for them as in India. The Soviet Union is on the move.

Thus Lenin's "strategy of encirclement" is not only being fulfilled—it is moving ahead of schedule.

Surprisingly to the West, the Soviet Union exploded an atomic bomb only 4 years after the war's end. Four years later she ex-

ploded a hydrogen bomb. Now abreast of us in this field, she forged ahead of us in the conquest of space as she launched man's first satellite and was first to the moon.

She maintains vast armies, and a navy second to ours. No power has ever had, in peacetime, so many submarines. They number 450; two-thirds of them long-range ocean patrol types. In 1956 alone Soviet shipyards built 100 submarines, or one every third or fourth day during the year. This is as many submarines as we have in our entire fleet.

In addition the Soviet Union is mounting a worldwide trade offensive aimed primarily at us. Hence the challenge to us is total. It involves the military, the political, the intellectual, and the industrial. The measures of our antagonist cannot be countered by half measures or by halfhearted competition.

If, Mr. Khrushchev must reason, his country has come so far so fast, how much will it forge ahead of us in the future unless we greatly step up our pace in education, weapons, foreign aid, and foreign trade? But how shall we excel in these fields if we are more concerned with keeping up with the Joneses than surpassing the challenges of Khrushchevs?

How shall others appraise us—to consider only one phase of the struggle—in the light of Dr. Wernher von Braun's remarks about the conquest of space?

Last year he said the Russians disregarded our efforts. "The Russians appear so sure of their technological leadership," he observed, "and their ability to retain the initiative that they do not even consider the possibility someone else might beat them to the moon . . ."

They were right. They got there first.

Gen. Bernard Schriever has also said that there is "very much evidence" that Russia has greatly strengthened its bomber defenses. But the aircraft that might not be able to get through may not even be able to demonstrate their impotence. "For," states Gen. Thomas Power, Chief of the Strategic Air Command, "our bomber bases are vulnerable to surprise attack."

Generals are not to reason why. Their Commander in Chief complains that "too many generals have all sorts of ideas."

Yet mankind moves on ideas. Men with ideas are the makers and shakers of the world. The larger their number serving the country the more fruitful and vigorous the country. But few men of ideas come to Washington. They are not likely to seek service in a government which is scornful of their kind.

Next year, says Representative GEORGE H. MAHON, able chairman of the House Defense Appropriations Committee, America is going into a 2- or 3-year period when the Soviet Union's missile superiority will present "the most frighteningly important situation that we have had in our lives."

Recently three well-informed witnesses appeared before Senator HENRY M. JACKSON's Subcommittee on National Policy Machinery.

The first was Robert A. Lovett, a Wall Street banker, a Republican, and a Secretary of Defense in the Truman administration.

He criticized the Defense Department for "its constant increase in committees (which) has reached a point where they are no longer mere nuisances, but have become positive menaces to the prompt and orderly conduct of business."

In executive session, Mr. Lovett indicated his belief that President Eisenhower leads a dangerously sheltered life as Chief Executive of the Nation. For, he said, the National Security Council protects Mr. Eisenhower from the debates that precede policy decisions.

Mr. Lovett was firmly convinced "we are doing something short of our best" in meet-

ing the "deadly challenge by an implacable, crafty and openly contemptuous enemy."

Finally, he said that the Budget Bureau has authority without responsibility in setting defense policy.

"I would not," said Mr. Lovett, "hesitate to increase the budget."

Mr. Lovett, I repeat, has had an enormous experience with our defense requirements. He is a leading Wall Street banker with a wide knowledge of financing, including Government financing, and is a lifelong member of the Republican Party.

A day later Mr. Robert Sprague testified. An industrialist, chairman of the Federal Reserve Bank of Boston, and consultant to the National Security Council, he also is a lifelong Republican.

Even more outspoken than Mr. Lovett, Mr. Sprague said, "The idea that an increase in spending for survival will bankrupt us is, to put a plain word on it, 'silly'." He pointed out that the Russians put 25 percent of their gross national product into military preparations, while the United States devotes only 9 percent of its gross national product to national security.

Mr. Sprague insisted that the United States be awakened to the scope of the overall Russian threat to us. But who is to ring the alarm bell?

"There is only one man in the United States that can do this effectively, and that is the President," said Mr. Sprague. He continued: "I believe, and this is a personal belief, that the danger is more serious than the President has indicated to the American public."

There ensued then this colloquy:

"Senator EDMUND S. MUSKIE. I gather that you consider our present military program inadequate to the needs?"

"Mr. SPRAGUE. That is correct, Senator."

"Senator MUSKIE. And I gather that you consider the deficiencies a threat to our survival?"

"Mr. SPRAGUE. I do."

Another critic of the administration's defense policy was Mr. Thomas Watson, Jr., president of International Business Machines Corp. He said:

"We may gain peace of mind by mixing our own doubts about our abilities in rocketry with thoughts of the superiority of our Air Force and other weapons. However, this kind of thinking is not conducive to long-term world leadership."

Asked if he felt the military budget adequate, Mr. Watson replied:

"I do not believe the adequacy of our defense posture can be discussed in the same context as inflation."

Then he went on: "I do not agree with people who suggest that we must not push our economy to any point necessary to win in competing with the Soviet because then we might lose what made our country great. Our national goal should be clear superiority over the Soviet Union in all possible areas, and we should believe enough in our democracy so that we will not be reluctant to enter fully into the contest."

These men believe that our survival is imperiled; that we are not doing enough to assure our security to the greatest degree possible; that we should do more; and if it costs more to do more we ought to pay for it in the spirit of "damn the torpedoes, go ahead."

But let there be no mistake about this. If we are to have peace we must have a high degree of discipline at home. We must understand—and the President is the only man among us who can bring this forcibly to the Nation—that waging peace in our times is a task of formidable proportions second only to waging war.

The successful waging of peace requires a vigorous national administration, an informed people, and a mature people who

know that you cannot be adult without being willing to pay for what you want. It is only in heaven that you can eat your cake and have it too.

This is the melancholy pass to which we have come. It is like the common story of the rich, miserly recluses found starving. There has never been a time when we did not have the resources of men, money, and access to knowledge that might have given us a wide lead over any aggressor and make us attack upon us suicidal. Yet we have apparently believed we could not afford to spend enough to secure our liberties.

Money plainly is not power. It is only potential power. It becomes a real power only when used in quantities sufficient to the task. Today although the walls of our world might be tumbled down tomorrow, all our gold could not produce a single missile or enable us to hurl a rocket to the moon.

We must abandon the perilous notion that we can afford security only within the strait-jacket of the budget. This is equivalent to throwing 3 feet of rope to a drowning man who is 6 feet away.

If we had tried to fight the last war within the budget, we would have lost. Congress did not say to the Air Force: "For budgetary reasons we can allot you only \$2 billion." On the contrary, it said: "Tell us your requirements and we'll find the money."

Since we are now in deadly conflict with a prodigious antagonist, we can neglect nothing that might assure our security. So doing, we might waste some money. But failing, we would lose our lives.

There is no room here for margin of error. Gone are the days of the last two world wars when we could go to the battlefield in our own good time and relieve the balance. In 30 minutes we could now go from national existence to national death.

Certain it is that we cannot escape biology. When white men came here the Indians wanted what we want: to be let alone. But they were not let alone and could not stand against their antagonists. In the pitiless universe, plants, animals, or men struggle hard enough to survive or they disappear. The Indians are gone. History records their passing. But nature does not weep for them. She is concerned only with the survival of the species; not with some segment of it, not even with the survival of Americans.

Where do we stand? We stand today a nation with prodigious resources, able to afford private luxuries incomparable in history, but trailing the Soviet Union in science, space, armament, and most recently the winter Olympics. Rich in the private sector of our economy, we are poor in the public sector, and we will get poorer if we follow the admonition of our Secretary of Commerce, who branded any politician as irresponsible or an economic illiterate if he were to try to "drain from the bloodstream of the private economy the savings urgently needed . . . for growth."

Look but at the growth we get. Television repairmen being paid more than teachers; 200,000 fewer scientists and engineers than the Soviet Union with half as many college graduates; toilet water at every drugstore; and polluted streams in every State.

Without a sense of purpose we are not able to put our enormous productive capacities to the needs of the Nation. It's every man for himself, and the Nation take what's left.

Of course, if we think Khrushchev was only kidding when he said he would bury us, we have no need to worry. But I, for one, believe our security is at stake. And yet, we stand as a nation, a 20th century Babylon, headless and heartless, a big, fat target for the ably led Communist world and the clamoring, poverty-ridden new states.

Even if we don't know where we stand in the world—even if we would rather not

know—it is a fact that we cannot hide our image from the world and this image is as important as any "foreign policy" we might devise.

The challenge to us arises partly from the arrival on the world scene of the Soviet Union, but the challenge also arises from what we have let ourselves become.

The American people ought to be told the bleak truth about their world, the character of the forces arrayed against them, and what they must do, at whatever cost, to survive or even to bring about a state of high security. They must be told that, however, humane their society, whatever its ideals, this alone will not save them from destruction by a society armed with the prodigious mechanisms of our times and an implacable determination to dominate all men.

They must be told, furthermore, that the problems they face are incapable of solution within their time or the time of their children; that for decades to come the life of humanity will be threatened by the lava flow emerging from the greatest eruption of all time. They must be reminded of what history and experience demonstrate: That merely because something is desirable does not mean that it will necessarily come to pass; that things men have longed for during centuries are as far from being realized now as they were in the days of Babylon.

The people must be told, too, that it will not be enough simply to react to the Soviet threat and to clean our domestic Augean stables. Goals we must have to which we and mankind may aspire. And once the goals are clarified we must have the fortitude and the patience and the means to attain them.

You have been kind and patient and it is time to bring these remarks to a close. But I cannot conclude without at least a word about what we should do now, about all of this.

Of course, there are many things that need to be done, but there is one thing without which none of them will be done. That indispensable element is the placing of the responsibility for governing and the power to govern this country in the hands of one or the other of the political parties.

I realize that politics has become a naughty word in America, but as long as we retain our constitutional system, political parties are necessary evils. Unless we give the control of both the legislative and the executive branches of our Government to the same party we are courting disaster. There is no other way short of a dictatorship to focus the tremendous talents and the potential power of our people upon the problems which confront us.

It is within the classic tradition of democracy that this particular duty is the exclusive responsibility of the citizen voters of this great Republic, and none of these citizens bear a greater responsibility than those who have had the good fortune to attend Harvard University.

Civil Rights

SPEECH OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8601) to enforce constitutional rights, and for other purposes.

Mr. OSMERS. Mr. Chairman, H.R. 8601, the civil rights bill, has my full support. The time has come, Mr. Chairman, for the Federal Government to see to it that every American enjoys the full and free exercise of his rights under the Constitution. Haggle we may over details, but Congress can no longer escape its plain sworn duty to insure and protect the constitutional rights of every American regardless of race, color, creed or place of residence.

All of us are well aware of the fact that discrimination exists in the North and West as well as in the South. In areas outside the South, discrimination is particularly aggravating in the fields of employment and housing but happily, steady progress toward ending it is being made.

To me, the most important provisions of this legislation are those concerning the voting rights of Negroes in the South where such rights are presently denied or curbed in direct and indirect ways in many counties.

The right to vote is the greatest right possessed by free men and women in a republic. An honest and secret ballot gives us the ability to choose our leaders and representatives. Without the right to vote, a citizen soon finds that, regardless of the provisions of the Constitution, he has no other rights except those permitted him by leaders he does not help select.

Ninety years ago almost to the day—March 30, 1870—we wrote the 15th amendment into the Constitution:

The right of citizens . . . to vote shall not be denied . . . on account of race, color, or previous condition of servitude.

Ninety years later we have yet to make good on that promise. In county after county in the Deep South, where thousands of Negroes reside and many own property, few or none are permitted to vote. Not only are these citizens prevented from voting by unreasonable and ridiculous tests, but by intimidation and violence as well. Ninety years is certainly long enough to prove that existing laws have not given Negroes in the South the voting rights which are theirs.

Voting referees are needed to see that the requirements for voting shall be uniform for all races.

The bill also protects voters from the threats and intimidation that have been so common in the past. The Federal Government must step in where necessary and give the right to vote to every qualified American citizen wherever it is denied.

In January 1959 I introduced H.R. 1933, a bill to prevent hate bombing. On May 13, 14, 1959, Subcommittee No. 3 of the Committee on the Judiciary held hearings on my bill and others with generally similar purposes. I was the first witness to be heard by the subcommittee and I would like at this time, Mr. Chairman, to quote a few sentences from my testimony at that time:

The weakening of the solidarity among the people of the United States by attacks on religious and racial groups, and buildings which they use, plays right into the hands of the communists. In no other way can the great strength of this Nation be weak-

ened as much as it is by pitting one racial group against another, one religious group against another, or one section of the country against another section.

The damage to our worldwide position as a guardian of liberty is incalculable if these conditions are allowed to exist without Federal law to correct them. The Communists are making supreme efforts among the peoples of Africa, Asia, and the Middle East to exaggerate our differences. Their propaganda mills exploit every single hate incident which happens here, whether it be a small local abuse or a major attack on a racial or religious group in the Congress of the United States.

The Nation cannot afford to permit the irresponsibility of a few individuals to jeopardize our prestige and leadership in the free world.

It is very heartening to note that title II of H.R. 8601 includes very practical provisions along the lines of my own bill H.R. 1933, penalizing those who do participate in hate bombing and related activities.

America's position in the world will be stronger with this civil rights bill on the law books of the Nation.

Impressive Photographic Exhibition in Connection With the White House Conference on Children and Youth

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. KEATING. Mr. President, all of us are aware that the White House Conference on Children and Youth is now getting underway. Some 7,000 delegates have come to Washington from all over the country to participate in these important deliberations. In connection with the conference, I should like to call to the attention of the Senate an impressive photographic exhibit which has been assembled especially for this occasion.

I ask unanimous consent that a statement I have prepared on the subject be printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

STATEMENT BY SENATOR KEATING

The subject of this exhibition is the hope of this Nation—its young people. In 350 distinguished photographs, the selective eye of the camera has recorded the hopes and fears, the loves and problems, the triumphs and disappointments of individuals growing up in America.

The 50th Anniversary White House Conference on Children and Youth, called by President Eisenhower, is charged with the great responsibility of planning to help youth build their world for tomorrow. The photographic exhibit on display in the West Ballroom of the Hotel Shoreham visualizes the many challenges that face delegates to the Conference.

There are expressions of a universal nature: the infant's abiding love for its mother, a child's discovery of life's magic in animals and flowers, youth's urge to rebel against what his sometimes illogical nature finds an unfair constriction of authority.

Other pictures focus on particularly American aspects of life: the adolescent boy's engrossing interest in automobiles, the relaxed give and take of learning in a democratic classroom, the problems of providing equal opportunities for all groups of American youth.

I commend to the attention of Senators this panorama of 350 pictures, which have been generously provided by many leading photographers and organizations, and then, as a public service, edited and assembled for the Conference by the Eastman Kodak Co. of Rochester, N.Y.

In a very real sense this exhibition, which will later be seen in other cities in America and abroad, illustrates the many fruitful discussions taking place in the sessions of the White House Conference. In as real a sense, it has significant meaning in relation to what we say in this Chamber now and in years to come. The camera has recorded the hopes for this country's future, which, in large measure, it is our task to make real.

The Balance of Payments Deficit—A Challenge to America

EXTENSION OF REMARKS OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. WIDNALL. Mr. Speaker, on March 9 I was pleased to deliver the keynote speech at the 14th annual world trade conference of the Pittsburgh Chamber of Commerce in Pittsburgh. My topic was "The Balance of Payments Deficit—A Challenge to America."

In my address I stressed the urgent need for reducing the deficit and told of the new program of informational and promotional activity in the foreign-trade field carried on by the Department of Commerce.

In his message to Congress, President Eisenhower outlined those plans. He echoed my expressed views when he said that "increased exports are important to the United States at this time." Besides creating more jobs for Americans, the President said, expanded exports will help to support such essential expenditures abroad as investment, private travel, maintenance of U.S. military forces, and programs of economic cooperation. It came as a source of some satisfaction to me that of the seven comprehensive steps charted by the President to stimulate exporting, five of them were embodied in my Pittsburgh speech. The seven steps the President directed the Government to take are, first, to strengthen the trade promotion services of the Department of Commerce, including its field offices located throughout the United States; second, to expand and give higher priority to the commercial activities of the Foreign Service; third, to expand the agricultural trade promotion activities of the Department of Agriculture; fourth, to place greater emphasis on the prompt reporting of information useful to American exporters; fifth, to establish new overseas trade centers; sixth, to make fuller use of international fairs, trade missions, and

other promotional means to stimulate the interest of foreign buyers in U.S. products while continuing to emphasize the basic objectives of the special program for international understanding; and seventh, to emphasize the promotion of tourist travel to the United States.

My own remarks in Pittsburgh follow:
THE BALANCE OF PAYMENTS DEFICIT—A CHALLENGE TO AMERICA

(Remarks by Representative WILLIAM B. WIDNALL, Republican, of New Jersey, at the 14th annual Pittsburgh world trade conference sponsored by the Pittsburgh Chamber of Commerce, at a meeting at the Penn-Sheraton Hotel, Pittsburgh, March 9, 1960)

"The Balance of Payments Deficit—A Challenge to America." Here is a theme which still has an unfamiliar ring in American ears. Unfamiliarity, however, must not be permitted to block proper attention to the important issues underlying this theme.

The first of the two phrases, "the balance of payments deficit," is a rather technical term which not long ago was confined almost entirely to the jargon of specialists in international economics and finance. During the past 2 years, however, it has cropped up repeatedly in statements of public officials and business leaders, and has become commonplace in business and financial journals.

From these sources, the term has found its way with increasing frequency into the daily press, where it startles and sometimes bewilders Americans whose last news of the balance of payments had to do with the postwar dollar gap. This new term, "balance of payments deficit," is one which many of us associate vaguely with the problems of foreign countries, but are surprised and perhaps chagrined to find being used as a name for a problem of our own.

Unfortunately, public understanding of the balance of payments has not kept pace with the growth in news references to it. This conference will contribute much to the wider recognition and better understanding which are needed with respect to those issues. For this reason, the world trade council of the Pittsburgh Chamber of Commerce is to be congratulated for its timely initiative in sponsoring today's meeting.

By way of preface, however, it may be worth while to recapitulate just a few of the most salient features of the current position. Leaving aside all reference to the trends and underlying factors which brought about that position, I would summarize it in very broad outline as follows:

In 1959 total U.S. expenditures abroad amounted to \$28½ billion. Slightly more than half of this (\$15 billion) was in payment for imports of foreign goods, and another \$5 billion went into purchases of various foreign services—shipping, insurance, tourism, and so forth. The remainder included roughly \$3 billion for purchases of our overseas military establishments and their personnel, \$2 billion for net foreign loans and grants by the Government, over \$2 billion for net private investment abroad, and a smaller sum for various private donations and pensions.

Foreign expenditures in the United States last year totaled approximately \$25 billion. Over \$16 billion of this was in payment for U.S. goods exported and more than \$7 billion was received for U.S. services rendered to foreigners and as earnings on our foreign investments. The remainder included relatively small amounts of foreign long-term capital invested here and of unrecorded transactions.

The foregoing figures do not include, either as foreign-aid grants or as exports, military goods transferred without reimbursement. Nor do they include the U.S. subscription to

the expansion of the capital resources of the International Monetary Fund.

Now, the U.S. expenditure total which I cited a moment ago exceeded total U.S. receipts on the transactions enumerated by \$3.7 billion in 1959. This difference, resulting in equivalent transfers of liquid dollar assets and gold to foreign ownership is, of course, "the balance of payments deficit."

Note that the deficit, so defined, is not a comprehensive measure of the change in our international net worth, by which I mean the excess of our investments and claims abroad over our outstanding liabilities to foreigners, long term as well as short term. In computing the conventional balance of payments deficit, we have treated U.S. foreign investment, both private and governmental, simply as an expenditure, rather than as an acquisition of valuable assets abroad. The result is a measure of the deficit strictly in terms of the effects of the transactions upon our international liquidity position.

This cash deficit in our international accounts, however, is a vitally significant and potentially threatening phenomenon, regardless of the size of our holdings of income-yielding long-term assets abroad, or of annual increases in them. These investments, in the main, are not at all liquid, and could not contribute much, should an emergency arise, to the problem of meeting demands by short-term creditors for withdrawal of their funds.

Fortunately, no emergency is at hand. Our economic and financial position is very strong. This gives us plenty of time to take action that will preclude the development of any emergency, provided that we use that time wisely for the application of policies designed to prevent extended continuation of balance-of-payments deficits on the 1958-59 scale. Drifting for even a few more years at the recent deficit level, however, would surely bring us into an unpleasant situation.

Moderate annual deficits in our balance of payments during most of the past decade, coupled with the large ones recorded in 1958 and 1959, have already raised the liquid dollar holdings of foreign countries—that is, their bank deposits here plus the short-term Treasury securities which they hold—from about \$6½ billion at the end of 1949 to \$17½ billion at the close of last year. Over the same interval, the U.S. gold stock dwindled from roughly \$24½ billion to \$19½ billion.

The increase in foreign countries' gold and dollar holdings to date could be regarded, for the most part, as a welcome restoration and redistribution of international reserves. It was a necessary condition for resumption of relatively unfettered multilateral trading patterns, and hence was a conscious objective of U.S. foreign economic policy for a number of years. It has been an essential factor in the recently accelerated dismantling of trade and exchange restrictions by important trading countries. Without it, the highly desirable reestablishment of external convertibility for major European countries a year or so ago could scarcely have been contemplated.

Nevertheless, we must ask how long the propensity of foreign countries to hold dollars as a reserve currency will remain strong enough to make them willing to add anything like \$3½ billion per year to their holdings. To date, they have taken the bulk of the liquid funds transferred to them over the past decade in the form of bank deposits and Treasury securities rather than in the form of gold. This attests to the confidence which foreign governments and their citizens have in our currency and to their faith in the economic and political stability of the United States. It also reflects, of course, their requirements for large operating balances to finance their trade both with us and to a considerable extent with each other.

Under present conditions, and with the attitudes now prevailing, our gold stock of \$19½ billion represents a rather comfortable international reserve, even though approximately \$12 billion of that total is required for our domestic monetary reserves under existing law. So long as no extraordinary and unexpected demands on our gold stock arise, it bears an ample ratio to our short-term international liabilities.

Still, if those liabilities should continue to rise rapidly, the ratio would soon become less ample. If it fell too low, it would expose our gold reserve to great jeopardy in the event of any development causing serious weakening of the confidence of foreign depositors in the dollar. If for any reason they were to attempt to convert a substantial proportion of their present dollar holdings to gold, or even to obtain full settlement in gold of U.S. balance of payments deficits on the 1959 scale, the simple arithmetic of the relationships I have reviewed is such that the available free gold reserve could be drained off very quickly.

If this happened, I do not believe I need to paint a picture of the chaos and uncertainty which would thus be introduced into international finance and trade.

Fortunately, this bogey is not imminent. Nevertheless, in order to prevent gradual drift into a situation in which it might quickly become a realistic threat, we should be prudent enough to take responsible steps now toward sharp reduction of the excessive deficit recently prevailing in our balance of payments.

The most authoritative projections of our international transactions which are available suggest that some corrective adjustment is already underway. American exports were depressed during 1958 and early 1959 in part by various cyclical and special factors which appear to be in process of reversal. Exports were rising fairly strongly in the latter part of 1959, and are expected to be considerably higher in 1960 than last year. Imports, on the other hand, tended to flatten out after mid-1959, following a very rapid rise during the several preceding quarters, and their further growth in 1960 is expected to be much more moderate than their increase from 1958 to 1959.

The anticipated recovery of the export surplus in our merchandise trade would mitigate appreciably the overall balance-of-payments deficit. According to these projections, the deficit might drop to the \$2½ or \$3 billion range this year. Such a level, however, would not be nearly good enough. Major efforts are still necessary to reduce it much further.

Over the last quarter century, the U.S. Government has taken the lead by example and negotiation in reducing tariffs and other restrictions to trade. Since World War II we have vigorously put forward our firm belief that liberal international trade policies are essential to free world economic progress and we have attempted to put this belief into practice in our own trading agreements. Despite some setbacks, our overall record is one of which we can justly be proud.

The United States should not try to redress the current deficit in its balance of payments by throwing aside its liberal trade policy and discouraging imports. Rather, we should seek to solve the problem by, among other things, promoting an expansion of our exports.

The advantages of a liberal import policy to the U.S. economy are clear. U.S. industry depends heavily on foreign sources of supply for a very large number of basic materials. For example, one-fourth of our iron ore, one-third of our copper and rubber, and the bulk of our tin, nickel, and newsprint come from abroad. The availability of these imports results in lower production costs and

greater efficiency. Imports also give the American consumer a chance to choose from a wider variety of goods than are available from domestic producers, and the competition of foreign goods with those produced at home offers direct and indirect advantages to the consumer in terms of price and quality. While this competition may at times be painful, it helps to keep American producers on their toes; helps to keep our economy dynamic; and helps to keep our prices in line. All of these things mean higher real incomes and a higher standard of living in the United States. Furthermore, it must be borne in mind that trade is a two-way street. Our imports help to finance our exports; without one there could not be the other.

Reversion to a restrictive trade policy would dissipate the advantages mentioned above and would not solve the long-run problem of balancing the U.S. international accounts. On the contrary, backsliding by the United States would tend to be self-defeating since it would encourage a return to greater protectionism in other countries and lead to a contraction of our own exports.

We must not forget the importance of exports to the U.S. economy. Our exports provide employment, increase the volume of output and thus lead to lower costs of production and prices, and add to profits. In 1959, not an especially good year, over \$16 billion of U.S. goods were shipped abroad. Many U.S. industries depend heavily on large foreign sales. For example, 40 percent of our tractor production, 35 percent of our civilian aircraft production, and 20 percent of our output of trucks are exported.

At the present time world trade barriers are coming down and we are in a position to reap the fruits of our own liberal trade policies of the past which helped substantially in the postwar recovery of other free world economies.

During the period of the so-called dollar shortage, many countries found it necessary to impose extensive restrictions on imports in order to conserve their meager foreign exchange reserves. These restrictions were highly discriminatory against goods from the dollar area—especially the United States. The need for such restrictions has now been greatly reduced. The war-ravaged economies of Western Europe and Japan have been rehabilitated and most of these nations have built their gold and foreign exchange reserves to quite satisfactory levels. As a result, most of the industrialized countries of Western Europe were able at the end of December 1958 to adopt external convertibility for their currencies, a move which eliminated the financial justification for discriminatory restrictions against U.S. exports.

The U.S. Government has taken advantage of this new situation in world trade and payments to press for the rapid removal of import restrictions and, in particular, those restrictions which are discriminatory against dollar goods. Our view on the lack of justification for such restrictions has been enunciated both in international forums such as the International Monetary Fund, the meetings of the contracting parties to the General Agreement on Tariff and Trade (GATT), and the OEEC and in bilateral representations to the governments of our trade partners.

The need to do away with restrictions and discrimination has been recognized by the other industrialized nations and in some of the newly developing areas as well. Many countries have taken important steps toward reducing their restrictions and the discrimination which they have practiced against American goods. Among the countries which have acted in the past year are: Argentina, Australia, Austria, Denmark, France, Germany, Ghana, India, Italy, Japan, Malaya, the Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Turkey, and the United

Kingdom. Some of these countries have virtually eliminated discrimination against the dollar area.

The drive to remove quantitative import restrictions on dollar goods has received so constructive a response and has developed such momentum that we can look forward confidently to further advances in coming months. We can reasonably hope that by the end of the year discrimination against our exports will be almost a thing of the past. The U.S. Government will continue its vigorous efforts toward this end.

The Department of Commerce presently carries on an extensive program of informational and promotional activity in the foreign trade field. Plans are now underway to improve and expand these facilities for exporters. It is planned that these activities will include a strengthening of the Foreign Commercial Service in order to provide timely detailed information on trade prospects; find suitable foreign agents for U.S. firms (that is, you); provide overseas facilities for the dissemination of promotional material by American business firms; assist business firms in adapting their promotional activities to local needs; arrange appointments with prospective purchasers; and the like. In addition to these continuing activities, the Department of Commerce plans to expand its work abroad with respect to trade information centers; in providing foreign exhibits of American products known as world trade centers; through participation in international trade fairs; and through the sending abroad of trade missions of American businessmen to meet with local industry and Government groups. These expanded activities are likely to prove especially helpful to the smaller and medium-sized firms which do not have adequate foreign trade information, and to other firms which have not fully explored the opportunities which may exist in foreign markets. In this manner our Government is trying to stimulate increased interest and efficiency in foreign sales.

It seems clear to me that the most desirable line of solution is to be found mainly on the side of expanding our sales to foreign countries. Many, though not all, of the means being suggested on the other side—that is, for curbing our payments to foreign countries—tend either to raise questions of contradiction with some other equally important policy objective or to be potentially effective only in the short run.

Happily, however, one of the prime lines of attack not only promises to help on both sides of the balance of payments account, but also coincides fully with one of our most important national economic goals. Moreover, it can be progressively more effective in the longer run than in the immediate future. I refer to the prudent anti-inflationary management of the whole complex of our monetary and fiscal policies.

Quite independently of international trade and finance, of course, it is of the utmost importance that we pursue monetary and fiscal policies designed to avoid inflation and maintain a stable purchasing power for the dollar. Sincere and diligent labor-management cooperation and ingenuity to hold down or reduce costs is equally urgent.

The balance of payments deficit now presents one more powerful reason for pursuit of sound policies in these fields. By maintaining and eventually improving our international competitive strength, along with our domestic economic strength, wise anti-inflationary measures will both facilitate expansion of U.S. export sales and temper the growth of many competitive imports. They will also sustain foreign confidence in the value of dollar reserves and thus minimize any possibility that those funds might be used to drain off our gold reserves.

Another important line of attack on the balance of payments deficit which should be

entirely noncontroversial is vigorous diplomatic pressure on our friends and allies abroad to complete the job of removing anachronistic trade and exchange restrictions discriminating against the entry of our goods into their markets. The present administration has pressed energetically for such action by foreign governments. These efforts, abetted by shifting circumstances in the realm of international commerce, have been rewarded by very substantial progress in the past few years and especially in recent months. Much remains to be accomplished here, however, and our Government must redouble, rather than relax, its vigor on these issues.

To many observers, it has seemed that the obvious and easy way to correct the balance of payments deficit is to reduce some of our expenditures abroad—to tighten our belts and live within the means of our receipts from foreign transactions. As a generalization, however, and with the reservation that certain exceptions may well be in order, I would urge that we eschew this line of solution, at least unless or until we have unsuccessfully exhausted the potentials for achieving balance through expansion of our sales. And I do not think failure is likely if a genuine export drive can be mounted.

The trouble with seeking to cut our expenditures abroad—still generally speaking—is that there are few effective means of doing this which do not have highly undesirable or self-defeating side-effects. Most devices for this purpose would either abridge arbitrarily the freedom of choice and the economic welfare of American individuals and business firms, or interfere with the conduct of important international responsibilities which we have assumed for what most of us view as good and sufficient reasons.

For example, an attempt to restrain the outflow of U.S. private capital to foreign countries would not only be rightly resented by the investors as an inhibition of their scope of action and profit opportunities, but would run contrary to our national policy of stimulating and encouraging economic development throughout the free world.

Raising barriers to imports of industrial materials or capital equipment, while perhaps of immediate benefit to the limited groups of U.S. producers thus favored, is always subject to the strong objection that it raises costs, and thus depreciates the competitive positions, of other American producers.

Similarly, new barriers to imports of particular consumer goods would not only tap the consumer's pocketbook to the detriment of other U.S. industries competing for his dollar, but would also impinge objectionably upon his range of choice in spending his income. Any attempt to discourage U.S. tourist travel abroad would be equally open to the latter objection, as well as to others on political and cultural planes. We should do our utmost to develop tourist trade to the United States of America and the flow of funds it will bring to our shores.

Moreover, artificially increased restrictions on purchases from abroad, whether by industry or by consumers, would surely invite retaliation by foreign countries and undermine the international cooperation in reduction of trade barriers which we have led for many years. It would ultimately penalize our exporting producers and their employees through shrinkage of sales opportunities abroad, and thus in the end would not even contribute anything lasting to mitigation of the balance-of-payments problem.

In another area there is little doubt that we could achieve considerable reduction in the balance-of-payments deficit, at least for the short run, by cutting back the size of our overseas military operations and the expenditures which they entail. To do this solely on balance-of-payments grounds, how-

ever, at the cost of weakening our strategic position in the cold war, might constitute abdication of responsibility for a larger problem in order to meet a lesser one.

While there is probably room for desirable economies in overseas military expenditures, as in other segments of defense spending, changes in the program should generally be judged on their own merits. On the whole, it seems clear to me that there is less risk in accommodating the balance of payments to the imperatives of the international military situation than in tailoring the defense suit to fit the balance-of-payments cloth.

Similar considerations, though perhaps more controversial, may be advanced against the notion of cutting back our foreign-aid programs primarily in order to reduce the balance-of-payments deficit. Since the greater part of the aid is spent on U.S. goods and services, despite our liberal and statesmanlike policy of worldwide competitive-bid procurement for some of the more important programs, it would require disproportionately large reductions in foreign-aid outlays to achieve a given net effect on the balance of payments. Here, too, in the main, the programs should be judged on their merits in a context much broader than that of the balance-of-payments deficit.

So I return to the thought that primary reliance in meeting that challenge must be placed upon improvement of our international competitive position and expansion of our export sales. This is the path that will lead to the greatest benefits with the least incidental damage to other American objectives, domestic or international.

It seems to me that we have barely scratched the surface of what our country could achieve if we emphasized exports and made them a national objective, as do most of the industrialized European countries. They are export conscious. Goods are designed and styled specifically for foreign markets. They provide servicing of goods abroad and much time and effort is spent on foreign sales. The success of many of these programs is a very wholesome example to us, as we have never made a comparable effort, either through private enterprise or the Government.

Through the activities of the Export-Import Bank, we have for many years been engaged in an effort to promote our foreign trade by financial means. From time to time our efforts in this field have been reviewed. Recently, suggestions have been made that the facilities of the U.S. Government in this field, which up to the present time have been used largely to provide medium and long-term credits and guarantees, should be expanded to cover exports which are normally traded on the basis of short-term credits. A number of other exporting countries have provided such facilities for their exporters, and there is some evidence that our own exporters have on occasion lost business because more favorable credit terms were available from other countries. We are now exploring the need and usefulness of additional facilities for export credit guarantees and financing in the short-term field.

American business is living in a more competitive world. The Western European economies and that of Japan have recovered their health and vigor. The sellers' market of the postwar period is no longer with us and, henceforth, American products will move in world trade only to the extent that American producers are capable of delivering the right kind of goods at the right prices.

There has been a great deal of concern that American goods are becoming noncompetitive in world markets. However, there is no clear evidence to support a conclusion that the competitiveness of American producers has been impaired. The lower level of our exports during 1958 and 1959 was largely due to abnormal and special factors. With con-

tinued economic expansion in Western Europe and Canada and increased exports of cotton and commercial aircraft already on order, we can reasonably anticipate a substantial increase in our foreign sales in the coming months.

Furthermore, it is important to note that in recent years while exports of some U.S. products have declined, U.S. exports of goods embodying advanced technology have continued to rise. Our advantage in world markets has traditionally lain in the innovative field, in our ability and willingness to invest in research and development. We can maintain this advantage. Change is the natural way of our economic life. In adjusting to the realities of a new era, business has a continuing incentive to develop new products and to introduce fresh methods of production and merchandising.

Government can go just so far in furthering opportunity, but your own individual initiative and effort in development will, in the end, bring results for you and the United States.

Appeal for the Vanishing Primary

EXTENSION OF REMARKS

OF

HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. CLARK. Mr. President, in the New York Times magazine of yesterday, March 27, appeared an article by our able colleague from Wisconsin, the Honorable WILLIAM PROXMIER, entitled, "Appeal for the Vanishing Primary." The article reflects the freshness and boldness of thought that all of us have become accustomed to expect from the Senator from Wisconsin. I commend his article to readers of the CONGRESSIONAL RECORD and ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

APPEAL FOR THE VANISHING PRIMARY—A SENATOR ANSWERS THOSE WHO WOULD ABANDON THE PRESIDENTIAL PREFERENTIAL POLL, AND SUGGEST THAT THE ANSWER TO THEIR CRITICISMS LIES IN THE EXPANDING SYSTEM

(By WILLIAM PROXMIER)

WASHINGTON—This Sunday hundreds of thousands of Wisconsin citizens are fighting out the presidential primary campaign of 1960. On the steps of churches, over a beer in taverns, in dairy barns and kitchens and automobiles, the argument, the contradiction, the agreement, the joking are rolling along faster and faster as the April 5 deadline approaches, a deadline that may seal the fate of HUBERT HUMPHREY, and JOHN F. KENNEDY.

The season of the primaries is upon us and the people of my State are happily engaged in what has become a rare—I think far too rare—American privilege: having a voice in deciding who is going to be either of the two (the nominees of the two major parties) who will have any chance to become the next President of the United States. In future weeks and months the people of some other States will have a similar opportunity.

There are a thousand reasons why this is a disorganized, irresponsible way for the country to be influenced in its choice of the occupant of so great an office. Many of the hundreds of thousands of conversations going on today in Wisconsin, for example, are ir-

relevant to the issues. Thousands of votes will be influenced by Muriel Humphrey's homey and simple coffee-hour campaigning for husband HUBERT, or racket-busting Bob Kennedy's tireless farm-to-farm barnstorming for brother JACK. And of course, KENNEDY's religion is constantly discussed and will persuade many.

Primaries have more serious inadequacies. Some were outlined by David Broder in this magazine a few weeks ago. Certainly the candidates may be hurting each other, and our Democratic organization in Wisconsin may be suffering a division that will take months to repair. And, as Adlai Stevenson pointed out in another recent article, the primaries impose a severe physical, financial, and time-consuming burden on the candidates.

A primary costs hundreds of thousands of dollars, while often exciting no contest at all. This year, for instance, will mark the first significant Democratic presidential contest in Wisconsin in 36 years.

It can be argued that a primary often fails to offer voters a meaningful choice. In 10 of the 15 States that permit presidential preferential polls, delegates to the national conventions are not bound, and often they are little influenced, by the voice of the people. In the remaining five States delegates are bound by the primary results. But in California a favorite-son delegation picked by the Governor will probably be unopposed. Indiana voters are expected to have no alternative to KENNEDY. In Maryland, WAYNE MORSE is the sole alternative to KENNEDY. In Oregon MORSE will run as a favorite son.

And what kind of choice will the Wisconsin voter really have on April 5? Only two of the five leading Democratic candidates are entered in Wisconsin. How about Symington or Johnson or Stevenson supporters? What choice do they have?

This weakness is only partly answered by the obvious fact that only KENNEDY and HUMPHREY chose to enter in Wisconsin. All candidates were free to enter. Presumably, any candidate really interested in the Democratic nomination, and who thought he had a very good chance in Wisconsin, would try to pick up the delegation by submitting his name.

Another weakness of the Wisconsin primary is that normally Republican voters, recognizing that Vice President NIXON is unopposed and little needs the prestige of a big vote in Wisconsin, can cross over in the primary. If they do so in sufficient numbers and the contest is otherwise reasonably close, Republicans can pick the Democrats' nominee.

One answer to this is that Republicans are American citizens, too. Why shouldn't they have a chance to influence the selection of the man who may be their next President? Of course, many Democrats won't buy this answer. They might, however, settle for the certainty that Republicans will be a minority, and probably a small one, in this Democratic primary.

In view of these serious weaknesses and imperfections, what can be said for the practice of having the plain voter play such a telling role in answering the big question?

There are three compelling arguments for the primary.

The first is that in an age of political apathy and indifference, of too much passive diversion and not nearly enough citizen responsibility, the presidential primary is exactly the kind of colorful, exciting, significant contest for public office that will persuade the citizen to discharge the active responsibility that he so rarely is called upon to assume. This is good for the voter as a man and as a citizen.

Besides, there is no more important activity for men who want to be President of the United States than to get out

and talk about the Nation's problems with the Nation's citizens. It is too often a temptation for candidates to avoid this most essential obligation to democratic leaders.

Wisconsin today affords an excellent example of the benefits to the voters of a presidential primary campaign. In the past 9 years I have campaigned intensively five times for statewide office in Wisconsin. I have met and shaken hands with well over a million Wisconsin citizens during this time. Since the presidential campaign began in earnest in Wisconsin, I have once again been out in the State talking with thousands of farmers and workers, tavern keepers and hardware merchants, housewives and college students. A sharp and exciting change has come over my State in the past few weeks.

Besides the irrelevant conversations, there is also a gratifying amount of talk about KENNEDY's battle for labor reform and HUMPHREY's fight for the dairy farmer; discussion of KENNEDY's strikingly thoughtful, logical, informed replies to questions—his impressive mental equipment—and of HUMPHREY's broad and deep competence in everything from fiscal policy to foreign policy.

Secondly, the primary makes sense because no one—not brilliantly informed delegates, not hard-working party leaders, not mayors or Governors or Senators—has as much right to say who should be the elected officials of a democracy as the plain voter—all the voters. And this should apply most strongly to the elective office that constitutes the greatest authority and heaviest responsibility the American people can give to any man. It should apply particularly to the primary system, because this reduces the choice of presidential candidates to two and affords the only real choice for the millions of Americans who consistently vote for one or the other of the major parties in November.

This is true not only because of the faith all Americans presumably share in popular democracy. It is true also on the practical ground that the plain voter, with all his shortcomings, will usually give a better answer than the political professionals in casting his vote. He will do so because he will usually ask the right question.

It has been my experience through three losing and two winning statewide campaigns that the voter almost never votes for a man simply because he thinks he will win. On the other hand—as I will try to show a little later—this is by all odds the major consideration of the party leader, the public official, the delegate.

Instead, the voter usually tries to answer the following question with his ballot: Who will make the best President of the United States? Often he may not have enough information to arrive at the right answer, but frequently he will. Today there is the magic of television and radio. Newspapers are reporting more fully, fairly and accurately than ever before. And both HUMPHREY and KENNEDY will have talked directly and personally to tens of thousands of Wisconsin citizens by election day.

After this kind of intensive campaign most plain voters may have a closer understanding of the characters, the minds and the attitudes on big issues of the candidates than Americans have generally had throughout our 170 years of democracy.

The third reason I vote for the primary system is the extremely serious weaknesses of the alternatives. The prime alternative is the selection of delegates by a State convention. Thirty-five States do this exclusively with no public presidential poll.

Why should such delegates—enjoying the wise and personal influence of party leaders, Governors, Senators, newspaper editors, top business and labor officials—usually better informed and more deeply interested than other voters—why should these delegates be considered such a grim alternative?

The answer is evident to anyone who has thoughtfully attended a State convention. Often a party chairman, a Governor or an unofficial but potent leader will actually select the delegation to the national presidential convention. In doing so, the leader, if his power is great enough, will pick delegates who will be amenable to his persuasion. Otherwise, he will unite with other party leaders until they can put together a strong enough combination to win convention approval. In any event, State conventions select the men and women who will represent the State in determining the presidential nominee on an emphatically partisan basis.

There is one all-pervasive and consistent principle: dedication to the welfare and success of the party as an entity. This is rarely the national party. It is far more often the State party—or even the dominant faction of the party within the State. The convincing argument is: What candidate can do the party the most good? The answer to this is usually—though not always—which candidate can win? Even a nationally winning candidate may not be best for the leaders in each State.

This victory criterion is the dominant one, but it is not the only basis of selection. The criterion in some cases may be: Will he help the ticket most in our State? The answer in New York may be quite different from that in Mississippi.

In both State and National conventions idealism is obvious. There is earnest concern with the national interest and a desire to nominate the man who will serve the Nation most ably. But the cry that never fails to bring partisan delegates up fighting in the intensely partisan atmosphere of a convention is "The man who will win in November."

From years of experience in campaigns, from public opinion polls, from scattered primary election results the delegates in general make the best guess they can as to who will be most likely to win in November. Of course, their decision is tempered. Even the most popular candidate cannot win if he is not acceptable, for whatever reason, to enough powerful State leaders. But, by and large, the decision is a giant guess on who has the best chance in November.

How much better to go directly to the voter, as Wisconsin is doing, and let him decide. At least let him decide how the votes of his own State should be cast at the national convention, after the voter has asked himself, not who will win, but who will make the best President.

I vote for the primary with all its obvious weaknesses, and though it has been losing ground. From its high point of 22 States, it was down to 19 States in 1956. It has fallen to 15 this year, and in 1964 the number will probably be even less.

Even in my own Wisconsin, where the Nation began the process of popular participation in Presidential campaigns by the first direct election of delegates to national conventions in 1905, the primary is in serious danger. The largest newspaper in Wisconsin has asked that State officials give earnest consideration to abolishing it. Top officials of both parties in Wisconsin will be sorely tempted to do so. With the grief the primary causes party organizations when it works, the wonder is that it has survived as long as it has.

For those who believe in popular democracy, the death of the Presidential primary would be a tragedy. If the Presidential primary disappears, a passive, apathetic America will slumber deeper than ever, as the real decisions on who should be President of the

United States are determined by a small group of deeply interested men and women in an atmosphere of almost irresistible partisanship.

No one would contend that the present, incomplete system of primaries is perfect, and many of us think the whole nomination process should be overhauled. To this end I shall introduce in the Senate in the near future a proposal for a constitutional amendment for a nationwide Presidential primary through which the rank-and-file voters could choose their own candidates.

Public opinion polls over the past few years have indicated that an overwhelming majority of Americans, no doubt disillusioned by what they have seen of the national conventions since televised coverage began in 1948, favor such a national primary and want a bigger share in choosing Presidential candidates.

I propose that in August of Presidential election years there be a nationwide primary vote to nominate the Presidential candidate in each party which qualified by having polled at least 10 percent of the vote in the previous Presidential election. To appear on the primary ballot, a candidate must submit a petition signed by qualified voters equal to at least 1 percent of the total vote cast for all Presidential candidates in the previous election. These petitioners must be residents of at least six different States, including two of the States with the largest populations, two medium-sized States, and two small States. If none of a party's candidates receives a majority, a run-off primary will be held in September between the two in each party with the greatest number of votes.

Tens of millions of American citizens would thus select the two men who would carry the banners of the Republican and Democratic parties in November. The parties would continue to hold national conventions following the primary, in order to nominate their Vice Presidential candidates and to write their platforms. Platform writing could then enjoy the attention it deserves. The party platform would also be, as it should be, the direct responsibility of the party's Presidential nominee.

I would accompany this proposal with an election-spending law directly relating to these primaries. The law would (1) limit the amount that could be spent by, or on behalf of, all candidates, and (2) require full disclosure of all contributions and expenditures, above a modest minimum amount, 72 hours after being received or paid out.

This highly desirable reform will undoubtedly take some time to bring about—if, indeed, it is ever achieved—but in the meantime we should retain the primaries we have, so that there is at least some opportunity for plain people to influence the nomination.

The presidential primary is not yet dead. It desperately needs improvement. But it is well worth fighting for and saving.

The big issue in this Congress in 1960 has been the battle over the right of all Americans—specifically the southern Negroes—to vote. What a paradox it is that, at the very time we are so deeply and properly concerned with this fight, we are passively permitting almost all Americans to lose the big share of their presidential franchise.

In an America that was founded and has flourished on democracy and that is still dedicated at great cost and risk to fighting for democracy throughout the world, the right of at least some plain Americans to have a voice in the primary election of their President should be enlivened, not killed.

The Reverend Dr. Martin Luther King,
Christian Statesman

EXTENSION OF REMARKS OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. BRADEMAS. Mr. Speaker, one of the most remarkable leaders of our time is the Reverend Dr. Martin Luther King, the distinguished Negro minister.

On March 10, 1960, Dr. King made an address at Goshen College, Goshen, Ind., a summary of which was prepared by Guy F. Hershberger, professor of history and sociology at the college. Dr. Hershberger's summary, which appeared in the *Elkhart Truth* of March 17, 1960, follows:

MARTIN L. KING: PROFESSOR'S VIEW

Martin Luther King is more than a champion of civil rights.

He is a minister of the Gospel whose roots are deep in the Christian heritage.

He speaks out of the deep religious experience and the sacrificial suffering of his own people. He has repudiated all violence.

Even though his suffering and that of his people has been far greater than that of the Founding Fathers, the movement which he leads was initiated, not by a "shot heard round the world."

It was founded in the church amidst hymns of praise and humble petitions from a thousand hearts.

"IF YOU HAVE WEAPONS, TAKE THEM HOME"

It was in this setting that Dr. King's spoken word was heard round the world; a word in behalf of freedom, yes; but also a word of love and mercy toward those who oppose freedom.

There were adversaries, some of them desperate. They even bombed his house. But when the crowds gathered about the ruins, some muttering thoughts of revenge, the fearless voice of Martin Luther King spoke softly once more, but clearly so that all could hear:

"If you have weapons take them home. If you do not have them, please do not seek to get them. Remember the words of Him who said, 'He who lives by the sword shall perish by the sword. Love your enemies. Pray for them that spitefully use you.'"

G. M. Trevelyan, the British historian, has said: "Close your eyes to John Woolman one century and you will get John Brown the next, with Grant to follow."

Obviously King is far closer to the spirit of Woolman than to that of most 19th century antislavery crusaders; and if his people continue to follow his steps the Nation need not fear the outcome.

Should they fail to follow him, however, and should a new Garrison or a Lovejoy appear, the next might easily be a John Brown, or a Nat Turner perhaps, with bitter fruits to follow.

KING SEEKS PEACEFUL CHANGE

What they do, however, will be determined not so much by King and his people as it will by the rest of us who hold within our hands the power of the filibuster, whether in the Senate or in the local community.

Martin Luther King is engaged in a heroic effort to bring about an inevitable social change in a peaceful manner.

If the church, the school, the community, and the Nation support him, his people will continue to follow.

If we fail him they may turn to other leadership and then we may expect the whirlwind, not only on the national but also on the international scene.

Citizens disturbed about communism and subversive influence would do well to divert their activity from name-calling directed against the Supreme Court and against religious and educational leaders who have a concern for the welfare of underprivileged and minority peoples at home and abroad.

Instead they should ponder the following letter recently received from my friend Lewis Waiyaki of Nairobi, Kenya (East Africa), a graduate of Goshen College, and now a student at the University of London.

FROM NAIROBI TO GOSHEN COLLEGE

"I am writing regarding my younger brother Peter. He wishes to study in America and it is my desire and hope that he should go to Goshen College.

"There are very few places for colonial and commonwealth students in British universities. . . .

"We are going through a difficult time in my country. The removal of colonial rule is clearly in sight but frankly I do not know how we shall be able to find suitable men for the task which lies ahead.

"Of course you and I would hope that men who will have the responsibility of guiding our country in the years to come will be people who accept the path of Christ. . . . In facing this problem America has responded but I fear not sufficiently.

"It gives me sorrow to know that the country which is showing generosity to us is the Soviet Union while the Christian countries of the West remain practically idle. . . . Already a large number (of students from Kenya) are going to Russia and the countries of the East where our people have been promised any number of scholarships.

CHALLENGE TO AMERICAN MENNONITES

"To face the Russian challenge we have formed an overseas education body to organize scholarships abroad and, of course, to advise intending students.

"For the present I am representing that body in Europe. . . . I hope and pray that Mennonites in America . . . can see the challenge and face it before it is too late. (This desire) is based on the fact that they are Christian pacifists (to which I am committed) and they do not have a colonial history. I think with their help we can build a place in Kenya for all of God's children."

The New York Times of February 24 reported the opening this year of a new university in Moscow for students from Asia, Africa, and Latin America.

To be known as the University of Friendship of Peoples, it will offer specialized training of from 4 to 8 years with all expenses paid.

Enrollment for the first year is to be 500 students with future enrollments increased to 3,000 to 4,000.

The objective is to attract young teachers and specialists from the underdeveloped countries as part of a campaign to win the support of the peoples of Asia, Africa, and Latin America.

If half of what is here promised is actually done while Americans drag their feet on the whole question of foreign aid, where will African students go for their education?

And if students of color are expelled from American colleges because they wish to sit while eating at the dimestore lunch counter, will African students want to come to America?

NAIROBI, GOSHEN, AND ELKHART

We must not think for a moment that Peter Waiyaki does not know all about the present situation in Montgomery and the

South. This story reached Nairobi as soon as it came to Goshen or Elkhart.

Does anyone really believe that American policymakers have no business being sensitive to world opinion?

And shall we listen to those who classify Martin Luther King and Benjamin Mays, his mentor, as Communists and subversives? (This has been charged.)

Or shall we look to him as a great hope for a new day, on both the national and the international scene, and also work for the goal to which he aspires?

Or falling that, are we ready to accept the possible alternative of a fanatical, violent leadership capturing the mind of the people of color, a leadership represented by such as Elijah Muhammed, perhaps?

Mr. Speaker, I should like also to include in the RECORD the following article on Dr. King's address from the South Bend Tribune of March 11, 1960:

MARTIN LUTHER KING PLEADS FOR EQUALITY

(By Louise Purvis)

GOSHEN.—"Negro students in the South are determined to continue their sitdown strikes in spite of expulsion and arrests. They are not at all afraid."

Dr. Martin Luther King, Southern Negro leader made this assertion Thursday night in the Goshen College Union auditorium where he appeared on the lecture-music series.

Dr. King, who Wednesday sent a telegram to President Eisenhower requesting him to instruct the Attorney General to investigate the Gestapoke methods and reign of terror of Montgomery, Ala., law-enforcement agencies, said he was returning to Montgomery immediately following the lecture to appear in court this morning with 35 students arrested Tuesday by police there.

A believer in passive resistance, Dr. King, copastor with his father of the Ebenezer Baptist Church in Atlanta, Ga., and former pastor of the Dexter Avenue Baptist Church in Montgomery, spoke on "The Future of Integration." He conducted a question and answer period following the lecture.

He said there have been three distinct periods in the United States for the Negro over the years and in each period there finally came a decision from the Supreme Court to give validity to the Negro's quest for freedom.

LISTS THREE PERIODS

He cited the first period, from 1619-1863 as the period of slavery, then the second period, from 1863-1954 as the period of restricted emancipation. Finally, he said, they are in the period of constructive desegregation which began with the Supreme Court decision in 1954 making segregation unlawful.

"We have broken loose from the Egypt of slavery. We moved through the wilderness of segregation. We stand now on the border of the promised land of integration," he said.

He said the Nation is faced not only with a moral challenge but with national survival, since peoples all over the world are looking to this country for leadership in racial issues.

To solve the problem, Dr. King offered several suggestions. He said we must look to the Federal Government to play its role in implementing the law of the land. Then we must have religion and education to change the attitudes and hearts of the people.

IDEALS OF BROTHERHOOD

He said that liberals in the North must stand up and say discrimination is wrong. "What is needed now is a liberalism committed to the ideals of brotherhood."

"White moderates in the South must take a stand," he said. "There are many thousands of them, but they are silent because

they are afraid of social, political, and economic reprisals. He said the Nation must look to the churches for leadership, and finally, "the Negro himself must move peacefully and with love for his oppressors."

Dr. King said, "All over the South the Negro is rising up and saying he is determined to be free, he is tired of the yoke of oppression." His determination is growing every day, Dr. King said, but "he must never strive to substitute one tyranny for another. Black supremacy would be just as dangerous as white."

CHARGES GESTAPO TACTICS

Dr. King claimed that police agencies in Montgomery have been acting like a gestapo force, going into private homes, invading private meetings, blocking telephone conversations, and tapping telephones. "They say they will fill up the jails with the Negroes," he charged.

During the question and answer period, he said the sit-down strikes were spontaneous in the beginning, but are now being given backing and support by many groups, including the NAACP and the Southern Christian Leadership Conference, of which he is president. He said the movement started in Greensboro, N.C., and has spread to 37 communities and almost every State in the South.

"The strikes will arouse the dozing conscience of the South," he predicted.

REFUTES MARRIAGE PLANS

He also scorned the idea that a desire for intermarriage with the white race has any bearing on the issue of civil rights. "The basic aim of the Negro is to be the white man's brother, not his brother-in-law," he insisted.

Dr. King was introduced by Dr. Guy F. Hershberger, professor of sociology at Goshen College, who met him on former occasions at meetings in the South of the Southern Christian Leadership Conference.

He spoke of Dr. King, who became a world figure when he was only 27 years old during the bus boycott in Montgomery several years ago, as a maker of history.

An Exposé of Charity Rackets

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Where Does Your Charity Dollar Go?" written by Peter Maas, Look staff writer, which appeared in the March 15, 1960, issue of Look magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHERE DOES YOUR CHARITY DOLLAR GO?

(By Peter Maas)

RIVALRY AND RACKETS IN MANY AREAS OF PHILANTHROPY CUT DEEPLY INTO THE DONATIONS OF MILLIONS OF AMERICANS

If you bought tickets recently so that "underprivileged children" could see a circus, you may have added to the take of chiselers who are now on their way to another town to pull the same racket.

If you were one of those who gave nearly \$4 million to the National Kids Day Foundation to help "kids who are poor, ill housed, and neglected," not a nickel of your contribution directly aided any child.

If you received a dollar bill from the National Cancer Hospital of America and responded, as did thousands of others who contributed some \$630,000 to save victims like 5-year-old Johnnie Jones " * * * whose freckles light up the neighborhood," you were duped. No such hospital ever existed, and no patients were ever treated.

These are only a few examples of what can happen to your charity dollar through misrepresentation, enormous "expenses," or outright fraud. In countless other cases, charities may not be swallowing your dollar, but they are devoting only a portion of what they collect to the advertised causes. This comes at a time when Americans are being bombarded as never before by appeals from coast to coast.

In San Francisco, a young accountant earning \$7,500 a year toted up 178 national and local calls for his financial help last year. A well-known New York businessman, whose yearly income exceeds \$50,000, estimates that he annually receives close to 500 pleas for aid. In Chicago, a housewife who has to make do on a \$60 weekly budget found she had donated to 31 different drives within the past 12 months and recalls at least 2 dozen additional requests to serve as a volunteer solicitor.

What happens to your dollar in this unbridled competition? Even for the worthiest causes, a hefty chunk of it is quickly wasted in high fundraising costs. Among the major national health agencies, the chief battlers for the charity buck, only the Damon Runyon Cancer Fund deducts nothing for expenses. But low fundraising costs appeal to contributors, so elaborate accounting techniques are employed by many other charities to make these costs seem minimum. The most popular ploy today is to charge off fundraising costs to education. A flagrant example is the National Tuberculosis Association. Over 23 cents of every dollar you shell out for its Christmas-seal campaign is really eaten up by fundraising expenses. But most NTA locals simply charge off 40 percent of the fundraising cost to health education.

The NTA's justification for this procedure is based on a 2½-year study of its operation made 20 years ago by an accountant and senior student in business administration at Columbia University. The association's executive director declares that the figure has been reviewed periodically. It has also been reviewed and flatly rejected by one of the most effective charity-control boards in the country, the Los Angeles Social Service Commission.

Most of us have no other choice than to accept a charity's version of what it does with our money. In Los Angeles, however, every appeal undergoes stiff scrutiny by Social Service Commission auditors. In 1958, the last year for which complete figures are available, not one top health agency chapter there got a commission endorsement for keeping campaign costs to 15 percent of its take. In addition, the commission found that actual fundraising totals ran as much as three times the amount originally claimed for them.

Caught in the competitive crush, even the most reputable charities today resort to various stratagems to avoid being accused of high fundraising costs. One in New York City is The Lighthouse, an organization for the blind. In addition to its annual appeal, it raises money through the door-to-door sale of handicrafts made by blind workers. The salesmen are not blind. They used to operate on a commission basis—until the New York State Charities Registration Bureau classified them as fund raisers and their commissions as fundraising expenses. The Lighthouse now sells its wares outright to the salesmen, who, in turn, peddle them to the public. "It's a miserable situation," says

Bernard Perlman, able chief of the registration bureau. "They still invoke the name of The Lighthouse and often end up by earning twice as much as the blind people who are supposed to be benefiting."

Another result of intense competition has been an increase in the number of special events—one of the costliest ways of raising money for charity. At best, an agency nets barely more than half the proceeds. This is true even of a carefully planned benefit like the National Foundation's traditional Franklin D. Roosevelt memorial concert in New York City, for which tickets are sold all over the country.

In amateur hands, the results of a special event can be disastrous. In a western city, a group of women sponsored a fancy gala for a hospital in the name of a local diskjockey who had died of cancer. They finally raised about \$21,000—at a cost of more than \$18,000.

Along with the rash of appeals has come one promotion, stunt and gimmick after another, striving to enlist your sympathy—and your dollar. The most spectacular is the telethon, still widely used by several causes. How effective is it? A man who produced 22 telethons told me, "a telethon is considered a roaring success if the charity gets 40 percent of the gross. Some of them are lucky they don't lose money."

For the most part, this isn't due to unfulfilled pledges. Telephone verification of donations, along with swift pickups by car, usually results in an 85 to 90 percent collection average. The problem is the high cost of putting on the telethon. Some promoters pocket as much as 10 percent of the gross, plus expenses. The television station must be reimbursed for pre-empted time, plus overtime costs. The sanction of Theatre Authority, a national organization that passes on benefit appearances by performers, has to be obtained. If it is, Theatre Authority receives 10 percent of all contributions under \$100, to distribute to various actors' charities.

In New York City, performers will often go on telethons for minimum fees or none at all, because of the city's status in the entertainment world. But outside New York, with few exceptions, "nobody does nothing for nothing." A telethon producer describes what happens: "You usually import a cadre of three to five performers—a master of ceremonies, maybe a pitchwoman, a male and/or female vocalist and a children's star for Sunday morning. After that, you recruit local talent. If any of it is professional, you pay the prevailing scale. If the city has a strong religious or ethnic group whose support you need, you make a deal so its pet charity gets a cut. You pay for the installation and, in some cases, a month's charge for each studio telephone. Except for the volunteers, you pay for just about everything else. The vital thing is to have kids on camera, the kids who are going to be saved. That's what brings the money in. After all, a telethon is basically an 18-hour emotional tin cup."

What else dissipates your dollar? How much actually goes into salaries? No figures are more closely guarded. They never appear in health agencies' annual reports. To a direct inquiry, the reply is, "I'm afraid that's an internal matter."

Recently, however, I uncovered three "inside" budgets, which reveal charity-salary statistics never before published. In each case, payroll expenditures turned out to be the biggest single item. The budgets were for three top affiliates of national appeals.

The first budget was that of a local of the American Heart Association. Of the three, it had the lowest salary overhead. In accordance with national policy, the local retained three quarters of the money it

raised. About 40 percent of this—around \$280,000—went for salaries.

The second was that of a chapter of the American Cancer Society. Its national headquarters gets half the local take. Out of the chapter's half, over \$300,000—or some 55 percent of the total—went for wages.

The third was that of a branch of the National Tuberculosis Association. It hung on to nearly 90 cents of every dollar it raised. It also wound up the year spending more than 55 percent of its funds just for payroll purposes. In cold cash, this added up to almost \$400,000.

How much of your dollar goes to research? In most instances, only a small part of it ends up there. The one major exception, the Damon Runyon Cancer Fund, is supported by the Walter Winchell Foundation; it uses all of your contributions for research. Of the bigger agencies, the American Heart Association devotes the largest slice of its budget for research projects. Next is the American Cancer Society.

The rest are doing well if their research allocations equal their fund-raising expenses. Even the old National Foundation for Infantile Paralysis, now simply the National Foundation, spent twice as much on fund raising as on research, from 1938 to 1958.

One of the worst performances has been turned in by the National Tuberculosis Association. NTA always beats the drum for more medical research around fund-raising time. But it actually spent less than \$700,000 for research last year out of the \$25 million you gave its various chapters. Of the three major drugs now being used to treat TB, the association can claim only a fleeting role in discovering one. In finding and developing the other two—including the most important one—it played no part whatever. Outside the research field, local NTA chapters generally do a commendable job in alerting communities against respiratory health hazards and in locating new TB cases.

Today, trying to track down what happens to your dollar is hard enough. How to give it has also become a bewildering problem. There are two embattled camps trying to collect it from you. On one side are the community United Funds, which raise money for a host of health and welfare causes in single "give-once-for-all" packages. On the other are the "big-four" health agencies—polio, heart, tuberculosis and cancer—which conduct independent campaigns.

About 1,200 United Funds are in operation. They have extremely low fund-raising costs. They also cut down on the plague of multiple drives, while at the same time they protect weak but worthwhile causes that might otherwise be lost in the shuffle.

Advocates of separate drives for new health agencies advance this argument: If not allowed to have its own fund drive, a new agency would never get off the ground. By and large, the people in charge of United Funds do not favor admission of new agencies, because each such admission increases the amount of money to be raised.

Some United Funds are tremendously successful, especially in industrial centers where they have energetic backing from labor and management. Many, however, fall short of their annual goals. Lack of top leadership is one reason. The refusal of the "big-four" agencies to participate is another. The National Foundation has never allowed any affiliates to hook up with United Funds. The American Heart Association and the National Tuberculosis Association will not let any more locals join those already in United Funds. The American Cancer Society has ordered all its chapters out this year.

An established health agency that figures it has enough muscle to go for a bigger slice of the philanthropic pie by itself won't buy

cooperative charity drives, even if this means riding roughshod over some of its membership or shouldering aside other appeals. The American Cancer Society is a case in point. Now sure of its hold on the pocketbooks of millions of donors, the society commanded its chapters to get out of every United Fund, without ever seriously trying to set up a system where some chapters could stay in those United Funds that are successful.

Many chapters protested the edict; over 40 actually quit the society. The most senseless was in Detroit, home of the first and best United Fund, which last fall shot past its annual goal for the 11th consecutive time. When its Detroit unit elected to stay in the United Fund, the American Cancer Society gave up some \$800,000 as its allocation for this year, some 13,000 volunteer workers and what it had cited as one of the country's best cancer-education programs. The society is now forming rival locals in the areas where its chapters pulled out. In Detroit, it has already done so. Most observers predict a long, costly war. As a friend of charity told me, "Cancer is a dreadful disease; it deserves every cent I can give to help stamp it out. But I don't see why I have to pay to help stamp out the United Funds too."

At the same time, the number of health drives continues to mushroom wildly. There are some 19 national outfits currently passing the hat for the blind, three for cancer, three for muscular dystrophy, two for polio, two more for arthritis and rheumatism, and at least one each for about 40 other afflictions. How sensibly do you give to them?

Actual national health needs seem to play little or no part in eliciting the support of most Americans. There are, for instance, more facilities for training and supplying seeing-eye dogs than there are blind people who want them. The Seeing Eye, Inc., has so much money available that it has stopped soliciting and says, "No blind person is ever refused a dog because of lack of funds." Despite this, at least nine other guide-dog appeals continue to rake in millions of dollars.

You contribute about the same amount annually for 9 million severe cases of mental illness as for 200,000 sufferers from muscular dystrophy. Although there are 10 times as many retarded children as cerebral palsy victims, you gave the latter cause 4 times as much. The help given 250,000 multiple-sclerosis cases was about equal to that given 11 million sufferers from arthritis and rheumatism.

For fund raisers, the reason for this disparity is simple: To be successful, an appeal has to make you give "emotionally" and "from the heart." This means that the ideal cause has to have a "good child image" or "fear"—preferably both—going for it.

The classic case is the National Foundation, by far the biggest agency in the history of health appeals. Since 1938, you have contributed nearly \$520 million to it. In its heyday, it came close to convincing America that infantile paralysis was the country's No. 1 disease menace. Its souped-up drives—keyed heavily to children, hope for the afflicted and parental fear for those still untouched—are generally credited with turning the trick. A San Francisco doctor recalls, "When polio hit town, we had two epidemics on our hands. One was polio; the other was hysteria."

Polio is a cruel crippler. But, in fact, the National Foundation was always first among the major health agencies in fundraising and last in the number of victims needing care. Its big bankroll became the envy of every other agency. One year, the combined expense and special travel account of just the National Foundation's president, Basil O'Connor, was about \$72,000. O'Connor draws no salary.

Your dollars, as the National Foundation

is always quick to point out, paid for the Salk vaccine. But your dollars also contributed indirectly toward a Thunderbird sports car for O'Connor. The car was a present to him in 1956 on his 65th birthday. The money was raised through a solicitation of foundation employees, whose salaries are paid out of your contributions.

For a number of years, your dollars also picked up the tab of a National Foundation public relations specialist, one of whose functions was to travel abroad annually to look for photogenic children. The children were then flown to California to appear on a polio publicity float in the Rose Bowl parade.

Last year, you paid \$25,000 in effect for the services and expenses of a public-relations man under contract to the National Foundation to put on a one-evening fund-raising affair, the Franklin D. Roosevelt Memorial Concert.

You have paid well over a million dollars in a single year to a New York printer who supplies the National Foundation with brochures, pamphlets and so on, without having to bid for the contract. It is reasonable to assume that competitive bidding on much of this work would result in greater economy and efficiency.

How much of your dollar, meanwhile, do the rackets get?

In city after city, matronly women still stalk the sidewalks shaking canisters for vague appeals. Afterward comes the traditional split: 40 percent for the shaker, 40 for the promoter, and 20 for the charity—if it actually exists.

A classic case of chicanery around the country is the charity circus. A circus man comes to town, approaches a local charity and guarantees it a few hundred dollars in return for its sponsorship of the show. Next, a "boilerroom" operation gets underway. This consists of high-pressure sales pitches by telephone solicitors. The targets are business and professional people who can be counted on to buy batches of tickets. Ads for the program are also an important item. The cheapest ones—which simply say "Compliments of a Friend"—are pushed, because the same space can be sold over and over again.

A favorite gambit involving a circus took place in Buffalo recently. It was the Underprivileged Children Appeal. Telephone solicitors pressured firms into buying batches of tickets for orphans and less-fortunate children in local institutions. A spot check reported by the better business bureau revealed that tickets thus sold far outnumbered the children able to use them. One institution, for example, reported receiving over 200 tickets for its 30 young wards.

Enormous fundraising costs also drain away your dollar on a national level, particularly among some veterans' groups. Most of the cash ends up in the hands of commercial sharpshooters. Take the Military Order of the Purple Heart. It contracted with a mailing house to send out unordered boxes of Christmas cards to the public. The mailing house first got its expenses back, then split the rest of your donations 50-50 with the Purple Heart.

Big money is involved in some of these operations. One year the American Veterans of World War II (AMVETS) authorized fundraising mailing of seals, calendar identification cards, neckties, greeting cards, and flower seeds. A generous public responded to the tune of nearly \$2 million. The net to AMVETS, \$307,000.

Another veterans' outfit, now out of business, was the National Association of Veterans' Employment Councils (NAVEC). During a 22-month canter through your wallets—using ballpoint pen mailings as its gim-

mick—the association pulled in \$2.1 million. Expenses were \$1.9 million. Its declared purpose was to get work for handicapped veterans. The House Committee on Veterans' Affairs reported that NAVEC furnished a list of 348 individuals it claimed to have helped. The committee was able to verify only 188, most of whom, it found, had been given part-time, temporary, or seasonal jobs. Eighty of these were employed as NAVEC fundraisers.

Almost all national charity rackets today revolve around unordered merchandise. A promoter approaches a struggling charity and offers to take over its fund-raising problems. In return, he gets the use of the charity's name to unload his cheap product, usually accompanied by a request for a donation of a dollar or more. The ball-point pen or other product probably cost him around 8 cents. In addition, he charges a fat fee for all his services. The charity is lucky if it receives 10 percent of the proceeds. The charity either doesn't know or doesn't care, since even this much money is probably more than it has ever got before. As Special Assistant U.S. District Attorney Frank McGarr told me, "It's a cute little game. Everybody comes out ahead except the public."

There are four basic steps you can take to protect yourself:

1. Never give to any street solicitor unless the drive has been officially certified by your community. Los Angeles has solved the problem by banning all such appeals.

2. Under no circumstances should you ever respond to an appeal by telephone. Invariably, this means that a "boiler-room" operation is playing you for what it can get.

3. Never donate to any cause that has sent you unordered merchandise. You are under no obligation to return it. If you mail back a contribution, you can be certain that most of it will not reach the unfortunates for whom the charity was organized. Nationally, there are two outstanding exceptions: the seal campaigns for the National Tuberculosis Association and the Crippled Children's Society.

4. If in doubt, check with your local better business bureau.

Rackets notwithstanding, nobody seriously questions the place of charity appeals in America. However, there is increasing evidence that the house of charity must set itself in order. The chaotic competition that currently exists simply adds up to a ruinous waste of your dollar.

Already, there are increasing signs of revolt on the part of contributors. Mrs. Evelyn Spaulding, energetic general manager of the Los Angeles Social Service Commission, notes, "The public is getting smarter all the time."

In 1959, Americans gave some \$7 billion to philanthropy. The share for health and welfare causes has dwindled steadily for the past 5 years. In Los Angeles, the total take for the 10 top health and welfare drives dropped nearly \$2 million last year. In Cleveland, cancer, heart, and polio all slipped below levels they had reached 5 years ago. The new expanded program of the National Foundation also fell far short of its expectations last year, and a supplementary drive was required. The Red Cross, in its drive, missed its goal by a whopping \$12 million. What is the solution?

There are almost as many answers as appeals. Some experts believe that local control with teeth in it, as in Los Angeles, is the only way out. Others have put forth the idea of having one national appeal for all health causes and another for welfare.

In Detroit, the outspoken executive vice president of the United Fund, Walter Laidlaw, said, "I think there ought to be a full congressional investigation of the whole field. If Congress can regulate labor unions, it can do the same with charities."

In New York, at last, two national health appeals, the American Heart Association and the American Cancer Society, are beginning to recognize the consequences of multiplying drives. The society's outgoing executive vice president Mefford Runyan, said, "Taking a lesson from recent television developments, we should move to clean up the situation before it deteriorates further. * * * I believe that, for the protection of the public and the agencies, a sort of Dun & Bradstreet rating bureau should be set up independently of the agencies."

In the end, you will have to decide. It's your dollar.

Restoring an Abused Word

EXTENSION OF REMARKS OF

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, I include an editorial appearing in the Idaho Statesman, published in Boise, Idaho, dated March 19, 1960. It contains a most excellent definition of the word "patriotism" written by Mrs. Carolyn Frieze, chairman of Americanism month for Capital Post No. 136 of the auxiliary of the American Legion. The people of the United States are taking the word "patriotism" far too lightly.

The editorial follows:

RESTORING AN ABUSED WORD

One word which—like patriotism, liberty, and loyalty—has been sadly abused and distorted and debased is the word "Americanism."

Once held in high esteem by every American, it has been so thoroughly worked over by busy wrecking crews of "one worlders" and intellect saboteurs that it's now all too generally rated as a word that's corny, or descriptive of something to be ashamed of.

It's desperately in need of restoration to its original high standing as a word expressive of the lofty ideals this Nation stands for and of its national heritage of inestimable worth.

A sort of stigma has been attached to this word "Americanism" by process of deceit and trickery, downgrading its true meaning and significance.

It may best be restored, perhaps, by reassertion of a clear, honest, and readily understandable definition.

Such a definition has been provided by a Boise woman, Mrs. Carolyn Frieze, chairman of Americanism month for Capital Post No. 136 of the auxiliary of the American Legion. Here it is:

"First and foremost, Americanism to me means regard for the individual, the dignity of the human being.

"It means equality under the law, the right to the pursuit of happiness; it means the freedom to carve out one's destiny; the right to work and save, to plan and hope; to match wits and strength, and no disgrace if to fail; it means the right to try again, head up and chin high; it means the common good, the welfare of the community and Nation."

No high-flown, esoteric language, this. It's a plain, concise statement in words everybody understands, pointing truly to the goals toward which all decent people strive, and setting forth a declaration to which they gladly subscribe.

All those of us who cherish our Americanism are under obligation to its author.

The Nation's Last Redoubt

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD another very excellent editorial from the Augusta (Ga.) Chronicle entitled "The Nation's Last Redoubt." The editor of this newspaper, Mr. Louis Harris, has done a very good job in giving a critical analysis to his readers of the so-called civil rights bill as passed by the House.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NATION'S LAST REDOUBT

Vote-hungry politicians in the House have propelled the United States a step closer to totalitarianism with passage of what they have chosen to call a "civil rights" bill. Their action leaves to the 18 beleaguered southerners in the Senate the almost hopeless task of blocking the leftist movement.

What the House has enacted, in its five-point measure, is a bill that largely ignores the Constitution of the United States and bypasses the people of this Nation whose sole right it is to alter that document.

To two points in the legislation there can be no great objection. One is that which requires local election officials to preserve election records for at least 2 years and permits Justice Department officials to examine them on demand. The other makes it a Federal crime to flee across a State line to escape prosecution for bombing or setting fire to any building or vehicle, or for threats or false reports of bombing.

The other three points, however, clearly infringe upon the "rights" of each of the 50 States and the citizens thereof.

Let's take a look at the voting referee provision, for instance, as seen through the eyes of Representative EDWIN D. WILLIS, of Louisiana. Upon complaint, the Attorney General requests a Federal court to "make a finding" whether discrimination exists against Negro voters "pursuant to a pattern or practice."

The bill does not define what constitutes a pattern or practice and the decision on this question is left entirely to the discretion, whims, or prejudices of the judge who, incidentally, may come from any section of the country.

After the judge, under guidance of the Attorney General and without any specific provisions for a hearing on the part of the State involved, makes a finding that a pattern of discrimination exists, the decree would establish a conclusive presumption that all Negroes, even those not a party to the initial proceedings, have in fact been discriminated against.

It would make it totally unnecessary for them to prove any alleged discrimination on account of race or color.

A referee named by the jurist would then take statements, again without State interference. An amendment offered by WILLIS to have the referee prove a knowledge of election laws was beaten.

In violation of all standards of due process, the bill denies local registrars or State officials, who are presumed to have denied the right of an applicant to vote, the right to be present with counsel at the so-called hearing and the right to confront and cross-examine his accusers.

When the referee reports results of his phony hearing to the court, the State's attorney general is invited to file exceptions, but since the report contains only the self-serving declaration of the applicant, the invitation is practically meaningless.

After all this unprecedented procedure, the court awards the Negro a certificate that he is a qualified voter and then authorizes the referee, or any such person as he may designate, to attend the election at all polling places, look over the shoulders of State authorities and see that the person is voted, and that the vote is counted. If the judge's orders are not carried out to the letter, State election officials may be hauled into court, deprived of the right to trial by jury and be fined and/or sentenced to jail.

Another phase of the bill makes it a Federal crime to interfere by violence or threats with a Federal court's school desegregation order.

This innocuous sounding item could well mean that never again, on pain of being fined up to \$1,000 and jailed for 60 days, may a newspaper editor or commentator, for example, protest a desegregation order if, in any way, what is written or said may be construed as posing an interference or threat.

If the bill may be interpreted in that manner, here is another transparent encroachment on the constitutional guarantee of freedom of the press.

Lastly, the bill authorizes the U.S. Commissioner of Education to set up schools for servicemen's children where regular public schools are closed because of desegregation orders.

If that is done, Americans who oppose integrated schools are nonetheless going to be forced to support institutions they do not want, do not need—and will not utilize.

Such is the devil's brew that has been cooked up for consumption by the Southern States alone.

If it passes the Senate and becomes law, then the floodgates to any and all types of unconstitutional legislation will be open, and totalitarianism will have become an accomplished fact.

Youth With a Purpose: Miss Frances Quick, of Coos Bay, Oreg.

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. PORTER. Mr. Speaker, we hear a lot about materialism today. When we find penetrating looks at our society, looks which mean hope and give added faith in tomorrow, we can be encouraged.

I am pleased to bring to the attention of readers of the CONGRESSIONAL RECORD the essay, "True Security," by Miss Frances Quick, first-place winner in local competition in the current junior chamber of commerce national contest on the subject "My True Security." I commend Miss Quick for her excellent commentary and the junior chamber of commerce for sponsoring the competition.

Miss Quick's essay was printed in the March 14, 1960, edition of the Coos Bay (Oreg.) World.

The essay follows:

TRUE SECURITY

(By Frances Quick)

(EDITOR'S NOTE.—Miss Quick, daughter of Mr. and Mrs. Charles Hanon, of 629 Market, Empire, has won many awards in speech and composition at Marshfield High School, where she is a senior. This contribution, which she titled "True Security," won her first place in local competition in the current junior chamber of commerce national contest for talks on that subject.)

Most everyone wants security.

To most people, however, security has many different connotations. One may seek security in knowledge, another in monetary success, and yet another in feeling that his life is a service to the people around him.

Though interpretations of the word "security" may differ, most of us try to find an abstract or physical "something" that when everything else falls us we can say, "Because I have this, I possess security."

Too many people today seek security in the accumulation of money. Security means a well-paying job, a nice suburban house, a little money in the bank. Many people educate themselves merely to earn more money.

America is sitting in a complacent rut of dollar security. Our people seek freedom from worry in the gathering of material wealth. We are so content with our past achievements that we have no dreams or visions of something better. We relax and look around at the automobiles, the suburban dwellings, the TV sets, and kitchen gadgets, and we say, "We've done a good job. Let's not do anything that might destroy our little world."

Even our young people reflect this attitude of security. Just the other day I read a summary of over 1,000 teenagers' ambitions. The great majority weren't concerned with fulfilling a dreamed-of goal. They had only one goal—dollar security. Their favorite ambition was to have just a little more money than average; enough to have a few luxuries.

What has happened to the spirit of 1776 that our men and women no longer step strongly out to meet a world of challenge, but must hug tight their material wealth?

The United States was built by courageous, freedom loving men who weren't afraid to take a chance on something in which they believed. Our country was not built by people who relied upon their Government to do the big things, nor was it built by people who lacked the spirit to catch and hold a dream.

Where are the Thomas Paines, the Ben Franklins of today? Perhaps my generation can learn from these men of the past, for when we look back in history we find they had two things in common. First, they had a dream of something better; and second, they had the drive and the ambition to make that dream come true.

My generation must not fall into mediocrity where we work for just enough money to purchase that suburban home or station wagon. Everyone, of course, has to have certain essentials for life—food, clothes, shelter; but if America is to continue to advance, our youth must not want only material security.

We must not become so involved in seeking the comforts of life that we neglect our responsibilities to society. We must have the initiative to serve the community, to be a member of the school board, to serve on the city council, to work on that Red Cross project, to be informed concerning the problems of democracy, and to act, sometimes at a material loss to ourselves but in the long run, at a profit for both ourselves and our fellow men.

If I, and each of us, will have enough initiative to become involved in the affairs

of man and work toward the solution of our problems, we will find that not only are we ourselves secure, but our community, our State, our Nation, and the world will also be secure. This is my true security.

South African Protest Is in Order

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very timely and well-written editorial of March 27, which appeared in the Greenville (S.C.) News. It is entitled "South African Protest Is in Order." The Greenville News, one of the outstanding daily newspapers in the country, is well known for its strong and sound editorial writings. This is another of its good editorials which merits the attention of the Congress.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOUTH AFRICAN PROTEST IS IN ORDER

Reacting to the State Department's criticism of the use of force and the shedding of blood in police attempts to control rioting Negroes in South Africa, the government of that country has told the United States, in effect, to mind its own business.

The South African authorities were entirely right.

The United States has no right in the first place to interfere in the strictly internal affairs of another country and, in the second place, the denunciation of the policies being enforced there by the police and the army can only make a bad matter worse.

Tragedy will be piled onto tragedy if the United States, through its meddling, encourages the rebellious African natives to continue their rioting and violence.

The action of the State Department in this instance is hard to understand in the light of the fact that it said nothing during the time Fidel Castro was carrying out his bloody purges to remove his political enemies in Cuba last year.

One suspects that this is one more ploy for the Negro vote in the United States, for the principal difference between what is going on in South Africa and the racial unrest in the United States is the relatively superior degree of civilization the American Negro has achieved since being transplanted to this country.

Taking a worldwide view, it is quite apparent that there is underway at this moment a rebellion of the colored races, especially the Negroes, against the white man's rule. Some have compared it to what happened in India before and after World War II, but the comparison is invidious.

This movement has been characterized as nationalism, an effort to end colonialism. It has some of those aspects, but it is more than that. Part of it, perhaps a big part of it, is due to Communist agitation. Another part of it is the hatred the Negro has come to hold for the white man whom he feels has exploited him for generations. And none can deny that there is some reason for this feeling.

What is happening in South Africa is part

of the pattern of what is happening in all of Africa. One by one the colonial powers have relinquished their control over certain African lands. Native governments have been set up, but rarely has the lot of the masses been improved.

There are two sides to the South African controversy. The most publicized phase of it is the effort of the Africans to overthrow what they consider an oppressive system imposed by the whites and the effort of the whites to maintain supremacy. But it isn't that simple.

The whites built a civilization in a wilderness peopled by savages. They brought to the savage natives a degree of civilization, sanitation, medical care and education. In return they demanded the labor of the natives. With a little learning and the desire to live like the white man, the native is demanding full equality now.

The white man, on the other hand, is fighting to preserve what he has built for himself and, indeed, for his very life. He knows he cannot long survive in a society dominated by radical demagogues of whatever color backed by the semicivilized masses who don't really know what they want and have no idea whatever of the responsibilities of self-government.

The situation in South Africa is such as to set the Communists to tingling with excitement and jumping with joy. And the United States isn't helping with its officious meddling.

Greek Independence Day

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. McDONOUGH. Mr. Speaker, on March 25 Americans of Greek origin and Greek people throughout the world celebrate Greek Independence Day which commemorates the success of the Greek struggle for independence from the Ottoman Empire.

Ancient Greece became the center of culture and education in the world, and originated the concepts of representative government and the rule of law.

Today the people of Greece are dedicated as were the people of ancient Greece to the principle of individual liberty and national independence.

Following World War II, Greece was engulfed in civil war brought about by the Communists in their effort to subvert the nation and bring Greece under Soviet domination. The people of Greece fought valiantly to preserve their independence, and with aid from the United States, the Communist insurrection was terminated. American aid was also extended to assist in rebuilding the economy of Greece.

The determination of the people of Greece to preserve the freedom and security of their nation is shared by the United States and the free world.

The people of the United States join with the people of Greece and those of Greek descent in the United States and throughout the world in commemoration of the 1960 observance of Greek Independence Day.

The Urban Renewal Program

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. WILLIAMS of New Jersey. Mr. President, as this body prepares again to discuss a housing act, the mayors of large and small municipalities have raised their voices to impress upon us the need for clear and effective action in 1960. These mayors do not advance theories; they point out facts and suggest answers. They are the men who are on the battlefield in the effort to save our cities and, in fact, to make our cities greater than ever before.

An article by Newark News Reporter George Kentera in the March 23 issue of the News describes the recent commentary made by Mayor Leo P. Carlin, of Newark, and other members of a mayor's advisory committee during a recent visit to Washington, D.C. I think that the comments are of direct concern to us and to citizens everywhere.

And, in the March 25 issue of the Bergen Evening Record, Hackensack, N.J., Reporter Frank Kelly describes the potential impact of just one relatively small urban renewal project in the city of Hackensack. Mr. Kelly makes the point, among many others, that the city will regain within a few years through increased tax returns all the losses it incurred in bringing the project into being.

Mr. President, the articles describe what can be done and what is being done under our urban renewal program. I ask unanimous consent that these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Newark Evening News, Mar. 23, 1960]

MAYORS ASKS HELP IN URBAN RENEWAL—CARLIN JOINS PLEA

(By George Kentera)

WASHINGTON.—Mayor Leo P. Carlin of Newark, and other members of a mayor's advisory committee suggested yesterday that Federal housing agencies play a more aggressive role in urban renewal.

After meeting for more than 2 hours with Federal Housing Administrator Norman P. Mason and his aids, Carlin commented:

"We don't feel their hearts and souls are in the program. We're trying to educate them to go all out . . ."

ACKNOWLEDGES CONCERN

Mason acknowledged at a press conference that the mayors were concerned about whether his organization was wholeheartedly behind urban renewal and relocation housing.

For the city leaders, Mayor Richard J. Daley of Chicago, president of the U.S. Conference of Mayors, presented a nine-point program which was largely a reiteration of recommendations made by the committee at its first meeting in December.

One recommendation called for a research program by the Housing and Home Finance Agency, parent of the various Federal hous-

ing bodies, "equal to the magnitude of the expanding urban problem."

Mason said he was happy to have the suggestion that a research program for which the HHFA had already asked \$600,000 be expanded. He also disclosed that the Agency was working on two plans which might meet the mayors' urgings for establishment of a Federal Department of Urban Affairs.

One plan, which he described as somewhat narrow in scope, is to be discussed with the U.S. Conference of Mayors and the American Municipal Association, he said. The other, a broader plan, is still being worked out.

The mayors feel that a Federal department is necessary to give proper attention to the growing U.S. urban population.

Other recommendations were:

That the Federal Housing Administration, a part of HHFA, activate the program for housing for the aged already authorized by Congress, and that the HHFA recommend to Congress legislation "which will make it mandatory for FHA to bear whatever risks may be involved in issuing mortgage insurance for new building and rehabilitation in urban renewal areas."

On the first point, Mayor Kenneth Peterson of Minneapolis said the movement by homeowners from the suburbs back to the cities was creating a need for better urban housing, particularly housing for the elderly.

On the second, Carlin said Newark was now approaching the most important part of its urban renewal program. Private developers can secure necessary financing, he said, only if the Government looks at the program "with rose colored glasses and not with a jaundiced eye."

Carlin was accompanied here by Louis Danzig, executive director of the Newark Housing Authority, the city's redevelopment agency, and by George Oberlander, city planning officer.

[From the Bergen Evening Record, Mar. 25, 1960]

CITY RIPS DOWN BLIGHTED HOMES—RIVER STREET STRIP IN HACKENSACK IS LEVELED FOR URBAN RENEWAL

(By Frank Kelly)

HACKENSACK.—Paperwork which went to Washington almost 3 years ago is being translated into visible results along Hackensack's River Street.

TWO-AND-ONE-HALF BLOCK AREA

In April 1957 the Hackensack Housing Authority filed an application with the Federal Government for survey and planning funds. The local agency wanted to determine whether a 2½-block area between River and Moore Streets—extending from Mercer Street north to Camden Street could qualify for Federal assistance under the urban renewal project program.

Today, if you drive along River Street from Mercer to Salem Street you will see mounds of dirt dotting a strip of bare earth where only a week ago stood frame houses and here and there a small business.

Houses and stores will continue to come down until the entire area is leveled.

PROFESSIONAL BUILDING

What's planned for the tract? Among the more fancy-capturing structures called for by existing housing authority plans are a 7-story professional building, to be occupied by physicians' and dentists' offices, and a 10-story multiple-purpose unit which might well house hotel facilities, a convention hall with a seating capacity of more than 1,000, and a spacious underground garage.

The professional building which may also contain offices for lawyers and possibly commercial firms, is to be situated at Salem Street's south side. Directly across the street will be the multiple-purpose structure, covering the square block bounded by Salem and Camden, Moore and River Streets. Its

convention hall will have banquet provisions available for the more than 1,000 persons it could accommodate, smaller banquet rooms, adequate kitchen facilities for each dining component, and service enterprises such as a barbershop, beauty salon, and tailor shop.

Joseph C. Barsalona, executive director of the Hackensack Housing Authority, said plans have been drawn up along those lines on the basis of concepts and suggestions submitted to the Authority by many interested redevelopment agencies.

Barsalona pointed out that these existing plans as to the building's interior, as well as their locales, could be revised.

How long will it be before these and other structures planned for the Moore-River Street urban renewal project area begin to rise? That hasn't been determined, the executive director declared. Deadlines for sponsors to begin building will be set forth as part of the contract requirements.

FIVE PARCELS

Sponsors, to clarify the term, will be those corporations, companies, or individuals who submit the highest bids in a public sale of the project's sites. Of course, to qualify, bidders must agree to follow the general building directives stipulated for various points within the project area.

The general format to be adhered to, explained Barsalona, is found in a reuse evaluation of the 2½-block tract made by a competent appraiser engaged by the Housing Authority. His investigations resulted in recommendations for the best possible reuse of the land:

1. The area should be divided into five parcels, starting at the Susquehanna, New York, and Western Railroad tracks (Mercer Street) and proceeding northward to the project's Camden Street extremity.

2. The first or southernmost parcel should be allocated for a parking area.

3. The second parcel should be earmarked for parking facilities and a commercial building, such as a drive-in bank.

4. The third parcel should be the site of a professional building. These three parcels will comprise the square block between River and Moore Streets from Mercer to Salem Street.

5. The fourth parcel should be the site of a multiple-purpose building.

As has been pointed out, present plans call for it to be situated in the square block between River and Moore Streets from Salem to Camden Street.

6. The fifth parcel would be converted into a parking lot.

SALEM TO CAMDEN

This area, a half block in size, extends along the west side of Moore Street, abutting Main Street stores' rear property lines between Salem and Camden Streets.

Barsalona pointed out that no accurate estimate can be made of the number of vehicles the parking lots in the first and second parcels will be able to accommodate. This is because no absolute dimensions have been staked out for the professional and commercial buildings to be situated in the same area.

Proprietors of stores along the east side of Main Street between Salem and Camden Streets have expressed interest in a Housing Authority proposal. It calls for the store-owners to band together and purchase the half-block area which is designated as the project's fifth parcel. The Authority, in making the suggestion recently, pointed out that the 25,000-square-foot tract could provide parking for store employees and customers.

The project's total estimated cost, as approved by the Federal Government, comes to \$1,453,292. This figure, said Barsalona, includes the disposal of the land and the cost of constructing the new buildings.

Estimated cost for the acquisition of the 65 land parcels which made up the 2½-block area is \$1,187,175, according to the Authority's executive director. He explained that the Federal Government permits a 10-percent leeway in that total to allow for possible changes in real estate values between the time of the properties' original appraisal and their acquisition.

RESALE ALLOWANCE

The approximate resale value of the land when it is sold to sponsors wanting to erect buildings within the project area has been figured at \$464,649.

Barsalona declared that the net loss to be incurred by the city and the Federal Government in the resale transaction is estimated at \$925,800. One-third of this amount, or \$308,620, will be borne by the city, and the estimated two-thirds balance, \$617,240, by the Federal Government.

Of the city's one-third share, noncash contributions in the form of improvements, such as tree removal, street widening, curb and sidewalk replacement, and relocation of utilities where needed, will amount to \$51,818. Hackensack's cash contribution to cover the net loss comes to \$256,802.

When the housing authority, backed as required by the city council's votes, filed its application for survey and planning funds for this urban renewal undertaking, the total assessed value of the 65 parcels within the involved area—both buildings and land—totaled \$243,555. Based on the prevailing tax rate at that time, \$6.50 per \$100 of assessed valuation, the taxes being reaped from the entire area amounted to \$15,732.

Within a few years the city will stand to regain through taxes on the buildings to be constructed within the project area all of the losses it is incurring in bringing this project into being.

The anticipated total assessed valuation on the buildings alone, Barsalona explained, is \$800,000. "With the total assessed valuation of the land added in," he remarked, "the building-and-land figure will be more than \$1 million. Using the 1957 tax rate of \$6.50 per \$100 to arrive at a valid comparison," he continued, "taxes to be realized annually would be more than \$65,000."

Within the Moore-River Street area, before demolition work got underway 9 days ago, there were 62 structures located on 65 land parcels. As of last night, razing crews from V. Otillio & Sons, a Paterson contractor, had ripped down 33 dwellings.

Demolition crews can knock a house completely down within 15 or 20 minutes. Backfilling, leveling, sealing public utility lines—these tasks require the better part of an hour for each structure.

Barsalona reported yesterday that the Paterson firm was given 90 days to complete the job. He expressed great satisfaction with the rate of progress.

The housing authority for many months, while it was securing options on nearly all of the 65 land parcels in the project area, was busy relocating families which were losing their homes to make way for urban renewal.

WIDEN MOORE STREET

Plans also call for the widening of Moore, Salem, and Camden Streets where they pass through the project area.

Moore Street, now 40 feet wide, is to be increased to 56 feet. The additional 16 feet will all be taken by moving eastward.

Taking footage from both sides, city-provided crews will increase Salem Street by 20 feet in width, from its present 36 feet to 56 feet.

The 16 feet by which Camden Street's width is to be boosted, from 32 to 48 feet, will be taken from its south side only.

All of these measurements extend across the streets from property line to property line—that is, the dimensions include the sidewalk width.

Action has been taken for securing funds to conduct urban renewal survey and planning work in two other areas of the city—Central Avenue-Passaic Street and in the first ward.

As for the Moore-River Street project, Barsalona said, "We're at the halfway mark."

What remains to be done? Says Barsalona, "Street widening, relocation of utilities, and public sale of the land—that's all."

Commonwealth of Massachusetts Favors H.R. 9999

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Gov. Foster Furcolo of Massachusetts, together with his statement to the House Committee on Public Works in support of H.R. 9999 which is self-explanatory.

THE COMMONWEALTH OF
MASSACHUSETTS,
Boston, March 23, 1960.

HON. THOMAS J. LANE,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE LANE: I am submitting the enclosed report on H.R. 9999, a bill granting the consent and approval of Congress to the northeastern water and related land resources compact, which I am informed is scheduled for hearing before the House Public Works Committee in Room 1302, New House Office Building on March 30, 1960, at 10 a.m.

The States of Rhode Island, Connecticut, New Hampshire, and Massachusetts have already enacted legislation which now requires the consent of the Congress to become operative.

Your support of the pending bill will be appreciated.

With every best wish to you, I am,

Sincerely yours,

FOSTER FURCOLO.

THE COMMONWEALTH OF
MASSACHUSETTS,
Boston, March 23, 1960.

PUBLIC WORKS COMMITTEE,
U.S. House of Representatives,
Washington, D.C.

GENTLEMEN: This report is submitted in support of H.R. 9999, a bill granting the consent and approval of Congress to the northeastern water and related land resources compact.

The northeastern part of the United States is, by virtue of its geographic location and other characteristics, a great natural resource area. The increasing intensity of use of these resources, particularly water resources, requires coordinated planning for effective resource management and the orderly growth of the region. An inventory of these resources was published in the New England-New York Interagency Committee 46-volume report after 4 years of work and at a cost to the Federal Government of over \$6 million.

At a meeting of the Governors of the New England States in 1956, it was agreed to create in cooperation with the Interagency Committee on Water Resources of the Federal Government, a northeastern resources committee for the purpose of implementing the New England-New York Interagency

Committee report and coordinating the development of the resources, particularly the water and related land resources of the northeastern area.

At the present time, the Northeastern Resources Committee is made up of a representative from Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut, and a representative of the Federal Departments of Interior, Commerce, Labor, Agriculture, Army, Health, Education, and Welfare, and the Federal Power Commission, all operating on a basis of equality.

The work of this committee has brought about a better coordination of the efforts of the States and the Federal agencies for the development of the water and related land resources of the region. From the first, the committee has had a vexing problem which must be solved before it can accomplish its purpose. At the present time, no provisions are made for funds to carry on the activities. It has been the practice in the past when a committee member was designated as chairman, the financial responsibility for keeping the committee in operation fell upon the State which the chairman represented. It became evident, therefore, that there is a need for organizing the committee on a more formal basis in order to make funds available from all the States and the Federal Government for this necessary activity.

After careful explorations were made of the type of organization that would be best suited for carrying on this activity, it was decided that an interstate compact should be entered into for the creation of a permanent Northeastern Resources Commission.

At a meeting of the New England Governors' Conference held in Hartford, Conn., on March 2, 1959, the Governors of all of the New England States, after reviewing the proposed compact, agreed unanimously to introduce enabling legislation in each of the States to authorize the States to enter into such a compact. Since then compact legislation has been enacted by the Legislatures of the States of New Hampshire, Connecticut, Rhode Island, and Massachusetts.

Accordingly, I feel that it is urgent that the pending legislation be enacted by the Congress in the best interests of the United States and especially the northeastern part thereof.

With every good wish to you, I am

Sincerely yours,

FOSTER FURCOLO.

Supreme Court Decisions

EXTENSION OF REMARKS

OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. STENNIS. Mr. President, a letter to the editor of the New York Times, written by the Honorable Charles J. Bloch, of Macon, Ga., was published in that paper on March 27, 1960.

Dealing with Supreme Court decisions, the letter is concise, but explicit. Mr. Bloch's argument is clear and irrefutable. His appeal for consistency and stability in government is Americanism at its best.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OPPOSING COURT DECISIONS—SOUTHERN SENATORS' POSITION ON CIVIL RIGHTS RULINGS SUPPORTED

TO THE EDITOR OF THE NEW YORK TIMES:

In a letter in the Times of March 12 Prof. Alan Westin of Columbia University refers to the so-called "campaign of slander against the Supreme Court" allegedly being conducted by the southern Senators.

I immediately thought of your editorial of February 29, severely criticizing the opinion of the Supreme Court in the case of *Nelson v. County of Los Angeles*.

I wonder why people think that newspaper editors have a perfect right to criticize decisions of the Supreme Court, but when southern Senators, in the course of their duties, do the very same thing, their acts are characterized as slanderous.

The validity of the position of the southern Senators with respect to utterances of certain justices of the Supreme Court of the United States is demonstrated by utterances of Justice Black in the case of *Federal Power Commission v. Tuscarora Indian Nation* in a dissenting opinion delivered on March 7.

DISSENT BY JUSTICE BLACK

Justice Black said: "These Indians have a way of life which this Government has seen fit to protect, if not actually to encourage. Cogent arguments can be made that it would be better for all concerned if Indians were to abandon their old customs and habits and become incorporated in the communities where they reside. The fact remains, however, that they have not done this and that they have continued their tribal life with trust in a promise of security from this Government."

I cannot help but wonder where the sentiment expressed by those words was on May 17, 1954. Prior to that time we southerners had a way of life which the Government had seen fit to protect, if not actually to encourage, by inaction of Congress on the subject and by repeated decisions of the Supreme Court and other courts on the subject.

Further, Justice Black said: "It may be hard for us to understand why these Indians cling so tenaciously to their lands and traditional tribal way of life. The record does not leave the impression that the lands of their reservation are the most fertile, the landscape the most beautiful, or their homes the most splendid specimens of architecture, but this is their home and ancestral home. There they, their children and their forebears were born. . . ."

CUSTOMS AND TRADITIONS

We cannot help but wonder why Justice Black and the Chief Justice and Justice Douglas, who concurred with him, can so well understand and express the feelings of the Indians and at the same time not understand why we southerners wish to cling tenaciously to our customs and traditions, which have had the blessings of the law for 90 years.

The dissenting opinion concludes: "Great nations, like great men, should keep their word."

This is the self-same sentiment which our southern Senators and most southern lawyers have been sturdily and strenuously advocating since May 17, 1954. Prior to that date the word of this great Nation as pronounced by the Supreme Court of the United States with respect to the segregation of the races in the public schools was this: "The decision is within the discretion of the State in regulating its public schools, and does not conflict with the 14th Amendment." These words of Chief Justice William Howard Taft (*Gong Lum, et al., v. Rice, et al.*), language which we southerners considered to be the word of our great Nation, were concurred in by Justices Holmes, Van Devanter, McReynolds, Brandeis, Sutherland, Butler, Sanford, and Stone.

CHARLES J. BLOCH.

MACON, GA., March 18, 1960.

Inflation Is Poison

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. HOSMER. Mr. Speaker, I commend to bipartisan consideration the following editorial which appeared recently in the Los Angeles Evening Herald:

INFLATION IS POISON

One would have imagined that the National Democratic Advisory Council, consisting of grown men, would display some maturity and responsibility.

This council is not responsible because the record of any political party in the United States is made in Congress by legislation and votes.

The Democratic Party is the majority in both Houses of Congress and therefore we must look at that record. It is a better and more mature record than the 10,000 words that the retired personnel of the council threw together as political campaign fodder.

The essential point of the council's brain-damaged document is spend and spend, tax and tax, socialize and socialize.

The ghost of Harry Hopkins rode the council meeting, and no man has done the United States greater damage than Harry Hopkins who perfected the Marxian technique of using the taxing power to alter our form of government.

This country is going through a severe inflationary crisis, the dimensions of which are now apparent in our diminishing gold reserve, which is a product of the reduction of the value of the dollar during a period of excessive export of goods and dollars abroad.

American goods, in many categories, are outpriced in world markets and some even in the American market.

This is a principal factor in the considerable unemployment in the United States and in the high cost of living.

It is true that some of the countries that we have aided and put back on their feet economically have responded to our difficult position by reducing their tariffs and quotas set up against the United States while we were aiding them.

But this is a drop in the bucket.

What is needed most is that the Government of the United States recognize its awkward position, realize that its gold reserve is being reduced to the danger point, take steps to avoid the need for the revaluation of the dollar, and stop wasting money.

The National Democratic Advisory Council's program includes all the projects ever conceived by the wildest theorists, many of which have been abandoned even by the Democrats themselves.

The party of Thomas Jefferson advocates such total concentration of power and activity in the hands of a centralized government that it could produce a power in the White House more effectively dictatorial than anything that exists even in the Kremlin.

The program of the Democratic council makes one wonder if it was not concocted out of all the proposed platforms of both political parties since 1932 and boiled down into a document to fit the 1960 election.

Certainly, no Member of Congress could stand up under the consequences of this document in 1962 if even a tenth of the fantastic proposals were put into effect. This is an eloquent catchall designed to flatter each pressure group.

Where is the money to come from?

How is the taxpayer to live if he carries on his back the multitude of bureaucrats that

this council would have the Government employ and at the same time watch his dollar shrink until it looks like a Kerensky ruble?

This is the most irresponsible program in an inflationary period that could be imagined and it should be rejected by Democrats.

What Kind of President Do You Want?

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. PROXMIRE. Mr. President, recently I put into the Appendix of the RECORD an article by New York Times Washington Chief James Reston, on what kind of President the American people want. I ask unanimous consent today again that a second article on this No. 1 political subject by this gifted reporter be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON—WHAT KIND OF PRESIDENT DO YOU WANT?—II

(By James Reston)

WASHINGTON, March 24.—The "other America" was back in the news today: not the "the affluent society" we hear so much about, but the indigent society that once dominated the front pages.

In a country with the unbelievable annual personal income of \$393 billion (as of February), there are still 32,200,000 people living on less than \$50 a week for a family of four.

Included in these 32 million, are one-fifth of the Nation's children and 8 million over 65.

This raises again the insistent question of the presidential campaign: What are the role and scope of the Federal Government in maintaining the public welfare? How should the resources of the Nation be used? Should the President grapple with the problem, or pass by on the other side?

President Eisenhower chose this week to pass by on the other side. The Congress was dealing with the problem of health insurance for the aged. The President opposed the legislation under discussion. His Secretary of Health, Education, and Welfare proposed that the administration immediately offer its own substitute bill to deal with the problem, but the President opposed that too.

WHAT MILK AND HONEY?

About the facts there is no dispute. As the President himself has often emphasized, the inflation of the last generation has been particularly hard on the old people. The 8 million over 65 in the low-income bracket cannot afford decent housing, proper nutrition, or adequate medical care.

Taking all aged individuals—16 million of them now, and 20 million 15 years from now—almost 60 percent have less than \$1,000 a year in money income. In 1959 2 out of 5 of them had less than \$200 for emergencies.

The main question here is not the specific bills introduced by Representative FORAND, of Rhode Island, or Senator KENNEDY of Massachusetts. Both involve the compulsory principle—supported by all the democratic candidates—of increasing the social security tax of people still paying that tax for the benefit of all old people who are now its noncontributing beneficiaries.

There are good arguments against this. One, for example, is that the proposed bills would subsidize the rich when they are old as well as the poor. Beyond this is the root question of paternalism and where the welfare state is to stop.

But these are important questions. There is an argument for going on. There is an argument for stopping. There is an argument for devising another and a voluntary way. There is, in short, an argument for doing anything but brushing the problem off without an explanation.

Life in youth-tide can care for itself. The welfare state does not have to relieve the young men in the Air Force from doing kitchen duty, as it just has. But people in affliction and adversity, standing on the summit of lean and slippered old age, are something else. Many of them have nothing to count but their years. Many more are in that witless stage of life and cannot even enjoy their memories.

If they are not a charge on the richest state ever devised by man, then they are at least a charge on the national conscience. Vermont Royster wrote a lovely editorial about them this morning in the Wall Street Journal, which is not an organ of rebellion. He is against the Forand and Kennedy bills. He hates the welfare state but he has a sense of pity.

EISENHOWER'S APPROACH

So does the President. As a human being he has retained as much humanity and compassion as anyone in the Capital. Also, he has this problem of caring for the aged in his own wife's family. But this merely brings us back to the main point: What kind of President do you want?

It is not the President's humanity that is at issue but his concept of the Presidency. It is not Eisenhower who is the issue but the man to succeed him, and the concept of government to follow after him.

This whole question of how we allocate and spend the Nation's resources has unfortunately drifted into black and white issues of whether we want tall fins with freedom or security with Government control. But before we get to the question of directing the Nation's resources, there is the question of directing the President's resources.

Obviously, the voluntary way is better, but if justice to the old people is not freely given, even then, before direction, comes the obligation of persuasion. The answer to the old people may be that the Government can't afford it, and shouldn't try to do more, but the point has to be explained. For if the old folk can't eat, at least they can vote. And so can the people who have to care for them.

Jobs for the Handicapped—Passports to Dignity

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. CARLSON. Mr. President, the Governor's committee on employment of the physically handicapped in Kansas conducts annually an essay contest among high school juniors and seniors on some subject having to do with the physically handicapped. This year the

theme was "Jobs for the Handicapped—Passports to Dignity."

Many of our high school juniors and seniors participated in the contest, and the winner of the first place was Jerry Ulrich, a senior in the Iola High School. He wrote an outstanding essay on this subject, and I ask unanimous consent that it be made a part of these remarks and printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE GOVERNOR'S COMMITTEE ON EMPLOYMENT OF THE PHYSICALLY HANDICAPPED PRESENTS JERRY ULRICH, A SENIOR IN IOLA HIGH SCHOOL, AND HIS ESSAY IN A CONTEST AMONG JUNIORS AND SENIORS IN KANSAS HIGH SCHOOLS ON "JOBS FOR THE HANDICAPPED—PASSPORTS TO DIGNITY"

"I am a man—an individual capable of supporting my family by performing a task useful to society." To be able to say these words is the goal of some 4 million handicapped persons in the United States who have been told that they are able to learn to become self-sufficient. Already more than a quarter of a million physically disabled persons are self-supporting. How these disabled Americans have contributed to society is an interesting story of human trial and eventual success.

The disabled American is playing an increasingly important role in U.S. industry. In order to meet the increasing needs of consumers, industry must have a steadily increasing supply of skilled and productive workers. The opportunity for the trained handicapped person is there. His chances for learning were greatly increased with the passage of Public Law 565, the vocational rehabilitation amendments of 1954. This law enables the Federal Government to provide funds to the States so that they may aid individuals in preparing for, and engaging in, remunerative employment. The States have met this requirement by establishing vocational rehabilitation services. Although the organization of these services varies from State to State, the services all help to train the disabled citizen.

Rehabilitation services provide help for the disabled in several fields. The services operate on the theory, that, what a man has lost, is not nearly so important as what he has left. The handicapped person need only apply to a local rehabilitation office for assistance. Here he is periodically given medical examinations to determine whether or not he is overexerting. Physical aids such as braces and artificial limbs are provided by the rehabilitation services. When a disabled person is physically equipped, a counselor helps him pick a vocation for which he is suited. After the person has selected a vocation, he is given on-the-job training in a "factory clinic." Here the worker only needs to work as much as he feels able. He is served well-balanced meals in the factory's cafeteria. Counselors are always at hand to help the person learn his chosen vocation. This period of training ranges from several weeks to 3 years. When the disabled person is close to mastering a skill, he has a new sense of self-assurance, realizing that he soon will be able to take his place beside his fellow citizens in the working world. Upon "graduating" from a factory-clinic, a disabled person is, in the words of a factory-clinic supervisor, "a fine product—a whole, well, human being." He is ready to enter the working world.

Jobs for the handicapped are becoming available in increasing numbers. The rehabilitation service helps the newly-emerged

worker to locate a job and to adjust to his new environment. Employment opportunities for trained disabled citizens have increased substantially in the last few years. This is not because factories have added special jobs for the handicapped; on the contrary, businessmen are finding that it is profitable to hire the handicapped. In an aircraft manufacturing plant, for example, blind employees search through the sweepings from the assembly line for screws, washers, and nuts. The items found save the company \$65,000 a year. Surveys by the National Association of Manufacturers show that the disabled worker in the right job is equal to, and, in some cases, better than, his able-bodied peers in such important factors as attendance, safety, turnover, and productivity.

With the increasing complexity of industry, handicapped persons are actually surpassing their associates. This is true, especially in the electronics industry, where dexterity on the assembly line is of prime importance. A person who has lost his hearing is able to concentrate on his job because he is unable to hear, therefore, not disturbed by noise. A wheelchair worker is not so prone to becoming restless at a tedious job as is an able-bodied worker. What a person has lost in one type of ability he can compensate for, by concentrating on the development of the skill he is able to perform. A worker who has thus practiced a skill very thoroughly will be of above average proficiency in that skill.

Achievement of the goal of being a self-supporting citizen is not easy for the handicapped person. Although artificial limbs, training centers, and similar helps are very beneficial to the handicapped person, he must have something more than outside help. The physically disabled individual must possess the will to succeed. For a handicapped person to even realize that he is able to learn to compensate for his disablement, and to take the proper action, is a major step.

Take, for instance, the hypothetical case of George Anderson. George lost his arms in an automobile accident 4 years ago. Previous to that time, he was employed as a printer in a greeting-card factory. After his accident, George became very depressed because he felt that he would never be able to be a useful citizen again. Then one day, a friend told George about a vocational rehabilitation service, whereupon George went to the office to see if he could find a way of regaining his status as an independent individual. At the rehabilitation office, a counselor helped George to realize that he could help himself. With the advice of the counselor, George chose a vocation which he thought himself to be capable of learning, that of Spencerian writing. Using a pen attached to his head, George learned to write beautifully. The rehabilitation service helped George to get a job in the same greeting-card factory that he had worked in for several years before his accident. George is now a contented, satisfied individual, realizing that he is on an equal plane with his fellow man.

There are thousands of Georges, the disabled Americans who have found a new hope in life by becoming financially independent. But more than this mercenary advancement, these individuals have gained a new sense of self-assurance. By taking their places in the working world, the handicapped have made known their possibilities. Americans are showing a general trend toward accepting the handicapped. Industry knows that employing the handicapped is good business. For these reasons, the handicapped have been able to obtain jobs. Thus, raising themselves to the level of self-sufficient persons, handicapped persons have used their passports to dignity.

An Important Public Service

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we hear much about the growing dangers facing the many Americans who have become boating enthusiasts in recent years. As the number of amateur sailors continues to grow, so does the need for responsible and mature judgment by those citizens. I was interested, therefore, in the editorial praise given on March 10 by the Cape May (N.J.) Star and Wave to the work of the U.S. Coast Guard Auxiliary in that area. The Coast Guard and the citizens are working together to prevent needless tragedy.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN IMPORTANT PUBLIC SERVICE

An announcement last week that Flotilla No. 35, U.S. Coast Guard Auxiliary, will conduct a series of classes on the handling of small boats should be of no little interest and importance to a large segment of the permanent population and visitors to this seashore area.

With a tremendous upsurge in boating in recent years and the likelihood that the growth in its popularity will continue for the foreseeable future, there is increasing need for instruction, guidance, and surveillance in the interests of safety.

In an area such as ours with inviting expanses of ocean and bay so close at hand and offering so many alluring possibilities to those imbued with enthusiasm for boating and fishing it is essential that everything possible be done to promote safety afloat.

Besides offering instruction in basic seamanship and boat handling, one of the greatest problems confronting all who are concerned with promoting marine safety is the need to impress upon and instill in novices a strong and abiding respect for the power and the inherent dangers of the open water.

We who live at the shore have seen all too often the rollicking, devil-may-care landlubbers or "shooboxers" who hang outboard motors on any kind of a hull and roar off in all directions for a day's pleasure without knowing one end of a boat from the other. And we have seen all too often the results of such foolhardiness, the needless risk of life and limb, the unfair burden that is placed on others to save them from their own folly, and occasionally the tragic price they pay for their ignorance.

Yes, we who live by the sea learn in many ways to respect its power.

Dedicated to promoting better seamanship and safety afloat and to assist the Coast Guard in its many duties, the Coast Guard auxiliary has made a major contribution since its establishment some years ago. Through courtesy boat and equipment inspections, ready counsel and advice based on knowledge and experience and training, the auxiliary has done much to make boating safer and more enjoyable.

Austria Views Outer Seven Pact "First Step" to Trade Area for All Free Europe

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. JAVITS. During the past several months, and especially since Under Secretary of State Douglas Dillon formally presented the U.S. proposal for a greater economic community of the industrialized nations of the free world last January in Paris, much has been spoken and written about the eventual effect of the European Economic Community (Common Market) and of the newly created European Free Trade Association upon the trade and investment pattern of the free world. Concern has been expressed by many eminent economists and statesmen that the accelerated trade liberalization being planned by the members of the Common Market among themselves and the reaction to this potentially discriminatory program by the members of the Free Trade Association may result in uneconomic trade patterns and a disruption of the flow of trade, particularly from the United States to Western Europe.

Mr. President, the members of the European Economic Community, the members of the European Free Trade Association and other members of the Organization for European Economic Cooperation, and Canada and the United States are scheduled to meet in Paris on April 21 for the purpose of negotiating an agreement for the establishment of an organization embracing all of them and pledged to coordinate action in trade liberalization and in economic support of the newly developing nations of the free world. In preparation, a meeting of nine exporting nations, including Japan, has already been successfully concluded this month in Washington; a 20-nation meeting on trade policies will take place in Paris later this month, and questionnaires concerning the structure of the proposed organization are already in the hands of its future member governments. It is heartening to read that Austria, one of the members of the European Free Trade Association, sees no real threat of permanent division and rivalry. Austria's Chancellor, Julius Raab, has recently made this clear, and Austria's Finance Minister, Reinhard Kamitz, has expressed his belief that, as a matter of fact, the future of economic integration rests in the two so-called rival organizations: EEC and EFTA.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts of an analysis of the Austrian position on this matter which is so vital to the continuing success of U.S. free world leadership.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

AUSTRIA VIEWS OUTER-7 PACT "FIRST STEP" TO TRADE AREA FOR ALL FREE EUROPE

To Austria the European Free Trade Association (Outer-7) convention recently signed in Stockholm is the first step toward reestablishing the economic unity of the free nations of Europe, which seemed to be seriously impaired when France, Western Germany, Italy, and the Benelux countries organized the Common Market almost 2 years ago.

Underlining this view in a major debate before the Austrian National Parliament this past week Chancellor Julius Raab emphasized that for Austria the real object of the European Trade Association was to provide "basis of negotiation for multilateral cooperation" with the Common Market. Mr. Raab expressed his belief that European integration had already gone so far that there was no real threat that the two economic blocs would continue existing separately forever. "It is Austria's special task," he said, "ceaselessly and loudly to campaign for cooperation between the Common Market and the rest of Europe." European integration has been a constant subject of our policy explorations for 2 years, the Chancellor noted, leading the Austrian Government to conclude that the Nation's present economic aspirations and needs make participation in the EFTA a logical step.

The parliamentary debate revealed general agreement with the Vienna Government's position that the formation as soon as possible of a wider free trade area, embracing both the six and the seven was of paramount importance. "Austria must do everything to bring about unity in Europe and in this respect the country's function can only be supranational," commented Socialist member, Czernitz. Foreign Minister Dr. Bruno Kreisky indicated that he thought that Austria, within the framework of the EFTA would have opportunity to develop new and extensive markets. It is necessary, however, he stressed, that Austrian industry should embark on a more extensive modernization program and undertake imaginative and long-range investment programs to become even more competitive.

While there is broad unity in Austria on the importance of economic integration, it is not certain that conclusion of the EFTA pact will quiet some of the responsible voices who have urged Austria to take extraordinary steps to associate itself with the common market. The controversy centers on two points: Would such association be helpful to Austria's economic growth? and, Would "association," as opposed to full membership, conflict with the neutrality to which Austria pledged itself in 1955 when it regained full political sovereignty?

Austria's Finance Minister, Dr. Reinhard Kamitz, believes that, in the conclusion of the EFTA, the future of European economic integration rests in the two organizations—the Common Market and the newly spawned association. They must, he says, work together to "abolish barriers in trade and payments" among all the nations of free Europe. It is agreed in Vienna, explaining the eagerness of Austrian participation in the newest trade liberalizing effort, that the EFTA is truly a vehicle for expanding and liberalizing the trade of Europe and the world at large.

The core of the Austrian position was summarized in Chancellor Raab's presentation to the Vienna Parliament in this manner:

The most advantageous development in European integration would, of course, have been the extension of the OEEC into an all-

Europe free trade area. We would be remiss if there were no regrets expressed at this time that developments have not made this possible.

Mr. Raab stressed that present organizations seeking to integrate Europe further are not in a final form. Rather, they are still in a state of development. The present efforts have a tendency, Mr. Raab stated, to lead toward an ultimate solution of greater cooperation in Europe.

National Wildlife Week

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. WILEY. Mr. President, recently, the Ripon Commonwealth Press of Ripon, Wis., published an informative article on National Wildlife Week, March 20-26.

In commenting on this special week, the editorial reviewed a specific project which, in itself, is a splendid example of wildlife preservation, the Horicon National Wildlife Refuge in Wisconsin.

Within 15 years, the program, administered by the U.S. Fish and Wildlife Service, has transformed a rough marshland into one of nature's most spectacular wildlife panoramas.

In addition to providing a wildlife refuge—for geese, duck, deer, fox, and other wildlife—the Horicon project is serving as a constructive program in conserving a rich, natural resource: water.

Reflective of the constructive work being accomplished to preserve our wildlife, water, as well as other natural resources, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATIONAL WILDLIFE WEEK

This week, March 20-26, is National Wildlife Week. We here, living close to the Horicon National Wildlife Refuge have something to celebrate—the resurrection of a marsh. Only 15 years ago this marsh lay dormant with just remnants of the wildlife of the past. Now it provides one of nature's most spectacular wildlife panoramas. Thousands and thousands of people throng to the refuge, principally in April and October, to see clouds of geese and ducks and other wildlife such as deer, pheasants, raccoons, and even the cunning fox.

The great transformation of these wetlands by the U.S. Fish and Wildlife Service has taken place before our eyes. The refuge is known throughout the country and people from every State make it a "must" stop on their way through Wisconsin. Last fall over 75,000 geese were on the Federal refuge at one time. This spectacle is almost beyond comprehension. Many species of ducks nest and rest in the refuge. Last year the duck production was over 8,000 birds. Production of refuge byproducts, such as pheasants and deer, has helped make this area famous above all others in the Midwest.

This natural phenomenon can be repeated elsewhere in this State with your help. As the Horicon National Wildlife Refuge was

the product of the wants of the people, so can there be other areas developed for wildlife near your home. First we must have the wetlands in the hands of those who have the knowledge to develop and protect them. We must have water conservation—water is the key to your survival.

National Chiropractic Association Sponsors National Correct Posture Week, May 1-7

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. McNAMARA. Mr. President, it is generally agreed, I am sure, that the most important asset which one can have is good health. Without it our lives become burdensome, depressing and unproductive. The realization of our potential usually goes by the wayside when one cannot perform assigned tasks and responsibilities due to ill health.

The habits which are acquired in the formative as well as during the middle years often go a long way in determining the standards of health in our more advanced years.

Our health, therefore, should be guarded at all times with the utmost care. It is undoubtedly the most precious thing we have. Once lost through neglect, indifference or carelessness, it may never be regained. We all are acquainted, no doubt, with individuals who have actually thrown good, robust health to the four winds. This is indeed most regrettable and unfortunate to observe.

To retain sound health one must practice good habits, and one of great importance is proper and correct posture. This phase of our everyday physical well-being is for the most part generally neglected. For some reason we tend to think that so long as we continue to take diligent care of the prime requirements for good health, we can ignore the details which make for a happy, healthful life. Correct posture is one of those details and is of importance to proper physical development in our children and continues to play a necessary role throughout life.

Many of our outstanding athletes have reported that one of the contributing factors to their success was correct posture which provided the means for proper muscle development and coordination.

What is more imposing and picturesque than to see the Corps of Cadets of the U.S. Military Academy at West Point or the Brigade of Midshipmen of the U.S. Naval Academy at Annapolis march in precision drills or pass in review at one of their football games? One of the factors contributing to these impressive displays is correct posture—en masse.

I desire now to call the attention of the Senate to the very fine work which has been done along this line by the National Chiropractic Association in

acting as sponsor for National Correct Posture Week.

The National Chiropractic Association is among those who have been urging higher health standards in America. This year from May 1 to May 7, inclusive, it is sponsoring National Correct Posture Week as a part of its better health program.

Many of our mayors and Governors have issued special proclamations urging the people to participate in the special educational activities during National Correct Posture Week, and the schools are paying special attention to this worthy program of training for our young people.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by Dr. Emmett J. Murphy of Washington, D.C., who is director of industrial relations of the National Chiropractic Association.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Dr. Murphy's statement follows:

GOOD POSTURE, GOOD HEALTH

Contributing to national health and welfare by improving individual posture is the sole aim of the National Chiropractic Association when it annually sponsors—from May 1 through May 7—National Correct Posture Week.

This is the time when chiropractors use every means of publicity to draw public attention to this primary aim of chiropractic. They believe, preach, and practice that good posture and good health go together.

In that belief we are in complete agreement with every branch of the healing arts, and we are sincere in our constant efforts to cooperate with all Americans in improving the standards of our national health.

It has been most encouraging to note that many agencies of our Federal Government have been in the vanguard of those advocating correct posture as a definite aid toward sound health and long life.

All recruits are familiar with the basic teachings of our Armed Forces which stress correct posture—not only on the parade ground, but elsewhere. These teachings stress correct posture as a means of physical, mental, and emotional well-being.

Other Federal agencies, too, have long been leaders in this never-ending campaign to keep Americans posture conscious. For instance, the Children's Bureau and the Women's Bureau, of the Department of Labor; the Federal Security Agency; the White House Conference on Child Health are but a few which could be listed.

SPOKESMEN AGREE

It is important to remember that good posture means much more than simply standing straight. Good posture is that position of the body in any activity in which all of its parts are working effectively and with proper balance, ease, and comfort.

On this one point all spokesmen of all branches of human endeavor have agreed for hundreds of years that correct posture is one of the most important paths to good general health.

This viewpoint is shared by medical and chiropractic authorities, public health workers, nurses, psychiatrists, the armed services, pediatricians, and specialists in industrial relations.

TEST YOUR POSTURE

Good posture is a result of holding your body in a balanced position. The easiest way to attain it is to think of an imaginary line running (side view) from the tip of the skull through your neck, shoulders, hips,

knees, and insteps. When the head is bent forward, the abdomen thrust out, or the back bent, the line of gravity is shifted, and a strain placed on muscles to keep the body from falling.

To test: Stand with back to wall with head, heels, shoulders, and calves of legs touching it, hands by sides. Flatten hollow of back by pressing buttocks down against the wall. Space at back of waist should not be greater than the thickness of your hand.

Stand facing close to wall, palms of hands touching front of thighs. If chest touches wall first, your posture is probably excellent, or at least good; if head touches first, it is only fair; if abdomen touches first, your posture is really bad, and you should see a chiropractor.

Standing

When you stand straight your head should be balanced and erect. Your shoulders are relaxed and low; your chest is held high. Your lower back should curve to just a slight degree. Your abdomen should be flat. Have your knees straight but not stiff, and feel your weight in the outer borders of your feet.

Sitting

You should sit with your feet flat on the floor. Do not slump in a chair, but keep your back straight and your abdomen flat. As in standing, your head should be erect and well balanced. When you lean forward, lean from the hips, not from the waist.

Walking

Movement should start at the hips. Your head and upper part of your body should remain at right angles to the ground. Swing your arms freely. Look ahead, never down. Point your toes straight ahead. Knees should be relaxed and free.

OFFICIALS ENDORSE POSTURE WEEK

Without the wholehearted cooperation of the American people, National Correct Posture Week would be a meaningless phrase.

It is the wonderful assistance of school-teachers and school authorities, of State legislatures, of Governors and mayors, of Members of the U.S. Congress, and of the people themselves that has made National Correct Posture Week an increasingly important observance in the United States.

Every year more and more officials at the city and State level proclaim its observance officially.

The active members of the National Chiropractic Association lead in observance of National Correct Posture Week, because the science of chiropractic is dedicated to the elimination of postural faults which rob human beings of the health they should have.

The Budget Can Be Cut

EXTENSION OF REMARKS OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the March 24, 1960 issue of the Edisto News of Denmark, S.C., entitled "The Budget Can Be Cut." This editorial is an example of the sound and well written editorials which appear weekly in the Edisto News, one of South Carolina's newest and most outstanding newspapers. It is ably edited and published by Mr. and Mrs. Jack H. Brewster.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BUDGET CAN BE CUT

The average citizen wants a reduction in Government spending and lower taxes. But he's at a loss when it comes to recommending specific reforms. The budgets are enormously complex, and run to realms of finely-printed pages.

There are, however, organizations whose business it is to analyze budgets and find where cuts are both possible and desirable. The Council of State Chambers of Commerce has done that with the administration's 1961 budget. It proposes specific reductions totaling \$3.3 billion—all of a non-defense nature. Its report observes that the "proposals represent only a relatively modest but effective start toward control of Federal spending at a manageable level—that is, a spending level which will make practicable the tax reforms that are necessary to assure sound economic growth and at the same time permit reduction of the public debt.

The proposals cover a wide area—reduced spending on public works; reduced grant-in-aid of various kinds; curtailed loan programs; a cut in Federal civilian personnel forces, and so on down the list. Not everyone will agree with them all, and other studies stress additional areas of possible cutbacks. But the point is that we can have more economical Government without undermining our defense in any way. And the main way to achieve it is by eliminating activities which can and should be undertaken by local government, by private enterprise, or by individual, and by other nations.

Upholding Law of the Land

EXTENSION OF REMARKS OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the March 24, 1960, issue of the Charleston Evening Post, one of South Carolina's most outspoken and widely read newspapers. The editorial is entitled "Upholding Law 'Of The Land'" and makes a point which merits the attention of the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UPHOLDING LAW 'OF THE LAND'

The U.S. State Department has condemned violent measures used by police in South Africa against Negro mobs.

At several places thousands of Negroes staged demonstrations against laws which require nonwhites to carry passes. In one instance police were besieged and being stoned when they opened fire. A number of the rioters were killed and injured. Many buildings were fired by mobs.

All this is tragic and distressing.

The U.S. Government, through the State Department, issued a statement in which it placed the onus on the South African Government. The United States, it said, "cannot but regret the tragic loss of life resulting from the measures taken against the demonstrators in South Africa."

The use of the word "mob" was delicately avoided. But that was the word often used

in denunciation of Little Rock citizens who demonstrated against school integration. The Government which condemns South Africa dispatched troops to Arkansas. Had it been deemed necessary, they would have been ordered to fire on the Little Rock demonstrators. They were fully armed, and ready to shoot. They were not there merely to stage a dress parade.

The President justified his Little Rock course as upholding the law of the land. Now what answer will he make if the South African regime says the police action was to uphold the law of the land? Whether laws against which the Negroes were protesting were good or bad, the fact stands that they are laws, and not merely laws decreed by court fiat. What's right about using troops to enforce the "law of the land" in the United States that's wrong about using police force for that purpose in another country?

Negroes in the U.S. South

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. JAVITS. Mr. President, the civil rights debate in the Congress has attracted widespread attention in the world's press. What we say and do here carries critical implications to our friends in the free world and in the uncommitted nations as well as to the Communist bloc. The nonwhite peoples who make up such a large part of the free world are especially concerned with our handling of this vital issue, and the editorial reaction in their newspapers should be of especial interest to us.

The editorial in the Hindu Weekly Review of March 7, 1960, a newspaper published in Madras, India, is typical of foreign comment that shows in a friendly way an effort to understand the issues and the problem.

I ask unanimous consent to have printed in the Appendix of the RECORD, the editorial from the Hindu Weekly Review of March 7, 1960:

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEGROES IN THE U.S. SOUTH

By now the pattern of the struggle waged by the Negro people of the United States "to realize (their) place in society" is becoming clear. They are pressing for full voting rights, to which they are entitled under the law, and for as good an education as is being provided free of cost by the State for its non-Negro citizens. In actual practice, in the South, Negroes are prevented from exercising their franchise by means of regulations authorized by the various States. In education, Negro children have to be satisfied with the second best, in segregated schools. But the American Negro no longer speaks softly and treads warily. A systematic nonviolent struggle for full civil rights is being carried on and the courts are being fully used to secure completely for the dark people the rights to which they are entitled by reason of the fact that they are as good American citizens as any with fair skins. The American Negro wants to "belong" completely to the society and environment in which he finds himself; he

wants not to be an African but a full-blooded U.S. citizen. This many of the whites in the Southern States are determined to prevent him from becoming.

Many efforts have been made to circumvent the historic judgments of the U.S. Supreme Court which has decided once and for all that segregation in education is unconstitutional. The Supreme Court has just now upheld the validity of the Civil Rights Act of 1957. In general the courts of the various Southern States are guided by local opinion and do all they can to nullify, in practice, the effects of the Supreme Court's decisions. The law, as administered in these States, is sometimes shocking. Only recently a group of whites, who dragged out a young Negro from a prison in Poplarville, Miss., last April, and murdered him, has been let off scot-free because a local grand jury would not even look into the case. The State legislatures have also tried their best to circumvent the Supreme Court judgments regarding segregated education. It may be remembered that Little Rock in Arkansas achieved a notoriety in this regard. In spite of tremendous handicaps the Negroes, under the guidance of dedicated leaders and the National Association for the Advancement of Colored People are carrying on the struggle for achieving full citizenship rights. In the latest campaign in Tennessee, the Negroes ask that they should be served while sitting at bars; racial discrimination has so long prevented this: the dark people are served only while they stand. This recalls to our minds the campaign for nonsegregated seats for Negroes in buses.

Though the outlook for the Negroes in the South of the United States is not very rosy, they are making a steady advance. Some of the plans to get around the integration of whites and blacks in schools have been frustrated. Public opinion in America is also growing more and more aware of the need for ending racialism within the country's borders, so that the United States could really qualify for leadership of the free world. The Federal Government is doing what they can to make civil rights a reality for the Negroes in the South. (There is some discrimination against the Negroes in the northern States, too, but it is on nothing like the scale in which it is practiced in the South where it is thought of as a part of the so-called southern way of life). A fresh civil rights bill is now being discussed in the U.S. Senate and President Eisenhower, though appreciative of southern feelings, has not encouraged any southern State in its campaign against the law of the land, as finally interpreted by the Supreme Court. At the moment of writing, southern Senators are carrying on a traditional filibuster to prevent the civil rights bill from being passed. We must hope that their attempts will fail. Mr. Nixon, Vice President of the United States, is known to be strongly in favor of full civil rights for the Negroes: And the Republican Party will support him. Among the Democrats, however, a split is threatened by this issue of full rights for Negroes. This crude racial prejudice is often sublimated into the so-called issue of State versus Federal rights. But America has a great democratic tradition. Her people are known for their friendliness and generosity. And the law is on the side of the Negroes, unlike in the Union of South Africa. But prejudices die hard. The democratic countries will watch the struggle of the U.S. Negroes with the confidence that ultimate victory will be theirs. It looks as if this issue will become a major factor in the next presidential campaign. In a land dedicated to freedom, we are sure racialism cannot survive forever.

Wildlife Federation Opposes Water Diversion From the Great Lakes

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. WILEY. Mr. President, I recognize that the preservation and best utilization of our natural resources is essential if we are to meet the ever-expanding needs of the future.

In many areas of the country, particularly in the Great Lakes region, we have been blessed with invaluable resources, including water. However, if these waters are siphoned off to serve special interests, the result in the long run will, I believe, jeopardize the public interest.

Currently, there is pending before the Foreign Relations Committee a bill, H.R. 1, which would propose to divert additional volumes—dangerously large volumes, I believe—of water from the Great Lakes.

As my colleagues will recall, I have opposed such efforts in the past. Frankly, I feel, along with the majority of people in the Great Lakes region, that this would seriously jeopardize not only the commercial, navigational, recreational, and other activities on the lakes, as well as the St. Lawrence Seaway—the deepened and improved trade route from the Midwest to the ports of the world.

In regard to this, I was pleased to note that the National Wildlife Federation, at its 24th annual convention, also adopted a resolution opposing further diversion of water from the Great Lakes region.

Reflecting the views of the federation, which, over the years has endorsed and supported a wide variety of constructive proposals for conserving and preserving our valuable resource—water—I ask unanimous consent to have the resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas Chicago, Ill., has been permitted by a Supreme Court decree of 1930 to divert 1,500 cubic feet of water per second from the Great Lakes such water being diverted to the Mississippi River; and

Whereas Chicago is presently seeking legal authority to increase such diversion to 2,500 cubic feet of water per second; and

Whereas the maintenance of the proper level of the waters of the Great Lakes are a valuable natural resource used and enjoyed by the people of the affected states and Province of Ontario, Canada, and the resulting decrease in the water level of the Great Lakes has and is creating an embarrassing international problem; is also decreasing and injuring the fish spawning areas and waterfowl feeding and nesting areas; and is materially injuring the natural beaches, boating enjoyment, and fishing; as well as decreasing the navigability of commerce on the Great Lakes Now, therefore, be it

Resolved, That the National Wildlife Federation in annual meeting at the Adolphus Hotel, Dallas, Tex., on the 6th day of March 1960, go on record as definitely opposed to the destruction and damage to recreational waters, the natural habitat of fish, and waterfowl and urge the vigorous opposition of all people to the continuing or extension of diversion of any Great Lakes water.

Khrushchev in France

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. KEATING. Mr. President, I was very much interested in the timely and informative report on Premier Khrushchev's visit to France which appears in the most recent issue of U.S. News & World Report.

In this article, Robert Kleiman, regional editor for U.S. News, writing from Paris, discusses Khrushchev's efforts to drive a wedge between the French and the West Germans. Kleiman also suggests that Khrushchev's careful and dignified demeanor since he has arrived in France is an attempt to emulate and impress the great leader of the French people, Charles De Gaulle.

Mr. President, these and other equally as important observations make this a most worthwhile article. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WITH KHRUSHCHEV IN FRANCE

(Khrushchev, back on tour, is trying a different tactic in France. But the goal's the same: to split the West. Regional Editor Robert Kleiman, on the scene, tells what the top Communist is up to—and measures his chances of success.)

PARIS.—The face that Nikita Khrushchev showed to Paris at the start of an 11-day tour of France was that of a cautious, polite, somewhat hesitant man—always anxious not to offend.

But, despite his careful display of courteous friendliness, the Soviet dictator set out immediately to try to stir up French fears of Germans, and German suspicions of the French. Almost from the moment of his arrival on March 23, it was clear that Khrushchev's chief objective in coming to France was to undermine the French-German alliance.

For example, Khrushchev drew applause from the Paris City Council when he revealed that the three German divisions that occupied the French capital in June of 1940 were destroyed by the Russians at Stalingrad in 1943.

To members of a Communist-controlled peace movement, Khrushchev said:

"The French must understand that they are the first to be menaced by the Germans. The Germans are dangerous only because they can start a war. Even a mad German militarist would not risk a war with us."

The Soviet Premier made plain that he wanted French support for "the conclusion

of a peace treaty with the two German states—a step that would commit France publicly and formally to a permanent division of Germany and Communist control of East Germany.

As French diplomats see it, Khrushchev's public remarks were aimed at the West Germans as well as Frenchmen. His talk of French-Soviet friendship was designed, it is felt, to make Germans suspicious about the possibility of a secret deal between Khrushchev and France's President Charles de Gaulle. At the same time, it is believed Khrushchev hopes French public opinion eventually will force a change in De Gaulle's policy of a close partnership with Chancellor Konrad Adenauer of West Germany.

STICKING TO THE SCRIPT

France is the seventeenth country Khrushchev has visited since becoming the No. 1 man in the Kremlin. He gave observers the impression that the stakes for which he was playing here were higher than those on any previous trip—including his U.S. tour. From the outset, he seemed to be taking unusual pains to avoid any errors or any off-the-cuff remarks that could upset his plan.

The ebullience for which Khrushchev is noted was kept closely under control. Clowning was avoided. Even smiles were few. All his public statements were carefully prepared in advance—even the toasts. The Soviet leader seemed to be trying to maintain a kind of solemn dignity that would conform to De Gaulle's concept of statesmanlike behavior.

Khrushchev's solemnity contributed to a first-day impression that the Soviet leader was pale and tired, perhaps still recovering from the influenza that delayed his trip 8 days. But, on his first day, he went through a rugged schedule that began at 4 a.m. in Moscow and ended at midnight in Paris.

The next day—after a good night's sleep—Khrushchev appeared as physically healthy and mentally alert as ever during a 30-minute speech to 200 businessmen and a subsequent hour-long discussion with 50 of France's top industrialists and bankers.

CHEERS—FROM REDS

Paris gave Khrushchev a friendly reception. Most spectators were curious, but silent Communists were present in sufficient numbers, however, to provide hearty cheers whenever he appeared in public.

Vocal anti-Communists made only rare appearances. Some shouted "Budapest!" Some scattered nails on the Champs Elysées which street cleaners had to sweep up before Khrushchev's car passed by. They ripped down a few Soviet flags and got into one brief scuffle with French Communists, but there were no serious disturbances.

Everywhere Khrushchev went, he made an effort to woo his audiences and to avoid the ruffling-up he has caused so often in the past. There was none of the boasting arrogance displayed by him during visits to the United States and elsewhere.

ALL FOR NOUGHT?

After hours of private Khrushchev-De Gaulle talks there was no indication that Khrushchev's tactics had taken in the French President. On the contrary, in one of his rare references to his own allies, De Gaulle made it clear that France belongs to the Western camp and intends to stay there.

Just what the final outcome of Khrushchev's mission to France will be is far from clear, as yet. But diplomats in Paris, from the outset, were inclined to doubt that the Soviet Premier's soft-spoken wooing of the French will get him any further than the threats of direct action against West Berlin which he was making in more belligerent tones just a few weeks ago.

Salesman of Polaris: William Francis Raborn, Jr.

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Salesman of Polaris: William Francis Raborn, Jr.," published in the New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SALESMAN OF POLARIS: WILLIAM FRANCIS RABORN, JR.

COCOA BEACH, FLA., March 27.—On the wall outside the entrance to the Washington office of Rear Adm. William Francis Raborn, Jr., is a framed Bill Mauldin cartoon. It shows an Air Force general, cigar ground in his jaw, fishing from a small boat. Leaping from the water, looking cockily at the general's hook, is a large sharklike fish representing the Navy's Polaris-carrying submarine. The caption under the drawing reads: "Go Fly a Kite."

The cartoon is the admiral's answer to the Air Force campaign to gain operational control of the Polaris missile system, which is entering a critical series of tests. However, if he had been the artist, the caption would have been a good deal saltier.

"Red" Raborn, proud father of the Polaris program, is not the sort to ignore attempts to tamper with or run down his beloved project. He will go through the motions of insisting that he does not care to debate with someone who knows no more about naval affairs than a Swiss guard.

COLORFULLY TEXAN IN SPEECH

Then, the built-in laughter in his eyes dimmed for the moment and a gull-shaped crease forming on his ruddy forehead, he will take care of the opposition in words that are colorfully Texan in tone and content. But he does it without venom, with the self-assurance of a man who feels he is dealing from an unassailable position.

The admiral has headed the Polaris program since its inception in 1955, with a salesman's fervor.

The success of the program to date in meeting a drastically tight timetable indicates that the technician in the admiral is the equal of the salesman.

His enthusiasm and drive are reflected in his staff, which darts about the country to Polaris facilities from a headquarters in the Munitions Building along Washington's Constitution Avenue.

It is, as staffs go, a small, compact one. Associates insist that it is next to impossible to get Admiral Raborn to add an extra billet.

"I can get more work out of one overworked man than out of two underworked men," he says.

HE'S A "CAN-DO" MAN

In Navy parlance, the admiral is known as a "can-do" man.

"People will suggest 15 reasons why something cannot be done," one of his former assistants reports, "but he will have a 'gut' feeling that it can. So he does it."

Though born in Texas (June 8, 1905, in the town of Decatur), Admiral Raborn grew up in Oklahoma. It was Oklahoma's Senator Elmer Thomas who got him his appointment to Annapolis.

Almost from the start, his naval career took an aeronautic turn—and almost came to a quick end.

He had his first ride at Anacostia while on Christmas leave during his plebe year.

The engine died on the way down, and the plane made a dead stick landing on the edge of the field.

"Red" Raborn was a lieutenant stationed on the other side of the island from Pearl Harbor just before the Japanese attack.

A KNACK FOR ANTICIPATING

Exhibiting his talent for anticipating technical requirements, he had worried about the lack of antisubmarine equipment on the patrol planes in his squadron. He devised a rack for depth charges. The planes had them aboard when war came.

He was executive officer of the carrier *Hancock* during the Iwo Jima, Okinawa, and several other campaigns. He won a Silver Star for gallantry when the *Hancock* was hit by a bomb.

Since the war, Admiral Raborn has alternated between sea duty and research and development.

The admiral has a son and daughter, both married, by his first wife. He lives with his second wife, the former Mildred Terrill (she was a Navy nurse with the rank of commander) in a split-level home in Arlington, Va.

He used to be a heavy golfer but gave it up for the Polaris. He has also taken up the organ. But his main hobby is gardening.

"There's always time to pull a weed or two," the admiral says.

Rural Development Program—Excellent Work Being Done in Schuylkill County To Build Stability and Prosperity

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the RECORD I want to direct attention to the Committee for Rural Development.

Last October while Congress was not in session, the President signed an Executive order establishing the committee, and it is possible that some of my colleagues in Congress may not have had this order brought to their specific attention. Certainly the many readers of the CONGRESSIONAL RECORD have not had the opportunity to see the order through the RECORD.

The administration has taken important steps in recent weeks to strengthen and expand the rural development program nationally. This is gratifying news, which will especially interest those Members of Congress who represent rural areas where families on small farms are having a hard time earning an adequate income due to rapid changes in the Nation's agricultural production and competition from the larger commercial units.

I have a firsthand knowledge of the rural development program, since Schuylkill County in my district is presently one of the participating areas. In

this county the Pennsylvania Agricultural Extension Service under the very capable direction of Mr. C. L. Robertson, the county agent, his associate county agent, Mr. Guy Temple, and other agencies, have joined with local leadership to promote better farms, better living in rural communities, and new off-farm enterprises.

Among other activities are the following: Through the leadership of those working with the rural development program, Schuylkill County's fine youngsters are being encouraged to participate in community improvement plans. Industry tours and other vocational guidance programs have also been set up for these young people. Leaders from all over the county are receiving help in trying together and stepping up industrial development plans. Plans to improve the tourist business locally are also going forward.

The Agricultural Extension Service has assigned Guy Temple, associate county agent, to head this program in Schuylkill County and it is with a great deal of pride that I call your attention to the following report just prepared for me by Mr. Temple:

The Schuylkill County rural development program came into being as a pilot program in the fall of 1957. The program first obtained a part-time worker in September 1958. Considerable time has been spent in becoming acquainted with the county, its people, and learning more about the rural development program.

A committee has been formed, namely, the Schuylkill County Rural-Urban Development Council, which is made up of representatives from business and agriculture, as well as other civic and community leaders.

The first work of the council was a problem affecting nearly all rural sections of the county, that of deer damage caused by an overpopulation of deer. The feeding of this deer herd has caused a great economic loss to many farmers of the area. As in all situations, there were two sides to the problem: the landowner having damage and the sportsman desiring a plentiful supply of game. Many individuals and groups had attempted to get this problem corrected. However, their efforts were not fruitful because factual information on damage and loss was not available.

Through the cooperation of the Pennsylvania State University resident and extension staff in the schools of agricultural economics, rural sociology, forestry and horticulture, and a local committee, a questionnaire was formulated. Locally, 4-H members, vocational agriculture departments, and interested groups in the county served as enumerators for the survey. Approximately 60 enumerators assisted in the survey, contacting nearly 200 landowners.

The work completed by the council with the assistance of other organizations confirmed that the deer damage was of a great economic concern to rural landowners. The loss in crops and property damage was \$492,000, nearly 5 percent of the total value (\$10,686,000) of agricultural production in the county.

These survey results were released to Pennsylvania Game Commission personnel, all county sport associations, and news articles were released to all county newspapers, plus two papers with statewide distribution.

We have since been informed that survey results were a major influence on the Pennsylvania Game Commission decision to place a larger number of antlerless deer licenses in Schuylkill County for the 1959 season.

It is anticipated to provide additional information through meetings and mass media to further improve landowner-and-sportsman relations.

As numerous contacts were made concerning the program it became evident that many people, including county, State, and Federal personnel were not aware of the functions or assistance available from established county, State and Federal public service agencies. This information was assembled in handbook form by the county steering committee and the State extension service provided the funds for printing. The handbook was distributed to community leaders and groups throughout the county. The council hopes to add additional agencies to this handbook and also attempt to keep it up to date.

Early in 1959, an attempt was made to contact as many county groups as possible and present a program to initiate some thought on their immediate community problems. As a result, many problem areas were more clearly defined to the people as well as to the Rural Development Committee.

From those problem areas mentioned, the steering committee elected to place emphasis on the following four areas:

1. Beautification of the county.
2. Zoning.
3. Youth.
4. Agriculture roundtable.

1. Beautification of the county: The various agencies of the rural development program are still working closely through their regular programs, with those farmers who have possibilities of learning the management skills necessary to efficiently operate their farm business. However there are many farmers who do not possess or cannot effectively learn the managerial skills. Consequently the council felt that these people might better their economic position through industrial employment. Therefore, any work done to improve the county will aid the existing industrial development groups in their efforts to attract industry, which will in turn offer this rural low income group new opportunities.

Industrial development groups in the area are doing a fine job in their work to attract and bring in new industry. However their job is made more difficult due to the general appearance of the area. Today industry considers esthetic value of an area as well as other considerations. Years of coal stripping has left many unsightly spoil piles along many of our highways leading into the county, and in some areas, even adjacent to homes. The council contemplated a project to reforest as many of these banks as possible. However an unforeseen, but pleasant circumstance has occurred which has partially sidetracked these plans—the announcement by the Philadelphia and Reading Corporation of their intentions to establish a refining industry in the area that will use some of the material in these banks.

However, experimental work to ascertain the species of trees, grasses and shrubs that are best adapted to culm bank planting is continuing. The Soil Conservation Service, Agricultural Extension are cooperating on this work, with the first trial plantings to be made in April 1960.

There is one beautification project in Mahanoy City, that can be pointed to as completed. A small park in the center of the city is now the pride of that community. It was accomplished through local effort. The Council through the Extension Service assisted this group in drawing up the plans for the park.

2. Zoning: New industries are already locating in the county and there is the possibility of a new Federal highway crossing the county. Many people when considering

these possibilities felt the need for some long-range planning and subsequent zoning.

Present plans are for an educational program to provide an opportunity for people of the local communities to learn the true story of zoning, both its advantages and disadvantages. This is an attempt to get the right information disseminated before many false rumors become prevalent.

3. Youth: Many people expressed in the survey that they felt that many rural youth were only aware of farming as an occupation in the field of agriculture. In September of 1959 a new youth program called "Town and Country Business Club" was inaugurated. The program has four State objectives:

1. Provide a greater understanding of business as it operates in the marketing field through firms associated with agriculture.

2. Help in exploring the career opportunities in business closely related to farming so that capable farm youth remain in agribusiness careers.

3. Give youth who will remain on the farms a better appreciation of the problems and nature of agricultural marketing.

4. Point up the needs and benefits of training and education for youth anticipating employment with agri-business firms.

Presently 38 different rural youth have attended meetings of this group. The group recently won a statewide contest and in addition had one of the members, Miss Sandra Krebs, chosen as "All-American Teenager" at a related youth power Congress in Chicago. This program also is serving as an avenue for better relationships and interchange of ideas between agriculture and business.

4. Agriculture roundtable: An attempt will be made to develop such a program so as to disseminate information of a public affairs nature to as many rural residents as possible.

In addition to the above-mentioned activities the various agencies involved, soil conservation service, extension service, department of forest and waters, farm and home administration, agricultural habilitation and conservation committee, office of employment security, local chambers of commerce, and others are continuing their own respective programs of aids and assistance to the people of Schuylkill County.

Mr. Speaker, the rural development program, I am convinced, will grow into a major national effort to build stability and prosperity into our fine rural communities.

At this time I would like to include the text of President Eisenhower's Executive Order 10847 setting up the Committee for Rural Development Program on a formal basis to provide leadership and uniform policy guidance to the several Federal departments and agencies responsible for rural development program functions and related activities so that they may take more effective and concerted actions in carrying out those functions and activities and cooperate more effectively with non-Federal participants, both private and governmental, in the program.

The White House, in releasing the Executive order, had the following to say:

Members of the Committee include the Under Secretary of Agriculture, Chairman; the Under Secretary of the Interior; the Under Secretary of Commerce; the Under Secretary of Labor; the Under Secretary of Health, Education, and Welfare, the Administrator of the Small Business Administration and a member of the Council of Economic

Advisers designated by the Chairman of the Council.

The rural development program was initiated in 1955 as a cooperative effort of the Federal, State, and local governments, including the participation of private individuals and agencies, to develop the human resources in rural America with particular emphasis on improving the conditions of the numerous low-income families, both farm and non-farm, living in rural areas. In a special message to the Congress, April 27, 1955, the President directed attention to the problems of low-income rural families and presented recommendations for a concerted program developed in a study and report prepared by the Department of Agriculture.

Operating through State committees and centering in selected pilot counties, the rural development program includes specific activities, such as improving incomes from farming, providing more efficient farm marketing, promoting off-farm work, balancing agriculture with industry, evaluating rural manpower assets, increasing opportunities through vocational training, attaining better health, and improving basic education.

Today's Executive Order makes formal organization arrangements for the Federal Committee for Rural Development Program which has been functioning informally since the program was initiated. The seven-man Committee will direct its activities toward providing leadership and uniform policy guidance to the several Federal departments and agencies responsible for rural development program functions and related activities so that they may take more effective and concerted actions in carrying out those functions and activities and cooperate more effectively with non-Federal participants, both private and governmental, in the program.

Under the Executive order, the Committee is instructed to continue particular emphasis on effective public and private cooperation and leadership for rural development at the State and local levels.

EXECUTIVE ORDER ESTABLISHING THE COMMITTEE FOR RURAL DEVELOPMENT PROGRAM

Whereas a substantial number of families, both farm and non-farm, living in rural areas have relatively low cash incomes and do not share equitably in the economic and social progress of the Nation, and it is desirable to encourage and assist such families by providing greater opportunity for their participation in the Nation's production of goods and services and in community, civic, and other affairs; and

Whereas the Federal Government, in cooperation with the several States and local governments and private agencies and individuals, has undertaken a rural-development program designed to develop the human resources in rural America by a series of concerted actions to identify the needs of low-income rural people and to help them to achieve greater rewards for their contributions to our national progress; and

Whereas the rural-development program has achieved steady progress toward its objectives, and the time has now come to consolidate its accomplishments and to provide more formal Federal organization for the program: Now, therefore, by virtue of the authority vested in me as President of the United States, it is hereby ordered as follows:

SECTION 1. (a) There is hereby established the Committee for Rural Development Program, hereinafter referred to as the Committee, which shall be composed of the following members:

- (1) The Under Secretary of Agriculture, who shall be the Chairman of the Committee.
- (2) The Under Secretary of the Interior.
- (3) The Under Secretary of Commerce.
- (4) The Under Secretary of Labor.

(5) The Under Secretary of Health, Education, and Welfare.

(6) The Administrator of the Small Business Administration.

(7) A member of the Council of Economic Advisers designated by the Chairman of the Council.

(b) To assure effective functioning of the Committee and uninterrupted participation of each department and agency represented on the Committee, the head of each such department or agency shall designate an appropriate officer or employee of his department or agency as an alternate member to participate in the affairs of the Committee whenever the member may be absent or otherwise unable to participate.

(c) The Committee may request the head of any other Federal department or agency to designate a representative to participate in the affairs of the Committee as desirable in furthering the work of the rural-development program and related activities.

SEC. 2. The activities of the Committee shall be directed toward providing leadership and uniform policy guidance to the several Federal departments and agencies responsible for rural-development program functions and related activities so that they may take more effective and concerted actions in carrying out those functions and activities and cooperate more effectively with non-Federal participants, both private and governmental, in the program.

SEC. 3. In conducting its activities, the Committee shall place particular emphasis on effective public and private cooperation and leadership for rural development at the State and local levels, and to that end shall provide guidance for the conduct of Federal rural-development program functions and related activities in a manner designed to produce maximum State, local, and private participation and initiative in identifying and meeting local needs.

SEC. 4. Each department and agency responsible for functions and activities that can contribute to the objectives of the rural-development program and related activities shall carry those functions and activities forward in such a manner as to make the fullest possible contribution to the objectives of rural development.

SEC. 5. The departments and agencies represented on the Committee shall, as may be necessary for the purpose of effectuating the provisions of this order, furnish assistance to the Committee in consonance with section 214 of the act of May 3, 1945, 59 Stat. 134 (31 U.S.C. 691). Such assistance may include the detailing of employees to the Committee, one of whom may serve as its executive secretary, to perform such functions consistent with the purpose of this order as the Committee may assign to them.

DWIGHT D. EISENHOWER.

The WHITE HOUSE, October 12, 1959.

Our Monetary System: How Proposals for Congressional Investigation Have Been Defeated

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. OLIVER. Mr. Speaker, on four previous occasions I have called attention to a series of articles published by the Texas Observer on the operations of our monetary system. These articles pointed to many questionable prac-

tices and policies, as well as to questionable organizational aspects of the system.

In truth, every social organization and every Federal agency should have a thoroughgoing congressional review at more frequent intervals than the Federal Reserve System has been reviewed. Actually, the last real investigation of this Nation's monetary system was made about a half century ago with the famous Aldrich Committee.

There have, of course, been recent proposals in Congress for a thoroughgoing investigation and study. One of these has been sparked by our colleague from Texas [Mr. PATMAN]. In truth, resolutions introduced by the gentleman from Texas came to the floor of the House for a vote in 1955 and again in 1957. These resolutions were not adopted. The final in a series of articles published by the Texas Observer sets out a most interesting history of these resolutions and how they were defeated.

An additional word about this series of articles: As I said when I called attention to the first of the series—on March 21—the Texas Observer is a most unusual newspaper. It is to be highly congratulated for bringing to the public's attention the issues on this extremely important subject. I know of no other newspaper which has done so.

Following this, the final of the series of articles, is included in part, a summarizing editorial from the Texas Observer on this subject.

The following article and editorial appeared in the Texas Observer of February 5, 1960:

BANK PROBE ASKED, KILLED

AUSTIN.—PATMAN first proposed an investigation into the Nation's money and debt systems in 1955. The Republicans made a party issue of the matter and defeated the resolution with the help of some Democrats. Only 1 of the 203 Republicans in the House voted to investigate.

In 1957, PATMAN tried again. Speaker RAYBURN stepped down to pay tribute to PATMAN and asked the House, "Why should not the great House Committee on Banking and Currency be given the authority to make this study?" The House vote "no," 225 to 174. Only 2 Republicans voted to investigate; only 38 Democrats opposed investigating.

Last year PATMAN contented himself with putting his arguments in the RECORD. "This administration has mobilized all of its forces to prevent an investigation," he said.

Federal Reserve Chairman William McChesney Martin refused, PATMAN said, to let him inspect certain crucial parts of the System's internal audits. "These," PATMAN said, "are the portions of the reports dealing with the conduct of the officers and directors of the banks, their financial interests and, if any, their speculations in the bond and securities markets. Nevertheless, those portions of the audit reports dealing with more routine operations of the banks and with the conduct of the lower echelon personnel revealed some almost unbelievably shocking things."

Scouring through the Federal Reserve's audits of its own banks, PATMAN alleged extensive waste and some fraud. Out of taxpayers' money, he said the banks have developed welfare programs, subsidized cafeterias, and "amusement, entertainment of all kinds, and banquets. They pay for gifts to people who are not even employees of the

bank; they send employees to school and pay for their training."

His indictment of the Federal Reserve on the basis of the audits he had examined ran to 30 legal, single-spaced, typed pages. His point was simple: an investigation was justified.

"The last time there was a full investigation and study of our monetary system," he said, "the Federal Reserve System was set up. Nearly half a century has passed since that investigation was made . . . new types of financial institutions have come into being. Other types which then handled only unimportant amounts of savings and investments now handle gigantic sums. Many of these, such as the insurance companies, the investment trusts, and the savings banks appear to have close working relationships in and among themselves, and with the commercial banks and the investment bankers. Just what are their interconnections?"

In 1935, he said, the Congress put the five bankers' representatives on the open market committee, which "has all the resources of the Federal Government—all of the gold at Fort Knox—at its disposal and discretion." It trades in secret with a portfolio of \$25 billion in Government securities to the tune of about \$10 billion a year with a small group of private dealers and speculators. Trading with foreign central banks totals \$5 billion and is also secret.

The trading, PATMAN said, "runs to fantastic amounts," and is "under the counter." There were only 17 dealers in 1956; the 10 biggest ones account for 88 percent of the trading. Since the trading is considered secret, there is no way the Congress or citizens can find out what a few men are doing with the Government's securities.

"The biggest dealers," PATMAN declared in his August 27, 1959, newsletter, "are the top New York and Chicago banks, and these banks help finance the other dealers. . . . Five of the largest New York banks jointly own the biggest 'dealer'."

He called the secret trading in Government securities "Wall Street in action" and said that it helps speculators make huge profits. In the first half of 1958, he said, amateur investors lost \$500 million, "but one man's loss is another man's gain—the 'professionals' cleaned up."

"The open market committee of the Federal Reserve has more power over our economy than Congress has," he said. Now and then, "we should investigate what they have done. But there has never been an investigation of the Federal Reserve Banking System or of its open market committee. It has handled hundreds of billions of dollars of our printed money, and yet we have had no audit."

"Why not investigate?" PATMAN asked. "What objection can there be to making the facts known?"

TEN BILLION DOLLARS "FOR FREE"

PATMAN's theories led him inevitably to his charges of a \$10-billion theft in the year 1958.

That year the Federal Reserve decided to increase the money supply by \$10.5 billion. PATMAN has explained that if this is accomplished by the purchase of Government securities, the money supply is expanded but the interest returns to the Treasury. If the "reserve requirements" of the banks are changed to let them create the money, they get all the interest on it.

In November, 1957, the banks had a total of \$57 billion in Government securities. As part of its antirecession program, the Federal Reserve, on three different occasions, made available more reserves to the banks—that is, gave them the power to create more money, ostensibly to increase loans and thus increase business activity. The new reserves came to a total of \$1.5 billion, which let the

banking system create new money up to \$14.5 billion.

"The official reason" for giving these reserves, PATMAN said, was "to help the banks meet business needs for credit. Actually, there was no expansion of business loans during the year, but rather a reduction of \$1.5 billion. The money which the banks created was, as I have indicated, substantially all used to acquire interest-bearing obligations of the United States."

The \$10.4 billion thus given the banks, PATMAN said, was a great deal more money than the cost to the Government of all the farm price-support programs in the whole quarter of a century such programs have been in effect.

The banks, he said, will be able to collect between \$300 and \$400 million annually on the bonds they were in effect given, "without any additional investment, not a penny."

Federal Reserve Chairman Martin testified, PATMAN said, that the Federal Reserve made available enough money in 1958 for the banks to extend credit amounting to about \$10.5 billion. "Mr. Martin did not know himself," PATMAN said, that the banks did not use the money to extend credit, but instead bought Government bonds with it.

PATMAN charged that 2 or 3 percent of the banks received about \$7 billion worth of bonds. Eighteen New York City banks got \$2.3 billion worth.

Last year PATMAN also rose to warn the Congress that he believed a friendly-looking little bill was going to give the Federal Reserve permission to give the private banks about \$15 billion worth of Government bonds which the Government had already paid off but had not yet cancelled. He quoted Alvin Hansen, a Harvard professor, warning that most of the "windfall," which Hansen estimated at \$9.8 billion, would go to the major banks.

Managers of the challenged bill assured the Congress it would not be used to give the bonds away, and it passed. PATMAN regarded the assurance as a victory.

"IT'S YOUR MONEY"

The fight, though, which has taken up most of PATMAN's time has been rising interest rates. He has unrelentingly opposed the administration's demand that Congress repeal the 42-year-old 4 1/4 percent interest rate ceiling on long-term Government bonds. He reasons that the bankers will not buy bonds at the present rate simply because they expect the rate to go up; if the Government would announce it will not raise the rate, the bankers would buy at the going rate.

Robert Anderson, Secretary of the Treasury and another Texan, argues that the Government cannot control interest rates. All the long-term ceiling is doing, he says, is forcing money into the short-term bonds market.

PATMAN argues that Government creates the interest rates by its massive influences on the money market.

High interest is a leading political issue this year, and defenders of high interest are taking to the press. For instance, UPI's financial editor on January 29 quoted "the money experts" to the effect that high interest rates "benefit many more people than they hurt." Who?

"The American Bankers Association," said UPI, "lists the beneficiaries of high interest rates as the 87 million owners of savings accounts in banks, the 23 million owners of shares of savings and loan associations, the approximately 40 million persons who own U.S. savings bonds, and the 112 million who own life insurance."

PATMAN's—and the Democrats'—argument takes two directions. High interest, they argue, causes economic contraction as businessmen draw in and invest less. As PATMAN says:

"The farmers are in a depression. They have been suffering from a situation largely

caused by tight money since 1951 The home builders are in distress and, more important than that, the people who want to build homes are unable to get the money with which to build these homes because of the hard-money-high-interest policy. This will eventually cause a shortage in housing units and an increase in rents. So we have these groups: Small business, farmers, and home builders, who are really in distress"

The second argument is that high interest falls hardest on consumers, homeowners, and taxpayers.

"When the Federal, State, or local government issues bonds to build highways, schools, and other facilities and pays a 4-percent rate, the cost of the facility to the taxpayers is doubled if the money is borrowed for 17 1/2 years," PATMAN has said. "When a family buys a home and pays 5 1/2-percent interest, the cost of the home is doubled in only 13 years."

In 1959, he says, farm income ran about \$12 billion while personal income from interest ran \$22 billion. "Naturally, wealthy people like the administration's high interest policy."

In his newsletter this week—dated February 4—WRIGHT PATMAN carried on his feud with the bankers. "It's your money they're after," he began. He quoted Gov. Pat Brown of California, "that a rise of 1 percent on an FHA home mortgage of \$15,000 means a whole year's income of the average home buyer. In other words, it means 1 whole year of a man's productive life will go to pay increased interest just to buy a home, and it's probable that he will devote 1 or 2 more years of his productive life to pay the added toll on autos, TV sets, and other durables, to say nothing of higher grocery bills."

Just how higher grocery bills crept into the picture, one cannot be sure; but one can be sure PATMAN will go on flaying the moneyed interests until he dies.

REFORMS GET SUPPORT

Though PATMAN did not get the House investigation of banking he wanted, an investigation was authorized by the Joint Economic Committee of the Congress into employment, growth, and price levels. On January 27 this year the reports were in, Senator PAUL DOUGLAS reporting for the Senate side, PATMAN reporting for the House members of the committee. Controlled by the Democrats, the committee's report gave an idea of PATMAN's influence on his party.

The committee agreed that the Federal Reserve has been decreasing the money supply in relation to the gross national product and that price increases have flowed more from the decisions of economic giants than from an excess of money in circulation. Interest rates are too high, the committee reported. The Federal Reserve should institute competitive bidding in the Government-securities market. The Treasury should depend on its own staff instead of on financial groups in deciding interest rates and securities issues. To create new money, the Federal Reserve should buy Government securities, not reduce reserve requirements.

PATMAN disagreed with some of the report—mainly where he did not think it went far enough. He advocated abolition of the open market committee and a maximum interest charge program by the Federal Reserve. He wanted the trading in Government securities distributed around the country instead of concentrated with 17 New York dealers. The Government securities market itself should be placed under Government supervision, he said. Bank reserves should be, not merely held steady as the committee recommended, they should be increased. PATMAN said, for merely holding steady "will not return to the Government the tens of billions of dollars in Government securities which the Federal Reserve has given away

since 1951 as a part of its program of reducing required reserves."

Over on the Senate side, Senator DOUGLAS, the Illinois Democrat, was presenting the same report.

"I have played my part in trying to help the banks prosper," said DOUGLAS. "I am ready to let them have five-sixths or six-sevenths of the gain to be made through the expansion of credit and money."

"I am not advocating that the Federal Government should take all of this (the new money). My good friend, Representative PATMAN, points to the fact that the Constitution gives to the Congress the power 'to coin money, and to regulate the value thereof.' Those are the exact words. The coining of money carries with it the creation of money. The creation of money is a public function which we have delegated to the Federal Reserve Board, which in turn has delegated to the banks."

"I am not proposing to disturbing that relationship," DOUGLAS said. "Let me make that clear. I am not proposing 'green-backism,' or 'credit-backism,' though I think Representative PATMAN has a case for which his critics have not given him due credit. I am simply proposing that at least we do not lower the existing reserve ratios, and that from future increases the Treasury and the people should get from one-sixth to one-seventh of the money assets and collect the interest for delegating this constitutional power to the private banking system. Is that not moderate? I am not even proposing that the reserve ratio be increased. I am simply saying, 'Hold steady. Do not lower it still further.'"

DOUGLAS seemed to mean that he was asking for less than it was reasonable to ask for in the public interest. Finally he said this as plainly as he could, without undercutting his own position:

"Let the banks expand credit by \$80 billion—I am simply proposing that we should allow the banks to have \$67 billion of that expansion instead of the full \$80 billion. All I am asking is that the people receive \$13 billion."

"My friend, Representative PATMAN, would want to have the people get more than that. I do not think he should be denounced for that. On the contrary, I think he is a pretty brave man. In many ways I admire the position he takes. But I am not advocating that."

PATMAN does not often express his disillusion with his own party on the subject of money policy, but last summer he let it slip into his column. "Control of money" has been the basic difference between the two parties since Andrew Jackson's first term, he said, "Yet, somehow, the historic difference between the two parties seems suddenly to have disappeared."

"There is hardly a murmur of protest from any Democrat," he said. The administration asks for a new interest ceiling. "No protest." "The old J. P. Morgan & Co. merged with the second biggest Wall Street bank—an event which must have Democrats of old standing up in their graves—but today there is little notice of it; all the committees of Congress are too busy even to investigate and the Justice Department refuses."

"All the Republican money policies," PATMAN said, "are being accepted with hardly any dissent, except a very few feeble voices including my own."—R.D.

MONEY AND BANKING

While reserving judgment until there has been full investigation and debate, no careful reader of Congressman WRIGHT PATMAN's thoughts on money and banking can fail to be alarmed by the possibility that the public are being stolen blind by the bankers.

The Federal Reserve System, Representative PATMAN avers, has become the tool of the bankers. The vital open market committee of 12 members is set up, by law, so that private bankers designate 5 of the mem-

bers. Billions of Government securities are traded behind the public's back by this bankers' committee, acting for the Government.

Mr. PATMAN takes a straightforward approach to the Government's debt financing. The source of the strength of the money system is the Government's credit; the Constitution specifies that Congress has the power to issue money; why in the world doesn't the Government issue its own credit, instead of (1) creating debt bonds, (2) giving the bonds to the banks, and (3) paying the banks interest on the Government's own credit. Unless this cycle of reasoning can be broken, it is essentially true that the Government gave the private bankers \$10 billions in 1958.

The bankers are now inundating the public with propaganda in defense of high interest. It is obvious to students of modern American economics that high interest inhibits investment, home buildings, and consumption—thus brakes economic activity—thus slows down economic growth. The bankers clean up; the economy stalls out. Russia's economy is growing now at 7 percent a year; we grow 2 percent a year. This trend, too, Mr. PATMAN and other classic monetary liberals fight valiantly, and without success.

The people do not entirely realize—though many dimly guess it, and many believe it as a matter of basic suspicion—that the election of the Republicans to run the country means the bankers run it, and plain people, small businessmen, consumers, homeowners, are drained or buying power as a direct result.

WRIGHT PATMAN represents the best in the Democratic Party's heritage on this issue. Let us hope the national Democrats, too, are smart enough, and bold enough, to take up money and banking as an issue of the first importance in their Los Angeles convention and carry to the people the fight for fair interest and an investigation of the Federal Reserve System.

Outrageous Meddling

EXTENSION OF REMARKS

OF

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include the following editorial which appeared in the Dothan Eagle on March 24, 1960:

OUTRAGEOUS MEDDLING

Here, as they came off the same wire on the same day, are three significant dispatches:

"JOHANNESBURG, SOUTH AFRICA.—Police today readied their guns in fear of new race riots after a day of terror in which they killed 62 Africans and wounded 208 demonstrating against South Africa's white supremacy policy."

"WASHINGTON.—The United States condemned Tuesday violent measures used by police in South Africa against Negro mobs protesting South African white supremacy laws. The action, an admitted intervention in the domestic affairs of another country, seemed certain to be strongly resented by the South African government."

"WASHINGTON.—The State Department is reported preparing another apology to the Fidel Castro government because of an unauthorized flight Monday of a private plane from Florida to Cuba."

Cuba is the country, about 90 miles from the U.S. mainland, where upwards of 500 Cubans were executed by the Castro Government during the first 3 months following his successful revolution. The files show no official condemnation by the U.S. Government but bulge with condemnation of the U.S. Government by the Castro government.

Obviously, our State Department is pulling boners in series now. This meddling with the domestic affairs of South Africa is the third in recent weeks. First, there was the bowing to Uruguayan protests concerning the scheduled execution of Caryl Chessman in California. At State Department request, Gov. Pat Brown granted a reprieve (the eighth) although this was strictly a California matter. The intervention didn't bring the desired results, either, as Uruguayans demonstrated during President Eisenhower's visit anyway and had to be subdued by police using tear gas.

Next the State Department interfered in a traffic case in an Oakland, Calif., police court in which a grandson of Nationalist China's President Chiang Kai-shek was involved. The grandson was charged with doing 80 miles an hour in a 65-mile-an-hour zone. The first judge to try him found him guilty despite State Department warning that a conviction would have international repercussions. At State Department urging the case was transferred to another city court where the second judge handed down a conviction after saying he was subjected to the same pressures. The grandson's attorney said all the time that he was guilty as charged.

Now the State Department has sent a message to the Union of South Africa, with whom we have always had cordial relations and no trouble, saying: "The United States deplores violence in all its forms and hopes that the African people of South Africa will be able to obtain redress for legitimate grievances by peaceful means. While the United States as a matter of practice does not ordinarily comment on the internal affairs of governments with which it enjoys normal relations, it cannot help but regret the tragic loss of life resulting from the measures taken against the demonstrators in South Africa."

Such a message is inexcusable arrogance, failure to mind our own business and inconceivable presumptuousness. Even the generally objective AP chronicled it as an "extraordinary action." That is an understatement. Much stronger words could and should apply to this outrageous intervention.

Of course, people regret terrible things happening to other people. But such is the business of the government and the people involved. At this distance it is impossible for us to appraise the events and the reasons therefor. But we are not the judge anyway. That country is an independent nation with a right to run its own affairs and a right to enforce its laws. It is not for us to meddle.

This sort of interference in South Africa's internal affairs may be good politics for politicians in the United States but if we persist in such outrageous performances we will be setting ourselves up as judge of all governments and handling their internal affairs as a self-appointed international court.

Our State Department is in need of a new Secretary or tighter controls over underlings, plus persuasive evidence that it has acquired sounder judgment and a greater grasp of responsibility. If, from the Secretary on down, the personnel has forgotten what the word "diplomacy" means it had better learn and apply that knowledge to the everyday run of business.

The present pace has carried this country from indiscretion to error and now to colossal blunder. What next?

Why Keep Living With TB?

EXTENSION OF REMARKS

OF

HON. JOSEPH M. MONTOYA

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. MONTOYA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New Mexican under date of March 16, 1960, which editorial I think reflects much common-sense with regard to the tuberculosis problem in this country. I think it is well worth reading by all of our colleagues:

WHY KEEP LIVING WITH TB?

"If the opportunity to end tuberculosis is not seized now it may be lost indefinitely. Medications that are effective today must be applied broadly before the tubercle bacillus develops resistance to these drugs. Otherwise, in a susceptible population, the disease may rise again to a point which defies control." That quotation is from the February issue of Public Health Reports, published by the U.S. Department of Health, Education, and Welfare.

It is part of a report on a national meeting of authorities on tuberculosis control—a meeting which stressed that drugs and treatment techniques are now available to wipe out tuberculosis in the United States. The authorities also stressed that the program to stamp out this terrible disease should be pushed without delay before the opportunity is lost.

If the medical experts are right—and there seems no reason to doubt them—it is within our power to eliminate a disease which has been the scourge of New Mexico for countless generations. But we would be willing to bet our bottom dollar that the required effort is not expended.

Instead the proposed program will receive a moderate amount of lip service, an endless array of sensible-sounding excuses will be expressed by those in authority here and there, and New Mexico will go right on having a tragically high rate of tuberculosis.

The excuses will be valid, as they always have been in the past. There isn't enough money, the money available is needed for a variety of other programs, there is a difference of opinion between this board and that one, and not enough nurses here, and an unhappy county medical society there.

We hope all those unfortunates who receive the ghastly news this year and next year, and the year after that, that tuberculosis bacteria are destroying their lungs will find comfort in the excuses.

There are TB patients sweating it out in State hospitals today who wouldn't be there except for the buck-passing and foot-dragging of 2 years ago which nullified plans for effective use of tuberculosis drugs on a broad scale. We hope they can be happy in the thought that the delay in providing drugs for the person who infected them saved the State some money and prevented possible hard feelings between the various authorities.

New Mexico should be at an end of its patience with tuberculosis and with the halfhearted attitude toward it. On an average 600 to 700 new cases of this old-fashioned preventable disease have been reported in this State for the past several years. That's a lot of death, pain, divided families and ruined lives and is definitely something to be taken seriously.

Yet an odd lethargy seems to exist all down the line concerning tuberculosis. At the national level, the administration chopped its budget for Federal aid to States for TB control 25 percent this year. At the other end of the scale, students in county schools haven't been tested for tuberculosis since 3 years ago.

We would like to see a nationwide crash program to find every TB carrier, assure treatment for every one, and check this scourge once and for all. We have little hope for that happening. But short of a national effort, New Mexico could at least take care of its own.

Senator Talmadge on "Meet the Press"

EXTENSION OF REMARKS

OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1960

Mr. STENNIS. Mr. President, one of the most sincere, and able Senators in this body, the junior Senator from Georgia, recently—March 6, 1960—appeared on the NBC network's "Meet the Press." On this program, with his characteristic logic and convincing reasoning, he presented many of the key reasons why the pending civil rights legislation should be defeated.

In a subsequent column—March 15, 1960—the distinguished journalist, David Lawrence, commented on this program, the scant attention paid to it by the northern press, and then quoted liberally from Senator TALMADGE's presentation—made extemporaneously in answer to searching, and sometimes hostile, questions of members of the panel. As Mr. Lawrence said, he did a "masterful job."

For the benefit of Senators who did not have an opportunity to hear the program, and for the general public, I ask unanimous consent that the text of "Meet the Press" for March 6, 1960, be printed in the Appendix of the RECORD.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

THE NATIONAL BROADCASTING CO. PRESENTS—
MEET THE PRESS

(Produced by Lawrence E. Spivak—Guest: Senator HERMAN E. TALMADGE, Democrat, of Georgia)

ANNOUNCER. Now "Meet the Press," produced by Lawrence E. Spivak. Remember that the questions asked by the members of the panel do not necessarily reflect their point of view; it is their way of getting the story for you.

Mr. BROOKS. Welcome again to "Meet the Press." Our guest today is Senator HERMAN TALMADGE, of Georgia, one of the leaders in the battle by southern Democrats against civil rights legislation. Tomorrow the Senate begins the second week of its record-breaking debate after 6 days of day and night speechmaking. There is only a faint prospect of a compromise. Senator TALMADGE held the floor last night as the Senate recessed after 82 hours of continuous session. His own speeches this week total more than 6 hours. In 1959 Senator TALMADGE took an active part in the southerner's

battle to preserve the Senate tradition of unlimited debate. He began his career in politics by managing the governorship campaigns of his father, the late Eugene Talmadge. He himself served for 6 years as Governor before his election to the Senate in 1956. He is an attorney and a businessman, but he prefers to be known as a farmer. He owns two large farms in Georgia.

Mr. MCCORMICK. Senator, what will be the result of this great debate? Don't you think the southerners will have to accept some legislation, at least on voting rights for example?

Senator TALMADGE. I don't think anyone can foretell what the ultimate conclusion will be at the present time. I would say that there are adequate laws already on the statute books, both State and Federal, to guarantee the right of any citizen to vote, provided he is legally qualified in accordance with his State laws.

Mr. MCCORMICK. Do you think the longer and more strenuously the South fights this harsher the legislation will be when it finally comes and the more outbreaks of disturbances you will have in your own part of the country?

Senator TALMADGE. I would hope, of course, that the Congress of the United States would not follow the efforts of some to enforce the second reconstruction on the South. I am very happy that in my own State we have had no outbreaks of violence of any kind. I hope that that situation continues.

Mrs. MCCLENDON. You say we don't need any more laws to protect the civil rights of Negroes in the South. Then, what can people like yourself, who don't believe in persecuting Negroes, do to insure that the people in your own State don't keep Negroes from voting, like the people in Alabama kept the Tuskegee professors from voting?

Senator TALMADGE. I would say in answer to your question that here are 17 pages of Federal laws that guarantee every citizen in America the right to vote. There are three different remedies. In my own State we have approximately 175,000 to 185,000 Negroes who are registered and who do vote. They have elected officials within my State. Frequently they are the balance of power in mayors' races and local races of all kinds. The Negroes in Georgia do vote in very substantial numbers. In some counties in Georgia we have a greater percentage of Negroes registered than we have of the white population. In three counties in Georgia we have more Negroes registered and voting than there are white people. So that is wholly misinformation that you have received.

Mrs. MCCLENDON. Yes, but there are other areas where you have it gerrymandered so there are just a few Negroes, or if there are more Negroes, they don't get credit for their votes.

Senator TALMADGE. We have no gerrymandering anywhere within my State.

Mrs. MCCLENDON. Don't you think you should conduct a campaign to get the people to get out the Negro vote?

Senator TALMADGE. The junior chamber of commerce in my State usually has an annual project to urge all citizens to register and get out the vote. All citizens who are qualified have been encouraged to vote. We can't help it if some citizens don't exercise that right. My colleague, Senator RUSSELL, inserted in the RECORD this past week a statement by the leader of the National Association for the Advancement of Colored People in Cleveland, Ohio, which stated that only 25 percent of the Negroes in Cleveland were registered and that of that 25 or 26 percent only about 25 or 26 percent of them voted. We have a much higher percentage than that who are registered in Georgia and a far higher percentage vote in Georgia.

Mr. VAN DER LINDEN. We have always considered Tennessee and Texas to be Southern

States, and yet we find that the Tennessee Senators, KEFAUVER and GORE, and those from Texas, LYNDON JOHNSON and YARBOROUGH, are giving you no help in your southern filibuster against the civil rights bill. Could you tell us why that is?

Senator TALMADGE. I wouldn't presume to suggest what other Members of the U.S. Senate ought to do. Sometimes it is difficult to determine my own course of action, and certainly every Senator is entitled to vote and to follow his ideas as he sees fit in the Senate.

Mr. VAN DER LINDEN. Speaking of LYNDON JOHNSON, there are some reports that he is losing some of his southern support for the presidential nomination because he is working for a civil rights bill. Do you think he has really been hurt or does he still have a chance for the nomination?

Senator TALMADGE. I have been so busily engaged in fighting this iniquitous, obnoxious, and unconstitutional proposed legislation that I haven't had any time whatever to think of presidential candidates a long time in the future.

Mr. VAN DER LINDEN. Could you think of one for yourself, Senator? Suppose there is a movement in the South as we hear there will be, to have independent electors in some of the States, including Georgia. Could you be drafted to be that candidate?

Senator TALMADGE. I certainly am not a candidate for President or any other national office except the U.S. Senate. I am a realist. I have no illusions about my being elected President or to a lesser office nationally at the present time. I hope I can continue to serve responsibly in the U.S. Senate.

Mr. WILSON. You have undertaken to make it appear here that Negroes are not denied the right to vote in the South, citing your own State of Georgia. The Civil Rights Commission has come to an entirely different conclusion—made an original recommendation on the basis of which some of the legislation now is proposed. Was the Civil Rights Commission completely wrong? Didn't they get the right information on the situation in the South?

Senator TALMADGE. We don't live in a Utopia. I would suggest that our law is not enforced 100 percent everywhere. The Civil Rights Commission did point out that there are several hundred thousand Puerto Ricans who are disenfranchised in New York State because they cannot speak or write the English language.

Mr. WILSON. What has that to do with Negroes voting in the South?

Senator TALMADGE. You were using the Civil Rights Commission as a final authority in this situation. I wanted to say some of the other things that they reported also. Now, the Senators from New York admit that that situation is true, but they say that they have qualification laws there, and I think New York State ought to have its own qualification laws. We have the same type laws in Georgia and in other Southern States. We have literacy qualifications. The Civil Rights Commission proposed a constitutional amendment that would even permit people who were lunatics and idiots and imbeciles and convicted felons to vote. I don't consider that very authoritative evidence when they make such a recommendation.

Mr. WILSON. You might not consider it authoritative, but wouldn't you have to agree that the overwhelming majority in the U.S. Senate today wishes a new civil rights bill—wishes the 1957 act to be strengthened? Would you agree?

Senator TALMADGE. I would say that in this presidential election year when we elect a President, when we elect a Vice President, and one-third of the Members of the Senate and all of the Congressmen and a great many Governors and statehouse officials, a

large number of politicians do pander to the self-interest vote of the National Association for the Advancement of Colored People, and they would like to vote for virtually any legislation that contains the label or the slogan "Civil Rights," regardless of its nature.

Mr. WILSON. Yes, but there was no presidential election in 1957 when the act which is now proposed to be strengthened was originally passed.

Senator TALMADGE. Of course, they anticipate elections. They are ready to appeal to that vote at any time, but they are particularly anxious to appeal to it in a presidential election year.

Mr. WILSON. You just want to go against the overwhelming majority of the Senate, is that your feeling?

Senator TALMADGE. As long as I am a Member of the U.S. Senate I am going to uphold the Constitution of the United States of America. I am going to represent my State and my Nation as I best see fit. And I know that this illegal, obnoxious legislation is not in the best interests, to grant authority to a centralized government in Washington and take it away from the people on the local level.

Mr. WILSON. Let me ask you another question on that particular point: You say this is obnoxious. A large majority of the Senate you admit does not think it is obnoxious. How long do you think that large majority is going to permit what some people call a spectacle to continue?

Senator TALMADGE. I don't consider it a spectacle. As long as I am physically able to continue, I am going to do so, and I can assure you that there are a great many Members of the U.S. Senate who feel likewise. One hundred years following the War Between the States is no time to reenact reconstruction legislation in a much more heinous form than Thaddeus Stevens ever dreamed of himself.

Mr. WILSON. Yet, the Attorney General, the majority of the Senate, a large body of the opinion in this country, do not agree that this is Reconstruction legislation.

Senator TALMADGE. I did not come to the U.S. Senate to practice conformity. I came here to represent my constituents and my country, and I intend to do so.

Mr. WILSON. Nobody is asking you to practice conformity. All people are asking for, as I understand it—and let me ask you this in the form of a question—is an opportunity to vote on the issue. That is all that is being asked for in the Senate?

Senator TALMADGE. There has never been any good legislation defeated by unlimited debate. On the contrary, many, many vicious bills have been defeated by the use of that strategy. During the War Between the States they tried to suspend the writ of habeas corpus. Unlimited debate defeated it in the U.S. Senate.

Mr. WILSON. You do not think it is going to defeat this bill, though, do you?

Senator TALMADGE. I do not presume to guess what it might do. I can tell you as long as I can fight it, I am going to do so.

Mr. BROOKS. Senator, I wonder if we could return to Mr. van der Linden's question about Senator JOHNSON and his presidential ambitions. If the southerners turn thumbs down on JOHNSON for President as a result of his activity in this fight, who might be their candidate?

Senator TALMADGE. I would not presume to know. I have no personal candidate. I do not think my own State delegation has made any choice. I think any thinking in that regard at the present time would be premature.

Mr. BROOKS. Any of the presently avowed candidates, are they softer on the question of civil rights than JOHNSON?

Senator TALMADGE. No. All of the presently avowed candidates for the Democratic

presidential nomination support proposals along the lines now pending before the U.S. Senate.

Mr. BROOKS. Should there be a move to cut off debate and that move should be supported by Senator JOHNSON, do you think that might further lose strength for his presidential candidacy?

Senator TALMADGE. I wouldn't want to anticipate "if" questions. Right now our problem is fighting this legislation, and right now it requires 24 hours of our time, and certainly we can't take time out to wonder about a presidential candidate July 11.

Mr. BROOKS. Some of your colleagues have expressed alarm over the physical strain of this thing. How are you bearing up?

Senator TALMADGE. Pretty well. Of course, it is a great torture to be put on the grill 24 hours a day, 6 days a week, but fortunately my health is good, and I have been holding up very well under the strain.

Mr. BROOKS. How long do you think you can keep going?

Senator TALMADGE. I think I can keep going indefinitely. I found that during my service in the Navy I could work 7 days a week with about 4 hours sleep a day, and I think I can do as well in the U.S. Senate.

Mr. MCCORMICK. Senator, you compared the figures in Georgia a while ago with the figures in Cleveland. According to the Civil Rights Commission, about 75 percent of the white eligible voters are registered in your State and something around 25 percent of the nonwhite eligible voters are registered. Is that a commendable figure as it stands, do you think?

Senator TALMADGE. Of course, we have literacy qualifications in my State that apply to white and colored prospective voters alike, and no one can make someone assume the obligations and responsibilities of citizenship against their will. In some areas, our white people don't register as well as they ought to. In some areas, our colored people don't register as well as they ought to. But I hold in my hand a photostat of the Cleveland Plain Dealer of Monday, February 29, 1960, and it has a picture of Charles H. Holmes and Harold B. Williams, the officials of the National Association for the Advancement of Colored People in Cleveland, Ohio, and they say that only 26 percent of the Negroes over 21 are registered to vote and that only 26 percent of those registered actually vote. Now we do much better than that in Georgia.

Mr. MCCORMICK. According to the Civil Rights Commission, you don't do much better, but aside from that, do you think two wrongs make a right?

Senator TALMADGE. I certainly don't, but there is no way on earth that anyone can make you register and vote against your will, and I wouldn't presume to try. That is a responsibility and an obligation but no citizen can be forced or coerced to register and vote, and then not all of them have the literacy qualifications. A good many of our white people don't have them.

Mr. MCCORMICK. In that connection, 23 Georgia counties, according to the Civil Rights Commission, have a Negro registration of less than 5 percent of eligible people. Isn't that a tremendous reflection on either your State's educational system or your ability to work up a little enthusiasm for democracy among your people?

Senator TALMADGE. I would say that if it is, there are adequate remedies in our State law, and here are 17 pages of guaranteed voting rights under the Federal law. There are three different rights under the Federal law. First, any citizen who thinks that he is being illegally deprived of the vote can go into the Federal court; he can get an injunction; he can recover damages against the registrar. Second, there is a criminal law. He can be indicted; he can be convicted and sentenced to the Federal penitentiary and

And thirdly, there is the Civil Rights Act of 1957 that authorizes this group to have the Attorney General of the United States of America file a suit in the name of the United States of America as their tax-paid private lawyer to enforce their rights. If those remedies aren't sufficient, there are no laws on the face of the earth that will be.

Mr. McCORMICK. Just one more thing, Senator. I don't have to point out to you that it was in Terrell County, Ga., that the voting director, or whatever you call him, has in effect defied the Civil Rights Act of 1957 in the face of the Supreme Court decision upholding its validity. How can existing laws get around this open defiance?

Senator TALMADGE. I read his statement. I happen to know that gentleman. He is a graduate of the Harvard Law School. He stated that he would follow the Georgia voting laws, and in doing that, of course, he is performing his duty under the law.

Mrs. McCLENDON. The Long amendment this past week guaranteeing that the Dirksen substitute bill would not interfere with free speech was voted down in the Senate. I wonder if you feel that the Dirksen bill or the administration bill would cripple the liberties of all the people in the land while attempting to give civil rights to some?

Senator TALMADGE. Why, of course, it would. The very theory of civil rights, that is the present theory of bills now pending before the Congress—and I might say there are over 200 bills in the Senate alone, the last time anyone weighed them they weighed something in excess of 8 pounds; they have quit counting them now, they just weigh them—but it grants rights to one group of citizens that it denies to others. For instance, the Civil Rights Act of 1957: You can't have the Attorney General of the United States as your tax-paid lawyer, yet members of the National Association for the Advancement of Colored People can. You can't have your rights litigated by the chief law enforcement officer of the country. You can't have your defendant rights to a jury trial denied because the Attorney General filed the suit in the name of the United States, but that is what we passed in the Civil Rights Act of 1957.

Mrs. McCLENDON. Do you mean to tell me that under the Civil Rights Act of 1957 that a Negro filing a complaint, has the Attorney General to represent him and that he can do this and a defendant in that case does not have to have a jury trial?

Senator TALMADGE. You have put your finger exactly on it. His right to a jury trial is conditioned by whether the fine exceeds \$300 or the jail sentence exceeds 45 days. That is true notwithstanding the Constitution of the United States of America, guaranteeing the right of trial by jury in not one, not two, not three, but in four separate places.

Mr. VAN DER LINDEN. A moment ago I mentioned the move in about half a dozen Southern States to set up machinery whereby they could cast their votes for independent candidates for President if they didn't like the ones produced by the two major conventions. This has seemed to be so alarming to Mr. Paul Butler, the Democratic National Chairman, that he has recently issued a warning to your State and 5 others that they had better not do that because their credentials at the convention in Los Angeles would be challenged. Do you think Mr. Butler's statements like that would be acceptable to your people, or do you think maybe he ought to just quit?

Senator TALMADGE. I doubt if Mr. Butler can speak for the Democratic Party. He has rendered a great disservice to the party already. The party would be much better off if he resigned. It is the duty of the chairman of any political party to try to keep down breaches within the party, to try

to heal wounds, and assuage injured feelings, but Mr. Butler has made war on one section of the party. My judgment is he won't last long after the Democratic convention in Los Angeles, come July 11, and the quicker he leaves the party, the better off the Democratic Party will be.

Mr. VAN DER LINDEN. The first part of the Dirksen civil rights bill would make it a Federal crime to obstruct a court order, but only in these school integration cases. Do you know why the court order in only the school cases should be singled out?

Senator TALMADGE. Of course not. It makes it a crime to violate that court order, and that court order alone, when a violation of it is already subject to contempt procedure, but every other court order wouldn't be a crime. But there is one even worse than that. In the second section here, flights to avoid criminal prosecution—where they bomb a church building or a school building. Under that act, it is so discriminatory that someone who fired a five-inch firecracker in a school building in Washington, D.C., and crossed over into Virginia could be tried under the terms of that act. But if some anarchist killed every member of the Supreme Court with a bomb, every member of Congress with bombs, the President of the United States with bombs, he would be exempt. It is a ridiculous thing in the extreme. If it was made uniformly applicable, if it was made constitutional, I could vote for that, where it affects all heinous crimes, but I certainly wouldn't make it apply to a child who shoots a firecracker in a school building and exempt someone who assassinates the President of the United States.

Mr. WILSON. I haven't got it clear yet whether you think there will be any kind of a political backfire in the South this year. Will there be any third party formed? Will there be any kind of an organization to oppose the Democratic nominee in case he is one of those who seems to be a prospect at the present time?

Senator TALMADGE. I think that is premature at the present time. I sometimes wonder how long the Southern Democrats who established the Democratic Party and have nurtured it through all of its years, lean as well as good years, are going to be made the political whipping-boy, year after year, purely for political purposes. Some of these times they are going to begin to resent it, and my judgment is that it is possible this year.

Mr. WILSON. There are 18 of you in the Senate taking part in this filibuster, is that right?

Senator TALMADGE. I don't know that I can speak for any other Senator. I have made speeches at considerable length on the subject, and I am going to do so in the future. All other Senators are better qualified to speak for themselves than I am for them.

Mr. WILSON. The point that I am getting at is that you are really a pretty small minority, and you never have been able to make yourselves effective in national politics for years, not since the two-thirds rule was put through by Roosevelt and Farley, or repealed. The South hasn't been a force in national politics since then, is that right?

Senator TALMADGE. I wouldn't say that the majority is always right. The majority crucified Jesus Christ. The majority is wrong as often as it is right.

Mr. WILSON. Do you mean the majority is trying to crucify the Constitution in this case?

Senator TALMADGE. That is right. Of course, they are. They're trying to crucify the Constitution; they are trying to crucify the South; they are trying to establish a second reconstruction in the South, even more heinous in many forms than the first reconstruction.

Mr. WILSON. No provision in the Constitution for the right to vote without regard to race, creed, or color?

Senator TALMADGE. There are 17 pages of laws that I have demonstrated to this panel; this is the third time. So that is a phony issue.

Mr. WILSON. But the Civil Rights Commission says you are completely wrong Senator.

Senator TALMADGE. I don't accept the Civil Rights Commission report with the same degree of finality that I would the Ten Commandments handed down by the Lord to Moses.

Mr. BROOKS. Senator, I am afraid you are going to have to accept the finality of the program, because our time just ran out. I am sorry to interrupt. Thank you very much, Senator TALMADGE, for being with us.

Speech by Lt. Gov. Garland T. Byrd

EXTENSION OF REMARKS

OF

HON. E. L. FORRESTER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. FORRESTER. Mr. Speaker, Hon. Garland T. Byrd, Lieutenant Governor of Georgia, delivered an address to the Georgia Vocational Association on March 18, 1960, in Atlanta, that is worthy of the attention of everyone interested in vocational education.

Lieutenant Governor Byrd is an outstanding young man, and is dedicated to sound education. I am proud to claim Lieutenant Governor Byrd as a constituent of the great district I have the pleasure to represent in Congress. His address is inspiring and yet so practical that it deserves a place in a CONGRESSIONAL RECORD.

The address is as follows:

SPEECH BY LT. GOV. GARLAND T. BYRD, AT ANNUAL BREAKFAST OF GEORGIA VOCATIONAL ASSOCIATION, MARCH 18, 1960, AT DINKLER PLAZA HOTEL, ATLANTA

Mr. Ginn, Dr. Hubbard, Mr. Martin, members of the Georgia Vocational Association, and guests, I am grateful for the very generous and kind introduction by Mr. Martin.

I am also grateful—extremely grateful—that you permitted me to address this annual meeting of Georgia's vocational teachers.

It is a high honor, to be asked to be your speaker.

But, I appreciate even more the opportunity which you have given me, to be here with you, and to talk about a matter in which I am intensely interested, and have been, for many, many years.

Right at the beginning, please let me say this:

To you, who are engaged in the field of vocational education, I pledge my full, complete, and unqualified support, in striving to reach your goal of excellence in vocational education.

I offer you my personal support and assistance, and I also assure you that in my capacity as Lieutenant Governor, and President of the Senate, I shall give you my official support.

To me, as a private citizen, and as a State official, there is nothing more important than preparing our young people adequately, so that they may achieve to the fullest the opportunities which are before them.

We all know that we are living in a progressive State. Each year, our expanding economy sets new records.

In industry and manufacturing—in trade and commerce—in service and in government—and in agriculture—we are moving ever forward, growing and expanding, achieving new heights.

And, my friends, we have just started. We have only begun.

In many areas of economic advancement, we lead the Nation in rate of gain.

But, we are not satisfied. We can't afford to be complacent. We know that there are still many areas in which we are lagging. We know we can't stop. And, we shall not stop, or even slow down.

Please permit me a few personal remarks at this point.

I said that from a personal standpoint, I appreciate immensely the opportunity to be with you.

I grew up in a school teacher family, living on the farm.

My mother was a school teacher, and so was my wife.

I had vocational agriculture courses in high school.

So I think I should be entitled to claim to know something of what I am talking about, when I speak of vocational education.

Since my entry into the world of business, and, more recently, into public office, I have had the opportunity to learn a great deal more about vocational education.

My approach, in these most recent years, has been much broader—I assure you—than it was back when I was in high school.

Then, I only looked to see how what I could learn would benefit me and my family.

Today, my concern is for each and every Georgian—young people, and, yes, adults, too—for vocational education, certainly, is not limited to young people.

COMMITTEES

I have had the opportunity, in the past year, to work with two committees of the general assembly, which have made searching, thorough, factual studies involving education and our economic development.

One of these committees was a joint study group, composed of the education committees of the senate and house.

Under the leadership of Senator Wallace Jernigan and Representative Battle Hall, the two chairmen, this committee prepared one of the most significant reports yet to come from any legislative group.

The committee's assignment was to look to see if we were adequately preparing our young people—in high schools—to take their proper and rightful place in our economy.

This committee found that there is indeed, a pressing need for expansion of vocational education. It recommended an expansion in our facilities, particularly the establishment of area vocational schools, throughout the State.

The other committee, which also prepared a noteworthy and significant report, was the government operations committee of the senate.

The government operations committee last summer began a study to determine if the State government could provide additional help in our industrial and economic development.

This study is still going on.

But, in its initial survey and investigation, the committee found that one of the most important ways in which the State government could aid economic development would be by the better training of young people for new jobs in the new business and industries which are coming.

Let me just mention this:

Georgia has not shared in this Nation's two newest industries: electronics and space missiles.

Why?

Well, one reason is that we do not have an adequate number of adequately trained people for jobs in plants which are producing these new, scientific products.

Right there is one of the most urgent needs.

We've got to look toward training our young people to fill jobs in this new age of nuclear energy and space.

No longer can we say such an age is in the future.

It is here, at this moment.

Our Nation is producing fantastic devices and machines, which just a few years ago we thought were only the product of the imagination of comic strip authors.

I'm sure you all can remember—I can—when you'd run outside and look if you heard an airplane flying over.

Not long ago, I flew three-fourths of the way across our continent in a jetplane, in a matter of four hours.

You don't have to fight traffic on the South expressway any more, to get from downtown Atlanta to the airport, to board your jet plane for New York or Europe or the Orient.

You can catch a helicopter taxi, downtown, and be there in five minutes.

Now, back when you and I were in high school, who'd have imagined you could watch a world Series game, being played out in California, in full color, on a gadget called a television set, right in your own living room?

And, listen, my friends—while I am still amazed that I can get to Denver in four hours by jetplane—it gives pause for some serious and sober thought—when you realize it doesn't take that long for a missile fired from Soviet Russia to reach Washington, D.C., or Atlanta, Ga.

STATISTICS

Now, the fact that I speak of imperative needs before us does not carry any implication whatsoever that I am critical of what we have already done.

Not at all.

Rather, when we review the record of accomplishment in vocational education in Georgia, we should be proud.

And, we should be encouraged, for, we know, when we examine what we have already done, that no challenge is too great.

We can anticipate the future, with confidence, for we know already our record of achievement.

So let me talk a few minutes about what we already have done in vocational education.

Even though all of you are closely connected with vocational education, you still may not be completely up to date.

Let me quote the figures.

In Georgia, at the present, there are a total of 75,700 persons enrolled in vocational agriculture courses. Of these, 48,000 are adults, and 27,700 are high school students.

In business education, there are 85,100 enrolled; 9,500 are adults—and listen—75,500 are high school students.

In distributive education, there are 7,400 enrolled; 6,500 are adults, and 900 high school students.

In homemaking, there are 74,000 enrolled—20,300 adults—and 53,800 are high school students—and, I think we should note that those in the homemaking courses are girls.

In industrial arts, there are 13,100 enrolled—all high school students. There are no classes for adults, at present.

In trade and industrial education, the total is 25,500 including 21,500 adults and 3,600 high school students.

Altogether, there are 280,400 class enrollments in vocational education—and 174,600 are high school students—105,800 adults.

I think I should point out that the term "adults" also includes a great many young people. All who are past high school are included in this group. A great many vet-

erans are enrolled in vocational classes. In fact, the veterans educational program has contributed greatly to the development and expansion of our vocational program in Georgia.

We now have more than 1,700 full-time vocational teachers in Georgia, and also some 500 part-time teachers.

We have two State owned and operated trade and vocational schools. One at Clarksville and another in Americus.

In addition, there are many locally operated vocational schools throughout the State.

Recently, the State board of education approved 22 sites as locations for area vocational-technical schools. The State has provided matching funds to supplement local funds for construction of six of these schools. These will be in Rome, Augusta, Columbus, and Albany.

It is imperative that we establish the other 16 schools as quickly as possible.

CHANGES

I mentioned, a moment ago, our urgent need for trained people to take jobs in the newest scientific and technical fields.

That's not the only need.

The economy of our State has changed tremendously in the past 20 years.

The number of farms in our State has been decreasing at the rate of some 4,000 a year. Forty years ago, there were more than 300,000 farms in Georgia. Today, there are only 160,000, a decrease of 50 percent.

In the past 10 years, 115 Georgia counties have lost population.

People are moving from the farms to the cities.

Today, more than 50 percent of all Georgians live within city limits. Another 30 percent earn their living in town.

Our farms are more scientific, more highly mechanized.

Modern machines, modern fertilizers, modern methods, mean fewer hands are needed to produce a crop.

But, although there have been these changes, the farmer still is caught in a cruel squeeze, is in a depression.

The farmer gets less for his products, while the cost of production is ever increasing.

The farmer today has to be a combination mechanic, chemist, laborer—and businessman.

He must sell his products on a highly competitive market.

He's got to know something about packaging and processing, freezing and canning, distribution and marketing. He's got to be a good bookkeeper—he has to keep up with tax records of all sorts—and pay those taxes.

Now, agriculture is by no means a decadent industry, in Georgia.

The people who live in the cities have to be fed and clothed.

We must train farmers not only in the latest scientific farming techniques, but also in machine maintenance and in farm management. Because there are fewer farmers, each must be more proficient to produce the food and fiber needed.

Let's take a look at some other fields of vocational training.

The high cost of living has made homemaking even more of a business, these days. Our girls have to be well trained in home management—we must have wise consumers. And, too, that high cost of living has made it necessary for many women to work to supplement the family income, so they also need to have a vocation.

We need to train more people in the field of distribution. No matter how well we are producing farm products and industrial goods, if we have a poor system of distribution to the consumer, we cannot maintain a sound economy.

We've got to train additional people for business, and equip them with knowledge and skills in use of the new business ma-

chines and methods. Electric and electronic devices are becoming commonplace.

We've got to step up our training in the skilled trades and in training of technicians, to meet the demands of our industry and manufacturing. We need machinists, tool and die designers, electronic technicians, and so on.

It's not unusual for a new industry, moving to Georgia, to provide some of its own personnel, to help train skilled help so the plant can operate.

Whatever the field—business, industry, agriculture, distributing, home management—vocational education plays a most vital role in our total advancement and development.

Vocational teachers must meet the challenge for excellence.

If we are to train our young people, the teachers themselves must be trained.

You, as teachers, must continue to study, to keep up to date.

You teachers need to improve yourselves, professionally, and this you can do through active participation in your own Georgia Vocational Association.

You not only have to educate students, you also need to educate—to inform—the public on what you are teaching, and its value to the local community.

You, as teachers, must produce the best students possible, to meet your community's demand for excellence in your work force.

NEEDS

Yes, there are many needs.

Today, industry and manufacturing employ more people, than any other occupation in Georgia. Commerce and service comes next.

Then government, then agriculture.

And, even though we have a changed economy, and our standard of living has increased, our per capita income still is below the national average.

We've got to balance our economy, in Georgia, diversify, even more.

We need the right kind of industry in the right place, throughout the State. We need more smaller plants and factories, in the rural areas, to provide employment for those who can no longer earn a living on the farm.

We have to expand our high school vocational program, especially in the fields of trades and industry, industrial arts, distributive education, and office training—if we are to have enough people for the increasing number of jobs.

We must have expanded facilities in colleges, to provide the training for vocational teachers and personnel, who will do the teaching. If we are to teach more students, obviously we must have more teachers. If we are to teach technical and advanced courses, obviously we must have teachers who are trained in these fields.

Every community in Georgia should survey its own situation. Each city and town should take a close, searching look, to determine if it is providing the right kind of training, to aid its own local economy.

And, we need more adult training, in all fields, to upgrade adults in their present jobs, to aid them to move ahead.

CONCLUSION

I commend you, and I congratulate you, upon your selection of a theme for this meeting:

Excellence: The vocational image of the sixties.

As we enter this new decade, indeed, we should look to the future.

Look backward, yes, but only in order that we may survey and appraise.

Look backward, yes, to determine areas in which we may have failed, or may not accomplish all which we should.

Look backward, or look at the present, but, only so that we may see what we must do in the future.

Excellence, yes, let that be our theme, not only for this meeting, but for the sixties, and the decades to follow.

Let us have such an excellent program of vocational education that every Georgian is better prepared—that the youth who is in school today may be trained and educated, in order that he or she may take a more worthwhile, a more productive, a more significant role in life.

On the farm or in the city; in the home or in the business office; in the retail store or in the manufacturing plant; let our goal be excellence.

Our Future Is Dependent Upon a Stabilized Dollar

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. JENSEN. Mr. Speaker, if ever there was a time in the history of our country when economy in Government must be practiced it is now, more so than ever before. This was brought forcibly to the attention of the full House Appropriations Committee on January 20 last, when our Secretary of the Treasury, Robert B. Anderson, and our Budget Director, Maurice Stans, testified before our committee, during which time the following exchange, in part, transpired between Secretary Anderson and me:

Secretary ANDERSON. If the total world should lose confidence in the United States and withdraw gold for that purpose, then we would have an exceedingly serious situation with which to deal. Our obligation, in my judgment, is to be sure that we so conduct ourselves and our country that this does not arise. I think that we do have, as I say, the confidence of other countries, but I believe also that other countries are going to have us under much more critical examination than they have in the past because they are in the position of saying, "How well are you running my stake in your affairs?"

From the standpoint of our being the world's banker and also from the standpoint of how solidly do we maintain the reserve characteristics of our money, that is.

The important thing I would like to point out is that this is rather a new thing for the American economic mind to assimilate. We have gotten into this kind of a position and yet our position and the position of the free world is exceedingly important in relationship to it. We can maintain that confidence if we, from the standpoint of the Government, pursue policies which will lead others to believe that we are going to maintain the purchasing power of our currency and not allow it to erode away.

Mr. JENSEN. Is not the best way to keep the confidence not only of the foreign financiers and foreign nations but also the American people in the stability of the American dollar to spend frugally for Government business?

Secretary ANDERSON. That is part of it; yes.

Mr. JENSEN. It is a big part of it; is it not?

Secretary ANDERSON. Yes.

Mr. JENSEN. Of course it is.

Now, that being a fact, great responsibility rests upon the shoulders of the Director of the Budget and on the Secretary of the Treasury, but an even greater responsibility rests upon the shoulders of Congressmen, and more especially on the shoulders of the

members of this committee, the Appropriations Committee of the House of Representatives, where all appropriations are supposed to originate. That being a fact, it now becomes a national "must," to a greater degree than ever before in the history of America, that we not only defeat any attempts to increase the President's budget, but that we reduce it substantially in order to make sure confidence will be maintained in the stability of the American dollar. If such confidence is not maintained then all is lost. We will have rank inflation and we will lose the confidence of our friends across the seas and we will have chaos on top of chaos in America.

The best example of what takes place in the minds of the American people was exemplified last year when shortly after the opening of the Congress our liberal colleagues introduced many bills which provided for appropriating many, many billions of dollars over and above our regular budget.

The American people spoke out. They flooded their representatives in Congress, and when I say "Congress" I mean the other body also, with demands that expenditures be reduced to a minimum and that all waste and unnecessary expenditures be eliminated. The effect was that the Congress did it because the American people demanded that they do exactly what they had to do in order to keep the American dollar stable.

Mr. Speaker, by so doing the American people proved again that they are the masters of their own destiny.

I have today introduced the following bill which is a companion bill to the one recently introduced in the Senate by Senators BRIDGES, CURTIS, BYRD of Virginia, and COTTON:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"ARTICLE —

"SECTION 1. On or before the fifteenth day after the beginning of each regular session of the Congress, the President shall transmit to the Congress a budget which shall set forth his estimate of the receipts of the Government, other than trust funds, during the ensuing fiscal year under the laws then existing and his recommendations with respect to expenditures to be made from funds other than trust funds during such ensuing fiscal year, which shall include an amount not less than \$500,000,000 for reduction of the public debt and which shall not exceed such estimate of the receipts. The President in transmitting such budget may recommend measures for raising additional revenue and his recommendations for the expenditure of such additional revenue. If the Congress shall authorize expenditures to be made during such ensuing fiscal year in excess of such estimate of the receipts, it shall not adjourn for more than three days at a time until such action has been taken as may be necessary to balance the budget for such ensuing fiscal year, nor shall it take any such adjournment without having provided for reduction of the public debt during such fiscal year by at least \$500,000,000. In case of war or other grave national emergency, if the President shall so recommend, the Congress by a vote of three-fourths of all the Members of each House may suspend the foregoing provisions for balancing the budget and for reduction of the public debt for periods, either successive or otherwise, not exceeding one year each.

"SEC. 2. This article shall take effect on the first day of the calendar year next following the ratification of this article.

"SEC. 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission to the States by the Congress."

Now, Mr. Speaker, and my esteemed colleagues in the Congress, after you have read Secretary Anderson's statement I am sure you will understand how urgent it is that we do all in our power to reduce Federal expenditures to the bare necessities now and that we also pass this bill during this session of Congress.

I only wish space in the CONGRESSIONAL RECORD would permit the inclusion of the entire hearing held with Secretary Anderson and Director Stans, a copy of which I have sent to every banker and a number of other interested people in the Seventh Iowa District upon request.

That hearing, entitled "The Budget for 1961" and available at the House Committee on Appropriations, contains only 135 pages. It should be read by every American who is concerned about the future of our blessed land.

Curtailment of Mail Service

EXTENSION OF REMARKS OF

HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. BURDICK. Mr. Speaker, in many points in North Dakota, star route truck mail service has been proposed by the Post Office Department. The people of North Dakota are objecting strenuously to this curtailment in mail service.

The following editorial which appeared in a recent edition of the Wishek (N. Dak.) Star points out the objection to these proposals:

We don't like the sound of proposed star route mail service truck from Hazleton to Wishek.

Towns all along would be affected, as well as us. Here's what we see in our crystal ball.

The Post Office proposes it in the name of economy. The railroad is not too interested in keeping it since then they can eliminate daily service and run trains twice or three times a week and save money.

But who suffers? The general public, you and I. In storms we fail to get our mail because the plows won't go out until it quits blowing. So they use this to implement the railroad service, using both for a time—but it's only a move to stall until railroad mail is out altogether. This is history in other areas.

The Wishek Association of Commerce has gone on record as opposing this proposed change. It would be well if both businessmen and private citizen alike also protest to their Congressmen. This is a political year and they'll be more likely to act.

Both private citizen and businessmen will suffer curtailed service eventually, as we see

it. We see little improvement in service since we already have excellent mail service in and out of Wishek.

Write your Congressman—give him your side and the people's interest in this matter will be protected.

Otherwise it will not. It's up to us.

Washington Report

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of March 26, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

MARCH 26, 1960.

The social security law, due as usual for election-year changes, is before the Ways and Means Committee in executive session. The Forand bill (medical care for OASI recipients) has taken the spotlight, it is true, but other broadening extensions and increased costs will come up, too. Perhaps it is timely, therefore, to raise questions concerning the basic concept of the social security program. Implicit in such questions is the realization that basic fallacies or flaws could destroy the program, despite the well-intentioned hopes of its advocates. After all, many citizens depend on social security income totally or in part for their financial security.

Questions which suggest themselves concern: (1) Compulsion: There is no freedom of choice. Both the cost in OASI taxes and popular reliance on the program preclude individuals taking out private insurance or investing to provide their future income. However, there is no assured return of money, as there is with investment programs. If, in later years, outside income beyond a modest limit is earned, all social security payments must be forfeited by some. (2) The program at best is questionable as to actuarial soundness—as to whether enough tax money will continue to come in to pay the required benefits. Why? (a) The program assumes a continually high and/or rising income to our people. Declining income is not considered a possibility. (b) Another assumption is that there will be an increasing number of new entrants into the program to keep picking up the tab for the older people as recipients of benefit payments. Also, to whatever extent future population growth rate may decrease and longevity increase, our "average age" is getting older and the program more costly. (c) Higher and higher taxes must be levied continually to cover the increasing cost; (present 6 percent tax already slated to rise to 9 percent, presuming no further benefits are added). (3) The program is based on politics and Government paternalism, rather than sound economics. (Note the bi-annual changes—every election year.) At any time it can be changed as to taxes, benefits, or coverage; or it can be voted out.

Senator GOLDWATER, in a Dallas speech, presented a challenging view of our foreign affairs. In too-brief condensation, he said: (1) We must win any war, cold war included. (2) Our strategy must be to assume the offensive—to pick the places of engagement, the times, and the weapons. (3) We

must always strive for military superiority. (4) We must keep America strong economically in freedom. (5) We must always act strong. We want respect first, after which friendship will follow. (6) Foreign aid dispensed in enlightened self-interest, to gain our objectives. (7) We must declare world communism an outlaw movement and deny recognition to Russia. (8) We should encourage captive nations to revolt against communism. (9) We should encourage friendly nations to regain their homelands, as China. (10) We must always be prepared to risk war rather than further appeasement. It is all-out war against enslavement, or peace with freedom. There is no middle ground. The Russians want to destroy our will to resist so we will fall like a ripe plum.

Our defense capability provides some interesting figures. Here are some facts. We now have: (1) Over 1,500 SAC bombers (mobile nuclear missile launching platforms). (2) Over 1,000 jet B-47's. (3) Several hundred jet 52's. (4) 15 carriers with 50 planes each. (5) Hundreds of tactical bombers throughout Europe and the Far East. As for missiles: Between now and 1963, we will have 130 Atlas 6,000-mile-range missiles, 140 Titans for a total of 270 long-range missiles on hardened missile pads; (2) 128 Polaris missiles with range capability (aboard a nuclear-powered sub) of an ICBM; (3) 120 medium-range missiles, Jupiter and Thor, based in range of key Soviet targets. Minimum total of all these missiles is 518, any one of which is capable of destroying an entire Russian city. In contrast, by 1963 Russia is expected to have 300 long-range missiles capable of hitting U.S. targets.

The civil rights debate in the House has ended and the bill passed. Now it goes to the Senate for adoption and/or change. Amendments offered by southern members in the House were all defeated finally, as though southern sponsorship were enough to kill any change suggested. Some defeats included moves to: (1) Limit Federal court appointment of referees to elections involving Federal officials; (2) add a qualification that referees be learned in State and Federal election laws; (3) Delete provision for ex parte hearing of applicants by voting referees; (4) Retain State control over State election records.

The most unreasonable defeat to the southerners was the rejection of a "freedom of speech" amendment which would remove the words "or by any threatening letter or communication" from the bill. Here we are admittedly legislating in a field where Congress "shall pass no law." True, this is a controversy over word definition, even legal grammar (anyone know the difference between "attempts" and "willfully endeavors"?), but the emotional civil rights debate is a dangerous atmosphere for argument. Just one unresolved doubt as to jeopardizing free speech is dangerous. Amendments ruled out of order included: (1) Poll tax abolition; and (2) extending penalties for obstructing court orders to cover all areas, not just school desegregation.

The Byelorussian Story: A Spirit That Cannot Die

EXTENSION OF REMARKS OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. IRWIN. Mr. Speaker, March 25 was the anniversary of that momentous

day in 1918 when a nation enslaved for centuries proclaimed independence for its people and established the Byelorussian Democratic Republic.

Centuries of suppression by czarist Russia had failed, it was clear on that day, to plunder the ethnic and national ideals of those people. The new imperialistic regime of the Russian Communists, relentlessly trod over the Byelorussians just 3 years later, and once again subjugated them to dictatorial suppression.

What has taken place since then illustrates to the world that the Byelorussian hope of liberty and independence, whetted 42 years ago for just a brief span, is undying. Soviet Russia has been unable with its dictatorial forces and subtle propaganda to rob Byelorussia of its ideologies, language, culture, and hope for freedom.

In saluting this dauntless people today, we express hope that the time will not be long in coming when they will again enjoy the freedom which is their national destiny.

Ydigoras Governs on the Run

EXTENSION OF REMARKS OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1960

Mr. SIKES. Mr. Speaker, I have noted an excellent article on Guatemala's dynamic President Miguel Ydigoras which I feel should be called to the attention of the House. This article appeared in the Washington Daily News of March 24, 1960, written by Virginia Prewett. It follows:

YDIGORAS GOVERNS ON THE RUN
(By Virginia Prewett)

GUATEMALA CITY.—Guatemala's President Miguel Ydigoras Fuentes, actively pushing Central Americanism to answer communism's thrusts from Cuba, has a technique of government newer than Castro's.

Premier Castro, young, disorganized, rabble-rouses by television. President Ydigoras, mature, experienced, travels by motorcade to Guatemala's remote corners weekly, while directly capital affairs by two-way radio.

SHUNS SHOW

On these trips, Guatemala's president shatters precedent and protocol in taking government to a people long ignored by capital cliques playing bloodstained games with national power. Pointedly, Sr. Ydigoras refuses to occupy the opulent bullet-scarred presidential palace built by dictator Jorge Ubico.

Members of his cabinet usually accompany the "mobile government." President Ydigoras even summons foreign ambassadors to present their credentials in backland towns.

In Guatemala City, 5,000 people may constitute a party which will influence the country's 4 million. General Ydigoras' tours are politically activating a large inert provincial middle-class and peasantry lying between the numerous compactly-organized Guatemala City parties and the very large self-sufficient Indian population that plays no active role in national affairs.

Nowadays President Ydigoras is credited with wizardry for the strength he has developed in this sector. But inquiry reveals he was already known throughout Guatemala.

BASQUE

As a roadbuilding Army engineer, Miguel Ydigoras Fuentes became a general and cabinet minister under Dictator Ubico. Of Basque descent, humanitarian, tireless and nonconforming, he formed such wide provincial friendships that even Ubico came to fear him.

When the dictatorship disintegrated, he was one of the generals who guaranteed elections. Leftish President Juan Jose Arevalo won, and promptly sent him as ambassador to London, a polite form of exile.

General Ydigoras was exiled in fact during the Red-infiltrated Arbenz regime. After Arbenz' overthrow, he became President Carlos Castillo Armas' ambassador to Colombia.

As president, he invited all but the top leaders of exiled leftists to come home, though it meant political struggle. In his first 2 years he gambled on his country support—distributing land, building schools and roads—and he won. Today he is drawing more and more moderate liberals and moderate conservatives into his following from the capital's fragmented parties.

President Ydigoras' administration is characterized by political wisdom and courage. It takes both nowadays for a Central American leader to support the United States openly while allowing the extremes of right and left to agitate freely against him.

Just What's Going on in the Federal Power Commission

EXTENSION OF REMARKS OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1960

Mr. HECHLER. Mr. Speaker, another cavity is becoming visible in the hound's tooth.

The revelation over the weekend that the Federal Power Commission has reversed its position and may give a \$15,660,000 plum to a gas transmission firm after personal calls from an attorney who was not even the lawyer of record in the case is shocking indeed.

I believe that the events and disclosures of the past few days are the strongest possible arguments for the passage of my resolution, House Resolution 474, which directs the Interstate and Foreign Commerce Committee to conduct immediate inquiry into the affairs, procedures, and policies of the FPC.

Or, if the Commerce Committee is already too overburdened with investigatory hearings to schedule the needed investigation at once, may I suggest that it be directed to the Government Operations Committee, and that this committee be empowered to conduct a full-dress investigation.

An investigation is needed, and it is needed now.

We cannot help but be disturbed by the facts that the Federal Power Commission has, in effect, set the stage for a whopping 7-percent return for the firm

represented by these visits from this lawyer, and that the same attorney's connection with the firm is so nebulous that the FPC itself could not allow his employer to pass his \$60,000 fee in another case on to the consumer.

I hardly need point out that utility stockholders are singularly free of the risks which characterize the operations of other, more competitive corporations. In view of this fact, it is really incredible that a 7-percent return could be justified by a Federal regulatory agency.

But this is just what the FPC—after secret visits from a lawyer mysteriously associated with the case—appears to be agreeing to do.

Mr. Speaker, I do not need to tell you who winds up the ultimate loser in this hopeless confusion of overlapping, temporary—and often unjust—rate increases. It is the public.

The public deserves protection from 7-percent earnings by any public utility. The public deserves absolute assurance that regulatory bodies are not being influenced by cloak-and-dagger phone calls and visits.

Most of all the public deserves a Federal Power Commission whose primary purpose is to protect and defend their interests, not the interests of the gas producers and transmission companies.

Twentieth Anniversary of Massacre of the Katyn

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an appeal from the Anti-Communist Confederation of Polish Freedom Fighters in the U.S.A. of Salem, Mass., which warrants the serious consideration of every Member of the Congress:

AN APPEAL MADE ON THE 20TH ANNIVERSARY OF THE TERRIBLE MASSACRE OF THE KATYN

The long forgotten event of the massacre at Katyn again revives as a warning to the free nations on its 20th anniversary. This occasion is a reminder of the moment when the Communists with cruelty tortured the innocent officers of Poland making them victims of Communistic oppression.

Katyn—a word piercing one with horror, calling forth revenge from on high on those who so unmercifully tortured and murdered 11,000 Polish officers in the forest of Katyn. This action calls upon the conscience of the people of the entire world for a just tribunal and sentence upon those who fulfilled the command of the Ribbentrop-Molotov Pact.

Today when the break between the East and West is being felt, a moment when the world is being divided into two enemy camps, and when during these days we commemorate the 20th anniversary of this cruel action, that a feeling of sympathy and warning reminds the world again of the unmerciful and man slaughter committed by the Nero of the 20th century, who under

the name of Khrushchev prepares for the world nothing else but enslavement.

It was in the spring of 1940, that the Communists have put to death 11,000 officers, the most faithful sons of Poland, thus committing a brutal massive murder. This premeditated plan was carried out by the Communists in order to deprive the Polish Nation of its most faithful sons, trying to bring upon Poland a complete ruin.

If today, we are in thought returning to this crucial moment and sending forth an appeal to the highest political authorities in this country, it is for no other reason but to remind and warn against the grave danger of communism.

What befell Poland 20 years ago, tomorrow may endanger America if it does not enter upon a path of strength and action. We must put aside all patient waiting and expectation of a better tomorrow, and break all relationship and contact with communism, with its lies, perversities, unfaithfulness and fraudulence.

The West, and among them America should not fear Russia but from the present political-military defensive change to a determined offensive. A long relation and hope in a better tomorrow brings about a feeling of drowsiness and neglect in the vigilance of the democratic powers. This feeling and expectation does not help the enslaved nations but on the other hand makes the situation worse. The Soviets of today are not afraid of the military strength of the West but they fear the democratic ideology and its advanced cultural and economic status.

America is not permitted to believe in Soviet tales of a simultaneous coexistence because the bloody communistic scoundrels dream only of it to benefit and freely dispute with the enslaved nations, thus showing the West what they are capable of doing. America must not believe in their disarmament proposals for the Communists have never been more oppressive, aggressive, more active and unstable than they are today. We cannot think in terms of peace with the Communists, until they return to the enslaved nations behind the Iron Curtain the long-desired freedom and until these so-called Communists are ready to undo the damage they have inflicted bringing restitution for their injustices. The men of the West on the other hand should be alert while shaking the bloody hand of Khrushchev and smiling to the aggressive communistic ruler.

America, guarding the greatest good which is the peace of the world, must also take under consideration the good of the other nations, especially their freedom. Freedom for all nations must be our goal. During this conference of appeasement we must remain unfaithful to our suffering brethren.

When a few years ago, in the Congress of the United States a motion was made in regard to Katyn and a hearing of facts demanded, unveiling the terrible massacre of 11,000 Polish officers, the people were terrified and many Americans were greatly disturbed and sympathetic. Today the mere idea of the tragedy that befell the Polish Nation simply stupefies and terrifies the people. The thought of it is nothing more than a remorse of conscience which the Americans are trying to deaden within themselves. But it is this fact of forgetting that we are not capable of doing.

At present more than ever we must think of our enslaved brethren. We must support them with our good will, prayer and protests. In this way, we will enable the suffering nations to hold high the torch of freedom, which must not die out. Thus helping them to bear patiently the pain and torture of the loss of freedom.

We cherish our freedom and believe that a nation loving its freedom cannot die or

perish. We also believe that the will to live cannot be destroyed by oppression and aggression but all rulers of this oppressive regime will sooner or later perish and peace and freedom will again triumph.

For years, we witness one young country after another obtaining their independence, such is the feeling of the oppressed always yearning and looking forward to the day when their goal, namely, freedom, shall be obtained. This feeling is reenacted from all countries beginning with the European nations and extending to the bamboo nations of the Far East. The day will certainly come and perhaps sooner than we realize. Let us hope that when it really dawns, the great America will be an active member of this action. It is to you, honorables, men of America, its leaders and rulers that we appeal in the name of the enslaved nations. Our anticommunistic organization, the Confederation of Polish Freedom Fighters in U.S.A., on this 20th anniversary appeals to you. Let not our voice be futile in its appeal but let it sound like a bell calling forth for the freedom of the enslaved nations.

Twenty years ago in the Katyn Forests the bloody hand of communism destroyed and murdered the flowery youth of the Polish Army. There was performed a tragedy not only for Poland but for many more nations of the world. For here the destructive communistic machinery put a stop to the birth of a United Nations. The Polish soldiers and officers murdered in the forests of Katyn were acknowledged by the world as heroes of the Polish nation and of the entire free world.

They were the first executed hostages of the captive nations.

Therefore we the people of Poland demand today not only the punishment of those found guilty of the murder but in the first place we demand that a break be made with all conferences to be held with Khrushchev and communism.

America has been and should continue to be a defender and guardian of peace not only within its bounds, but mainly the peace and freedom of the enslaved nations.

JOSEF MLOT-MROZ,
President.
JOSEF PAZDZIORYNY,
Vice President.

Multiple-Use of Our National Forests

EXTENSION OF REMARKS OF

HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1960

Mr. CHENOWETH. Mr. Speaker, I include in my remarks an editorial from the Monte Vista (Colo.) Journal, on the importance of giving statutory recognition to the multiple-use objectives of our national forests. I am sure each Member of the House will enjoy reading this fine editorial on the multiple-use management of our national forests. The editorial follows:

WE MUST KEEP OUR FORESTS INTACT

This week in Washington a subcommittee of the House is holding hearings on a bill that would spell out statutory recognition of the multiple-use objectives of the national forests. With the growing value of national forest resources, their accelerated use and increased accessibility, pressure for

single use of specific national forest areas are growing tremendously.

H.R. 10465, along with several companion bills introduced by Members of Congress, would authorize and direct that our national forests be managed under principles of multiple use and to produce a sustained yield of products and services, and for other purposes. Passage of the measure will simply mean that our national forests shall be administered for outdoor recreation, range, timber, watershed and wildlife and fish purposes by the Forest Service.

It is no secret that the Department of Interior's National Park Service has cast loving eyes on some choice areas of our national forests. They want these areas for single purpose management—recreation. Special or single purpose management of our national forests is a luxury the people of this nation can ill afford in the face of increasing needs.

Our national forests now possess the inherent capability to produce trees for lumber and wood fiber, forage for livestock and wildlife, suitable environments for outdoor recreation, water for domestic and irrigation use and minerals for industry. Today there is insufficient national forest land in the United States to meet current demand for these products should they be administered on a single purpose basis. And at our population growth trend the demand on our forests will probably increase tenfold in the next decade.

Natural resources on the national forests are intermingled. Frequently several resources overlap on an individual acre. A specific area of land may grow trees, grass, and shrubs, producing many opportunities for many different kinds of use. Space upon which to grow renewable resources is limited and will continue to shrink. So it stands to reason that every acre must be made to contribute somewhere near its optimum capability. This means that all uses and resources must share the land to the fullest extent possible.

Multiple-use management as practiced by the Forest Service contemplates several different kinds of uses, sharing the land together in combination and harmony. Multiple-use plans are designed to achieve a resultant benefit to people which in total is greater than had the uses been exclusive, uncoordinated, and uncombined.

Multiple use, as a concept of land management, was first adopted by the Forest Service in 1891. As a policy it has been actively pursued and tested well over 50 years. It is only short of a miracle the policy has survived the vagaries and uncertainties of changing administrations and special interest pressures. The measure now before Congress will give this time-tested policy the stature of legislative recognition and support.

Multiple-use management, as contrasted with primary purpose of preservationist management, is a dynamic program designed to use the renewable natural resources on a sustained yield basis, not unlike farming. Forest cover promotes favorable watershed conditions which reduce floods and permit regular flow of water. Regulated timber harvest can and has increased water yield from forest lands as high as 30 percent.

Multiple use is not a passive task of supply avoiding conflicts between national forest activities and uses. It considers the challenging concept of making more uses available to the public. Properly located roads to timber sale areas open up new country to the hunter, fisherman, and camper. Access permits better harvest of excessive big game population. New camping areas are available for all.

Our national forests have long been administered under the policy of multiple use and sustained yield. Let's keep it that way.

Friedrick an Outstanding Appointment to the Board of Regents of the University of Wisconsin

EXTENSION OF REMARKS OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Monday, March 28, 1960

Mr. PROXMIRE. Mr. President, Jacob F. Friedrich, a Milwaukee labor leader, was appointed a few days ago, by Gov. Gaylord Nelson, to the board of regents of the University of Wisconsin.

Mr. Friedrich is a fine example of what is right about the American labor movement. In a lifetime of service to the working people of Milwaukee, Jake Friedrich has not only fought for honest, responsible unionism, but he has also distinguished himself in many long hours of unpaid-time work for Milwaukee's community needs, in positions of heavy importance and responsibility.

In an era in which the vast majority of union officials throughout our country are honest, conscientious, hard-working men, it is good to see this ability recognized and put to even greater public service as Governor Nelson has done in appointing Friedrich.

The tiny proportion of racketeers and crooks in organized labor catch the headlines and proper public indignation. Certainly the solid contributions of the Jake Friedrichs of organized labor deserve, and should receive, far greater recognition.

Mr. President, I ask unanimous consent that an editorial hailing the Friedrich appointment, published in the March 26 issue of the Madison (Wis.) Capital Times, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

J. F. FRIEDRICK—AN EXCELLENT CHOICE FOR BOARD OF REGENTS

Governor Nelson's appointment of Jacob F. Friedrich of Milwaukee to the university board of regents will have the hearty approval of all those interested in the welfare of the university and the future of education in this State.

"Jake" Friedrich has long been an example of outstanding labor statesmanship in Wisconsin and a man who has concerned himself throughout his adult life with the problems of education. His main interest, of course, has been in the field of labor education where he has worked for so many years with such distinction.

The university itself recognized this 5 years ago when it conferred on him an honorary doctor of laws degree—the first labor leader to be so honored in this State.

Friedrich's training in labor came in an era when labor leaders were more concerned with the broad general welfare than with the narrow ends of labor itself, as so many labor leaders are today.

His philosophy was developed in association with such labor leaders of the past as Henry Ohl, Frank Webber, Jack Handley, and the others who brought high social ideals into the Wisconsin labor movement.

Though those ideals have been weakened in more recent years, Friedrich has yielded

none of the principles with which he was inspired in his early training.

He has a long record of public spirited contributions to the progress of Milwaukee and the State and has won the respect of all those with whom he has come in contact in his many public activities.

It has been a long time since organized labor has been represented on the board of regents. Over the past 20 years the emphasis has been on big business representatives.

But Friedrich will not be a voice for labor alone. He has shown in the past that he looks beyond narrow group interests and he will continue to do so.

It would be hard to find a more worthy representative of labor. It would be equally hard to find one who will work more devotedly for the welfare of education generally.

Admiral Session's Views on Countering the Soviet Threat

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1960

Mr. HOSMER. Mr. Speaker, the current issue of the Naval Reserve Association News carries the following summary of the Soviet military threat and recommendations to counter it advanced by Rear Adm. William A. Sessions, U.S. Naval Reserve, retired:

Russia imposes the threefold threat of nuclear, general, and limited war. She has a spectacular land mass, has surrounded herself with satellite states she dominates. She has brought nuclear capability into balance, probably has excelled in missiles; has a first class air force with periphery bases for striking all European and Asiatic nations; has built a new fleet second numerically only to ours.

In case of nuclear war our defenses are massive retaliation. This presupposes a "Pearl Harbor" and if her missiles are as good as supposed our fixed bases are sitting ducks.

We would accomplish this massive retaliation by planes airborne at time of attack (they couldn't return if their bases were destroyed); land based guided missiles; movable bases—carriers; seaborne guided missiles—Polaris—which might be delivered through polar ice.

But such action is a stalemate, therefore the probabilities become general or limited war.

General war presupposes a long drawn out affair with heavy damage and loss, both civilian and military, on both sides.

With our allies we have forces (we hope) to provide uncontested landing places and to hold and inflict damage on the enemy until reinforcements arrived but large ground forces would have to be moved to combat theaters, munitioned, clothed, and fed; air and missile bases must be built, supplied, close by; we must deny the enemy access to the sealanes with fast carrier attack forces. The Navy now has 11 such carriers in commission, about one-half of World War 2 vintage with flight decks too short for modern planes—which we don't have enough of anyway.

One transport sunk can cause greater loss than major battles, with no enemy casualties to offset it; sunken ships also can ground planes. The active Navy has about 900 ships of all types; only 20 percent of our escort vessels are modern, equipped with up-to-date

detection gear; there are plenty in the mothball fleet if we can rely on the enemy using only World War II subs, which I don't think we can.

She has over 400 modern, highspeed (over 20 knots) submarines, some with guided missile capability, all with modern effective torpedoes. To combat them we have a few Hunter Killer groups of old carriers, with overage escort vessels. Finally, the threat of airborne nuclear attack at sea requires greater dispersal of our ships, which, in turn, requires more escorts around the periphery with longer submarine detection range.

Limited war hasn't and probably won't stop. For this we have four fleets ready in potential trouble spots, with marine forces well equipped with World War II weapons. They only have token amounts of the equipment their new landing force techniques require—two combination transports, helicopter, and plane close support ships converted from old carriers. After nearly 20 years' service, hulls and machinery are wearing out.

The German single chief of staff with almost unlimited power fought two wars and lost both. This concept, often proposed and always rejected, is rearing its ugly head again. All chiefs of staff select their own staffs of people who hold their own views, thus with this system we would lose the benefits of hearing all sides to the question.

We need opposition to the single chief of staff concept; modern carrier-seagoing landing field with the right planes to use it; more Polaris submarines and ships; modern antisubmarine vessels and equipment; large copters, modern equipment, modern ships for the Marine Corps.

The same issue of the NRA News also carries the following discussion of relative merits of submarine-based and land-based deterrent ballistic missiles:

The Air Force wants to keep 25 percent of SAC aircraft aloft at all times; place missiles in hardened, underground sites; put others on railroad cars; develop fully the B-70 manned bomber system.

The B-70's, with all the weaknesses of present bombers, could not get their first wing in operation until 1965 or 1966 at a cost of over \$11 billion. According to our intelligence Russia won't have the ICBM's to require keeping planes up for 2 or perhaps 3 years. That's when we should keep a portion of SAC airborne rather than waste money, wear out planes and crews now.

And why do they want the other three points? Because it's said 300 missiles could wipe out our SAC bases in 30 minutes; because they need mobility since their sites are well known. And, we add, because devastating attack on these sites would destroy untold American lives and property right here in the United States.

Let's get our deterrent retaliatory power to sea in Polaris submarines—away from the United States and our people, where it is always hidden, alert, moving, invulnerable to pretargeted attack, where attack on one would alert all others.

Two missile subs will be operational this year, nine have been authorized so far, three more are in the fiscal budget now before the Congress. A Polaris sub can fire at the rate of one a minute—each sub carries 16 missiles with a complement of about 100 officers and men. It takes 700 Air Force Personnel to man a 10-missile ICBM site—70 men per missile as against just over 6 for Polaris. And the sub's ability to evade attack obviates the necessity for hair trigger decisions on whether or not to launch our retaliatory missiles—a decision which could be wrong, yet could destroy civilization.

What is the cost of Polaris? James Elliot, writing in the Norfolk-Ledger Star, states

that the first Polaris was fired only 3 years ago and to date only \$2,742,648,000 has been appropriated for the entire program including the submarines. He further states that out of 49 shots with the Polaris, it has been successful 33 times, partly successful 14 times and unsuccessful only twice. The last 10 shots have all been without one single unsuccessful firing and the last 3 had the inertial guidance system installed and operating.

Tax Regulation

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Fairfield (Iowa) Ledger, Mar. 4, 1960]

IS THIS WHAT WE'VE BEEN ASKING FOR?

There was a time when every American could exercise his right to speak in his own behalf to his Congressman. He still has the right but limitations have been put upon him which should alert him to the fact that Government which he thought was his servant is becoming his master.

As we've abandoned our individual responsibilities and asked Government to take over we asked for what we are getting. It now becomes apparent that Government cannot do for you without doing to you.

A case in point is a recent regulation of the Internal Revenue Department that expenditures for lobbying purposes cannot be permitted as a business expense if done "for the promotion or defeat of legislation, for political campaign purposes, including the support or opposition to any candidate . . . or for carrying propaganda relating to any of the foregoing purposes."

In the past it has been a recognized right to petition Congress and it has been generally recognized that Congressmen need to know what their constituents like or don't like.

You are still free to tell them but you are not free to spend any money in doing so and charging it to business expense. The Internal Revenue Department will crack down on you under a regulation which has come to have the force of law under the mandate we've given Government to do all things for us.

If somebody wants to spend the country into bankruptcy, if somebody proposes to tax a business out of existence, if somebody proposes to outlaw a labor union the parties against whom legislation is proposed are now told they can't publish their grievances and permit the Government to pick up a part of the tab by way of deductions on tax returns.

The proponents of big Government will not be alarmed about this. For those who may be alarmed there is something they can do. They can write a letter to their Congressman asking him to support a couple of bills which will restore their right of petition without a tax penalty.

But watch it. You must pay for the postage stamp with your own money. You must not (if you are in business of any kind) pick it up from the stamps you bought for business purposes. Bib Brother on the Potomac is watching you.

If you have to go to the post office to buy the stamp you are lucky. It will give you a little time to ask yourself the question "Is this what I've been asking for?"

[From the Sioux Falls Argus-Leader, Mar. 23, 1960]

THROTTLING OPINION BY TAX REGULATION

U.S. Representative HALE BOGGS of Louisiana has asked Congress to support his bill to permit tax deduction of certain expenditures for legislative purposes, including advertising expenditures.

His bill would insert in the Internal Revenue Code on tax deductions for "ordinary and necessary" business expenses this short paragraph:

"Expenses lawfully incurred in supporting or opposing or otherwise influencing legislation in the Congress or in a State's legislature or in the legislative body of a county or other local governmental agencies or in submission of proposed legislation to the voters, shall be allowed as proper deductions from gross income."

A new regulation of the Internal Revenue Service provides that expenditures related to a business or the production of income are nonallowable for tax purposes if used for lobbying, propaganda, or advertising in connection with legislation or candidates. The Internal Revenue Service issued this regulation last December 29.

The regulation is not fair. It prevents a public utility, for instance, from presenting its side of the power question in advertisements as a deductible business expense. It tells every business that it cannot spend money to tell its side of the story at Pierre or Washington and deduct it as a business expense. It very likely may prevent tax deductions of such expenditures related to a business, or payments to a union organization or business association.

The regulation would make suspect as "propaganda" any advertisement or similar expression of views which an Internal Revenue agent may decide is in some way connected with the promotion or defeat of legislation. Why should the Internal Revenue Service or anyone else become judge and censor of opinion?

At the same time the regulation takes no cognizance of the biggest lobby in the world: the Washington bureaucracy. This bureaucracy is supported by the taxpayer's money. The Washington bureaucrats lobby their pet projects on the taxpayers' time and money. There is no Internal Revenue Service regulation holding them back.

It has always been a part of the American way to let each side have its say. To interfere with that expression of opinion by increased taxation is not in keeping with our ideals. Why interfere with a business, a labor union, or anyone else who wants to protect his own interest by lobbying or advertising?

Our country and our economic system have become great because its citizens have been able to exert influence on legislation and the conduct of affairs by the Government. If a citizen doesn't like the law or the legislators, he has the chance to change them.

There are abuses in lobbying. Too often legislators hear only one side of a story—from the side that can afford to present it. There is no lobby for the common people in Pierre or Washington. The legislators are their representatives. Our system requires that we depend upon their good judgment to look after the people, even if they aren't present at committee hearings or in the lobbies of the Capitol. It is not up to the Internal Revenue Service to attempt any changes in the lobbying system.

Legislators cannot operate in a vacuum. To say that they should be insulated from the ideas of business, labor, or anyone else undercuts the American way.

Congress should pass Representative Boggs' bill. If it does, it will take the Government's nose out of at least one place where it doesn't belong.

Sympathy for Secretary Seaton

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release and a letter which I wrote to Secretary of the Interior Fred A. Seaton on March 25, 1960. The Al Sarena mine is in my congressional district.

The March 23, 1960, meeting of Texas oil millionaire H. L. Hunt, Secretary of the Interior Seaton, House Minority Leader CHARLES HALLECK, Republican, Indiana, and Senate Minority Leader EVERETT M. DIRKSEN, Republican, Illinois, as reported by a wire service in the Washington Post and Times Herald, drew a letter of condolence from Representative CHARLES O. PORTER, Democrat, Oregon.

In his letter to Secretary Seaton PORTER said he sympathized with him and added "may Heaven protect you from your friends." The meeting followed the Interior Department's recent rejection of five bids for oil and gas leases that Hunt made on 25,000 acres in the Outer Continental Shelf of Louisiana. The Department said the bids were too low.

The usual appeal to such a decision is through the Bureau of Land Management. Hunt filed a notice that he would appeal directly to the head of the Department. Reportedly this would be the first such direct appeal made under the circumstances.

Representative PORTER's letter sympathized with Seaton's predicament and commended him for being unavailable for comment and suggested he remain forever unavailable for comment on the interview. PORTER suggested Seaton have a private chat with his Republican friends on the Hill and advise them "Fellows, I'd say, 'lay off. I don't care if it is an election year. This business of your squiring a litigant into my private office is embarrassing and even more so when you leave him there with me as though we were a couple of reluctant lovebirds.'"

The Oregon Congressman told Seaton "I feel sure that you did nothing improper. I remember appreciatively your attitude on Al Sarena." (On an unusual appeal to then-Secretary McKay the lower departments were reversed and title to valuable timber was given to private parties having mining claims. Later Secretary Seaton said no such special appeals would be allowed in the future.)

PORTER recommended that Hunt's attempt to appeal be rejected and that usual procedure be followed. PORTER sent copies of his letter to Senator JAMES E. MURRAY, Democrat, Montana, chairman of the Senate Interior and Insular Affairs Committee, and Representative WAYNE N. ASPINALL, Democrat, Colorado, chairman of the House Interior and Insular Affairs Committee.

The full text of Representative's PORTER's letter to Secretary Seaton follows:

MARCH 25, 1960.

HON. FRED A. SEATON,
Secretary of the Interior,
Washington, D.C.

DEAR MR. SECRETARY: This is a letter of condolence. You remember the old saying, "I can take care of my enemies but Heaven protect me from my friends." If you have enemies, I don't know of them. The friends to whom I refer are my distinguished colleagues, the affable and obliging minority leaders of the House and Senate, Representative HALLECK and Senator DIRKSEN.

You probably saw the United Press International story in yesterday's Washington Post: "Texas oil millionaire H. L. Hunt, accompanied by the top Republicans in Congress, called yesterday on Secretary of the Interior Fred A. Seaton." The top Republicans were, of course, HALLECK and DIRKSEN.

Your friends said the meeting was "nothing of any consequence—just a personal call on the Secretary" and "just a casual thing, only a pleasanter." Busy as they are, they would have probably done the same thing for any big contributor to the Republican Party.

Tycoon Hunt himself said the meeting was a "routine matter on which I will not make any disclosure at present." He added that he was an old acquaintance and "I am an admirer of his." You, the story noted, were not available for comment.

In sympathizing with you I've tried to figure out just what you could say under these circumstances: "Yes, I know Mr. Hunt. Yes, he was brought to my office by Representative HALLECK and Senator DIRKSEN whose good opinions I cherish. Yes, Mr. Hunt has appealed Interior's rejection of his bids for certain oil and gas leases and he is appealing directly to me, bypassing the Bureau of Land Management. Yes, this has never been done before. Yes, they were with me 40 minutes, then DIRKSEN and HALLECK left and Hunt was with me for another 25 minutes."

So far, so good. But then what? Do you say, "No, I made no deal with him. No, we didn't discuss his appeal." I feel sure that you did nothing improper. I remember appreciatively your attitude on Al Sarena. Oil and some of your predecessors (for example, Teapot Dome) did mix, with scandalous repercussions.

If I were you, I think I would remain forever unavailable for comment on this interview. I would, however, have a private chat with my Republican friends on the Hill. "Fellows," I'd say, "lay off. I don't care if it is an election year. This business of your squiring a litigant into my private office is embarrassing and even more so when you leave him there with me as though we were a couple of reluctant lovebirds."

It may be that the Post story is incomplete in some respects. Perhaps you had arranged for Bureau of Land Management officials to be present throughout the conference although I'm not sure your friends would have liked that. It would have seemed unfriendly for a "personal call" that was a "casual thing" and "only a pleasanter."

I sympathize with you. I have confidence in your integrity and in the integrity, although not the judgment, of Representative HALLECK and Senator DIRKSEN. It is my hope that Mr. Hunt's appeal directly to you will be routed back to the Bureau of Land Management for disposition in the usual manner with the usual safeguards for both the public and the private interests involved. And may Heaven protect you from your friends.

With best wishes,
Sincerely,

CHARLES O. PORTER,
Member of Congress.

AFL-CIO Opposes H.R. 10590

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Andrew J. Biemiller,

director, department of legislation, American Federation of Labor and Congress of Industrial Organizations, in opposition to the President's effort to breach the 42-year-old 4½-percent interest ceiling on long-term U.S. bonds.

The letter follows:

AMERICAN FEDERATION OF LABOR AND
CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D.C., March 25, 1960.

HON. THOMAS J. LANE,
House Office Building,
Washington, D.C.

DEAR MR. LANE: On February 15, I wrote to you explaining why the AFL-CIO opposes the President's effort to breach the 42-year-old 4½-percent interest ceiling on long-term U.S. bonds. Recently, the Committee on Ways and Means approved a so-called compromise (H.R. 10590) which would foist an unnecessary and intolerable burden on future generations of taxpayers.

I hope you will read the following brief analysis of the committee's proposal, which supplements our earlier statement, before your own decision is finally made on this vital issue.

If you vote "yes" for the Ways and Means four-point compromise:

(1) You will be putting your seal of approval on unlimited Treasury power to buy in old unmatured low-interest rate bonds and to swap for them new bonds that can yield, and in certain cases will yield, interest rates in excess of the statutory ceiling of 4½ percent.

For example, on March 11, 1960, a 2½ percent bond maturing in 1961 sold at 96 and yielded 4.42 percent. This bond could be exchanged for a new one extending the maturity perhaps 7 or 8 years and yielding rates of interest higher than the original 2½ percent coupon rate. The new yield rate can go to an unlimited level as long as the new bond does not carry a coupon rate in excess of the statutory ceiling of 4½ percent. This process will aid the owner of the bond who bought at par and is still getting only the 2½ percent coupon rate and not the yield rate of 4.42 percent to receive a higher rate of interest. While the new bond will enable the bond owner to get a higher rate of interest, it will result in higher interest costs to the Treasury for a longer period of years.

Of course, this kind of discount selling will breach the historic 4½ percent ceiling—but without the face of the bond saying so. Thus, the administration's objective will be achieved by indirection. However, this proposed refunding operation may ultimately add billions more to the already fantastic \$9.4 billion burden we are now paying in interest charges alone this year on the Federal debt.

(2) In addition, you will be voting to permit the President to issue almost \$6 billion in bonds yearly (equal to 2 percent of the total debt) at any interest rate over 4½ percent he may choose. Never before has any President been granted the unrestricted power to fix interest rates which this "compromise" now asks Congress to approve.

We are told that items (1) and (2) must be enacted to "stretch out" the Federal debt and to fight inflation. Yet, from 1953 until recently, the administration was doing very little to stretch out the debt during years when interest rates were far lower.

To lock into the debt structure now for many years peak interest rates—rates that have already been ratcheted up by this administration and the Federal Reserve Board to a 30-year high—is hardly prudent management of the public debt.

Moreover, items (1) and (2) would encourage a one-way direction for interest rates on U.S. long-term bonds—up. It is noteworthy that no requirement is included that the Treasury call in overpriced loans when interest rates are going down.

As for inflation: Since 1953, the administration and the Federal Reserve Board have had available a variety of fiscal and monetary tools with which to fight higher prices. However, except during the recessions of 1954 and 1957-58, they have shown an almost exclusive fondness for higher interest rates as a price stabilizing device. Now, although prices have been almost stable for 2 years, the Treasury is demanding permission to raise interest rates once again in order to fight what is, concededly, a phantom inflation.

Apparently, this administration opposes increasing the prices of everything, except money.

(3 and 4) You will be voting for a "sweetener" calculated to entice the unaware. This part of the compromise proposes interest rates higher than 4½ percent for issues of Government obligations invested in special U.S. trust funds and for E and H U.S. savings bonds. Of course, this provision would be appropriate and only fair if the rest of the bill is passed. However, the Government is now paying substantially less than 4½ percent on its obligations owned by its trust funds, and as for savings bonds, only 3¾ percent in interest is currently being paid, although up to 4½ percent is permissible under existing law.

If the administration really wants to stretch out the federal debt, it should first use its power to sell savings bonds at a higher rate and take other steps to make these bonds more attractive and salable. Why should small family savers perpetually be entitled to less for lending money to their Government than bankers and others receive? Furthermore, it would be much wiser to try to extend the long-term portion of the debt via greater sales of saving bonds and without scrapping the 4½-percent interest ceiling (as proposed in items (1) and (2)) than to pierce the 4½-percent ceiling and thus pressure all public and private interest rates yet another notch higher, as a consequence.

It is the view of the AFL-CIO that the so-called committee compromise is actually abdication. Because the issue so vitally affects the welfare of every American, we urge you to strenuously oppose enactment of H.R. 10590.

Sincerely yours,
ANDREW J. BIEMILLER,
Director, Department of Legislation.

The 42d Anniversary of Proclamation of Independence of Byelorussian Democratic Republic

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. DADDARIO. Mr. Speaker, March 27 marks the 42d anniversary of the proclamation of independence of the Byelorussian Democratic Republic.

More than 10 million Byelorussians have been so completely isolated in the Soviet Union and have been so firmly sealed off from the free world that we in the west seldom hear of them. Just as they were almost lost in czarist Russia, so they seem to be today in Communist Soviet Russia, and one seldom hears or reads about them except on rare occasions. March 25 offers such an occasion,

for that day is their Independence Day.

For centuries these stouthearted people had suffered under the autocratic regime of Russia, but they had not given up hope for their eventual freedom and independence. Toward the end of the First World War when the czarist regime was shattered, Byelorussians felt free to proclaim their independence, and this they did on March 25, 1918. Then for about 2 years they worked, fought, and lived freely in their reconstituted Byelorussian National Republic. But the new state, surrounded by foes, could not survive the powerful onslaught of the Red Army. Early in 1921 the country was overrun, and then made part of the Soviet Union. Thus ended the free and independent Byelorussia, but it still survives in the lives and memories of millions of liberty loving Byelorussians in and out of their homeland, and they celebrate March 25 as their national holiday, their Independence Day.

Nixon to Red China?

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. PORTER. Mr. Speaker, George Dixon today writes in the Washington Post that Vice President Nixon is planning a trip to Red China. According to Columnist Dixon, the Vice President thinks that such a trip would give him a boost politically.

I hope that Nixon is allowed to go and that Senators ENGLE and MAGNUSON are allowed to go too. We need more public attention on our relationships with Red China. Such attention will make the failure of our present "containment by isolation" policies clear beyond argument.

It was Nixon who, with the help of a Republican-dominated press and other Republicans, told the Nation that Chiang's defeat on the mainland of China was the fault of Acheson and other Democrats. This assertion would also become better known as an untruth once public attention is focused on this area of our foreign relations.

Red China must be a part of any effective disarmament scheme. Red China is the nation most likely to commit the rash act which would start world war III. These stark and vital facts make it imperative that we increase our communications with Red China, even if it seems to mean that RICHARD NIXON will gain a temporary political advantage.

Under unanimous consent I include the Dixon column:

WASHINGTON SCENE—Will Nixon Go to Red China?

(By George Dixon)

RICHARD M. NIXON built so much political character for himself with his trip to the Soviet Union he now wants to duplicate it with a visit to Red China. But if the Republican Vice President is the only U.S. po-

litico allowed to go to Peiping the Democratic Senator from his State, CLAIR ENGLE, is going raise "unshirted hades."

Senator ENGLE will be joined in his heck-raising (my Nice-Nellyism) by the chairman of the Senate Interstate and Foreign Commerce Committee, WARREN G. MAGNUSON. Senator ENGLE and Senator MAGNUSON want to visit Red China to study the possibilities of trade in nonstrategic materials. They have sounded out our State Department but the soundings have produced only stony silence.

The junior Senator from California and the senior Senator from Washington have been tipped off that the Red China excursion for Nixon already is in the works. According to their information, the State Department has given its nonpartisan blessing, and Secretary of State Christian A. Herter is unofficially lending his good offices to clear it at the other end with Red China's political boss, Mao Tse-tung.

Both MAGNUSON and ENGLE swear that if the Vice President is allowed to make such a trip for purely political reasons and they are barred from a factfinding study from which they can derive no possible political advantage they will "tear the roof off."

The Vice President thinks that a trip to Red China within the next few months would boost his political stock back to where it was after his historical quarrel with Nikita S. Khrushchev in a Red Russian kitchen.

Mr. Nixon subscribes to the theory that if it worked once it can work twice and that if he can achieve a breakthrough into the forbidden country that holds one-fourth of the earth's people his "image" will be so gigantic he'll overshadow any stay-at-home Democratic opponent.

Senator ENGLE has been making unofficial representations to the State Department to help him get cleared into Red China ever since last fall when he accompanied a Senate Interstate and Foreign Commerce survey expedition to India, Australia, Indonesia, Thailand, Israel and Jordan. The solon declared he could get no cooperation whatsoever from the State Department although he explained, in both English and the language of diplomacy, his sole purpose was to make a trade study of a potentially sizable customer.

Senator ENGLE told me he is maintaining a daily alert to see if the State Department is more cooperative with the Vice President.

"If DICK NIXON is cleared into Peiping to build him up politically and 'Maggie' (Senator MAGNUSON) and I are barred from a trade study that is long overdue," said the colorful Californian, "I promise to really cut up rough."

I am betting on Senator ENGLE to keep his promise.

Trading Jobs for Low-Wage Goods

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting and enlightening report showing the effect of the total 1959 imports from Japan and Hong Kong as compiled by the Southern Garment Manufacturers Association, of Nashville, Tenn. I sincerely hope that this perilous situation will be remedied in the very near future for the protection of

our long-established domestic industry and the retention of those employees dependent upon that particular type of employment.

The report follows:

SOUTHERN GARMENT
MANUFACTURERS ASSOCIATION, INC.,
Nashville, Tenn., March 24, 1960.

HON. THOMAS J. LANE,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN LANE: The enclosed is released today in order to explain the results of a study just completed showing the effect of the total 1959 imports from only two countries, Japan and Hong Kong, of shirts, blouses, pajamas, trousers, brassieres, gloves and similar garments.

As busy as you are, we can only hope you will find a minute or two to look at it. The summary of the study is attached.

We have tried to just give you the facts, since you are close to your people, and if men like you do not feel it is necessary to influence the use of a little commonsense in carrying out the reciprocal trade policy, people in this, one of the large and vital industries of the country, have little in the way of encouragement before them. Our industry is cotton's largest customer.

The State and Commerce Departments are deaf to our pleas to put on the brakes a little and not allow this situation to worsen to the point of driving a substantial percentage of these plants to foreign countries and make ghost towns of hundreds of communities this industry sustains. The State Department says that, frankly, they are not interested. Escape clause proceedings are completely impractical.

Any suggestion or comment you care to offer would be most welcome.

Sincerely yours,

GORDON MCKELVEY,
Executive Vice President.

TRADING JOBS FOR LOW-WAGE GOODS

Asserting its support of the reciprocal trade policy as interpreted by its author, the late Cordell Hull, the Southern Garment Manufacturers Association today pointed out that American workers have not much time left to decide if they want to sacrifice their high level of purchasing power through high wages and steady employment in order to save a few pennies here and there in buying foreign-country low-wage-made goods. The association today released the results of a study just completed showing the effect of 1959 imports from Japan and Hong Kong of blouses, shirts, trousers, brassieres, pajamas, gloves, and other similar wearing apparel which the association stated, proved the contentions it has consistently made that a depression is in the making when the Government goes beyond the intent of the reciprocal trade program and permits the markets of a long line of industries to be taken over by foreign-country low-wage manufacturers.

"In other words, Mr. and Mrs. American Workers, you are 'saving at the spigot and wasting at the bung-hole' every time you buy a foreign-country low-wage-made article instead of one made in a U.S. plant."

In its detailed summary, the association shows that in 1959, based on reports made to the State Department by the Ambassador to Japan and the consul general in Hong Kong, and reports of the Bureau of the Census, imports of these items amounted to approximately 11 million dozen, or more than 128 million separate garments.

With the aid of skilled engineers determining the man-hours and man-days involved in the production of this enormous quantity of garments, these figures show that more than 24,000 employees would have been paid in excess of \$50 million to spend in the thousands of communities where they

work, if these garments had been made in the United States, that the livelihood of some 73,000 people in the United States was affected by these imports.

Even of more alarming proportions, on the basis of an average of 250 employees per plant, the study shows that 97 plants in the United States would have been required to manufacture these garments. "This many plants would represent the entire production of this industry in the State of Tennessee, or the State of Georgia, the State of North Carolina, or the State of Texas. That many plants would represent the approximate production of this industry, in many cases, of 2 or more States," the association's statement related.

It was pointed out that in some congressional districts, this industry predominates in the way of employment. Thus, Members of Congress are confronted with the realization that an entire industry, sometimes the largest employers they have in their districts, are being brought closer and closer to short-time operations and layoffs, with all the economic consequences that must fall on the communities which have enjoyed the benefits of having this industry, and, in numerous instances where the community has no other means of absorbing the displaced workers, it was further said.

The association feels that it is the policy of the present administration and the reluctance of the Congress to face up to this problem that is building an economic collapse, which could easily break any day, with consequent wholesale industry stagnation in one of the largest and most vital industries in the United States, with part-time and full-time unemployment for thousands of employees, and the crippling of hundreds of towns, particularly small communities.

"This industry and its association do not advocate unreasonably high tariffs or a policy of shutting out all competitive imports. On the contrary, this industry believes in, and supports, the Reciprocal Trade Policy championed by the late Cordell Hull as being a healthy program for the economy of the United States and all nations participating therein, but that belief and advocacy is based on the true intent of the Reciprocal Trade program as enunciated by the late Mr. Hull, a policy that did not contemplate total submission of our markets to the demands of foreign country low-wage manufacturers, and consequent demoralization of hundreds of American communities, unemployment of thousands of workers, destroyed purchasing power, forcing American manufacturers to transfer their plants and capital to these foreign low-wage countries or quite business entirely", the association emphasized.

SUMMARY

For the period January-December 1959,¹ Japanese and Hong Kong imports of the above items amounted to 10,704,652 dozen or, 128,455,824 units.

Total direct labor man-hours to produce the above quantity of apparel items are 37,451,629, which represent 4,681,454 man days. On the basis of 50 weeks of production, it would require 18,726 direct labor employees to produce the above quantity. On the basis of \$1 per hour labor, the payroll would be \$37,451,629.

Five thousand six hundred and eighteen indirect labor employees would be required at a payroll of \$11,236,000 or a total payroll of \$48,687,629.

The above quantity of apparel items is the equivalent of a \$285,586,984 a year wholesale volume; 18,726 direct labor employees and 5,618 indirect labor employees, or a total of

24,344 employees, and on the basis of an average of 2 dependents per employee, accounts for a total of 73,032 people's livelihood being affected, for a period of 50 weeks.

The importation of the above quantity of the various apparel items listed, represents the production of 97 plants in the United States, with an average of 250 employees per plant.

The above figures include direct and indirect manufacturing labor, salesmen, shipping, warehousing, etc.

H.R. 11313

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. PELLY. Mr. Speaker, recently I introduced H.R. 11313, which amends the Agricultural Act of 1949, as amended, to provide protection against unfair competition from corporate agriculture to the American family farm, and protection for the employment opportunities of domestic agricultural workers in the United States in connection with the employment of workers from Mexico.

Hearings on legislation similar to my bill are presently being held before the Equipment, Supplies, and Manpower Subcommittee of the Committee on Agriculture.

In order to explain to the best advantage the provisions of my bill and the purposes of its introduction, I wish to include my statement presented to the Agriculture Subcommittee in support of this measure:

STATEMENT OF REPRESENTATIVE THOMAS M. PELLY, BEFORE THE EQUIPMENT, SUPPLIES, AND MANPOWER SUBCOMMITTEE, COMMITTEE ON AGRICULTURE, IN SUPPORT OF H.R. 11313, MARCH 28, 1960

I am grateful for this opportunity to testify in support of H.R. 11313. As the sponsor of this bill, I would like to explain briefly the considerations which led me to introduce it.

For some time I have been deeply concerned because of the deep-seated problems created by the presence each year of about half a million foreign farmworkers. From their wartime introduction, when it is true they were most necessary, their numbers have swelled from 90,000 to nearly 500,000 last year. I am convinced that their consistent appearance, year after year for nearly two decades, and in greatly increased numbers, has had a most serious effect upon the employers involved, upon our seasonal domestic workers, and upon certain segments of our agricultural economy.

Recently I have had the occasion to read the report of the consultants appointed by Secretary of Labor Mitchell to review carefully and independently the operations and the effect of the Mexican labor program. This carefully written, dispassionately presented analysis by individuals with no self-interest at stake is a most persuasive one which, I believe, might well present a general avenue for congressional action.

I would call your attention particularly to what is known of the effect of the large-scale use of Mexican workers upon our own farm labor force. I am told that we have a surplus of farm labor in this country—that there is more underemployment in the agri-

cultural worker occupation than in any other major occupational group. I know from the Department of Agriculture reports that farmworker wage rates are far below those paid by any other major industry. I know that agricultural workers are a class apart so far as the protection of many of our labor standards and protective laws are concerned—workmen's compensation, unemployment insurance, minimum wage, and even in protection of the right to organize.

Yet this class of impoverished, underemployed, unprotected workers at the bottom rung of the U.S. economic ladder are the only group of U.S. workers exposed to systematic, Government-arranged competition by a large mass of temporary foreign contract workers. It takes no economist to persuade me that this type of competition, augmentation of the labor supply, can have no effect but to delay improvement of employment opportunities for U.S. farmworkers and to delay or to prevent improvement in the wage structure which might otherwise occur through the influence of labor shortages. That a U.S. Government program is contributing in this manner to the prevention of the welfare of such a group of U.S. workers is, I assert, a tragic, indefensible miscarriage of justice and a blot on the conscience of all thinking Americans.

In passing I would observe that this is not a matter only of our own conscience; it is importantly a matter of the appearance that we Americans give to the rest of the world and particularly to the peoples of the underdeveloped nations—the peoples in whose hands the future of this civilization may rest. These underdeveloped nations have a predominance of their population on the land—often themselves the victims of incredible hardship, deprivation and exploitation. We seek to encourage these populations and their leaders to look to western ways—to the example of U.S. democratic and economic methods. We seek to demonstrate to them that our way to economic development is better than and as fast as the way of regimentation by Communist overlords. Then the example that we hold forth to them is that of what the distinguished Secretary of Labor James P. Mitchell has called the "excluded Americans" deprived of all normal protections, paid such low wages that wives, children, grandmothers, and every able-bodied family member must work, and deliberately placed in competition with the hungry millions of underdeveloped Latin Americans. I understand that already this situation has not gone unnoticed in the halls of the United Nations.

In passing, also I must observe that the employers of my own State of Washington who depend almost exclusively on U.S. workers and who commonly pay from \$1.25 per hour up have considerable reason to object violently to the price-lowering effect of production in large quantities elsewhere by foreign labor brought in at wages as low as 50 cents per hour and even less. I am amazed that the farm organizations do not better represent the interests of the farmers of the northern half of the country where the use of Mexican workers is relatively minor and wage rates for domestic workers, relatively more adequate.

These are a few of the reasons which have led me to introduce H.R. 11313. These considerations have persuaded me that the only proper position for those interested in economic justice and the application of Christian principles to daily affairs is to oppose continuation of the Mexican labor program for any period of time—unless it is substantially amended. The amendments which I suggest in the bill before this subcommittee are generally parallel to those recommended by the consultants to Secretary of Labor Mitchell.

My bill is different in one respect which I wish to emphasize. In setting out a pro-

¹Except pajamas, T-shirts and gloves, which included January-September 9-month period.

posed termination date of July 1, 1969, I am not suggesting that as the time at which the future of the program should again be considered. Rather I am suggesting that date as a final termination date for this program—placed far enough in the future to give ample notice to all economic interests affected. Enough time to develop the domestic labor supply capability which through atrophy some growers and communities may have lost is, in my opinion, of vital importance.

My bill provides that the program may be tapered off during that period. I have chosen not to suggest a rigid percentage reduction each year, preferring to leave to the Secretary of Labor the judgment as to when the decline would be sharper and when it should be less sharp than a straightline trend. I do not regard the 1969 date as necessarily sacrosanct; what I do regard as fundamental is that without further delay a final termination for this program be agreed upon and made the basis of planning by all interested parties.

Thank you, Mr. Chairman and members of the subcommittee, for permitting me to offer this explanation.

Is the Labor Boss for or Against the Aged?

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. BOSCH. Mr. Speaker, there is growing public recognition that all public enemies are not necessarily on "The Ten Most Wanted List" maintained by the Federal Bureau of Investigation. There is a developing realization that certain detractors from our American way of life skillfully operate on the fringes of lawful activity so that it is difficult to attach criminal culpability to them. These new public enemies have been working in our midst for many years bent on the destruction of our national greatness and dedicated to the socialistic glorification of mediocrity.

The type of public enemy to which I refer need not be a gangster, although he frequently comes from such a background; he need not be a Communist, although people of his ilk frequently are; he need not be avowedly anti-American, although he frequently works to further anti-American causes that are contrary to our Nation's military and economic strength. The new public enemy to which I refer is the labor boss who seeks for his own selfish aggrandizement to distort the record on important national issues confronting our people, to reward the slothful by taking the industrious, and to influence public opinion along the lines of the socialistic thinking in which he professes belief.

These labor bosses preach civil rights while condoning segregation in the ranks of their own labor organizations; they advocate equal economic opportunity while interfering with the rights of American citizens to work; they preach the principles of democracy while practicing totalitarian rule in union office.

These labor bosses deal in distortion and demagoguery to fill the public record with false and misleading statements and are quick to resort to vilification and abuse against anyone who seeks to set the record straight or who has the courage to disagree with them.

Over the weekend the press attributed a statement to United Auto Workers President Walter Reuther that was critical of the President of the United States. Mr. Reuther is reported to have criticized President Eisenhower because of the latter's opposition to a proposal pending before the Congress designed to launch a national health insurance program financed by a compulsory payroll tax imposed on our working population. Mr. Reuther, in effect, said that the President has always had his medical bills paid for by the Government. The truth of the matter is that President Eisenhower through great personal sacrifice has rendered more than 40 years of his life in unparalleled public service in behalf of the citizens of our Nation and against the threat of totalitarian enslavement of freedom-loving people everywhere.

Mr. Speaker, I do not recall similar public service by Mr. Reuther. In the CONGRESSIONAL RECORD for August 20, 1958, my distinguished colleague on the Committee on Ways and Means, the gentleman from California [Mr. Urr], documented by Mr. Reuther's own admission the fact that the President of the UAW was a Socialist. In the CONGRESSIONAL RECORD of January 16, 1941, that great statesman from the State of Georgia, the late Honorable E. E. Cox, placed in the RECORD evidence that Walter Reuther at the time he was President of an Automobile Workers local with a membership of 30,000 filed a statement that he could not afford to pay for medical examination and treatment for himself and his wife and that he received such examination and treatment at the expense of the city of Detroit. On August 2, 1955, our patriotic and esteemed colleague from Michigan [Mr. HOFFMAN] placed in the CONGRESSIONAL RECORD documentation of the machinations by this same Walter Reuther to avoid military service during World War II. Mr. HOFFMAN also called attention to the fact that the Reuther brothers while studying in Russia wrote a letter to close friends on January 20, 1934, in Detroit admonishing them to "Carry on the fight for a Soviet America."

Mr. Speaker, I have recently received a letter from the AFL-CIO expressing opposition to some 175 bills that are currently pending before the Committee on Ways and Means having the effect of liberalizing the retirement test in the social security program so that our citizens who have paid for protection under Social Security could continue to engage in more realistic partial employment after they reach age 65. On page 6068 of the CONGRESSIONAL RECORD for March 24, 1960, my distinguished and courageous colleague from Missouri [Mr. CURTIS] referred to labor boss opposition to the liberalization of the retirement test, and I call your attention to his well considered remarks. Mr. CURTIS

in effect said that if the labor bosses were really interested in the welfare of the aged, they should support a liberalization of the retirement test instead of trying to force our still potentially productive citizens out of the labor market.

Mr. Speaker, the labor boss is now supporting H.R. 4700, a bill to provide Government payment for certain health care costs incurred by the aged at the expense of our present working population. This labor boss support is in the face of the facts that H.R. 4700 is discriminatory in its application, would impose an excessive cost on the American people, and would detract from rather than improve the quality of the medical care available to our aged.

Dr. H. I. Fineberg has recently written a very excellent analysis of the Forand bill which appeared in the March 27, 1960, issue of the Long Island Press. I will include Dr. Fineberg's comments on this legislation as a part of my remarks:

THE DOCTOR'S CORNER—LAW WON'T PROVIDE BETTER MEDICAL CARE

(By Dr. H. I. Fineberg)

In recent weeks, the Forand bill, has come to the foreground more than ever.

Since we discussed this proposal a few weeks ago, I have been deluged with mail from people in this community—who have accused me of being "anti-old age." Nothing could be further from the truth. I have often declared that every sick person must be taken care of regardless of age, economic status or creed. There must be only one type of medical care—the best that we have available. Everyone, rich or poor, young, middle aged or elderly, must have it. In this city and State no one needs to forego the services of a doctor of medicine because of inability to pay.

My concern over the legislation recommended by Congressman FORAND is that it would establish a system of medical care under which all of us—the patient, the doctor and the hospital—would take orders from the Federal Government. As Dr. Frederick C. Swartz, chairman of the national medical society's committee on aging, has pointed out—the result would be poorer, not better, health care for the people of our country.

Dr. Louis M. Orr, president of the American Medical Association, voices our opinion when he says that the interests of the aged could best be served by encouraging further development of voluntary health insurance; by replacing compulsory retirement and age discrimination in employment with more realistic and flexible systems; by curbing inflation; by encouraging construction of nursing homes and other facilities designed to care for the long-term patient efficiently and economically; and by increasing reimbursement of hospitals by local and State governments for care of the needy of any age. We still insist that the voluntary way is the best way—unhampered by bureaucratic control.

Last month, a British physician spoke about the importance of telling the American people of the back-breaking tax load that can result when a government enters the medical care field.

In a speech before Blue Shield people in Chicago, Dr. John B. Reckless reported that, prior to the National Health Service in Britain, the public in that area did not fully realize that a government can levy costs for services not only directly by taking a contribution from a person's income but also by direct and indirect taxation. He stated that the taxation per head in the United States is estimated to be 24 percent whereas in Britain the direct taxation is at least 40 percent.

In addition, Dr. Reckless revealed some examples of Britain's indirect taxation. Their sales tax is as high as 66 percent on automobiles and there is a tax of 100 percent on luxury items such as electrical appliances, iceboxes, television sets, furs, jewelry, cameras, etc.

Government medicine is expensive medicine and it results in overutilization of services. According to Dr. Reckless' figures, in the first 3 years of the government-controlled program in Britain, a country which has 50 million people, the following were issued: 609 million prescriptions and drugs, 7 million sets of dentures and 700,000 appliances. Costs skyrocketed and the government was so embarrassed that they had to impose restrictions.

When the National Health Service was started in Britain, it was estimated that it would cost \$500 million a year. Within 3 years, this figure rose to \$1.2 billion and now it is \$2 billion a year.

Closing of Westinghouse Nuttall Plant in Pittsburgh

EXTENSION OF REMARKS OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. DENT. Mr. Speaker, recently after a few comments I introduced into the RECORD a letter from Albert J. Fitzgerald, of the United Electrical Workers.

This letter dealt with the conditions surrounding the closing down of a plant owned by the Westinghouse Corp., known as the Nuttall plant.

Apparently the Westinghouse Corp. felt that that was their side of the story left untold and have addressed to me over the signature of Dale McFeatters, vice president, their position in this matter.

In fairness to all, I am submitting for the RECORD the letter from the Westinghouse Corp. so that both sides may be studied:

WESTINGHOUSE ELECTRIC CORP.,
Pittsburgh, Pa., March 23, 1960.

The Honorable JOHN H. DENT,
House Office Building,
Washington, D.C.

DEAR MR. DENT: We appreciate having brought to our attention the letter which Albert J. Fitzgerald, general president of the United Electrical Workers Union (UE), wrote to Congressmen regarding the closing of the Westinghouse Nuttall plant in Pittsburgh.

While the subject may not be of immediate interest to you, and those who have knowledge of the situation will recognize Mr. Fitzgerald's letter as a misrepresentation of the facts, we want you to be fully informed regarding the Nuttall plant.

The Westinghouse gearing division, located at the Nuttall plant, has for some time been an unprofitable operation, despite intensive efforts to remedy this situation. We tried to improve the volume of the plant by introducing new products. In the past few years we spent \$1½ million on new equipment and plant rearrangement, in an attempt to create a successful operation. Despite these efforts, the division continued to lose money, and prospects for the future were in no way encouraging. Therefore, there was no alternative but to cease op-

erating at this plant and fold the activities into other plants.

The welfare of the people whose jobs are to be discontinued was—and remains—a first consideration of the company. As soon as the decision was made to close the Nuttall plant, we focused full attention on a plan of action to meet three objectives: (1) to place as many employees as possible at other Westinghouse locations in the Pittsburgh area; (2) to help locate jobs for our people at other companies in the area; (3) to provide a program of special and liberal benefits to assist any who are separated from the company.

Under our policy, managers of all other Westinghouse locations in the Pittsburgh area are taking a personal interest in the matter of finding jobs for these people; no one is to be hired at any Westinghouse location in this area until after the Nuttall people have been given full consideration for any available job. The first layoffs at Nuttall began only last week—and a relatively small number was involved—so it is too early to estimate how many will be accommodated in this phase of our plan.

It must be recognized, of course, that each manager's first obligation in increasing his force is to recall any of his own people who may have been furloughed. Also, it is obviously essential that skills be matched with jobs. Another complication in moving an employee from one location to another is the matter of seniority. The unions at some locations naturally want to protect the seniority rights of their own people, and in some instances insist that a transferred employee start with no seniority. This, of course, would make the transferred employee subject to early layoff in the event of a subsequent reduction in force. In other situations, there is objection to bringing long-service employees into a plant for it reduces the employment security of present employees. The UE does not represent employees at any other Westinghouse plant in the Pittsburgh area.

In spite of these complications, we are hopeful that a number of employees can be placed in jobs at Westinghouse locations in this area. Already we have arranged for 25 moves. At the same time, we have been diligently pursuing our second objective, to help locate jobs our people might fill at other companies in the area. Again, because only a few people have been laid off at Nuttall, it is too early to judge the effectiveness of this effort. Incidentally, this phase of our efforts has been made more difficult by the recent announcement that a steel plant in the same neighborhood will shut down, laying off nearly twice as many people as are employed at Nuttall.

The third phase of our efforts in behalf of the gearing division employees was to offer a special benefits program, to assist those who would be separated from the company. This program provides allowances amounting to as much as 20 weeks of pay (the amount being based on years of service and the employee's level of earnings—many will amount to \$2,500). The program also continues the employee's personal insurance coverage for as long as 6 months after the date of separation. The benefits are in addition to unemployment compensation, whose cost—as you know—is also chargeable to Westinghouse.

This special benefits program would provide up to three quarters of a million dollars for the approximately 400 men and women employed at Nuttall. I believe you will agree that this is not a "meager" amount, as claimed by Mr. Fitzgerald. It is also difficult to imagine how the program can be called "discriminatory," when the amount of separation pay is directly related to the employee's years of service.

The special benefits program we have proposed for Nuttall employees was accepted after brief negotiations by the union representing salaried employees at the plant. It is the same program, incidentally, which was accepted by both the union representing hourly employees and the union representing salaried employees at another Westinghouse location last year. In direct contrast, repeated attempts to negotiate an agreement with Local 601 of the UE—the union headed by Mr. Fitzgerald—have been wholly unsuccessful. Instead of making any earnest attempt to bargain on the company's proposal, the local 601 leaders continually have resorted to misrepresentations and irresponsible statements of the type displayed in Mr. Fitzgerald's letter.

It is hard to conceive just what purpose Mr. Fitzgerald and other UE leaders expect to serve by continuing to deride the proposal and reject it for their members. It is quite apparent that in so doing they are not reflecting the wishes of their membership. For example, here are statements from a letter received by the company just last week:

"I am a Nuttall worker with better than 20 years of service. In Saturday's Pittsburgh Press I was surprised to read about the charge of unfair labor practice filed by Local 601 of the UE. I think the Westinghouse management has been very fair with their attempts to aid us.

"At our last meeting one of our members made a motion to accept the benefits offered by the company. Before the motion could be voted upon, Mr. Gibbs (Local 601 president) told the member he was out of order. This is the way all of our meetings are conducted. I can honestly say that better than two-thirds of the Nuttall workers are in favor of signing for the benefits and the severance pay."

If the UE is sincerely interested in the welfare of the employees it represents, it would be better advised to assist management in putting the liberal aid program into effect, and to seek the cooperation of other unions in the Pittsburgh area in accepting UE-represented people when jobs are available. One very real problem is that the UE's own reputation is not helping in the task of placing people.

Throughout Westinghouse, the day-to-day actions of all members of management are guided by a Westinghouse creed, which begins with the statement: "We believe that the most important asset of Westinghouse is its people—in every plant, office and community, wherever they work and live." I can assure you that our adherence to this belief has been faithfully reflected in our handling of the Nuttall situation. We have done, and we will continue to do, everything reasonable to help locate other employment for these people, and to provide the assistance of special benefits for those who may be separated from the company.

I trust the above adequately covers any questions you may have regarding the Nuttall situation.

Sincerely,

DALE McFEATTERS,
Vice President.

Greek Independence Day

EXTENSION OF REMARKS OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. BOLAND. Mr. Speaker, 139 years ago, on March 25, 1821, Greeks

rose in arms against the Ottoman Empire which had oppressed them for four centuries. In a long and difficult struggle the Greeks regained their freedom. They have maintained it intact through many difficult challenges to this day.

It is hardly necessary to say that the Greeks are a freedom-loving people. Much of the heritage of Western civilization, including much of our concepts of personal and individual freedom, are in their genesis Greek ideas. Indeed, it is hardly possible to point out an aspect of what we Americans hold to be good and worthwhile in which there is not some important historic root in Greek experience, Greek culture and above all, Greek thought, passed down to us through the ages. It was the ancient Greeks who conceived of the "good life" as the high expression of man's existence and who elaborated the conditions and reasons for the "good life," which have been so pervasively influential in Western civilization.

Greek ideas are by no means confined to Western civilization; their influence has been truly universal. The thought of the ancient Greeks civilized and informed the early Arab empires and traveled through the Arabs to the West; Greek ideas and Greeks informed the Persians, the Indians and traveled through Russia and into China. That a people capable of such brilliance and such contribution to civilization should have fallen under the domination of an alien power was to be deplored. Equally, their reemergence to freedom, the anniversary of which is celebrated on March 25, is a cause of celebration not only for the Greeks.

Greek War of Independence

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DERWINSKI. Mr. Speaker, it is certainly fitting and proper that we commemorate the 139th anniversary of the Greek War of Independence against the rule of the Ottoman Empire. The glory and grandeur that was ancient Greece passed away and was followed by a long period of oblivion and foreign control of the Greek Peninsula. The successful battles that the fiercely independent people of Greece waged were productive; complete independence was achieved and universally recognized in 1832. Today, Greece stands as one of the bulwarks of the Western world against the ever-dangerous menace of communism.

Equally notable was the heroic work of the Greek people in World War II, and the period immediately following. They fought vigorously and effectively against the Fascist invaders and Nazi hordes, and in the postwar period struggled relentlessly to free their country from armed Communist rule.

However, Mr. Speaker, we do have an area in which our continued interest is necessary in relation to our friendly

contacts with Greece and its people. Greece, as much as any other country, suffers from the inequities in the immigration and refugee laws, and President Eisenhower should be commended for his earnest plea to produce a practical revision of immigration quotas. When Congress tackles this situation, the Greek quota will be one that fairness dictates should be greatly revised.

I am heartened by the great number of Members who recall this Greek independence day, which remembrance symbolizes the appreciation of the American people to a loyal partner in the lineup of free nations.

The Future for the Aged

EXTENSION OF REMARKS

OF

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, inasmuch as the Congress will shortly be considering legislation now in the Ways and Means Committee, dealing with the problems of the aged, I believe the Members will be interested in a series of articles prepared for Ray Henry, which appeared in more than 100 newspapers throughout the country during January and February.

The first and summary report follows:

THE FUTURE FOR THE AGED

(By Ray Henry)

Retirement will lose much of its sting in the 1960's.

Big improvements in pensions and retirement security can be expected. Medical care will be better and easier to get. More adequate housing will be built. Scientists will find new and important ways to provide better health in old age.

I feel safe in painting this sunny picture for this reason:

The Government, business, labor, and health organizations have combined their efforts in the past 10 years to make old age more secure and worth while. Those efforts, now starting to pay off, are still being expanded.

The biggest changes in recent years have occurred in retirement security. And, it's in this area that major improvements will be made in the 1960's.

Retirement security has largely come in two forms since the beginning of the 1950's: Improvements in social security and the other government retirement programs and the addition of many private pensions plans for employees.

Here's what can be expected in the 1960's from these two forms of old age security:

Social security will be expanded a number of times. People in the higher income brackets will find more of their income taxed and, as a result, be entitled to higher retirement payments. People now getting social security, particularly those getting relatively small payments, will find their payments more than keeping up with changes in the cost of living.

The benefits of private pension plans will be raised and many employers will start providing—for the first time—pension benefits for their employees.

Railroad retirement will be improved along with social security, but military retire-

ment and Civil Service retirement—already excellent programs—won't be changed much. In fact, military men may be required to contribute to the cost of their retirement program.

Added together, the changes in the retirement security programs will mean that a larger chunk of an individual's working income will be replaced by retirement income.

Thus, instead of retiring with an income which is only about 25 percent of what a person was receiving from his work, he'll have 35 or 40 percent replaced in retirement income.

Now take the other areas of concern for older people:

Health: Two big improvements will come in this area. Scientists will find ways of preventing ill health and in treating illness when it occurs. Prepaid health insurance plans will cover many more older people.

From research which started in the mid-1950's, scientists are beginning to find answers to the diseases which come with old age and to the riddle of what causes people to age.

Out of this research, will come ways to treat the diseases and to prevent them.

In one way or another, the Government and private industry will find ways to provide medical care at low cost for retired people in the 1960's. It's almost sure to come in the form of health insurance coverage.

The chances are good that the basic protection will be provided under the social security program, just as the basic protection against economic want is now provided.

In addition, the Nation's medical doctors will add geriatrics—the treatment of the diseases of old age—as a specialty to their medical schools and profession.

Housing: Many more older people will be able to find good housing especially adapted to their needs. This includes apartments, individual homes, retirement villages and nursing homes.

This will result because retired people—due to better incomes—will be able to afford better housing and because home builders will find such housing a lucrative market.

The Government will establish controls on the conditions under which nursing homes will exist, both as to the construction of such homes and their operation.

The Government will also provide both financial assistance and mortgage guarantees to older people wanting to build or buy housing to suit their needs.

Employment: With improvements in private pension plans and higher social security benefits, fewer older people will want to continue working after their normal retirement age. And, employers will be less willing to let them work.

There will be an increase in the programs under which employers will allow their employees to gradually retire. But, it's doubtful whether this practice will become widespread in the 1960's.

Older people wanting part-time employment to supplement their income will find additional opportunities, beyond those which existed in the 1950's. But, most oldsters who want to continue working will have to set up their own businesses.

U.S. Space and Missiles Programs To Advance U.S. Security and Economy

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. FULTON. Mr. Speaker, this morning, in the Science and Astronau-

tics Committee, Lt. Gen. James M. Gavin, U.S. Army, retired, made an excellent and timely statement on U.S. space and missile programs to advance U.S. security and our economy.

Under leave to extend my remarks in the Record, I am including this statement which I am calling to the attention of my colleagues in the Congress and the American people:

STATEMENT OF LT. GEN. JAMES M. GAVIN, U.S. ARMY (RETIRED) BEFORE THE COMMITTEE ON SCIENCE AND ASTRONAUTICS, THE HOUSE OF REPRESENTATIVES, MARCH 28, 1960

First, let me say how pleased I am to have this opportunity to appear before this committee. Few things are more important to our country, and in fact to the Western world, today than a well administered, adequately supported space program. It has been most reassuring to have seen the increased support given our space program during the past year. The Administrator of the National Aeronautics and Space Administration, Dr. Keith Glennan, has been doing a splendid job and if given adequate support, he will, unquestionably, in my opinion, close any gap that now may exist between our own program and that of the Soviets.

The purpose of my being here, as I understand it, is to testify on the proposed bill amending the National Aeronautics and Space Act of 1958, H.R. 9675. I have personal views on the act and I am pleased to have the opportunity to present them. In doing so, however, I would like to express the view that the administration of the act usually will reflect the methods and manner of doing business of the Administrator. Dr. Glennan has been doing an exceptionally fine job within the framework of the provisions of the National Aeronautics and Space Act of 1958. His recommendations for change, therefore, must be given our most serious consideration. I have no doubt that, with the changes made as he suggests, he will continue to carry on as successfully as he has in the past and, undoubtedly, more successfully. Nevertheless, since I have been asked to present my personal views, I am doing so, not in any sense as a criticism of the present administration, but in an effort to strengthen our administration of our national space programs in the future. In doing so, I would like to comment on specific points.

The first point that I would like to discuss is quite fundamental and it has to do with military and nonmilitary space activities. I realize that the proposed bill is intended to see that "responsibility for planning and directing nonmilitary space activities is placed directly and unequivocally in one agency, NASA."

I agree entirely that this is what we should seek to do; assign responsibility for planning and directing to one agency. I am of the view, however, that there is but one space program and that one cannot physically separate the nonmilitary and the military space activities. In this respect our space endeavors parallel closely those in our atomic programs. We must have one overall space agency adequately supported from which we will take for military application all the technical information that appears to have military usefulness. I would add that there is only this aspect of the space program that is in common with our atomic program. I recall, several years ago, frequently hearing the observation that we should set up a "Manhattan" type project for space. This was really impracticable because our space programs had, in fact, already begun, and contributions were being made to our space programs by hundreds of industries scattered throughout the country. Our atomic program, however, began from an idea, and all

the work could be initially isolated. Our space program began in the Department of Defense and only because of failures in judgment and decisionmaking did it become necessary to establish NASA. Since there is now a "military" program in being and also a "nonmilitary" program under NASA, the assumption seems to be that these should be continued in this manner. Actually, except for what is essentially product improvement, little progress will be made in the Pentagon without drawing upon the technology, materials, and systems developed by NASA in the future. And, in the foreseeable future, if in fact it is not partially true today, the frontier of knowledge will be pushed back by NASA's funding and endeavors almost exclusively. It is important therefore that NASA be given the full responsibility for our space program and that its efforts be so organized as to enable it to provide whatever is necessary for our military program from its own research and development work. I would not recommend considering two separate programs. This will surely mean continued duplication and lack of coordination. Furthermore, if the decisionmaking process in the Pentagon continues under the present JCS system, as they have in the past, it seems reasonable to assume that some essential military programs will be held back, programs that otherwise would be aggressively advanced under the sponsorship of NASA.

I agree entirely with the elimination of the National Aeronautics and Space Council. One can understand why it was established, looking back upon the immediate post-sputnik I period. However, I do not believe that its composition was such as to enable it to contribute a very great deal to the efforts of NASA. I do think that the Administrator of NASA should have available to him the advice of the best council that could be appointed. The Administrator of NASA is charged with the expenditure of funds, the planning and administration of a sizable amount of money. I think that it would be in the interest of the Administrator of NASA, Congress, and the country as a whole, to provide a council consisting of our most able men who are technically well informed in matters concerning NASA. I would point out the parallel between the practice of industry in which a board of directors is made available to top management. To draw another parallel, the commissioners of the Atomic Energy Commission fill a somewhat similar role. In brief, therefore, I agree with the elimination of the National Aeronautics and Space Council. However, I do believe that there should be established a space council that is immediately responsive to the needs of the Administrator of the National Aeronautics and Space Administration. In making this recommendation, one can anticipate the objection of conflict of interests that may be raised. I believe, however, if the composition of the Board were in the main scientific rather than defense industry oriented, that this objection could be dealt with. In any event, the objection of "conflict of interests" is potentially present in almost every situation involving a citizen who comes to Washington to serve the interests of the country as a whole. The fact that this conflict exists should not be cause for unfavorable action on this recommendation, in my opinion.

If my observations on the need for one overall, well-supported space program are valid, then I believe that there is a need for a civilian-military liaison office. This should be established to assure the smooth flow of scientific and technical information from NASA to the Department of Defense. A comparable office has existed between the AEC and the Department of Defense and it has been most successful. This I know from personal association with it for a number of years.

I agree with the changes in the Patent Law. The present law acts to discourage industry from working for NASA.

I believe that it would be well to consider carefully, and to discuss thoroughly, the problem of "in house" work. When the AEC was established, it was anticipated that the technical information coming from the fundamental and applied research of the AEC would be made available to American industry. This seemed to be a very sound approach to the problem because of the very great cost of undertaking research and development in nuclear physics. Our experience, to date, suggests that while there has been some flow of information, there has been a lot less than American industry has anticipated. In fact, there is a strong feeling on the part of some industries that "in house" work has continued to grow and expand far beyond that anticipated when the AEC was established. There is a fundamental problem involved here, that of whether or not we can meet the challenges of the space age through the free enterprise system or whether or not we must rely upon Government research, development, and production of all the materials and systems that will go into an adequate space program. If we are to support the free enterprise system, then a consistent and clear effort must be made to place contracts with industry for research, development, and production. It is realized that sufficient "in house" research must be done to provide yardsticks to the Government that will be used to measure the adequacy of nongovernmental work. But this should be the limit of the "in house" work and the objectives should be to maximize the amount of work placed with industry. I would like to add a final point in connection with this discussion. A true space age will only be realized when our entire economy reflects the technology of the space age in consumer products that will come out of the space age programs, and they will number in the thousands in time, and will have tremendous impact upon our overall standards of living. From these consumer products will come ideas that can, in turn, be applied to our space technology. This regenerative process can be continued to the betterment of both programs and through its continuance we will be able to develop an economy that will, in turn, be able to support an adequate space program. To follow the Soviet system of doing all work in government facilities with a maximum concentration upon a "nonconsumer" technology would be very shortsighted indeed.

Trujillo's Policy of Murder

EXTENSION OF REMARKS OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. PORTER. Mr. Speaker, 3 years ago when I spoke out against Trujillo's policy of murder, the Washington, D.C., police urgently recommended that I carry a gun. They had had experience over many years with Trujillo's gangsters.

The astute United Press International Latin American reporter, Henry Raymond, writes in today's Washington Daily News about the most recent Trujillo murder plot to come to light.

It is no wonder that Trujillo refused to allow the Inter-American Peace Com-

mission to cross his borders. He knew they would find evidence of terror, torture, and murder. I hope that the Organization of American States will soon make a formal statement to deplore this lack of cooperation and the jungle morality imposed by Trujillo in the so-called Dominican Republic.

The seconds are ticking away. Trujillo and his policy of murder will soon be but dark and bloody pages in a history book.

Under unanimous consent previously granted I include hereafter the text of Mr. Raymont's story:

[From the Washington Daily News, Mar. 28, 1960]

**DIPLOMAT ORDERED TO SLAY COLLEAGUE—
PEACE GROUP HEARS OF DOMINICAN PLOT**
(By Henry Raymont)

The Inter-American Peace Commission is studying evidence purporting to show that the Dominican Republic is operating a vast espionage net in the Americas, using terror and murder against its opponents, it was revealed today.

The evidence was supplied by Pablo Giudicelli Velezquez, who resigned last month as second secretary of the Dominican Embassy in Costa Rica after disobeying alleged orders to kill his superior, Chargé d'Affaires Alfredo Fernandez Simo.

Photostatic copies of the document sent confidentially to the Commission were made available to the United Press International.

PLAN

They accused Col. John W. Abbes Garcia, former chief of the Dominican Military Intelligence Service, of ordering Senor Giudicelli to shoot Senor Fernandez on the Embassy grounds and then invoke diplomatic immunity for himself. The reasons given were that Senor Fernandez refused to return to the Dominican Republic and was "going over to the enemy."

Senor Giudicelli replied he could not understand the order, especially in the light of a letter from Vice President Joaquin Balaguer indicating he was sympathetically considering a critical report on Government activities submitted by Senor Fernandez.

Another message from Ciudad Trujillo came the following day saying:

"Do what you were told in earlier cable and then you come. Cable from Chancery is nothing but a smokescreen to keep that traitor quiet and allow you to act. John Abbes."

When Senor Giudicelli stalled and asked to come home for more specific instructions, another message signed by Abbes followed: "January 24—in reference to today's cable. Do not return without executing operation. John Abbes."

The documents recalled allegations that Jesus de Galindez, missing Columbia University instructor who was an avowed foe of Dictator Rafael L. Trujillo, was kidnapped and killed in 1956 on orders of the Dominican Government.

Sources reported that the Dominican code book given to the Commission contains the word "Galindez" but no explanation was offered of the context in which it appeared.

In his letter to the Commission, Senor Giudicelli said that the Dominican Embassy in Costa Rica shielded a huge network of espionage in that country as well as in many others in the Americas.

The 28-year-old diplomat now living at the Venezuelan Embassy in San Jose offered to testify before the Peace Commission. But he urged that steps first be taken to protect his relatives in the Dominican Republic from reprisals.

Senor Giudicelli said he and Senor Fernandez received numerous anonymous threats

since they resigned from their embassy posts February 4. Senor Fernandez has left Costa Rica for Colombia.

The Peace Commission is studying Venezuelan charges that the Dominican Republic has committed flagrant violations of human rights which are contributing to the unrest in the Caribbean. When the group last week asked to make a factfinding visit to the island, the Dominican Government turned it down arguing that such an investigation was a violation of its internal affairs.

Colonel Abbes has denied the report in a statement released in Ciudad Trujillo.

Medical and Health Care for the Aged

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. CURTIS of Missouri. Mr. Speaker, March 23 I placed in the Appendix of the Record, page A2634, a speech that I gave before the American Academy of General Practice—physicians—at Kansas City, Mo. Three weeks later I gave the same speech before the convention of Missouri insurance agents in St. Louis, Mo. As I stated when I placed this in the Record, I prepared this speech to be delivered to these seemingly diverse groups. In this speech I discuss the general background of the problem that our society faces of medical care and hospital care for the aged.

I had expressed the belief in that speech that the tremendous progress made in our American society in advancing the well-being of all American citizens had made ineffective the demagogery which was based upon using the Federal Government as a means of transferring wealth from the have to the have-nots. This belief is right now being placed to a more severe test than I had anticipated. I am wondering if indeed it is true that we can have a rational national debate on the subject of Federal spending.

A pressure group which is probably the most effectively organized for political action of any group in our society today has apparently decided to use the problem of medical and hospital care for the aged as an issue to test whether or not this kind of demagogery can still be used successfully. This group is the Americans for Democratic Action, of which the most powerful segment is the Political Committee on Education of the CIO-AFL, dominated by Walter Reuther, a member of the ADA executive committee. The COPE of the CIO-AFL apparently has decided to abandon the issue of the Landrum-Griffin bill for the 1960 campaign and see whether or not they cannot make the Forand bill which professes to meet an aspect of the problem of the medical and hospital care for the aged do in its stead.

Those eligible for disability benefits would not be covered, nor would the measure provide for payments to mental or tuberculosis hospitals.

Despite the fact that old age is relative, and based upon physiological changes, the Social Security Act bases it on birthdays—65 for a man, 62 for a woman.

By this standard, there are now some 15.5 million Americans over 65 who can be called aged.

This group is living evidence that we have the finest system of scientific medicine in the world, and that our standards of living are unparalleled in history.

Each year, our older population will increase. And by 1970 this fortunate Nation can expect to have 20 million people over 65.

But the growing numbers of our aged have, to some extent, caught us unprepared. For example, we are only beginning to understand the waste of human resources involved in arbitrary retirement of these people because of their chronological age.

And so millions of men and women—many of them as healthy and as capable as they were at 40—are shelved long before they should be, long before they want to be.

With retirement, cash income usually drops. And at the same time, the need for health care services increases until it is about twice that of the younger adult.

It is this combination of lower income and greater need for health services that has led some well-meaning people to believe that medical expense is the most critical problem besetting our aged population.

In their opinion, only the Federal Government can provide an adequate answer.

Against this background, let us examine the premises upon which the supporters of H.R. 4700 base their arguments.

Although the health needs of our older people may be greater than those in other age groups, are the aged too poor to pay for their own medical care?

The answer is that some are, but the overwhelming majority are not.

We are told that three-fifths of all people 65 and over have less than \$1,000 annual income.

Although in one sense accurate, it would be hard to find a more misleading statistic.

It is equally accurate and just as misleading to state that in 1957—the most recent year to which that misleading figure applies—63.7 percent of all Americans had incomes of \$1,000 or less per year.

In 1957 almost half of those persons over 14 years of age also had incomes of \$1,000 or less per year. And 47 percent of those between the ages of 14 and 65 had incomes below \$1,000 a year.

Supposing we organize a social club with only two requirements for membership: First, that no wives had incomes of their own; and second that all husbands earned at least \$25,000 a year.

If we used the same statistical techniques as those employed in compiling the figure of "three-fifths of all people 65 and over have less than \$1,000 annual income," we could come up with this statement:

Half the members of this social club have incomes of less than \$1,000 a year. Obviously, the money income figure cited by the Department of Health, Education, and Welfare for those 65 and over is of little help to us in considering the financial problems of the aged.

Income drops after retirement, yes. But no age group is likely to have as favorable a liquid asset position as the aged, 74 percent of whom now own liquid assets in one form or another.

Furthermore, the needs of the aged person are usually modest. The heavy expenses of raising a family are behind. For the most part, homes are paid for. In fact, according to OASI, "almost three in every four beneficiary couples owned their own homes—most of them free of mortgage—and the median equity in nonfarm homes for the homeowners was \$8,360."

Only 4 percent live in the homes of relatives.

A survey in 1957 by the National Opinion Research Center determined that only 9.6 percent of those interviewed would be unable to pay a medical bill of \$500.

And so when we consider the financial resources of the aged, we can do it sensibly only if we know how many have income from employment, social security, pensions, annuities, savings, investments, insurance, or other assets.

We can only measure financial resources intelligently if we consider them in terms of family income and assets, not individual income and assets.

And when we attempt to figure out the number of people who cannot afford adequate health care, we must know how many already receive it from a religious group, a fraternal group, through membership in a union, as ex-seamen, as members of the Armed Forces, as professional courtesy, as members of specific religious orders, as veterans entitled to compensation and care.

We know, for instance, that 16 percent of the aged are public welfare recipients. As such, under federally aided public assistance programs, they are eligible to receive medical care.

We do not know the answers to questions like these:

How much do the families of the aged help out? And how many of our older people are affluent?

My point is that the economic problems of older people are not only complex and diverse, but difficult to analyze precisely. Yet it is suggested that we take a serious and irreversible legislative action, with tremendously important consequences, with no real guideposts.

We are being asked to grope our way through the statistical darkness on the off-chance that we will stumble into an effective solution.

No one denies that there are instances of severe hardship among our older people—or among any other age group, for that matter. Such cases do exist, although to what degree we can only guess.

Certainly the weight of sound evidence seems to suggest one conclusion: The financial and health problems of the aged have been considerably exaggerated by the proponents of Forand-type legislation. And on the basis of

the facts as we presently know them, it is impossible to justify the creation of a massive Federal mechanism for compulsory national health insurance—even though that mechanism would deal only with a single and somewhat artificially determined category.

Implicit in the thinking of those who support H.R. 4700 is the belief that the health care needs of older people can be conveniently separated from their other needs. Nothing could be a greater mistake. Some of our aged have many needs—in housing, in recreation, in preparation for retirement, in finding acceptance, and understanding within the community, in developing new interests, in using talents, and capabilities.

As an example of how interrelated the needs of the aged can be, a former housing commissioner of the State of New York has pointed out that hospital confinement of older people could be reduced by 20 percent if adequate housing were made available for them.

PRIVATE NURSING HOME LAW WHICH I SPONSORED

Further, the Nation's doctors have repeatedly stated that no person, regardless of age, needs to forgo a physician's services because of inability to pay.

Expert medical testimony before the House Ways and Means Committee establishes another point: the aged have individual health needs. As Dr. Frederick C. Swartz told the Ways and Means Committee:

Care for any segment of our population—the aged included—calls for a cooperative attack on the problem by nurses, doctors, hospitals, social workers, insurance companies, community leaders, and others. It requires flexibility of medical technique—an ingredient which would unquestionably vanish the moment Government establishes a health program from a blueprint calling for mass treatment.

In the case of the aged, their health problem primarily involves acute illness and the so-called degenerative diseases. In a very large percentage of cases, the main need is not for an expensive hospital stay or a surgical operation, but for medical care at home or in the doctor's office. In other cases, the important requirement is nursing care in the patient's home, or the home of relatives. And in still others, custodial care in a nursing home, or public facility may be the only answer. The point is that the medical needs of this particular segment of the aged are subject to countless variations.

The Forand bill, let me point out, wishes not only to grant the aged population most needy assistance but also to move the Federal Government into the very area of medical care where private insurance is now most effective—the area of hospitalization and surgery.

Forty-second Anniversary of the Proclamation of Independence of the Byelorussian Democratic Republic

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1960

Mr. FARBSTEIN. Mr. Speaker, the Soviet Union has acted not only like a

powerful steamroller smothering and pulverizing everything within reach, but it has also been like a deadly and devouring monster, putting an end to the hopes and aspirations of helpless neighboring peoples by enslaving them. The Byelorussians were one of the first victims of Russian communism in the 1920's, and they have been suffering under its tyranny since then.

For centuries these liberty-loving and rugged fighters for freedom have lived under Russian autocracy, but they have not bowed their heads to their oppressors. They had long fought, but had not been successful in their unequal struggle against imperial Russian forces. In the First World War, when the czar's autocracy was overthrown, and the people felt free, they proclaimed their independence on March 25, 1918, and founded the Byelorussian National Republic. That was the beginning of a new era for the Byelorussian people. In their free country they worked hard, prepared to defend their freedom and enjoyed life under their democratic republic. But from the outset their very existence as a free people was under serious threat, and the Red Army of the Soviets was the deadliest of these. Early in 1921 Byelorussia was attacked, overrun, and soon it was incorporated into the Soviet Union. Thus, at the end of more than 2 years of freedom and independence Byelorussians once more lost their freedom. Fortunately, however, even under the most ruthless of tyrannies, these people have not given up hope for their freedom and they still cherish the memory of their independence of those 2 years. On this 42d anniversary of their independence day, we wish that they may attain freedom and happiness in their homeland.

Progress U.S.A.—Fairfield County, Conn.: What a Difference a Decade Makes—No. 2

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. IRWIN. Mr. Speaker, continuing my series of insertions in the RECORD on the general topic of "Progress U.S.A.—Fairfield County, Conn.," I would like to introduce further excerpts from the Fairfield County Trust Co.'s economic newsletter and fact sheet on the growth and development of the county.

Today's excerpt from the company's August-September 1959 issue follows:

WHAT A DIFFERENCE A DECADE MAKES
Ten years ago, Fairfield County boasted 488,000 residents. They had buying incomes of \$883 million and "plunked" down \$518 million for retail purchases. Today some 632,000 people call the county home, a gain of 30 percent. Between the end of 1958 and mid-1959 alone, population rose 3.3 percent. Buying incomes total \$1.6 billion now, up 82 percent from 1948, placing Fairfield County 28th among the big income counties of the Nation. A decade ago, it was 32d. Those

retail purchases—\$961 million last year—ranked the county 30th largest in the Nation, a spurt of 86 percent over 1948 when the county ranked 40th.

On the basis of buying incomes per family, Fairfield County now holds the No. 2 spot nationally—topped only by Montgomery County, Md., in the Washington, D.C., suburban area. Ten years ago, Fairfield ranked 10th richest. The changes on a per capita income basis are even greater. A decade ago, Fairfield ranked 19th nationally; now it stands second in the Nation, with San Francisco first.

BUILDING FAIRFIELD COUNTY

By the looks of the first half, residential construction in Fairfield County may easily match the big boom years of 1952-55, when more than 6,000 dwelling units were put up annually.

In the first 6 months of 1959, some 3,000 dwelling units were added, compared to 2,000 for the same time a year ago—a 50 percent jump. Both private homes and apartments shared in the gain, with 2,300 houses under way in the 1959 period compared with 1,700 last year. The 700 new apartment units topped the 1958 period's 300. Cost of new residential building soared 63 percent—from \$35.5 million for the January-June 1958 period to \$57.5 million this year.

Indications are that this heightened level of residential building will continue. July showed Fairfield County mortgage recordings of \$35 million as against \$19.5 million a year ago. Deeds numbered 1,540; July 1958 showed 1,000.

Nonresidential building is booming, too; \$33.5 million worth of commercial, manufacturing, educational, and science buildings, plus public works and utility projects, were constructed in the first 6 months of 1959, according to the F. W. Dodge Corp. The figure last year was \$24.5 million.

Since the 1950 census, masons, electricians, and carpenters have plastered, wired, and hammered away at 56,000 new dwelling units in Fairfield County, according to the Connecticut State Housing Division. In April 1950, a count of noses showed better than 154,000 private homes and apartments in the county. As of mid-year 1959, the number had leaped to over 210,000—a jump of some 36.6 percent.

BULGING PURSES

Fairfield County far outstripped the Nation in retail sales performance in 1958, according to the latest report of Sales Management, the "bible" of the retailers. The county's increase in total spending between 1957 and 1958—a period hobbled with economic blues—amounted to 4 percent, the United States as a whole managed 0.3 percent. Recession or no, families continued to spend. Per household retail sales rose from \$5,229 to \$5,360. Every retail line except autos shared in the gains. But the auto sales dip was well below the national average, 8 percent compared to 12 percent for the United States.

The county's "up-tilted" income-distribution pattern helps explain this resiliency in sales. Four-fifths of Fairfield County families had buying incomes of \$4,000 or better in 1958. This compares to three-fifths of families throughout the Nation. Matter of fact, better than one-third of Fairfield County families had spendable incomes of \$7,000 or more, versus one-fifth for the United States.

And they spent. This market—whose population equals New Hampshire's and whose income matches Rhode Island's—spent as much as the entire State of Montana in 1958. The food bill of Fairfield County residents was as great as Vermont's and North Dakota's put together; its gas and oil sales matched Nevada's; its auto sales were as much as Idaho's; its lumber and building

sales equaled New Mexico's, and its furniture and appliance purchases amounted to Utah's.

Checks that Fairfield County businessmen and residents write to pay employees and buy goods and services are an important measure of economic activity. July totaled \$423 million, 10 percent over \$385 million in July 1958. Precession July 1957 checks were \$389 million. Stanford's gain was 16 percent, Bridgeport's 7 percent. U.S. increase was 14 percent.

For the first 7 months of 1959, Fairfield County's debits hit \$2.8 billion, versus \$2.5 billion a year ago. Stamford was up 17 percent, Bridgeport 7 percent, the county 10 percent, the Nation 9 percent. Meanwhile, county residents continued to stash away dollars in commercial banks, savings banks and savings and loan associations. Yearend 1958 total was \$945 million, up 12.5 percent from 1957.

Statement of Policy of the National Council of Churches

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. ROOSEVELT. Mr. Speaker, in recent days we have been awakened to the unfortunate fact that military training manuals have gone well beyond in subject matter what most of us feel properly belongs in such publications.

I have before me a letter—and I am sure this communication has been received by every Member of Congress—setting forth the views and position of the National Council of the Churches of Christ in the U.S.A.

This communication should have the widest possible circulation because it will add to a better understanding of the action taken by the Secretary of the Air Force in the training manual fiasco, and of the basic principles and concepts involved in the matter.

I insert at this point in the RECORD, the letter from the Reverend Roy G. Ross, general secretary of the national council, accompanied by an attachment listing those representing denominations which give wholehearted endorsement of the national council's statement of policy:

NATIONAL COUNCIL OF THE CHURCHES OF CHRIST IN THE U.S.A.,
New York, N.Y., March 22, 1960.

HON. JAMES ROOSEVELT,
House of Representatives,
House Office Building,
Washington, D.C.

MY DEAR CONGRESSMAN: The prompt action taken by the Secretary of the Air Force closes its training manuals to infiltration by propaganda against churches and religious institutions. However, the appearance of such defamatory matter in Government publications heavily underscores the extreme dangers to the American principles of freedom. The dangers lie in the lending or employment of governmental power or media, at any official level, to induce or coerce regimentation of expression or to make some pattern of civic thought or religious opinion a test of loyalty, or to equate con-

cern for the rights of men with infidelity to the American ideal.

The National Council of the Churches of Christ in the U.S.A. and its constituent communions are and always have been unalterably opposed to communism. Its unqualified conviction was expressed in the council's policy statement of May 19, 1953, that:

"No body of people is more concerned to combat communism than the church groups of our country" and "these churches are the greatest bulwarks of freedom in the United States."

Such conviction was reasserted in the recent resolution of the council's general board adopted last June—"reaffirming the consistent position of the National Council of Churches expressed in many official actions opposing the evils, the violation of human rights by Communist and other tyrannies."

For the very reason that the National Council of Churches and its constituent communions hold this unalterable and consistent opposition to communism in any part of the world, the council, with equal determination, also opposes and condemns—and will continue to oppose and condemn—all efforts, official or private, subtle or overt, intended or otherwise, to use agencies of any branch of Government or media of mass communication under Government regulation to defame church institutions or leaders, to subject church loyalty to the poison of innuendo, to differentiate between religious groups in point of patriotism, and thus to undermine religion itself, the centuries-old nature of the American people as a religious people, and the essential unity of our Nation in its life and freedom.

Such efforts and practices not only are a patent violation of the free exercise of religion as guaranteed by the first amendment to the Constitution of the United States, but also are violations of that amendment's guarantees of freedom of expression and opinion and of every citizen's right to discuss openly and without fear the practices and policies of his Government. They set a pattern which is profoundly un-American and which, unless opposed and checked, can inculcate familiar totalitarian methods for manipulating the people's mind.

The very purpose of the Bill of Rights was to secure religious liberty and those associated liberties from the invasion of civil authority, and to place them beyond the reach of political or official control, or of private malevolence insinuating itself into media operating under Government sanction.

Precisely because of the national council's unalterable loyalty to these American constitutional principles, it insists not only on the right but also on the duty of the churches and of religious communions and their members to study and comment upon issues, whether political, economic, or social, which affect human relations, the dignity of the individual, and the right of all men everywhere to liberty under law and justice.

To serve these noble and thoroughly democratic and American ends, the national council conducts itself as the cooperative medium through which 33 Protestant and Orthodox communions in the United States focus the light of the Christian faith on all phases of American life and American concern. That it may so serve fully and loyally, the national council will continue to oppose not only communism and any other form of tyranny over the mind of man, but also all efforts public or private, to subject the churches of America and their representatives to any ordeal of suspicion, innuendo, and hysteria.

Sincerely yours,

ROY G. ROSS,
General Secretary.

APPENDIX A

We, the duly elected and authorized representatives of denominations, as indicated, fully and wholeheartedly endorse and support the statement of policy of the National Council of Churches of Christ in the U.S.A. as set forth in the attached letter dated March 22, 1960, by Roy G. Ross, general secretary, National Council of Churches of Christ in the U.S.A.:

Norman J. Baugher, Church of the Brethren; Zoltan Beky, Hungarian Reformed Church in America; Eugene Carson Blake, Presbyterian Church in the U.S.A.; Archbishop Bokdan, the most reverend metropolitan, Ukrainian Orthodox Church of America; Gaines M. Cook, Disciples of Christ; Charles J. Darlington, Philadelphia Yearly Meeting of the Religious Society of Friends; Franklin Clark Fry, United Lutheran Church in America; Most Rev. Leon Grochowski, Polish National Catholic Church of America; Kenneth G. Hamilton, Moravian Church; James E. Hoffman, Reformed Church in America; Fred Hoskins, general council, Congregational Christian; Archbishop Iakovos, Greek Orthodox Church of North and South America; J. H. Jackson, National Baptist Convention, U.S.A., Inc.; Alfred Jensen, American Evangelical Lutheran Church; Arthur Lichtenberger, Protestant Episcopal; James A. Millard, Jr., Presbyterian Church in the United States; Reuben H. Mueller, Evangelical United Brethren; Glenn A. Reece, Five Years Meeting of Friends; Roy H. Short, Methodist; Sion Archbishop, Primate of the Diocese of the Armenian Church of America; B. Julian Smith, Christian Methodist Episcopal; Edwin H. Tuller, American Baptist Convention; James E. Wagner, United Church of Christ Evangelical and Reformed; W. J. Walls, African Methodist Episcopal Zion.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentations be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church,

Gruening, Moss, Long of Hawaii, Lusk, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, and Brunsdale.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, and Brunsdale.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, and Brunsdale.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.

Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.

Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.

Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.

Mr. Justice Clark, of Texas, 2101 Connecticut Ave.

Mr. Justice Harlan, of New York, 1677 31st St.

Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.

Mr. Justice Whitaker, of Missouri, 5000 Van Ness St.

Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.

Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.

Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.

Marshal—T. Perry Lippitt, 6004 Corbin Rd.

Reporter—Walter Wyatt, 1702 Kalmia Rd.

Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whitaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Tenth judicial circuit: Mr. Justice Whitaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Address by Hon. A. S. Mike Monroney, of Oklahoma, at the 60th Annual Dinner of the Society of the Friendly Sons of Providence, R.I.

EXTENSION OF REMARKS OF

HON. JOHN O. PASTORE

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, March 29, 1960

Mr. PASTORE. Mr. President, on Thursday evening, March 17, 1960, the Society of Friendly Sons of Providence, R.I., gathered for its 60th annual dinner. This dinner is the central secular function of St. Patrick's Day, always religiously and enthusiastically observed in the State of Rhode Island.

The society's toast to the United States indicates the patriotic tone of the dinner; and from this U.S. Senate in years past have gone our colleagues to add luster to the night, and oratory to this toast to our Nation.

To call the roll of only a few, the names of Senators Kennedy, Symington, Mansfield, McNamara, O'Mahoney, and Truman come to mind. Glowing comments on the appearance this year of the junior Senator from Oklahoma are summed up in the delighted expression of the president of the Society of the Friendly Sons, Mr. Nelson G. Burke. "The address of Senator A. S. Mike Monroney," President Burke writes, "was most inspiring and the rapt attention of his audience was in itself a tribute."

As if it had been planned that way, the Senator from Oklahoma's emphasis on our weapon of faith in this nuclear age was in perfect balance with the address of the Most Reverend Paul Hagarty, bishop of the Bahamas.

Bishop Hagarty spoke of the world revolt of the underprivileged, seeking freedom from ignorance, freedom from starvation, freedom from the tyranny of economic pressure. The Senator from Oklahoma [Mr. Monroney] spoke of the material power of "the scientific sixties" to lift the underprivileged—fortified by our religious faith to win the confidence, the minds, and hearts of men.

I request that the address by the Senator from Oklahoma [Mr. Monroney] be printed in the Appendix of the RECORD as a document of encouraging science, sound economy, and inspiring philosophy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR A. S. MIKE MONRONEY BEFORE FRIENDLY SONS OF ST. PATRICK, PROVIDENCE, R.I., MARCH 17, 1960

What an honor it is to be chosen as the one to respond to the traditional toast of the Friendly Sons of St. Patrick to our own United States.

What an additional honor it is to be chosen as one of the members of such a distinguished panel of participants as the Most Reverend Paul Hagarty, bishop of the Bahamas; the Most Reverend Russell J. McVinnay; Rev. Francis P. Brady; Hon. John P. Hartigan, judge of the U.S. Court of Appeals; Hon. Edward B. Hanify, attorney and corporation counsel; and your many other distinguished guests.

Sixty years, sure; and 'tis a long, long time for the Irish to be getting along together. And it is as significant a milestone in the history of the United States as it is in the history of your fine association of Friendly Sons. It runs the gamut of life in these United States. Your 60 years parallel the milestones of our Nation's great progress—from shilleaghs to Chevrolets—from leprechauns to lace curtains—from Shamrocks to solar space.

I am so glad to be in home State of two of our greatest and friendliest Senators: Senator THEODORE FRANCIS GREEN and Senator JOHN "O'PASTORE." Theodore's great good humor and the sharp, inclusive wit and eloquence of Johnny make them the Senate's top Democratic team.

Sixty years—a fabulous 60 years in the life of the United States and of the Friendly Sons of St. Patrick—is but a tiny dot over the centuries of recorded history. But in these 60 years which you celebrate tonight the dot of the 60 years in history's span is as huge as our planet itself in our progress.

Frontiers of which your founders never dreamed are crossed every hour on the hour. From terrestrial to celestial is the signet of the scientific sixties. Traffic is getting so heavy in outer space that they'll be wanting traffic lights between the moon and the sun and the stars to avoid disastrous collisions.

Your founders, all progressive men, could not be heard in voice beyond this room. Tonight we hear the "beep beep" of Pioneer V's voice from 675,000 miles away—in a few months, perhaps, from the far side of the sun.

The vision of your founders—seafaring men though they might have been—was limited on a clear day to Martha's Vineyard or Nantucket from a few miles offshore. Today we can see from the dark side of Tombstone, Ariz., on our TV or to the dark side of the moon.

Mankind is on the move. We are breaking out of our two-dimensional world and into the third dimension—that of the vertical. For the tens of thousands of years of man's progress from his caves, he has spread out to find new paths to faraway points, as our Pilgrim Fathers did in settling a new continent. As transportation from the covered wagon grew to the train and steamship, his world widened.

With the crossing of each new frontier they sought out the new. That was the spirit that our forefathers brought to this coast and carried on the whaling ships that sailed the Straits of Magellan as they rounded the Horn to the broad Pacific.

Their sons kept on until all the oceans were charted and explored—and then started to explore the jungles, the swamps, and the poles. We've climbed the highest mountains in the world, gone up the Amazon, reached the darkest of Africa. We've crossed the North and South Poles so often that the path looks like a superhighway.

Progress in the pioneer spirit is the stuff of which America is made. But in reality, until the past two decades, with all his travels and explorations, man had scarcely gone farther in one direction than his cave-man ancestor. That was in the direction of the third dimension—the vertical.

Since the Wright brothers first powered flight in 1903 at Kitty Hawk, that dimension has been expanding—first, timidly, to 100 feet—to 500 feet. And now we see at long last man challenging the voids and the vacuums of outer space—venturing into a new dimension with courage and ingenuity.

In the last year we have seen spectacular new things happen in the field of the vertical: referring to Z-52, KC-135, X-15 (Scottie Crossfield—150 miles into outer space), and B-70.

And now we train the astronauts for space. This is not an idle jest or something out of the science comics. It is real. Today we know—or soon will know—more about what man will meet in outer space than Columbus knew about what he would meet as he sailed westward across the Atlantic.

But as we get the signal loud and clear of the scientific sixties, it is not—we are finding—entirely a blessing. Electronics have shrunk distances and put the whole world within range of voice, sound and sight. I could have flown to Paris and back to Newfoundland by jet in the span of time I took to come from Washington to Providence by train today.

And with this constantly shrinking globe have come to mankind powers from new energy sources undreamed of 15 years ago. Rockets with thrust to reach the moon and the sun and the stars. Explosives that can annihilate entire States with their blast. Speeds of ICBMs from outer space that can reach Providence from Moscow—or from the United States to Moscow (it's as short either way) in 19 minutes. These fantastic speeds make interception or defense unlikely, and only by equal power of destruction through retaliation can we make reasonably certain that this catastrophic attack by thermonuclear warfare does not occur.

To be prepared requires our Nation to have the ability to retaliate in equal and certain destructive capacity. Then, and only then, can we feel any sense of security from attack.

Thus, in the dawn of the scientific sixties we find as our forefathers found when they landed on this continent that only the strong can be secure. Then it meant survival of a few dozen lives from Indian attack. Today it means the survival of tens of millions from destruction in the first 10 hours of an atomic war.

I do not mean to make this speech a grim one. I would be less than frank if I did not remind you that at no previous time in our great history have we been as vulnerable to a catastrophic attack if we let weakness erode our strength or our position of leadership in the free world.

This is the challenge to this generation. One-third of the world's people are behind

the Communist Iron Curtain. They total slightly over 1 billion. One-third (another billion) are in the neutral area of the world. And slightly less than one-third reside in the free world.

Both the free world and the neutral world depend perforce upon the leadership of the United States. If we fail ourselves—we fail them as well.

As I see it, we cannot win the cold war with arms—atomic or conventional. We might—yes, we must—prevent it from becoming an atomic world war III. Our decisive strength in weapons alone will not be enough, however, either to prevent the shooting war or win the cold war.

It seems to me that we have one weapon that the Communists can never have. It is the weapon to bridge the chasm between the destructive side of science and the hope for the best era of Christendom. This is the weapon of our faith—of our belief in an Almighty and Divine Power—and that mankind was made in the image of this holy and Supreme Being. It is the belief that we are our brother's keeper. It is our belief in "right makes might" and not in "might makes right." Without that faith, a godless, materialistic power, even with modern arms, cannot achieve a victory. The mind, morals, and spirit of man must control science or else a Frankenstein of science will destroy us.

Given the strength and courage to hold off the destruction of nations by atomic war, we can change the heading emphasis of "science for death" into "science for life." If we have the faith and the determination to serve—as this generation must serve the peoples of the world—we can and will win.

Instead of beating our swords into plowshares we must beat the atom bomb into mankind's greatest servant. Today more than 100 diseases which have plagued mankind since history began are yielding to diagnosis and treatment with atomic isotopes. Through our research in "science for life" we are attacking cancer and other killers that have heretofore been called incurable.

In the field of agriculture, experiments are under way that may produce entirely new food products, through the use of atomic isotopes. New fruits, vegetables, even superior breeds of livestock, may result from these agricultural experiments in changing nature to work better for mankind.

Engineering uses may revolutionize recovery of energy from coal and oil veins through controlled underground explosions of small atomic bombs. Harbors can be opened in many parts of the world, such as South America and Africa, where no ports are available today, through gigantic underground blasts of atomic energy. Canals or reservoir sites likewise may one day yield huge benefits from the conversion of atomic energy from war to peace.

This one-third of the world that is neutral—looking either to the Communist way of life or at our free way—today is in the darkness of the 18th or 19th century. Ordinary fuel such as coal or oil must be shipped halfway around the world to supply the fuel for electrical generators. Consequently, in such countries as Thailand I have seen them burning teakwood and mahogany beneath the boilers of their generators to supply the low current to burn the electric lightbulbs in the tourist hotels. The people there have thus far missed this 20th century.

But with the magic of atomic energy, low-cost atomic reactors can, and someday will be built that can bring an electrical world to the darkest of Africa and to the villages of India. No longer will it be impossible to generate electricity because of the high cost of shipping fuel halfway around the world. A package of uranium, no larger than a package of cigarettes can light and heat a village of 5,000 for an entire year.

Yes, even the miracle of fresh, pure water may be created by breakthroughs with atomic energy. Millions of acres today are desert because the scant supply of surface water is insufficient or out of reach of irrigation works. Yet I have seen the desert of the Middle East transformed in Israel by irrigation into a land as fertile as the Garden of Eden. The magic of water can make the desert bloom and can offer hope for the tens of millions of hungry people who now barely subsist.

Yet at the shoreline of the oceans, the Mediterranean, the Red Sea, the Pacific, and the Atlantic is the world's largest storehouse of water. Its salt content makes it kill instead of grow the produce of the land.

We are nearing breakthroughs with conventional fuels on desalination of this sea water at costs comparable with surface irrigation. When this is achieved, and it is not far away, we can hold out hope to these millions that low-cost machinery either with conventional or atomic power can bring them the water they need to turn their dry, parched lands into rich orange groves and fertile acres to produce food in abundance.

These are but a few of the things that the scientific sixties hold out for us to do. We must retain the faith of our forefathers to pioneer, to show the true and kindly face of Uncle Sam, and to carry out message of faith and good will to the underprivileged people of the world.

This we can do with the same kind of courage, hard work, and sacrifice that America has shown through our long history. The oppression of hate, of distrust, and destruction can be conquered if we use the tools of the scientific sixties as well as our pioneering forebears used the crude tools of their day. Victory will come when we win the hearts and minds of the men of the world, and only faith in our religious life, in our tools and in ourselves will bring it.

To cry out that we must draw back—to be too timid to dare to risk some of our substance for spectacular new gains tomorrow—will mark us, as it has marked many nations during the past 60 years of this society's existence, as powers of the past and not as world powers of tomorrow.

Faith, courage, and work hold out to a nation—willing to strive hard enough for the goal—the eternal blessings of the world's people.

May they say of this generation of Americans that:

We kept the peace through strength and courage.

We lit the lamp of science to shed its brilliance for all mankind.

And thus we blazed the path to a better life for all of the world's people.

Tight Money Policy and High Interest Rates

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I would like to put in the RECORD the following resolution on tight money and high interest rates adopted recently by a unanimous vote of the delegates to the annual meeting of the National Housing Conference. It is, I believe, further evidence of the growing concern across the Nation with

regard to attempts to drive interest rates still higher and restrict money even more tightly:

RESOLUTION ON TIGHT MONEY POLICY AND HIGH INTEREST RATES PASSED UNANIMOUSLY AT THE ANNUAL MEETING, WASHINGTON, D.C., MARCH 15, 1960, BY DELEGATES OF THE NATIONAL HOUSING CONFERENCE

The National Housing Conference deplors the tight money policy of the present administration which stifles our whole economy and inflates the cost of housing to home-seekers, homeowners, and tenants and adds to the public cost of servicing existing programs. This tight money policy is pricing millions of families out of the housing market by artificially burdening the public with high interest rates. The FHA rate now is 5½ percent plus one-half percent premium, or an effective rate of 6¼ percent. This compares with the rate of 4¼ percent, plus a one-half percent premium prevailing in 1953. These excessively high interest charges on housing have the effect of taking new housing out of the financial reach of 5 million families who are seeking adequate housing.

We regard the tight money policy as inflationary, unsound, and unfair to home buyers of moderate means. Its effect is to restrict the essential growth of the whole economy.

We call on the administration and on Congress to reverse the tight money policy and to adjust the interest rates down to a reasonable level.

Tribute to L. G. Hardman, Jr.

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 29, 1960

Mr. TALMADGE. Mr. President, the March issue of Modern Textiles magazine pays tribute to one of Georgia's most outstanding industrialists and business and civic leaders, Hon. L. G. Hardman, Jr., of Commerce, with a cover photograph and an excellent biographical article by Editor Jerome Campbell. Mr. Hardman has been one of the most diligent and able promoters of a vital and progressive textile industry in my State of Georgia and this tribute to his many outstanding accomplishments is richly deserved. I commend Modern Textile magazine for saluting this stalwart Georgian and I ask unanimous consent, Mr. President, that the text of the article entitled "Forward-Thinking Hardman of Harmony Grove" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORWARD-THINKING HARDMAN OF HARMONY GROVE

(By Jerome Campbell)

Harmony Grove Mills of Commerce, Ga., is essentially and understandably in the business of manufacturing cloth as a profit-making organization. Its management, however, has always regarded the mill as fulfilling the equally important function of providing jobs and good cash income for the people of the little northeastern Georgia rural community where the mill is located. It was for this purpose mainly that the mill was built back in 1893 by Hardman's grandfather, Dr. William B. J. Hardman, in asso-

clation with several other businessmen of Commerce. The original mill was equipped with 10 spinning frames and 60 looms powered by a wood-fired 150 horsepower steam engine.

In those beginning days, when fabric manufacturing was almost unbelievably simple compared to the complicated present, Harmony Grove Mills turned out sheetings and shirtings which were sold as gray cloth through New York agents. The first sample of cloth made in the mill, deemed good enough for marketing, was sent to Wilkins & Giles in New York. Later its output was sold through Ribinson & Shackleton, a firm some oldtimers may still remember. Early records show that the mill's first cotton was bought at 6 cents a pound; burlap for wrapping the cloth cost 5 cents a yard.

In 1898, Dr. W. B. J. Hardman's son, Dr. Lamartine Griffin Hardman, also a practicing physician, became president of Harmony Grove, a position he held until his death in 1937. Serving as president of the mill was only one of his activities; he practiced medicine with great distinction, being at once a practical country doctor and one of the most skilled and sought-after surgeons in Georgia; he entered politics and was elected Governor of the State for two terms (1927-31).

His son and namesake, L. G. Hardman, Jr., now president of Harmony Grove, spent his boyhood in commerce close to the mill and millworkers. After he graduated from the University of Georgia in nearby Athens in 1930, he worked for a few years supervising the Hardman family farms and orchards. It was in his heart, however, to make a career in textiles. To acquaint himself with the mill's operations, he made it a practice to work in the mill 2 hours or so every night after putting in a full day at his other duties. For this work as a mill trainee he received no pay, but did learn by doing the basic operations in making cotton yarn and cloth.

In 1932 he went to work full time in the mill as assistant to the president with duties encompassing its general operation and management. Within a few years the directors were so impressed with his devotion to his job and his increasing skill as a manager that they put him in full charge of the mill with the title of vice president. Upon his father's death in 1937 at the good age of 81, young Hardman was made president.

Even before he was given that title, Hardman had been doing some serious thinking about the future of Harmony Grove Mills. He had come to the conclusion that the mill was badly in need of thorough modernizing and reequipping. "What we had," he recalls now, "was a 1903 model mill and the year was 1937. We had to modernize to survive."

The task of modernization which Hardman set for the mill and for himself was a not an easy one. Harmony Grove was a small outfit, and modernization is always expensive. The older men among the officers and directors, as old people often are, were inclined to be satisfied with the way things were and to resist the idea of change, especially when change meant incurring substantial expenses. So Hardman carried out his modernization program step by step at a pace sometimes far slower than he liked, but one which was dictated by the circumstances of the mill.

AN EYE ON THE MARKET

As he bought new equipment, he studied the market for fabrics looking for a place where Harmony Grove, with its relatively small production and limited resources, might operate profitably. He found it in the continued making of sheetings for the bag trade and drills for the industrial market; for many years the mill concentrated on these goods.

In the 25 years since Hardman first began his modernizing efforts he has kept at it knowing that modernization is a never-ending process and not something that can be finally achieved and then forgotten. Harmony Grove Mills today is as neat and modern a mill for its kind of production as can be found in the textile industry. Hardman and his associates in management, C. W. Hood, Jr. (whose father and brother were among the mill's original founders) and Johnston McCorkle, superintendent, take an understandable pride in saying that not a piece of machinery in the mill predates 1942 with the exception of a few cards and a couple of spinning frames that have been rebuilt and modernized. Most of the major equipment of cards, spinning frames and looms is far newer, of course; and the process of keeping the mill modern still goes on and will continue to do so, Hardman is determined.

Just as the plant and its equipment have been expanded and modernized, so have the fabrics manufactured been changed to keep up with the times. About 10 years ago the inroads of paper made the production of cloth for the bagging trade increasingly precarious. Hardman and his associates gradually shifted over to apparel fabrics. Today the mill weaves cotton drills, twills and sateens largely for converters and for the work and sports clothing trade; it also makes a range of industrial fabrics.

With a total of 29,000 spindles and 600 looms all manned by some 600 workers, Harmony Grove, while not a giant operation, is nevertheless too big and substantial to be considered a small mill. Hardman, Hood and McCorkle are quite willing to regard it as a medium-sized mill and they are content that it will remain so.

It is their pride and satisfaction, that regardless of size, Harmony Grove is a reasonably profitable operation and that it fulfills, on a scale greater than ever, its original primary function, envisaged by its founders 67 years ago, of serving as a source of employment and wage-earning prosperity for the good people of Commerce (population 3,350) and the surrounding rural areas of Jackson County, Ga.

It is also the pride and satisfaction of Hardman and his associates that Harmony Grove Mills is truly a community operation. Many of the millworkers and their parents were delivered at their births by Hardman's father, Dr. L. G. Hardman, Sr. and his uncle, Dr. W. B. Hardman. For many of them, their jobs in the mill, important as such jobs are, are only one of their breadwinning occupations. Workers at the mill have their own farms which they till in their spare time; many are poultry breeders—an important rural industry in Jackson County.

These mill and country people regard the mill president, L. G. Hardman, Jr., as one of them. He has known most of them all their lives; he and his wife visit them in their homes; and they are accustomed to seeing Hardman in and around the mill day and night. As a past president of the American Cotton Manufacturers Institute (1957-58) Hardman is active in the broad affairs of the textile industry and finds himself on these and other matters doing a great deal of traveling.

But he is never away from Commerce for long. Often on returning from a business trip at night, he will take time to walk through the mill seeing how things are going and chatting with workers on the night shift. He rarely takes a vacation; his business interests including the operation of the mill and the supervision of the Hardman family farms and orchards give him, he says, all the diversion he needs.

A MAN WHO LOVES TEXTILES

Hardman has a great enthusiasm for the textile industry and a warm sense of grati-

tude toward it for providing him with an interesting, and challenging career. He looks back upon his year as president of the ACMI with keen appreciation. It was, he says, one of the happiest years of his life. He is grateful for the opportunity his service as an officer of the association gave him to meet and work closely with other leaders of the industry whom he regards as the finest group of men in the world; men of unsurpassed integrity and good sense.

With so great an enthusiasm for textiles, it goes without saying that Hardman is optimistic about textiles' future. He looks forward to a day when the changing relation of productive capacity to a growing demand will make textile manufacturing more profitable than it has been during his three decades in the industry.

But like all thoughtful leaders of the industry, he is deeply concerned over the growing menace of low-wage foreign competition. He considers the only practicable solution to this danger would be a system imposed by U.S. law of equalizing foreign production costs with production costs in this country. We must give our textile industry and the people who depend on it for a livelihood an opportunity to compete on an equal basis with foreign producers, he says. How such equalizing legislation can be put on the statute books is admittedly a difficult task. But we must all work to achieve it, if our industry is to survive, he firmly believes.

The Congressional Record

EXTENSION OF REMARKS

OF

HON. CHARLES M. TEAGUE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, I call attention to the fact that in the first session of this Congress I introduced H.R. 7687 to restrict the printing of extraneous matter in the CONGRESSIONAL RECORD. The following editorial by Edward Kennedy, assistant editor and publisher of the Monterey (Calif.) Peninsula Herald, which appeared in the October 9, 1959, issue of that paper, points up the need for such restriction:

NEWS COMMENTS—CONGRESSIONAL RECORD

Congress adjourned on September 14. Since then the Senate and House Chambers have been empty and silent. The lawmakers have gone home.

One might expect the CONGRESSIONAL RECORD, the official journal of what is said and done in Congress, to suspend publication with adjournment.

Not so. The CONGRESSIONAL RECORD continued to come out daily until October 5—for 3 weeks after adjournment. During that period it was bulkier than usual, the daily issues running to well over 200 pages.

The cost of printing the CONGRESSIONAL RECORD is estimated at more than \$300 a page. So you can see that a lot of the taxpayers' money has been poured into the publication of the activities of a no longer existent session of Congress.

The reason why the RECORD continued to appear daily after Congress had closed shop was to publish the "extension of remarks" of Members of Congress. Theoretically these "extensions" are speeches that Congressmen made. In actuality most of them were never made at all as speeches. They are simply

verbose statements submitted for publication in the RECORD.

Many Congressmen put into the RECORD their "news letters" to their constituents. Since these tracts are intended for the voters at home, it is difficult to see why a Congressman should find it necessary to put them into the RECORD for other Congressmen to read. But apparently they do.

Consider, for example, the lengthy report of the Honorable Charles A. Boyle of Illinois, which begins thus:

"DEAR FRIENDS: As I write my closing newsletter of the 1st session of the 86th Congress, the leaves of Washington trees are turning yellow, the grass of the Washington parks and lawns are putting on their fall coats of brown, and eight of my kiddies are back in school, seven in Arlington, Va., and Pat, the oldest, matriculated at Loyola University in Chicago. * * *

Since the adjournment the RECORD has devoted three columns to a description by the Honorable GEORGE S. MCGOVERN, of South Dakota of the annual sun dance of the Ogala Sioux Tribe of Indians at the Pine Ridge Reservation in his district. He says it attracted a lot of people.

The RECORD has also published a moving memorial eulogy by the Honorable ABRAHAM J. MULLEN to "a great Bulgarian, Nikola Petkov."

The RECORD has published three columns from the Honorable JOE HOLT, of California, in praise of the part played by the Marquardt Corp., in the industrial development of the San Fernando Valley.

The RECORD has published three columns devoted to a letter from the Honorable FRANCES P. BOLTON, of Ohio, to her constituents on what happened during the session.

"A great historical achievement of this session was the passage of statehood for Hawaii," writes Mrs. BOLTON, who apparently doubts that either her constituents or her fellow Congressmen read newspapers.

The Honorable WILLIAM S. BROOMFIELD of Michigan took no less than nine columns to tell what happened during the session.

"As I have in the past, I intend to continue my policy of talking things over with my constituents," Mr. BROOMFIELD writes. You bet he will, and at the taxpayers' expense.

The Honorable GERALD R. FORD JR., of Michigan took 2½ pages to set forth his voting record during the session—although his votes had been recorded in the RECORD after each rollcall.

Senator EVERETT DIRKSEN, of Illinois, took a column to attack those who have complained that mail service is slow. His Democratic colleague, Senator PAUL H. DOUGLAS, took 14 columns to publish a speech he delivered in Chicago.

The Honorable GERALD T. FLYNN, of Wisconsin, took six columns to justify his vote against the labor racketeering bill.

The Honorable BARRATT O'HARA, of Illinois, took a column and a half to list the 19 members of the Chicago White Sox who live during the playing season in hotels in his district.

We have rather carefully perused all the issues of the CONGRESSIONAL RECORD published after the adjournment. We read them at the Monterey Library.

Our considered judgment is this: There is not a word in all this trash that was worthy of publication at the taxpayers' expense. It was just money down the drain.

So much has been wasted in this manner that perhaps a couple of columns more of type won't matter much. So we shall ask our Congressman, Representative CHARLES TEAGUE, to put this editorial in the CONGRESSIONAL RECORD—E. K.

History of Augusta Minutemen Company in World War II

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 29, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article relating to a history of the Augusta Minutemen Company covering their activities in Augusta County, Va., during World War II, published in the Daily News-Record, of Harrisonburg, Va., on March 22, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLONEL ROLLER GIVES HISTORY AUGUSTA MINUTEMEN COMPANY

(By Gen. Charles S. Roller, Jr.)

PORT DEFIANCE.—Before this generation passes away I would like the people of Virginia, especially the Shenandoah Valley, to know something about the Minutemen companies organized in 1942 and 1943 to guard strategic places in Virginia—the railroads, highways, rivers, and especially train bridges.

We organized our Minutemen which should be called the Virginia Militia, as authorized by the Virginia General Assembly. I was captain of Troop 8 and we had no trouble in forming the largest company in the State.

At the same time, I was also a lieutenant colonel of the National Guard and helped to train men in other features for World War II.

ORDERS FROM RICHMOND

In our Minutemen we had the finest professional and businessmen and farmers. I was contacted daily by special telephone from Richmond. We could not tell about our assignments then.

One of our first calls was for a platoon to hurry to both ends of the Chesapeake & Ohio tunnel between Waynesboro and Charlottesville. The officer carried pistols and the men any kind of rifles or shotguns. We were on duty 14 hours. We saw one suspicious element which was carried to Richmond. We never were told what the results were.

Another night we were ordered to the turn at Buffalo Gap. It was late but we walked the C. & O. tracks looking for bombs or obstacles. The world was not aware then of the precautions which had to be taken against our enemies.

One night when we were having a get-together in the A.M.A. camp on Middle River a messenger arrived at 7 p.m. saying suspicious characters were seen going up on the hill. After wading and swimming the river we formed a company of 75 and climbed that steep hill. We covered all the terrain and found a suspicious automobile. Half way up the steep climb one of our members gave out because of heart condition. Six of our best men carried him to the top.

NIGHT SOLDIER TEST

As a test, on another occasion, our commander in Richmond ordered me to assemble the company in a building. A message directed us to proceed west until we hit the woods. Those whose name were in the first half of the alphabet would go south and the other half north.

No two men were allowed to go together. I was to go into the center where they would disperse. A lieutenant would check the men as they arrived at the A.M.A. gym to see what kind of a night soldier they were. They all arrived except two. A squad was sent after them. One of the men had fallen into a creek and sprained an ankle. The other had heard his yells and had gone to his assistance.

NORTH RIVER BRIDGES

On another occasion we were ordered to protect the railroad and highway bridges on North River. Thousands of troops were being moved from the South to Baltimore and New York for embarkation. We guarded those bridges and roads for 24 hours.

There were many other occasions where we were of service. I never heard a man gripe and they often went through rough times to carry out their assignments.

As captain of that great organization, I am planning to give them a banquet in Staunton. We must report, however, that 26 members since the war have answered the last call.

While all manpower was scarce, we responded to all calls for fires and fought at many home and barn blazes during the 5 years we were in existence.

NEVER MUSTERED OUT

After the surrender of Japan in August 1945, the men voted never to be mustered out. No. 8 is the only company in Virginia still in existence.

Governor Tuck once telegraphed me if the company was available during a threatened strike. We would have been ready in 2 hours but were not needed.

We are at the Governor's service at any time. In recognition, I suspect, of that service, on January 27, 1960, Governor Almond promoted me to a brigadier general in the State militia. He issued some beautiful citations for my service.

It is nice to know that we have one company of about 125 men who today are always ready to go to the aid of their country, State and county.

OTHER OFFICERS

Other officers of the company were: R. E. Christian, first lieutenant, a sergeant in World War I and graduate of AMA; J. Eddie Rannels, second lieutenant, a captain at AMA; John Givens Fulton III, first sergeant, a graduate of AMA and officer at VPI; Boyd Van Pelt, supply sergeant, cook, ordnance sergeant, a graduate of AMA; H. I. Todd, sergeant; Hugh H. Kerr, first sergeant. Corporals: E. Russell Cover, AMA graduate; John Ed Shipplett, graduate of AMA; Dr. A. Griffith, age 86; W. L. Kerr, 82, AMA graduate.

FIRST PLATOON MEMBERS

The surviving members of the first platoon with their addresses at the time of enlistment include:

Joseph Alexander, Staunton; R. C. Almarode, Mount Sidney; William E. Armstrong, Staunton; Charles R. Armstrong, Staunton; John P. Austin, Mount Sidney; James S. Banks, Jr., Norfolk; Stanley J. Bernstein, New York; Eugene C. Bell, Norfolk; William J. Bodie, Staunton; George W. Brand, Staunton; Robert P. Brown, Jr., Mount Pisgah; Jacob C. Bosserman, Mount Sidney; Earl Daves Cabaniss, AMA; John R. Catlett, AMA; Arnold G. Clemmer, Staunton; Hugh A. Christian, Mount Solon; Robert E. Christian, Deerfield; Luther M. Church, AMA; James H. Clemmer, Staunton; Letcher P. Clemmer, Middlebrook.

Ellis Coffee, Staunton; Harry M. Cooke, Verona; E. Russell Cover, Staunton; William B. Crawford, Jr., Fort Defiance; William C. Coulton, Waynesboro; Lee A. Cupp, Sanger-

ville; Henry B. Davis, Waynesboro; Harry B. Dice, Burkettown; John J. Dudley, Staunton; Charles H. Echols, Staunton; C. M. Eddy, Staunton; Ben F. Ellis, AMA; Arthur A. Epstein, AMA; C. B. Engleman, Fishersville; Garnett C. Farrer, AMA; Donald G. Fauber, Staunton Draft.

R. C. Fitch, AMA; Earl D. Flory, Verona; Arthur C. Frank, Burkettown; John Givens Fulton III, Mount Meridian; Patrick H. Georger, Warrenton; Edgar P. Hanger, Verona; Eugene G. Hanna, Mount Solon; Tracey Harman, Mount Sidney; Paul E. Harman, Mount Sidney; Alexander R. Harris, AMA; Thomas G. Hawpe, Greenville; Herbert S. Hulvey, Fort Defiance; John N. Jackson, Churchville.

FROM MANY AREAS

Guy C. Kelster, Verona; Hugh H. Kerr, Staunton; Levy B. King, Staunton; Fay K. Koiner, Waynesboro; Jack K. Lambert, Deerfield; S. Hugh Lambert, Deerfield; Ashby D. Lanram, Staunton; George E. Lawson, Staunton; Robert T. Linstone, AMA; Herbert W. Lucas, Mint Spring; Dominick Marino, Staunton; Dr. Fred E. Markley, Staunton; Albert J. Mehler, New Hope; W. W. Meyerhoeffer, Laurel Hill.

C. L. Miller, Staunton; Benjamin A. Morgan, Jr., Staunton; William Lewis Morrison, Staunton; Sam F. McClure, Spottswood, Wallace McCutcheon, Fort Defiance; Echols A. Quillen, Waynesboro; Clarence W. Redner, Waynesboro; Charles S. Roller, Jr., Fort Defiance; Finley H. Rosen, Mint Spring; Richard F. Rushmore, Jennings Gap; C. L. Sheets, Verona; John E. Shippelt; Mount Sidney; A. D. Shinaberry, Deerfield; Peter Shover, Mint Spring.

Jack S. Sneed, Mint Springs; Louis Spillman Jr., Waynesboro; W. W. Stogdale, Staunton; James B. Taylor, Staunton; Cecil W. Thompson, Verona; Houston I. Todd, Staunton; Wm. W. Trimble, Swoope; Wm. W. R. Trimble, Swoope; Finley Tynes, Staunton; Boyd A. VanPelt, Verona; Frank S. VanPelt, Verona; Harry Van Ripper, AMA; Frank Villanova, AMA; Samuel S. Wales, Ft. Defiance; James F. Walker, Mt. Defiance; Tom Watson, AMA; Claude A. Weaver, Staunton; Charles K. West Jr., AMA; Melvin A. Wheeler, Deerfield; Francis G. Wishart, AMA; Frank W. Young, Waynesboro; Walter A. Zimbro, Deerfield.

AMONG THE DECEASED

Among the deceased members are: M. M. Alexander, Mt. Sidney; Robert E. Balsey, Staunton Draft; Dudley Brooks, Ft. Defiance; Wm. B. Bourland, Ft. Defiance; Clarence DeBaun, Staunton; Dr. Guy R. Fisher, Staunton; Wayt A. Irvine, Staunton; Walter L. Kerr, Laurel Hill; Guy S. Miller, Crimora; Dr. Wm. A. Murphy, John D. Palmer, Ft. Defiance.

John F. Patterson, Ft. Defiance; Louis T. Peck, Waynesboro; Dr. Wm. C. Roller, Mint Spring; James E. Runnels, Jr., Staunton; Kenneth B. Sensabaugh, Staunton; John H. Shafer, Staunton; Edward McC. Sites, Ft. Defiance; Ernest P. Sutton, Verona; Earl Van Fossen, Staunton; Dr. W. S. Whitmore; Dr. Ralph Crosby, Staunton; C. V. Perkins, Ft. Defiance; J. C. McCue, Sr., Verona.

The 2d platoon was made up entirely of AMA cadets.

The Bishop James Edward Walsh Case

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. AUCHINCLOSS. Mr. Speaker, I am pleased to read in the papers that

the United States has delivered through the appropriate channels a definite and strong diplomatic note to Red China protesting the imprisonment of that great humanitarian, Bishop James Edward Walsh, of the Roman Catholic faith. This man, who has devoted much of his lifetime to the relief of suffering and distress among the Chinese people, has been rewarded by the brutal Communists with contempt and unspeakable human treatment. It is only one more incident in the indictment against Red China in their desire for admission to the community of the United Nations. This is proof of their insensibility to the cause of justice and as the note of the State Department says, it is a showing of their "complete indifference to humanitarian principles and callous disregard of universally accepted standards of international law and behavior among civilized nations."

It is to be greatly regretted that the Governor of my State of New Jersey, Robert E. Meyner, recently advocated the admission of this international pirate, Red China, into the fellowship of the United Nations. I submit that this is a realm of internationalism where a politician, ambitious for high office, had better keep out until he matures and has a wiser and better appreciation of the differences between "humanitarian principles and callous disregard of universally accepted standards of international law."

Opposition to Senate Resolution 94— Resolution by Council of the Polish Societies and Clubs in the State of Delaware

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 29, 1960

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution recently adopted by the Council of Polish Societies and Clubs in the State of Delaware, in which the council outlines its reasons for objecting to the passage of Senate Resolution 94.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

FEBRUARY 23, 1960.

We, Americans of Polish heritage, assembled at Pulaski Legion Hall, Jackson and Linden Streets, Wilmington, Del., in the annual meeting of the Council of the Polish Societies and Clubs in the State of Delaware, and of the Delaware Division of the Polish American Congress, as delegates of our organizations and the Veteran Post of the Polish Army, on Friday evening, January 29, 1960, passed a motion to give the executive committee of the executive board the power to prepare a resolution in opposition to the repeal of the Connally amendment.

RESOLUTION

"Whereas the United Nations World Court is composed of 15 judges, only one of these judges can be an American. Nine of these judges constitutes a majority of the quorum

which is enough for a decision. From that decision there is no appeal; and

"Whereas the International Court of Justice, commonly referred to as the World Court concerns every American who cherishes and wishes to retain the form of government recognized as existing in the States and established in the Federal Government under the Constitution of the United States; and

"Whereas Senate Resolution 94 is designed to strike out the words of the Connally amendment—'as determined by the United States.' It proposes that our country subject itself without reservation to judgment by Communist judges; and

"Whereas the World Court operates under decrees of the United Nations—not under the Constitution of the United States. In this country the U.S. Constitution guarantees peaceful assembly, free speech, right to petition, trial by jury and the right to own property and other basic freedoms. Individual guarantees and rights of this type are not found or are severely limited in the United Nations Charter; and

"Whereas the World Court judges take no oath of office to any principle. There are no uniform United Nations qualifications for World Court judges—not even a legal degree, several of the judges now serving are from countries that have not accepted any jurisdiction of the World Court—even on international matters. And yet these judges would (if the Connally amendment is repealed) be able to rule on domestic issues in the United States; and

"Whereas with men and women in high places in Government advocating the repeal of the Connally resolution, being in favor of policies designed further to destroy our independence as a nation, it behooves each truly patriotic citizen to become alerted to the dangers that lurk in the forthcoming months of 1960 as a citizen of the Republic to an extent never before required of him. * * * For never before in its history has our Nation faced so many perilous dangers as seem bent on its destruction at this moment; and

"Whereas could any Senator and Congressman who has taken an oath to support the Constitution of the United States treat his oath so lightly as to submit any part of our Constitution to the fiat of a World Court? Could our elected trustees of our constitutional liberties so betray their trust as to offer these liberties to be limited or destroyed by a small group of men, some of whom may be appointed by powers that seek our destruction? and

"Whereas one of the principle reasons the great legislative body of the U.S. Senate was created, to act as a special guardian for the basic rights of this country, its individual States, and the people therein, and to guard against precipitate or emotional legislative action. It is our sincere hope that the U.S. Senate will live up to that purpose and will kill any attempt to repeal the Connally amendment; and

"Whereas it is safe to say that the Founding Fathers of our Nation never envisioned that the Constitution would some day be bypassed and that the fate of American citizens would be placed in the hands of 15 judges, only 1 of whom is an American; and

"Whereas the repeal of the Connally reservation or its mutilation by amendment would surrender the right of the American people to self-government. For it would subject the United States to the dictates of whatever nations happen at any time to constitute the members of the International Court of Justice. In that Court we would never have more than one vote, and sometimes we have none. It is the attempt to soften up the American people for this final betrayal. Finally its a question of world government, with world law—a question whether American freedom is to survive; and

"Whereas there is only one defense that the citizens of the United States have against

the internationalists who wish to make the United States a mere satellite of Communist Russia—and that is preserve the Connally amendment, which protects the national sovereignty of the United States of America: Therefore be it

Resolved, That the Council of the Polish Societies and Clubs in the State of Delaware and the Delaware Division of the Polish American Congress, emphatically opposes the Humphrey resolution (S. Res. 94) which would scrap our State and national sovereignty and place the United States of America under a world government, in which 170 million Americans would virtually have no control, giving to the World Court exclusive authority to determine any matter affecting the rights of citizens and the Government of the United States; and be it further

Resolved, That a copy of this resolution be sent to the President and Vice President of the United States, Senators J. WILLIAM FULLER, of the Senate Foreign Relations Committee, JOHN J. WILLIAMS, J. ALLEN FREAR, JR., and to Congressman HARRIS B. McDOWELL, JR., the press, radio of Wilmington, Del."

CASIMIR CHETKOWSKI,
President.
VINCENT J. KOWALEWSKI,
Secretary.

Hire Older Workers

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. HOSMER. Mr. Speaker, older workers in this country are discriminated against by employers and there is no basis in fact for such discrimination. Two recent newspaper articles emphasize this point. The first reprinted below is from the Los Angeles Examiner and the second from the Los Angeles Mirror News:

[From the Los Angeles Examiner]

JOB BANS ON ELDERLY DEPLORED
(By Gobind Behari Lal)

SAN FRANCISCO, January 20.—Advancing age is an unjust stigma keeping able and efficient people from employment, the Regional Conference on Aging was told today.

Prompt action is needed to stem inflation and eliminate artificial handicaps imposed on the aging by an unthinking public, Dr. J. Fale Ludwig, Los Angeles, told the conference, adding:

"Employment restrictions are based on the assumption that the older worker is not as good a worker, is not productive, is not dependable. Yet, study after study has shown that the average older worker is just as good as, sometimes better than, the younger."

Dr. Alfred Auerback, San Francisco psychiatrist, deplored "worship at the shrine of youth and beauty" in American culture and the brushing aside of older citizens as "non-productive members of society."

Respect for age, he said, must immediately be inculcated to balance the American philosophy of life.

Seriousness of the burden of inflation on older people was described by Dr. E. Vincent Askey, Los Angeles surgeon and president-elect of the American Medical Association.

Rising hospital costs pose serious problems to the aged who must, Dr. Askey pointed out, suffer health impairments.

He said the consequences of inflation might well present a clearer picture of what faces us in the 1960's than the fanciful predictions for "a leisurely push-button life, a pioneering life on the moon, or even a manufactured life in a test tube."

He urged that 1960 be the year of decision and called upon Congress to halt inflation through a balanced economy and a stable dollar so that elderly people may benefit from health insurance.

[From the Los Angeles Mirror News]

RX FOR OLDSTERS: STEADY WORK

One of the cruelest and most idiotic taboos in our present socioeconomic pattern is the virtual ban on hiring older workers.

Pressure from ambitious workers to force early retirement of long-term workers to "make room" for younger men is shortsighted and costly and denies industry the valuable know-how of skilled veterans.

Back in 1880, when the German Government set up the first extensive plan, 65 years was fixed as retirement age.

But life expectancy was only 38 years in 1880. Now it's 70 years, thanks to giant advances in medicine.

What was a sound retirement age in 1880 is sociological nonsense today.

There is extensive agitation in Congress for expanded medical aid to oldsters. It will be costly, and younger workers will have to pay it unless we take a second look at the taboo against employing older workers.

Happily, the American Medical Association is making just such a survey of the problems of the aging.

Dr. J. Fale Ludwig, speaking at the AMA conference in San Francisco, urged "a vigorous program to eliminate employment barriers placed before older citizens."

That's the vital key.

Elderly citizens actively employed remain mentally alert and physically hale far longer than forcibly retired workers. They solve their own social, medical and economic problems, without becoming a tax drain on the whole economy.

Commonsense and pocketbook wisdom together argue for employment of those older workers who want to work and are capable of production norms.

Wisconsin Delegates to White House Conference on Children and Youth

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 29, 1960

Mr. WILEY. Mr. President, as we know, the sixth annual White House Conference on Children and Youth is under way.

The major purpose of the conference is to assess the needs and conditions of the Nation's children, to resolve the problems in this field, and to promote opportunities for children and youth to realize their full potential for a creative life, in freedom and dignity.

As I understand it, more than 7,000 persons are in Washington attending the Conference.

At this time, I would like to commend these fine individuals, participating in this Conference, who are constructively attempting to resolve the problems con-

fronting youth nationally, and in their home communities.

Following the meeting, it is hoped that these dedicated leaders will be able to return to their communities, better equipped to promote youth-development programs and to brighten the outlook for the youth of America.

Particularly, we in Wisconsin have a fine group of representatives at the Conference.

Reflecting the splendid traditional spirit of public responsibility by American citizens which has helped to make this country great, I ask unanimous consent to have the list of delegates attending this fine Conference printed in the Appendix of the Record.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

WISCONSIN DELEGATES TO WHITE HOUSE CONFERENCE ON CHILDREN AND YOUTH AS OF MARCH 22, 1960

Attorney General John W. Reynolds representing Governor Nelson.

Mrs. Otto L. Falk, Route 4, Oconomowoc. President's Conference Committee and program participant.

OFFICIAL STATE DELEGATES

A. B. Abramovitz, Madison; Richard F. Armstrong, Chippewa Falls; Charles Asher, Jr., Sturgeon Bay; Phil Bandt, Madison; Miss Sybil Berntson, Madison; Thomas Blanchard, Madison; Miss Elizabeth Burr, Madison; Armand F. Cirilli, Hurley; Rev. H. Bruce Connell, Park Falls; Stuart B. Crawford, Madison; Dr. Helen C. Dawe, Madison; James G. Frechette, Keshena; Mrs. Marion Freeman, R. N., Appleton; Mrs. Grant Gordon, Milwaukee; Mrs. Lois O. Guest, Neillsville; Miss Muriel Hamilton, Madison; Miss Agnes M. Hansen, Madison; Miss Agnes M. Haughey, Superior; Richard C. Helmsletter, East Troy; Miss Sue Holthusen, Stevens Point; Mrs. E. E. Homstad, Black River Falls; Dr. Amy L. Hunter, Madison; Mrs. Hyman Israel, Waukesha; Dr. Ralph G. Iverson, Menomonie; Gordon B. Jaeger, Merrill; Mrs. Robert C. Johnson, Milwaukee; F. X. Joswick, Pulaski; Val Karan, Madison; Mrs. A. M. Klaus, Two Rivers; Mrs. Karl L. Kleinpell, Cassville; Miss Karen B. Kritz, Wauwatosa; Chester A. Krohn, Marinette; Miss Jenny J. Lind, Madison; James Linderman, Eau Claire; Miss Patricia McGinnity, Madison; Miss Gladys Mollart, Watertown; Mrs. Carl J. Neess, Wausau; Edgar W. Nell, Algoma; Rev. Arnold H. Nielsen, Janesville; David Nyhus, Ashland; Miss Carol O'Loughlin, North Fond du Lac; Mrs. Charles J. O'Neil, Milwaukee; Mrs. David Palmer, Madison; Mrs. John Parkin, Marshfield; Dr. George A. Parkinson, Milwaukee; Allen Paschen, Baraboo; Miss Norma Rathbun, Milwaukee; Harold Reinecke, Fond du Lac; Miss Ione M. Rowley, Madison; Mrs. John H. Schleifer, Benton; R. H. Schmidt, Clintonville; Christopher Scott, Tomah; Ralph Sherman, Dousman; Rev. William J. Spalding, Green Bay; Miss Carolyn Spargo, Mineral Point; Mrs. E. K. Steul, Madison; James Leroy Stewart, Lac du Flambeau; Bernard Stumbras, Appleton; Dr. H. Kent Tenney, Madison; Miss Gertrude R. Thurow, LaCrosse; Hon. Eugene A. Toepel, LaCrosse; Mrs. Clarence Underwood, Racine; Mrs. Ruth B. Walker, Kenosha; Franklin Walsh, Hebron, Ill.; George E. Watson, Madison; Russell S. Way, Green Bay; Richard W. Whinfield, Madison; Hon. David Willis, Green Lake; Capt. Michael S. Wolke, Milwaukee; Rev. G. Aubrey Young, Waukesha.

¹ Youth.

PROGRAM PARTICIPANTS

Msgr. Norbert P. Dall, LaCrosse; Miss Mary Julia Denton, Madison; Robert L. Erdman, Milwaukee; Rev. Benjamin A. Gjenjvick, Milwaukee; Max J. Hays, Madison; Miss Clarice Kline, Waukesha; John David McLain, South Milwaukee; Frank Newgent, Madison; Dr. Lloyd M. Simonson, Sheboygan; Harvey A. Stevens, Madison; Miss Dorothy Waite, Madison.

DELEGATES REPRESENTING NATIONAL ORGANIZATIONS

Jerry Baker,¹ National Federation of Settlements Neighborhood Centers, Milwaukee; Miss Lynn Bratley,¹ Y.W.C.A., Racine; Miss Barbara Brero, Elva; Miss Catherine Carnes,¹ International Juvenile Officers Association, Madison; Robert M. Carnes, International Juvenile Officers Association, Madison; H. What Happens When the Tariff Commission Turns Down a Local Community Hard Hit by Unemployment by Quibbling Over Technicalities—Or a Study in Local Impact When the Commission Fails To Do Its Job for a Small Local Industry

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. STRATTON. Mr. Speaker, last week the Tariff Commission turned thumbs down flatly on a plea by the

glove industry and the citizens of Fulton County, N.Y., in my congressional district, for urgent relief from the serious economic impact of cheap foreign glove imports. Ignoring the heavy unemployment in this community, the Tariff Commission—acting, in my judgment, in defiance of the clearly expressed intent of Congress—threw out this complaint from an entire community largely on a technicality, the inability to produce specific unemployment figures for only one fraction of the overall glove industry. This action may have been clever as an exercise in legal niceties, but what about its impact on the local community itself, and what about its much broader implications for determining whether the Tariff Commission has outlived its usefulness in dealing with what is surely the most important aspect of the whole matter of foreign imports.

To present a graphic picture of this local impact I include herewith an editorial from the *Gloversville (N.Y.) Leader-Herald* of March 26.

The editorial follows:

IT'S BIGGER THAN FULTON COUNTY

After suffering so many setbacks in modern times, Fulton County probably doesn't display the shock it should at the Tariff Commission's decision not to recommend to President Eisenhower escape clause relief through the enactment of specific import quotas and withdrawal of tariff concessions.

It may be that "defeatist attitude" which is being talked about in many quarters or it may be that we are too close to the situation to realize just how much the glove industry is being discriminated against by our national leaders who devote more time to being internationalists than being servants of the people who elected them.

In any event, the last has not been heard of this. Immediately jumping in to defend the glove industry were Senators KEATING and JAVITS and Representative STRATTON. They had some pertinent comments on the whole situation and it would be decidedly unfair to even suggest their concern is motivated by political ambitions.

It seems a shame that greater protection can't be given to the employers and employees in such small industries as the glove business. To many of those in Washington who decide the fate of such things and who are accustomed to dealing with problems much bigger than this, the future of the glove industry probably holds little significance.

But the same thing has happened to other industries and will continue to happen to still more industries until the problem gets the attention and action it deserves. Unemployment on the scale we have seen it first hand does not present a pleasant picture. And when it spreads—and it certainly will if greater protection from imports isn't afforded American industries—what will be in the end result?

Our potential military enemies won't need bombs to defeat us. They will have used a more potent weapon—that of stirring up discontent to the extent that it has destroyed morale and affected the clear-thinking abilities of many loyal Americans.

More than the glove industry, more than Fulton County is involved in this whole mess. But when will our fellow Americans in powerful places come to realize that?

Centennial Celebration of Cameron County, Pa.

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 29, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a resolution passed by the House of Representatives of the Commonwealth of Pennsylvania commemorating the centennial celebration of Cameron County. It is fitting that the Senate should take note of this event. Simon Cameron, for whom the county was named, was a Member of the U.S. Senate during the 35th, 36th and 37th Congresses. For a time he served as Secretary of War in the Cabinet of Abraham Lincoln. Cameron County may well look back upon the past 100 years as a century of progress and prosperity.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION MADE AT CENTENNIAL CELEBRATION, CAMERON COUNTY, PA.

IN THE HOUSE OF REPRESENTATIVES,

January 26, 1960.

On March 29, 1860, the General Assembly of Pennsylvania took 401 square miles of land area from portions of the counties of Clinton, Elk, McKean, and Potter, created the 66th county of the Commonwealth and named it Cameron, in honor of Simon Cameron, then a U.S. Senator from Pennsylvania, and later a short-time Secretary of War in the Cabinet of Abraham Lincoln.

Because of its terrain it is known as "the Land of Endless Mountains." Its foothills lead into the Continental Divide of the East. Its Indian paths were a portage from the Susquehanna to the Allegheny waters. Within its borders are the greatest table lands on the Atlantic seaboard.

Often referred to as Pennsylvania's last frontier, it has played an important part in the history of the State and Nation.

Spars from the timber of its forests supported the masts of many a commercial and combat vessel. Flagstone from its quarries was used in the Arlington National Cemetery and in the esplanade at the Tomb of the Unknown Soldier. Hunting, fishing, and recreation constitute a substantial segment of its economy.

Dynamite with which the Panama Canal was blasted into being was manufactured there. For a time in the teens and the twenties, powder and munitions so dominated its economy that Emporium was known as Powder City.

At Emporium was founded Sylvania Electric Products, Inc., which industrial acorn has grown into the giant industrial oak of today with plants in all parts of the United States and affiliates in many foreign countries. During World War II, its laboratories at Emporium gave final laboratory perfection to the VT fuse shell, acknowledged and rated as the No. 2 weapon of the war. During the war the predominance of female labor at the plant was such that Emporium became known throughout the Nation as "Girls' Town, U.S.A." and was so featured in an article in Collier's magazine. Today, as an affiliate of General Telephone & Electronic

Corp., it has assumed its leadership in the electronic and space age in which we live. Within its borders are also located a part of Quehanna operations of Curtiss-Wright engaged in matters affiliated with the jet and space age.

In 1861 hardy lumbermen, also expert as backwoods riflemen, pinned tails of buck deer to their hats, converged from the surrounding areas upon Driftwood, from whence they transported themselves by raft down the river to Camp Curtin at Harrisburg where they enlisted for service in the Civil War as the Bucktail Regiment. Their fighting fame is recorded in the history of that war. A monument now stands to their valor at the point of departure at Driftwood.

In World War II, four-star Gen. Joseph T. McNarney, a native of the county, served as Deputy Chief of Staff, supreme allied commander of the Allied Forces in the Mediterranean theater of operations, and succeeded general of the armies, Dwight D. Eisenhower, in the European theater for the demobilization of the American forces.

When history was being made with the advent of the voyage of the atomic submarine *Nautilus* under the North Pole, Harry Thomas, a Cameron County boy, was on board as a communications officer.

Hon. C. J. Goodnough, representative from Cameron County, was twice elected and served as speaker of the house of representatives. The field of entertainment records the name of Tom Mix.

Cameron County operates on a balanced budget and has no indebtedness, bonded or otherwise.

The first 100 years of the life of Cameron County may truly be viewed through the eyes of history as displaying a pageant of progress. The strength and courage of its people have kept pace with the times and they stand ready to face the future with the same spirit. Therefore, be it

Resolved, That in recognition of the centennial celebration of the creation of Cameron as the 66th county of the Commonwealth, this house of representatives of the General Assembly of the Commonwealth of Pennsylvania hereby extends its congratulations and best wishes to said county and its people for continued prosperity, success, and happiness and that the celebration of the centennial during the period of July 2 to 9, 1960, not only reflect the glories of its past, but also project its future role in the history of the Commonwealth and Nation; and be it further

Resolved, That a copy of this resolution be transmitted to Cameron County Centennial, Inc.

Dismissal of Student by Vanderbilt University Divinity School—Protest by Faculty

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Tuesday, March 29, 1960

Mr. KEATING. Mr. President, Mr. Glenn D. Everett, the Washington correspondent for the Religious News Service, has brought to my attention a statement by the faculty members of the Vanderbilt University Divinity School, protesting the dismissal from the school of a student, Mr. James Lawson, because of his participation in a recent lunch counter demonstration in Nashville, Tenn.

The statement is signed by 15 of the 16 faculty members of the divinity school.

It points out:

Whether or not we approve his strategy, we believe that Mr. Lawson has endeavored to follow his Christian conscience and we see no adequate justification for his expulsion from the divinity school.

Mr. President, I ask unanimous consent that this statement be printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

STATEMENT BY THE FACULTY MEMBERS OF VANDERBILT UNIVERSITY DIVINITY SCHOOL, NASHVILLE, TENN.

Divinity student James Lawson has been dismissed from the Divinity School of Vanderbilt University by action of University Chancellor Harvie Branscombe and the university board of trustees.

Mr. Lawson participated in the recent lunch counter demonstration in Nashville in which some of our Negro citizens requested service in establishments which have refused them service because of their race.

The undersigned, representing 15 of the 16 faculty members of the divinity school, wish to protest this action. We have adopted the following statement expressing our convictions in this matter:

"Our seminary community consists of men of various consciences and witnesses who acknowledge an ultimate loyalty to God alone.

"The responsibility of this community is to bear witness to this ultimate loyalty.

"Whether or not we approve his strategy, we believe that Mr. Lawson has endeavored to follow his Christian conscience and we see no adequate justification for his expulsion from the divinity school.

"We have had no part in such action. Mr. Lawson has been a respected student and we continue to hold him in respect."

Gordon D. Kaufman, Leander E. Kech, Arthur L. Foster, Lou H. Silberman, Paul S. Sanders, S. Everett Sander, Everett Tilson, James D. Glasse, Langdon B. Gilkey, George N. Mayhew, Herman A. Norton, Bard Thompson, Ronald E. Sleath, Frank Grisham, James E. Sellers.

Poll Results

EXTENSION OF REMARKS OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following results of my annual questionnaire as well as certain charts showing the occupational breakdowns which should be of interest to Members of this body:

POLL RESULTS

(By ALVIN M. BENTLEY, Congressman, Eighth District, Mich.)

Out of some 30,000 questionnaires which were sent out in January, 7,632 were returned for a gratifying percentage of 25.4 percent. Here is the way the eighth district voted:

1. The problem of labor-management conflict, resulting in situations such as the steel strike should be dealt with by the Congress. Along which of these lines do you think the Congress should consider legislation. (1) Compulsory arbitration, 12.7 percent; (2) prohibition of industry-

wide strikes, 17.4 percent; (3) factfinding boards with power to make recommendations, 19.6 percent; (4) application of anti-trust laws to big labor, 27.9 percent; (5) Government regulations of both wages and prices, 10.9 percent.

2. The question of a continued deficit in our international balance of payments and the resulting loss of gold and dollars is one of the most serious problems that faces the new Congress. One aspect is the low-cost foreign competition which we face at home, as well as abroad. What alternatives would you suggest to meet this situation: (1) Subsidize American exporters to meet the difference in labor costs, 3.9 percent; (2) raise tariffs and impose import quotas to protect our industries against low-cost foreign goods, 33.8 percent; (3) prevent U.S. companies located abroad from exporting their products here, 37.2 percent; (4) reduce dollar expenditures overseas by cutting back on our troop commitments abroad and limiting foreign aid, 33.5 percent; (5) require dollar loans and grants abroad to be spent in the United States, 45.5 percent.

3. The problem of our defense effort being behind the Soviet Russians in certain aspects concerns many people greatly. Do you think we should: (1) Go all out to match the Russians in every phase of defense regardless of cost even if it means higher taxes, 11 percent; (2) continue our present levels of defense spending for a balanced program, 37.6 percent; (3) make every effort to reach a workable agreement with the Russians for disarmament, 38.2 percent.

4. The social security tax rose to 3 percent on employers and employees alike on January 1 and is scheduled to reach 4.5 percent by 1969. Should the program be amended to include the following benefits even if higher taxes are required: (1) Lowering the retirement age, 32.7 percent; (2) increasing the present limit of \$1,200 on outside earned income, 44.9 percent; (3) providing hospital, nursing care and surgical benefits to eligible persons, 32 percent; (4) tying social security benefits to living costs, 37.2 percent.

5. Consideration is being given in Congress to eliminate all present tax deductions (except the \$600 exemption) and then reducing the present rates about 40 percent with the minimum rate at 12 percent, and the maximum at 55 percent. Some of the deductions which might be removed include expense accounts, long-term capital gains, local and State taxes, interest payments, income splitting for married couples, tax-free interest on bonds of States and cities and charitable contributions. Social security benefits might be taxed and personal exemptions for old and disabled persons would disappear. Depreciation allowances would end but corporation taxes might be cut to 44 percent. Net rental value of house would be treated as income. Would you favor eliminating all these deductions in return for lower tax rates: Yes, 23.2 percent; no, 64.9 percent.

6. Are you in favor of: (1) More Federal aid for education and to boost teachers' pay, 15.6 percent; (2) Federal aid to local public works, 4.1 percent; (3) Federal aid for depressed areas, 28.4 percent.

7. Do you think that Federal credit should be extended to veterans, 12.3 percent; farmers, 5 percent; small businessmen 12.7 percent.

8. What should Congress do to solve the farm problem: (1) Raise supports and tighten production controls, 2.3 percent; (2) gradually decrease supports and controls, 41.7 percent; (3) eliminate all supports and controls at once, 28.2 percent; pay farmers the difference between the market price and the support price with production controls, 4.2 percent; (5) gear supports to farm production costs, 10.9 percent.

Camden Speaks Up for Senior Citizens

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 29, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we citizens have been paying more and more attention in recent weeks to the problems confronting our aged and aging citizens. In Camden recently a plea from the Camden (N.J.) Polish American Citizens Club added new data and new urgency to our concern about the future and programs for the future.

An editorial in the March 26 issue of the Camden Courier Post describes that appeal and gives additional viewpoints.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

The plight today of senior citizens living on fixed incomes, mainly social security and pensions, leaves little doubt that something has to be done—in fact, is going to be done—to aid them.

Demands for relief from the ever-increasing cost of living, particularly in the tax field, are valid. And it is evident that relief must come not only from the local level, as was the subject of pleas at the recent public hearing on the city's 1960 budget, but from the national level as well.

Just what form the needed relief will take is not so readily apparent.

That the problem is steadily becoming more pressing was evidenced in the greater number of persons who presented that view at the budget hearing. Additionally, there

was a plea from the Polish American Citizens Club, which said 340 of its members were over 60 years of age and 247 were on pension.

"Such incomes are becoming more inadequate with each succeeding year to cope with the increasing cost of living and higher taxes," the club noted. It added:

"The rising tax structure is making greater demands on the fixed incomes of these senior citizens, causing them anxiety and alarm as to their ability to meet rising tax costs and retain possession of their properties on which they have paid taxes for 30 to 40 years."

Nationally, the number of elderly persons in proportion to the population is growing. And therein may lie a factor which could provide a major portion of the answer to their growing problem. The answer could be in the elderly themselves—their vast number. And that means political strength.

As soon as the elderly recognize that strength, they can weld themselves together as a unit and a powerful voice. They can

unite behind sensible legislation in their own behalf. The sooner they do, the sooner they will get it.

The hope then would be that the legislation is, indeed, sensible and not a wild visionary scheme like some proposed in the past.

Polaris Shot Opens Crucial Test Series

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of March 28, 1960, regarding the Polaris missile:

POLARIS SHOT OPENS CRUCIAL TEST SERIES

(By Richard Witkin)

COCOA BEACH, Fla., March 27.—The Polaris ballistic missile, the weapon around which a new Navy is being built, has begun a series of three critical tests.

The first was conducted this afternoon at San Clemente Island off the California coast near Los Angeles. A Polaris was launched beneath the sea by a charge of compressed air.

This had been done many times before. But today for the first time an attempt was made to ignite the missile after it had emerged from the water. This procedure will be followed in normal operations.

It was not immediately known, however, whether today's ignition attempt was successful.

The second test will be conducted within the next few days a few miles offshore from the launch site at Cape Canaveral, Fla. The launch pad will be a regular Polaris tube installed aboard a converted merchant ship, the *Observation Island*.

Except that the *Observation Island* will not be submerged, the shot will practically duplicate an operational shot. It will be the first firing to use all the navigation, guidance, and fire-control equipment required for a bona fide launching from Polaris submarines.

WILL TEST FULL CAPACITY

The third test will dispense with simulation and demonstrate the Polaris' capabilities of its true environment.

For this test, the *George Washington*, first of the Polaris submarines, will sail here from New London, probably in July. She will stow a Polaris in 1 of her 16 vertical launch tubes, cruise out to sea and submerge, and then aim the missile down the Caribbean range.

To the team directing the Polaris development—its chief is Rear Adm. William F. Raborn, Jr.—the critical nature of the tests is more political than technical.

Secretary of Defense Thomas S. Gates, Jr., indicated at a news conference on March 10 that a decision on Navy proposals to expand the Polaris program would hinge largely on the outcome of these three tests.

The admiral and his staff have shown no worry about encountering any serious technical defects. They are satisfied from previous tests that the Polaris design is sound.

Whatever the outcome of the two remaining tests, and related budget deliberations, the Navy expects to meet its autumn timetable for dispatching the *George Washington* on regular operational patrol. The Patrick Henry—built, as was the Washington, by the Electric Boat Co. in Groton, Conn.—is due to join her sister ship on patrol duty before the end of the year.

If the two-ship schedule is met, it will be a remarkable achievement.

GO-AHEAD GIVEN IN 1956

It was not until December, 1956, that the Navy was authorized to proceed full speed with the Polaris missile, a 28-foot two-stage bird powered by solid propellants. Until then, the Navy had been working on a sea-going version of the Army's single-stage liquid-propelled Jupiter.

There were several reasons for the switch-over. Basically, it was decided that liquid propellants were much too dangerous for shipboard use.

While planners were coming to this conclusion, propellant makers were increasing the power of solids, and the Atomic Energy Commission was compressing the size of required warheads.

These advances made for a solid-propellant Polaris design of very attractive size and weight.

The original timetable for sending a Polaris submarine to sea was sometime in 1963. But in December, 1957, a year after the go-ahead for a solid Polaris, the already tightly paced program was further accelerated.

The target date for the first ship on station was advanced to late 1960. It was expected that sacrifices would have to be made in initial range (1,380 instead of 1,725 statute miles), reliability and accuracy. (Tests indicate that there will be no sacrifice in accuracy; it is too early to gage the missile's reliability.)

DOUBTERS NUMEROUS

Ever since the decision on 1960 deployment, a horde of doubters have been dismissing the ostensible speedup as Navy propaganda.

Today, 7 months before the target date, all signs indicate that the Navy's promise to have ready-to-fire Polaris on station in 1960 will be fulfilled.

There are broader issues—broader than the issue of the deployment timetable—on which the Polaris concept is being seriously questioned.

This is not to suggest that any responsible official, even in rival service, does not want the Polaris in the Nation's arsenal. It is almost universally acclaimed as an important and highly desirable weapon system.

The main questions being asked are these: How meaningful will be the deployment of the initial Polaris submarines, in view of the limited range of first-round missiles?

Is the Polaris submarine as immune to enemy attack as its proponents assert?

Have the difficult problems of navigation and communications been surmounted?

Finally, and perhaps most important, is not the Navy seeking to invest too high a proportion of the Nation's military funds in a weapon system with too limited a punch?

TWO AND SEVEN-TENTHS BILLION SO FAR

Funds appropriated for the program through the fiscal year ending June 30 total \$2,742,433,000.

It is expected that the 1961 budget will provide at least another billion dollars.

The dollar figures, too large for ready comprehension, take on meaning when one looks at what they have bought.

This included huge production buildings put up by such contractors as the Lockheed Aircraft Corp. (missile frame and over-all coordination), the Aerojet-General Corp. (fuel and propulsion), and the General Electric Co. (guidance and fire-control); nine \$100 million submarines, three times the size of the largest ones in World War II, already launched or under construction. Also, a \$26 million missile-assembly facility that will help transform Charleston, S.C., from a backwater Navy station into a major Navy port; and the multimillion-dollar conversion of a conventional submarine tender,

the Proteus, to enable it to unload and load missiles in Polaris submarines in port.

Patrols are expected to last 2 to 3 months. With their nuclear power plants, the Polaris craft will be able to stay submerged the entire time.

The Navy builds its case for the Polaris around two words: concealment and mobility. Admiral Raborn states it this way:

"Since we would normally be in the position of firing back, not firing first, the concealment and mobility of the Polaris system is what best suits our needs."

HARD-TO-FIND TARGET

"No instrument made by man is as hard to find as a nuclear submarine if it really wants to keep its position secret."

"On land our military installations are known. Most of them we don't even try to keep secret."

"Polaris launching sites, on the other hand, can't be 'zeroed in' for two excellent reasons. One is that the location will not be known in advance. And the second is that the location is constantly moving."

Additional advantages are attributed to the Polaris submarine. It will have a low vulnerability to sabotage. It will stay only a short time at an overseas base—when it meets the Proteus or other tender between patrols.

As a result, it will run little risk of being overrun in an invasion.

The most immediate question raised about the Polaris is the degree of usefulness of the initial 1,380-mile missiles. It is suggested that a very restricted number of potential targets could be covered within that range.

It is suggested, too, that with its operating area so narrowed, the Polaris would be much more likely to be detected and followed by Communist antisubmarine forces than the Navy admits.

The Navy acknowledges that these initial shorter range missiles reduce its flexibility. It will be happier with the 1,725-mile missile that will be available in 2 years, and the 2,875-mile missiles for which it hopes soon to obtain development funds.

The Navy insists, however, that more than three-quarters of potential targets can be covered from friendly waters by the first-round missiles. It gives low rating to the current potential of antisubmarine detection techniques.

An additional point is made by the doubters. In a war, Polaris submarines would give away their position to patrol planes when the first of their 16 missiles broke the surface. They might be attacked and sunk before many more missiles had been launched.

SCHEPTICS ARE DISPUTED

The consensus among qualified neutral observers appears to be that the vulnerability of Polaris submarines will be much lower than skeptics suggest, though not so low as the Navy likes to think.

Has the Navy surmounted admittedly tough communications and navigation problems?

It insists it has. Communications will be accomplished primarily by a "very low frequency" system able to penetrate a certain distance into the water. This will be supplemented by a worldwide high-frequency net transmitting signals that a Polaris submarine can pick up by sticking a small antenna just above the waves.

Navigation is critical since an error at the launch point will mean an error at the target end.

There remains one overriding to consider. If the Polaris is primarily a destroyer of cities rather than what the Air Force calls a counterforce weapon—a weapon powerful and flexible enough to take out tough or mobile military targets—is the Navy seeking too large a Polaris fleet?

GOAL IS 45 SUBMARINES

The Navy says it would like a fleet of 45 Polaris ships, each with 16 missiles. Air Force sources think 15 or 20 vessels would be sufficient.

In addition to Polaris ships, the Navy is pressing for installation of Polaris missiles on surface warships.

The Navy is disturbed by what it fears is a campaign to concentrate an overwhelming proportion of the Nation's deterrent strength in the Polaris.

Naturally, the higher the portion of limited strategic funds invested in Polaris, the less available for such Air Force weapons as the Atlas, Titan, and the Minuteman intercontinental ballistic missiles and manned bombers.

At the root of the debate over the size of the Polaris force is the question: what type or types of nuclear war are likely to erupt?

Here are some points made by Air Force observers concerned lest the Polaris be over-emphasized:

The Polaris could be whittled away, ship by ship, without provoking a major war. This would be exceedingly dangerous if the Polaris force constituted the bulk of the Nation's strategic strength.

POWERFUL FORCES WANTED

The Air Force leans to the notion that powerful forces must be available to seek out the enemy's military might (buried command centers; buried and mobile missiles) rather than "soft" city and industry targets.

Air Force strategists do not dismiss the idea that this Nation might someday feel compelled to abandon the current idea of accepting the first major blow before retaliating. They talk of "preemptive" response to limited enemy provocation.

The Navy does not reject the need for some counterforce weapons. But it puts far less stress on them than the Air Force.

The Navy appears to question how an enemy could attack major land targets without crushing population centers in the process. That would provoke retaliation of attacks on cities and industries by the Polaris.

Moreover, the Navy argues, Polaris submarines, would have the best chance of any weapon of surviving an enemy blitz. They are therefore the most effective deterrent.

Import Quota To Control the Import of Lamb

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, March 29, 1960

Mr. CHURCH. Mr. President, the distinguished junior Senator from Wyoming [Mr. McGEE] ably represented his State at a hearing of the U.S. Tariff Commission on March 22, 1960. Much of what he said concerning the sheep industry in Wyoming is applicable also to the sheep industry in Idaho, and I have vigorously joined with him in urging the Tariff Commission to adopt an import quota to control the import of lamb, mutton, and live animals which is threatening to ruin the domestic industry.

I ask unanimous consent that Senator McGEE's statement to the Tariff

Commission may be printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

STATEMENT OF SENATOR GALE W. MCGEE, WYOMING, TO THE U.S. TARIFF COMMISSION, MARCH 22, 1960

Mr. Chairman and members of the Commission, I am here today to support the action of the sheep industry in seeking relief from certain foreign imports of lamb, mutton, and live animals. These imports have reached the point where they are causing considerable distress to the sheep industry, a very vital industry to my State. I feel confident the position of the industry as a whole has been or will be adequately reflected by representatives of the national associations. Therefore, I should like to confine my remarks today to the problem which is facing our people in Wyoming.

Eighty-five to ninety percent of the lambs produced in our State are feeder lambs. The general market for these lambs tends to be the west coast for the lambs produced in the western part of the State; while those produced in the eastern part of the State are generally shipped into the areas of Colorado, Nebraska, Iowa, and Kansas.

Last July the price for feeder lambs in Wyoming was 19 cents per pound. When it was announced the Delino interests were importing sheep into the California area, the price of feeder lambs in western Wyoming immediately dropped to 17 cents a pound. If we compute an average weight of 70 pounds per feeder lamb, this means there was an immediate loss to the producer of \$1.40 per animal. For a grower selling 1,200 lambs, the size of an average band, this means a loss of \$1,680. This price drop was also reflected in the lambs grown in the eastern part of my State, and it was extremely detrimental to the economy of the State of Wyoming.

Let us next consider the old ewe market. In 1958 old ewes sold for an average price of \$10 per head. Last year because of imports, the price was \$5 to \$7 per head with very little market for old ewes. When we consider the fact that 70 percent of our mutton which is used in manufacturing meat was imported, it is quite easy to ascertain why the old ewe market suffered extremely in 1959.

On the dressed lamb market, there were many instances where lambs imported from Iceland were retailed on the east coast for 39 cents per pound. The wholesale price in most other areas amounted to at least 39 cents per pound; and considering a 30-percent gross markup for retail, the effect on the domestic price was quite drastic.

The announced price for New Zealand and Australian dressed lambs has ranged from 25.5 cents to 38 cents per pound, with the majority being in the area of 27 cents to 28 cents. At the same time, because of increased costs of production in the United States, the price per pound of a dressed domestic lamb ranged from 37 cents to 50 cents. Since a price of 47 cents to 50 cents for the domestic lamb is required in order to show a profit for the producer, the American grower is in an extremely unfavorable position.

The Congress has recognized the problem facing the domestic sheep industry by passing the National Wool Act. Notwithstanding this and other congressional action, it is my feeling the industry is still in jeopardy.

The alternatives with which we are faced at the present time are to increase the tariff on imports or to provide for import quotas. I feel that a certain amount of imports could properly supplement the domestic industry by sustaining a year-round market for lamb and allowing the people of the United States to eat this delicacy at all times of the year

rather than the various seasons as it has been so often in the past. These imports, however, should not be allowed to the extent where they completely ruin the domestic industry; and for this reason, I would like to recommend the adoption of an import quota based upon some historical volume of imports, such as an average for the past 5 years. This would include years of low import, such as 1956, and also years of high import, such as 1959; and I believe that would be a good balancing factor. I hope the members of this Commission can approve an action of this type.

I appreciate the opportunity to appear before you today to express my views on this very important subject.

Tabulation of Poll

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. BERRY. Mr. Speaker, I have just completed the tabulation on a questionnaire which I mailed to every boxholder outside of first-class postoffices and to all addressees receiving their mail in first-class offices in my congressional district. I am inserting the results in the Record in order that all Members of Congress and others reading the Record may know how the people of western South Dakota feel on some of the most important issues.

Not only, Mr. Speaker, did about 8 percent complete their returns, but most of them took advantage of space provided in the questionnaire to express their opinions and to explain their stand on specific questions and issues.

I have saved for future reference many quotes from these comments, a few of which I should like to pass on. For instance, a number questioned why we should spend such large sums on the space program, one said, "We don't need another planet to subsidize."

There were a large number of farmers who demanded a repeal of the present farm program, saying "It is only making the large farmers larger and the small farmer smaller," or "What chance does a young man have to get a start under the present program?" Another said it this way, "Neither the Middlewest nor the Nation can afford to experience a serious depression resulting from low farm prices, and we cannot afford to continue to build up surpluses and spend billions in storage. No fair-minded foreign nation should complain if we put our house in order by using tariffs and quotas."

On the subject of foreign aid, one man said, "Christ performed miracles to teach the people to care for themselves, but he did not start feeding all the hungry people of the world."

On the subject of small business one man said, "The small businessman is being put out of business with high taxes—yet he is the backbone of the Nation." Another said, "The small businessman can work out his own problems if he is not taxed to death."

On the need for a balanced budget and reducing Federal regulation and control, one said, "It seems that our people have been convinced that the only way they can be prosperous is to gradually surrender their freedoms to Government control." Another said, "If the present rate of Federal expenditures continues, our children will see the day when the Government is taking their entire income and giving them a planned program from the cradle to the grave; all that then remains is to deny them the right to vote and they have had it."

The same thought was said this way, "I am for balancing the budget. I am

against spending money we do not have for benefits that do not benefit." Another said, "If you want your father to take care of you, that is paternalism; if you want your mother to take care of you, that is maternalism; if you want Uncle Sam to take care of you, that is socialism; if you can take care of yourself, that is Americanism."

On Federal aid to education one said, "The farther money gets away from home, the less comes back." Another said, "The States and local governments should handle their own problems rather than crying for Federal help for every project that arises." Another put it this

way, "Federal aid is inherently dangerous and absolutely unnecessary. The States can and will take care of their own school problems if left alone. The United States of America has the best all-around educated population in the world—what more do we want?"

I would close the quotations with this final shot, "A citizen's only recourse is profanity and a letter to his Congressman; the Congressman's only recourse is profanity and the burden of writing a sympathy letter back to the citizen."

Following, Mr. Speaker, is a complete tabulation on a percentage basis of the answers to the questions asked:

[Percent]

	Yes	No	Not certain		Yes	No	Not certain
1. Do you believe sufficient emphasis is placed on our missile and space programs?	59	19	22	6. Has the Federal Government given sufficient attention to the problems of the small businessman? (Please comment).	20	35	45
2. Do you consider our defense budget to be adequate?	64	11	25	7. Do you believe the Federal minimum wage should be raised?	22	65	13
3. Should we continue our mutual security military and economic aid to friendly nations?	62	13	25	8. Should labor unions be brought under the antitrust laws?	79	8	13
4. To bolster farm income, do you favor—				9. Do you favor reducing the national debt before tax cuts are made?	78	12	10
Increased crop supports and controls?	15	62	23	10. Do you favor legislation to tighten taxation on cooperatives?	61	20	19
Enactment of domestic parity program for wheat with allotment based on bushel rather than acreage quotas?	43	25	32	11. With respect to education, should the Federal Government:			
Preventing foreign competition with tariffs and quotas?	50	24	26	Consider it a local and State problem?	68	19	13
5. Do you favor an increase in gasoline tax even though failure to pass would slow down the interstate highway program?	37	52	11	Give aid for school construction?	43	43	14
				Help pay teachers' salaries?	22	61	17
				If you favor Federal aid, should a tax levy be made to cover the cost rather than add it to the national debt?	48	17	35

Those who indicated their business as farming answered question 4 as follows: 4(a) 35 percent said "yes," 55 percent said "no," and 11 percent "uncertain"; 4(b) there were 68 percent who said "yes," 21 percent "no," and 11 percent "uncertain"; on 4(c) 66 percent said "yes," 14 percent said "no," and 20 percent "uncertain." On question 9, 87 percent said "yes," 7 percent "no," and 6 percent "uncertain."

The ranchers were even more definite on question 4 with only 13 percent answering "yes" on 4(a), 79 percent saying "no," and 8 percent "uncertain"; on 4(b) there were 49 percent answering "yes," 34 percent "no," and 17 percent "uncertain"; and on 4(c) there were 73 percent who said "yes," 10 percent "no," and 17 percent "uncertain." On question 9 there were 86 percent who said "yes," 11 percent "no," and 3 percent "uncertain."

Of those who classified themselves as farmer-rancher, on 4(a) there were 27 percent answering "yes," 49 percent "no," and 24 percent "uncertain"; on 4(b) a total of 55 percent said "yes," 21 percent "no," and 24 percent "uncertain"; and 4(c) found 64 percent answering "yes," 10 percent "no," and 26 percent "uncertain." On question 9 there were 72 percent answering "yes," 18 percent "no," and 10 percent "uncertain."

An interesting category was the teachers on question 11. On 11(a) there were 37 percent answering "yes," 39 percent saying "no," and 24 percent "uncertain"; on 11(b) there were 63 percent answering "yes," 18 percent "no," and 19 percent "uncertain"; on 11(c) there were 48 percent answering "yes," 34 percent answering "no," and 18 percent "uncertain"; while on 11(d) there were 60 percent of the teachers answering "yes," 8 percent "no," and 32 percent "uncertain."

tain." These returns indicate that the teachers themselves are divided on the subject of Federal aid to education and a large majority feeling that if any such program is instituted there should be a tax levy to cover the cost.

Wilson Memorial

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 29, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we who work in Washington, D.C., are often made keenly aware of the sharp differences of opinion which often arise when we discuss new buildings, new civic improvements, new memorials to our great men.

On January 21, when I introduced a bill to establish a Woodrow Wilson Memorial Commission, it was already clear that there was no single opinion on the form the monument could take. Many feel that it should be a "living memorial," that is, a functional building such as a library, an international center, and so forth. Others believe that it should be a monument similar in concept to those which already honor Washington, Jefferson, and Lincoln.

Such discussion is, I think essential if the proposed memorial is to serve its purpose as well as it should. When Americans become concerned about an issue, their discussion brings improvement and innovation. The Memorial Commission would certainly have a formidable and rewarding task.

The latest discussion about the memorial concerns members of President Wilson's family, and it is discussed in a Newark, N.J., news editorial of March 21.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WILSON MEMORIAL

Woodrow Wilson's family is divided on the form of the proposed memorial to be erected to him in Washington. His last living daughter disagrees with her brother-in-law and her stepmother.

Dr. Francis S. Sayre suggests it should be an international house for the reception of foreign visitors, particularly those participating in cultural exchange programs. Mrs. Edith Bolling Wilson concurs.

But, in response to an inquiry by Senator WILLIAMS of New Jersey, sponsor of legislation to create a memorial commission, Mrs. Eleanor Wilson McAdoo has expressed preference for a monument.

Many favor the "living memorial" idea, among them President Eisenhower. But there are strong arguments for a nonutilitarian monument, and Mrs. McAdoo's are among them. She points out that Mrs. Wilson plans to give the President's house on S Street to the Nation as a shrine. Another building dedicated to his memory would not be needed, she feels. But Mrs. McAdoo's most important reason is that a monument could be seen by every kind of American who might hesitate to visit an education and orientation center.

Dr. Mason Gross, president of Rutgers, feels the same way. He has said that as between a memorial of real beauty and a fussy center, no matter how nobly conceived, I would certainly pick the memorial.

The Washington Monument, the Lincoln Memorial and the Jefferson Memorial are beautiful. It is not required of them that they be useful. They express the grandeur that invests the memory of great Presidents. Their noble lines inspire reverence in the beholder, which is what memorials are supposed to do.

Managing One of Our Greatest Resources

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. HORAN. Mr. Speaker, the Fifth District of Washington State, which I have the honor to represent, is blessed with an abundance of forest land. The major portion of this land is under the jurisdiction of the U.S. Forest Service.

These timber resources play an important role in the economy of this area and, thus, proper management is of vital importance. The Forest Service, under the able and conscientious direction of Chief Richard E. McArdle, has provided this sound management. Their purpose has been to manage the forests in line with the multiple use or "best for the greatest number of people" concept. Under this plan, everyone benefits rather than just a chosen few.

I would like to enclose an editorial which appeared in the March 21 edition of the Spokesman-Review Newspaper, Spokane, Wash., entitled, "Forest Use Policy Statute Supported." This editorial, I believe, sums up the general feeling among the people of our area regarding the proper management and utilization of our forest resources.

The editorial follows:

FOREST USE POLICY STATUTE SUPPORTED

Some progress is being made in the National Capital toward the enactment of a statute that would assure the management of national forest lands on the basis of multiple use.

Thanks to the stimulus of Representative WALT HORAN of Washington's Fifth Congressional District and other Congressmen well aware of the need for a policy declaration by the Congress, a bill outlining such a policy has been getting favorable treatment to date in Washington, D.C.

Among those who testified before a House Agricultural Subcommittee last week the chief of the U.S. Forest Service, Richard E. McArdle; spokesmen for various land-use associations, and Congressmen of both political parties.

Their testimony has emphasized the aim of the Forest Service to carry out administrative multiple-use policies which affect timber operations, grazing, fish, and wildlife, general agriculture and varied recreational interests.

There have always been some minor irritations over the carrying out of national forestry policies. But that is to be expected in a country as large as ours and with such great variations in the location, size and other economic and geographic factors that condition the effects of administrative regulations. In general, however, there has been no attempt on the part of the Forest Service to confine its public services solely to forestry.

Yet the recent threat of legislation that would compel the Forest Service to abandon its principles of multiple use of public lands—this threat has now made it desirable, if not necessary, that Congress provide official and legal authorization for the multiple-use concept.

It will take relatively fast action for the bill now under committee consideration to win enactment and White House approval at this session of Congress.

There should be no letup in the effort to secure a sound multiple-use statute this year. Individuals and organizations which favor multiple use of forestry lands over the proposed "lock-up" or single-use plan should continue to raise their voices of approval at this time.

Judge Oscar Dancy, Cameron County Commissioners Court Favor Shrimp Import Quota Proposal

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 29, 1960

Mr. YARBOROUGH. Mr. President, it was my recent privilege to join the distinguished senior Senator from Louisiana, Senator ELLENDER, and others in cosponsorship of a bill to establish country-by-country import quotas on shrimp and shrimp products.

Enactment of this quota measure would, I believe, help relations between American and Mexican fishermen in Gulf of Mexico fishing. Establishing quotas will let foreign fishermen know exactly what part of our market they can expect to supply.

A study of the record shows that under our Federal aid programs we are advancing money to some 50 countries across the Atlantic and Pacific to increase their shrimp imports into the United States. Unfortunately, this is reacting against the interests of fishermen of our own country and our good neighbors of the Americas.

Few Americans understand the advantage and desirability of strengthening our mutual understanding with our friends below the border as well as our city and county officials in south Texas. Two such officials are Judge Oscar C. Dancy, the honored, beloved and distinguished judge of Cameron County, Tex., and his county clerk, Mr. H. D. Seago, likewise with a long and distinguished record. Recently the commissioners court of Cameron County passed a resolution favoring establishing a country-by-country import quota on shrimp and shrimp products. I ask unanimous consent to have printed in the Appendix of the RECORD the following resolution of the Cameron County commissioners court on shrimp imports.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION

Whereas the greatest concentration of deep sea shrimp trawlers in the world is based in Cameron County, Tex., and the shrimp industry is a vital part of the economy of such county; and

Whereas shrimp in vast quantities are reported off the coasts of various foreign countries, especially in the Far East, and shrimp from such countries are for the first time in history being made accessible to the markets in the United States due to the introduction into these countries within recent times of

power-driven, well-equipped modern fishing vessels and especially due to the construction in such countries (often with funds originating in the United States) of modern freezing plants; and

Whereas the labor in many of such foreign countries is cheap, and the standards of living of labor in such countries is far below that in the United States; and

Whereas the shrimp industry of the United States is threatened with disaster from the uncontrolled and unregulated flood of cheap foreign shrimp into the United States: Now, therefore, be it

Resolved by the Commissioners Court of Cameron County, Tex., in meeting duly assembled on this 21st day of March 1960, a quorum being present and voting, on motion duly made, seconded, and unanimously carried, that full support be, and it is hereby, given to H. R. 8769 now pending in the Congress of the United States placing a country by country quota on shrimp imports.

In testimony whereof, said Cameron County, Tex., has caused this resolution to be subscribed by its county judge, and attested by its county clerk, this 21st day of March 1960.

CAMERON COUNTY, TEX.,

OSCAR C. DANCY,

County Judge.

Attest:

H. D. SEAGO,

County Clerk.

We're Up to Front Row Again

EXTENSION OF REMARKS

OF

HON. WILLARD S. CURTIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. CURTIN. Mr. Speaker, the exploits of Pioneer V have emphatically brought before the people of this country the very real accomplishments of our scientists in space exploration. In this connection, under leave to extend my remarks in the RECORD, I desire to include a very fine editorial which appeared in the March 18, 1960, issue of the Bethlehem Globe-Times of Bethlehem, Pa., on this matter:

That's a happy sound in the signals being sent back over more than 500,000 miles of space from Pioneer V, America's space rocket heading for an orbit around the Sun and a near rendezvous with Venus.

It will be a greater victory for American scientists still if the tiny radio powered by solar batteries keeps functioning as anticipated until the 95-pound windmill satellite disappears from range months from now and 50 million miles away in the lonely heavens.

The signal is now setting a new record for distance transmission through space each time it comes through. That in itself is welcome news to a nation afflicted with a national inferiority complex. It means we are making a major contribution to man's exploration of the vast void that comprises our planetary system.

The United States still has to accept an unaccustomed and uncomfortable back seat to the Soviet Union in the realm of sheer power in rocketry. For accuracy in aiming and skill in the immensely complex and abstract arithmetic of space ballistics, the Russians have forced the best scientists whom this country could gather from here and abroad to do their utmost just to keep pace.

But Pioneer V is a tangible demonstration that the United States has something to show the world in the important area of instrumentation. American rockets are truly space scouts capable of collecting and sending back an unprecedented amount and variety of data to expand man's sphere of celestial knowledge.

Electronics and the Future Air Traffic Control

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 29, 1960

Mr. GOLDWATER. Mr. President, on March 17, 1960, Gen. E. R. Quesada, Administrator, Federal Aviation Agency, made an address before the Electronics Industries Association, at the Government-industry dinner at the Statler-Hilton Hotel in Washington, D.C. General Quesada touched upon some very interesting points in the program to modernize the electronics part of our airways.

Since I believe that my colleagues will be interested in this address, I ask unanimous consent, Mr. President, that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ELECTRONICS AND THE FUTURE AIR TRAFFIC CONTROL

(Address by E. R. Quesada, Administrator, Federal Aviation Agency, before the Electronics Industries Association government-industry dinner, Statler-Hilton Hotel, Washington, D.C., March 17, 1960)

I am indeed happy to be with you tonight and to discuss some of the more challenging problems facing us in the aviation community. This evening I hope to give you an up-to-date report on our plans and programs to provide safer and more efficient aviation facilities for the Nation.

Aviation and electronics have come of age during the lifetime of many of us here tonight. What's more, the two industries have grown up together. The years following Orville Wright's historic 12-second flight at Kitty Hawk have been years of phenomenal progress for both aviation and electronics. Electronics has had its impact on the growth of the aviation industry. Likewise the electronics industry has benefited from the inexhaustible market generated by the air age. Manual and mechanical systems and devices in aircraft have been replaced by smaller, lighter, less expensive and more efficient electronics packages. The remarkable progress in electronics in the last decade is a tribute to engineers and scientists of the world who have dedicated their efforts to research and development. And, I might add, a tribute to the electronics manufacturers for their efficiency in producing the products of research and development for distribution to the users. In this regard, your organizations have promoted, not only our Nation's productivity but have furthered the well-being of its individual citizens as well.

As we look now to the future, aviation will rely on the efforts of men such as you to an increasing extent to provide the neces-

sary airborne devices, navigational aids, and communications equipment that are the lifeblood of a safe and efficient air traffic system. Your steady growth over the past several years reflects the increasing dependence that we are placing upon your industries in helping us reach our objectives. And I would say, without hesitation, that the electronics industries, big as they are, are only beginning to tap their productive potentialities. Your greatest years still lie ahead.

Now what are the objectives of the Federal Aviation Agency? There are many, but there is one that takes No. 1 priority—air safety.

We must attain air safety to the most absolute degree possible, for every type of aircraft that uses the navigable airspace, whether large or small, jet or piston-engine, whether flying under visual or instrument flight conditions, from takeoff to touchdown.

I believe we have made excellent progress in the field of safety, through more and better navigational and communications equipment, through research and development activities, improved flight standards and air traffic control regulations and procedures, higher medical standards and pilot qualification, and many other related factors. This progress has been due to the efforts of not one agency or one group, but rather to the cooperation and hard work of the entire aviation community.

The aviation picture today is rapidly becoming more complex. The airspace, which was more than adequate when I started my flying career 35-odd years ago, is literally shrinking as the result of increasing air traffic and the introduction of bigger, faster, and higher-flying transport planes and thousands upon thousands of business and private aircraft. Today we have over 100,000 active aircraft in the United States. Of this number 70,000 are civil. We estimate that by 1965 we will have 83,000 civil aircraft in our national inventory. In terms of hours flown, we expect general aviation aircraft to jump from its current rate of 12 million hours per year to 16 million by 1965. This will be an increase of 33 percent in the next 5 years. These statistics are staggering in themselves, but when we consider the fact that next year we will have 225 jet transports operating in our system, the immensity of the task we face strikes home with stark reality. Now then, what are some of the specific problems associated with modernizing our national system of aviation facilities? First, to accommodate increased numbers and complexity of aircraft in smaller blocks of airspace, and still maintain safe separation between aircraft, we must provide a measure of flexibility in our air route structure to permit the more efficient utilization of our precious commodity—airspace. This requires improved navigation devices both on the ground and in the air. Our ultimate goal is to provide a navigation reference throughout the airspace from the ground to the highest altitude at which aircraft will fly. This means that we must provide facilities which will permit aircraft to be flown off-airways—off the established air routes—a system in which aircraft are not necessarily required to fly from navigation aid to navigation aid.

There are available today, in various stages of development, many navigation systems that will permit off-airways, point-to-point flight. At our National Aviation Facilities Experimental Center, in Atlantic City, we are currently experimenting with Doppler navigators, pictorial displays, self-contained dead-reckoning computers and other techniques to determine how this equipment can be used in a system based on ground-referenced devices. The accuracy of position information required for air traffic control demands at this time that self-contained airborne navigation systems be updated periodically by reference to a ground navigation facility. The VORTAC network being implemented throughout the country will provide accurate azimuth and distance information to facilitate this updating.

I would emphasize here that radar, our primary surveillance tool, plays a most important role in increasing the number of aircraft that can be safely flown in a given block of airspace. In addition to our own radars, the FAA has controllers at 38 Air Defense Command sites to provide radar advisory service under a joint use arrangement.

So far, my discussion has been pretty much directed to separation problems in the lateral plane. Of no less importance, and of at least equal complexity, are the problems associated with maintaining vertical separation between aircraft.

The ground-determined height of aircraft has long been a missing dimension in air traffic control. We are currently developing an air height surveillance radar. A "receiver only," passive system, it uses an S-band air surveillance radar as the target illuminator. The antenna system is a 160-foot high structure, consisting of three antenna arrays, arranged to form an equilateral triangle, 80 feet on each side. The height-finding radar is designed to furnish comparative heights of aircraft within 50 miles of the airport complex.

We also need altitude information on aircraft that are in the en route area, beyond the reach of our height-finding radar. There are several possible means of obtaining this information. One method we are investigating involves the use of the radar beacon system. A radar beacon, of course, is by nature a data link. The radar beacon system can provide the four essential bits of information required for positive air traffic control: range, bearing, altitude, and identity. The beacon system which the FAA is implementing presently provides three of the four, and we are now in the early stages of developing the capability of obtaining aircraft derived altitude information via the radar beacon link. Although our operational beacon capability today is limited, we are rapidly implementing beacons in our high density areas. By July of 1962, we should have operational coverage of the navigable airspace over the entire country, with over 50 beacons operational.

Another difficult problem facing us today is the ever-increasing demand for radio spectrum utilization. As more and more aircraft are introduced into the system, the overcrowded air traffic control and air navigation frequency bands will reach saturation in high density areas. We do not foresee any significant increase in aviation's share of the spectrum. We must live with what we have and to do this, the FAA will do everything possible to insure that the bands of the spectrum allocated to aviation are assigned and used effectively. We are modernizing voice procedures and seeking ways to improve voice intelligibility. We are working to achieve improved techniques and better frequency stabilization.

We are well aware of the fact that the communications bottleneck must be overcome. We have developed and are currently testing a high-speed, automatic ground-air-ground communication system known as AGACS. AGACS is an experimental tool with which we will determine the design characteristics for a two-way data link adaptable to the requirements of all users of airspace. Within a 2-minute rollcall cycle, AGACS handles up to 500 two-way messages. These messages are contained within a single-frequency channel, as is presently used for voice communications. Routine flight instructions and advisory information from pilot or controller are transmitted to the aircraft or control station. Here they are converted into direct reading

displays. Voice radio will still be used for nonroutine and emergency communications.

Implementation of radar beaconry, data link, VORTAC, and the host of other improvements to the overall air traffic control environment will provide the air traffic controller with the information he needs to move air traffic safely and expeditiously. To be of maximum value to the controller, this information must be correlated and applied swiftly and efficiently. The FAA is developing a Data Processing Central designed to relieve the controller of many of his routine clerical chores and allow him to spend more of his time in his decision-making capacity. The Data Processing Central will automatically print and update flight progress information. It will probe for, detect, and display potential conflicts between aircraft in the system. It will assist the controller in scheduling aircraft for landings. The Data Processing Central will be available for use in the New York area in 1963.

Another extremely important area in which we are making progress is the development of a blind, or all-weather, landing capability.

Last year alone, the airlines forfeited \$23 million in revenue because they were not always able to deliver their passengers and cargo to destination airports. The military needs the all-weather landing capability to insure a full retaliatory combat potential. We are currently evaluating systems developed by the Navy and Air Force for their applicability to civil operations.

The introduction of this all-weather landing capability must, of course, be an evolutionary process. Our program is divided basically into three phases. In the first phase, our attention is directed to the improvement of the present instrument landing system (ILS) and the ground control approach (GCA). The second phase of the program involves the testing of an all-weather landing system for interim application where the need is urgent. And, finally, we will develop new techniques for a landing system suitable for the future air traffic environment.

Our National Aviation Facilities Experimental Center is today a full-fledged experimental facility complete with instrumented laboratories, high capacity computer and simulation facilities, and is staffed by a dedicated group, and technically recognized experts in all fields of the informed aviation world. We are in the final phases of the development of improved standard airport lighting. We are evaluating 5 different visual glide slope systems. We are actively investigating aircraft arresting devices. We are making excellent progress in our program to automate weather measurements and provide for their automatic transmittal to forecast centers. We are actively pursuing a program to collocate high altitude air traffic control and air defense functions in the SAGE Super Combat Center.

In our long-range planning, we must envision the effects on our control system of the eventual introduction of supersonic and ultrasonic aircraft in the air carrier inventory. When this takes place the human limitations of pilot and crew to control their aircraft will become more apparent. It will be necessary to turn to automatic devices for the airborne environment to achieve maximum safety in flight. The quantity and the complexity of the electronic gear that will go into future aircraft will be greater than what they are today.

Future flight environments will require electronic equipment with greater operating extremes to cope with the variety of new problems created by supersonic speeds. This will not necessarily present new problems in design because much work in this area has been done in the missile programs. It will involve application of known principles and techniques to new equipment.

Powerplant performance and structural fatigue under high temperature conditions will have increased importance to safe operation. These problems will require close monitoring. Sophisticated electronic recording devices may be necessary to accomplish this monitoring.

Control of a supersonic airplane by a so-called autopilot, requires more precise and rapid sensing of airplane deviations from the flight path. Greater speed and accuracy will be demanded in the performance of the necessary corrective actions by the autopilot than are required in the autopilots of current turbine-powered airplanes.

Since the performance of a supersonic airplane is so critical and its instrumentation and control systems are so complex, the pilot will need information on flight parameters faster than can humanly be determined or computed. Therefore, the pilot will need assistance from sensing systems fed into a computer. The computer in turn will provide rapid answers to the pilot.

It is conceivable that ultimately the pilot will only monitor control of the airplane. The intelligence from the computer will be harnessed to provide actual control of the plane. All the parameters for a given flight might be fed into a computer before the takeoff and the entire flight to the end of the landing roll would be controlled automatically. The airborne portions of the VOR and DME systems would furnish some of the intelligence used in such a flight control system.

Coupled with flight control, would be automatic control of the various systems in the aircraft, such as engine fuel management, pressurization, anti-icing, and deicing systems. This would appear to be the ultimate and will not all come at once. There will need to be intermediate stages in which only a portion of such control is utilized.

Since the takeoff of a high speed aircraft is perhaps the most critical portion of a flight, information to show whether to continue the takeoff or to abort is very important. This involves sensing of engine power, aircraft speed, outside air temperature, and so forth. The computer will compare this data with ideal parameters and give the pilot information needed. This might logically be one of the first steps in the intermediate stage.

It is easy to see that systems such as I have just described would have to have extreme reliability and fail-safe performance. FAA will determine minimum performance and reliability standards. The equipment will have to meet the standards originally and be maintained so as to continue to meet them.

As you can see, electronic needs for future aircraft will be great.

In addition to the automatic control systems mentioned, the present day navigation equipment such as VOR, DME, LORAN, and DOPPLER will have to give way to more sophisticated electronic equipment to handle future navigation problems. This does not mean that the basic system will change, but rather equipment of those types will need to be redesigned to take advantage of improvements in the state of the art—to increase reliability and simplicity and to reduce size, weight, and cost.

Our progress to date is in large part attributable to the outstanding contributions of the electronics industries to our programs. Our continued progress and leadership in aviation will require sustained and imaginative research, development and productivity. They will require vitality, creativeness, and the application of new skills and techniques on the part of science, management, and government.

As a regulating agency we cannot cope with the problems which will confront us in the future without your continued help and guidance. I urge that you continue to

assist us in whatever manner that is at your command. We will require advice and assistance on performance standards for the new types of equipment. Such standards in the past have been prepared to a great extent under the auspices of the Society of Automotive Engineers and the Radio Technical Commission for Aeronautics. Many of your member companies have furnished technical assistance on the working committees of those organizations. Continued technical support by working either directly with us when we ask for collaboration or as members of SAE or RTCA will be of great assistance. Knowing of your past record, I look forward to your future support with confidence.

The Wilderness Bill and You

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. HOSMER. Mr. Speaker, the general public in California is particularly interested in legislation to preserve and protect the wilderness resources now in Federal ownership. They join with millions of Americans throughout the land in urging a reorganized Federal wilderness system.

There is wide agreement that this generation has a duty to preserve and pass on a heritage of wilderness in an untrammelled natural state.

The wilderness bill first appeared in 1957, based on studies started about 1948. Pending now are various measures in both Houses of Congress. The Government's major land-managing departments have endorsed the pending legislation provided that minor amendments are adopted. Hearings have not been held by the House Committee on Interior and Insular Affairs this Congress, but have been completed by the other body.

Under unanimous consent to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Mirror-News:

THE WILDERNESS BILL AND YOU

"The world," mourned the poet Wordsworth, "is too much with us; late and soon."

What's worse, a geographic "togetherness" is making it impossible to fend off this encroaching world, even briefly. Urbanism grows. Wilderness vanishes.

Yet here in America some scattered fragments of true wilderness remain, which might be saved for ourselves and future generations.

SOME PLAIN TALK

Interior Secretary Seaton, a plain-talking midwesterner, says:

"The important thing is that those places of high intrinsic value for public refreshment, enjoyment, and inspiration be quickly identified, and steps taken to protect and preserve them * * * before they are irretrievably lost to other uses."

Seaton gives the United States 10 years at most to complete a program of wilderness sanctuaries that would be safe from commercial exploitation.

Such a project must start immediately. Lengthy surveys by governmental and private agencies have pinpointed some 55 million acres scattered from Cape Cod to our own Pacific coastal forests.

All lie now within Federal domain. No new lands would have to be withdrawn.

There's a measure before the U.S. Senate (S. 1123) which would do the job.

Quite simply, this wilderness bill would forever retain these last unspoiled regions in their primeval state.

Every major U.S. conservation group has joined the Eisenhower administration in urging passage of such an act. Who's against it? Mainly those with a special, selfish interest in exploiting these hitherto "untouched" areas.

Our own highly respected Sierra Club, founded in 1892 by John Muir, stands in the forefront of this fight. They've just issued a breathtakingly beautiful book called "This Is the American Earth." Its photographs by famed Ansel Adams and its poetic text by Nancy Newhall present the wilderness case better than a dozen senatorial orations.

"A tragic loss" says Sierra Club director David Brower, "could be prevented if only there could be broader understanding of this: that the resources of the earth do not exist just to be spent for the comfort, pleasure, or convenience of the generation or two who first learn how to spend them; that some of the resources exist for saving, and what diminishes them diminishes all mankind; that one of them is wilderness."

LAST DITCH BATTLE

We firmly believe this last ditch battle to preserve a semblance of our wilderness heritage should be joined by thinking people throughout the country. We urge it wholeheartedly.

For as Miss Newhall concludes in her commentary in the Sierra volume.

"Were all learning lost, all music stilled, Man, if these resources still remained to him, Could again hear singing in himself And rebuild anew the habitations of his thoughts."

Sharing With Those in Need

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 29, 1960

Mr. WILLIAMS of New Jersey. Mr. President, March 27 was a day during which three religious American overseas aid agencies appealed for funds. This appeal during World Refugee Year had particular significance. It was a reminder to us in this Nation that we can never forget others no matter how secure we feel ourselves to be.

The Cape May (N.J.) Star and Wave paid notice to this effort in a moving editorial on March 24, 1960.

I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHARING WITH THOSE IN NEED

The current World Refugee Year has focused the attention of people in America and in other United Nations countries upon the plight of the homeless throughout the free world—refugee victims of war, disaster, and political displacement.

It is important to note in this connection that in all privately inspired effort to

help these stricken peoples, the preponderance of the work is done, has been done, and will continue to be done through our great religious faiths—Protestant, Catholic, and Jewish.

This is as natural as it is fitting, because compassion for our fellow men is basic in the Judeo-Christian ethic and inherent in religious precepts.

For years our American religious communities and their counterparts in other lands have labored to relieve suffering among the homeless and uprooted, sustaining widespread programs of resettlement, constructive development, rehabilitation, and vocational training.

In addition, to lessen suffering both among the refugees and among the many, many other millions of needy overseas, they maintain year-around distribution of food and clothing, assist orphanages, schools, and hospitals, and carry on housing, tuberculosis, and other health projects.

Currently the American religious overseas aid agencies are appealing to our people for funds with which to continue their works of mercy.

On Sunday, March 27, in Protestant and Catholic churches throughout America, responses will be made to the Protestant One Great Hour of Sharing appeal and to the Catholic Bishops' Relief Fund appeal.

Similarly, our national Jewish community will be giving support to the United Jewish Appeal, a continuing effort with special emphasis at this season.

This sharing with those in need abroad is in the highest American tradition. Voluntary assistance to the suffering, neighbor helping neighbor, is a basic spirit of Americanism. And in today's world every man—everywhere—is a neighbor.

Let us, each through his own faith, share our abundance with our neighbors in need.

Crowdus Baker, Great American

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. PHILBIN. Mr. Speaker, in common with many citizens of Massachusetts, and in particular Greater Boston, I was delighted and truly gratified to learn of the recent election of the distinguished Mr. Crowdus Baker to be president of the world-renowned business and merchandising establishment of Sears, Roebuck & Co.

The selection of Mr. Baker to this high and honorable post is not only a most impressive tribute of confidence by the leaders of this great firm in his character, ability, and his superlative qualifications, but it is another striking example of the opportunities for advancement to highest posts of responsibility in the business affairs of our Nation which are implicit in our great and incomparable free enterprise system.

Mr. Baker's brilliant career is another very impressive and striking instance of steady rise from the ranks by dint of great ability, industry, devotion to duty, and superlative general qualifications, to top leadership in one of the greatest business organizations in the world.

Born in Dallas, Tex., February 27, 1906, of stalwart American folks, Crow-

dus Baker was graduated from Terrell Preparatory School in that beautiful city and later from the famous Austin College in Sherman, Tex., class of 1928.

Setting his sights on loftiest peaks of achievement and willing to work hard in order to gain his objective, he joined the Sears company in 1929.

It was not long before his industrious habits, fine traits of character, winning personality, agile mind, and fine qualities of leadership deeply impressed his superiors and in 1935, he was assigned as operating superintendent of the large Sears mail-order house at Seattle.

From that time on, Baker's promotion to more and more responsible posts was surprisingly rapid. The company came to regard him as one of its most able and promising young executives and in 1939, named him to become superintendent of the huge Boston mail-order house which covers the entire Northeast section of the country. In 1945, so well had he handled his assignments and duties, he was designated general manager of Sears operations in Boston, after having served as operating superintendent of a similar unit in Philadelphia.

It was here in our great Massachusetts city of Boston that I first had the privilege and pleasure of knowing this great American and watching his unusual and outstanding work in his own company and his remarkable contributions, far beyond the call of duty, to many worthwhile activities in the civic, charitable, and business-development life of our historic capital city. His tireless energy and his ever-willing and ever-ready response to many demands made upon him to take part in community betterment projects became a source of wonder and admiration to those of us familiar with the many facets of his very busy life.

In a sense, the progress which Crowdus Baker has made in his career has been truly phenomenal. But it certainly comes as no surprise to those of us who were in a position to observe and note the broad sweep of his talents, the obvious and outstanding qualities of leadership he possesses and his special aptitude for inspiring confidence and making friends wherever he went.

Crowdus Baker is a man of exceptionally broad horizons, possessed of the drive, spirit of determination and resourcefulness, adaptability, so often necessarily a part of the makeup and attributes of leaders in every field.

Kindly and generous of impulse, warm and sympathetic in nature, he never hesitates to join with others in improving the opportunities and bettering the lot of those who struggle and toil.

He is endowed with practical vision and marked powers of decisive action and is known for his sense of fairness and his ability to make sound judgments.

All these qualities admirably equip him for the high post of responsibility he has assumed because they mark him indelibly as a man who has his feet on the ground and who knows how to deliver the goods in the literal, as well as the figurative, sense.

The famous firm of Sears, Roebuck has not only made a wise choice but it deserves to be heartily congratulated for recognizing merit, character, and ability

in making this appointment. It is in instances like this one where young men starting at the bottom can by their own powers and industry work their way to the top that the American people are constantly refortified in their faith in our great productive economic system. This particular appointment is notice to the world that there are no frontiers of opportunity in this country, that everyone who has the ability and is willing to work can reach highest levels in American business life.

Of course, everyone cannot be president of Sears, Roebuck, and everyone possessed of gifts and talents cannot necessarily attain highest leadership. There are unpredictable elements of chance, fortune, personality, and other factors that come into advancement and progress in any field. But it is very refreshing to know that in the main, American boys starting from scratch can and do work their way to the top by virtue of their own gifts, their own spirit of resolution, and their own hard work.

The many friends of Crowds Baker in the business, civic, and social community of Boston join me, I am sure, in rejoicing with him in this well-deserved recognition of Crowds Baker's outstanding abilities. And we hail him, not only as an outstanding business leader, who has demonstrated his capacity for getting things done, but as a warm, considerate, and generous friend, a humane personality, vitally interested in American life, in the American people, and in helping to solve the great problems of the hour.

I am happy indeed to extend my heartiest congratulations to him, to his family, and to his company, which I think has demonstrated great wisdom in making this appointment. In succeeding President Charles A. Kellstadt, Mr. Baker will have no easy task. He will have to live up to a very high standard of performance indeed, one that has deeply impressed the Nation and that portion of the world familiar with it. He is succeeding a great, a worthy, and another distinguished business leader who has left a proud and indelible imprint upon his company and the history of our times.

I wish for Crowds Baker long life and continued good health, great and steadily increasing success in his vital work, and all those choice blessings of the Lord which come from family, friendship, and the joys of sincere loyal living. And I wish for him and his dear ones most abundant measures of happiness in the years to come.

Bishop Walsh

EXTENSION OF REMARKS
OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. WALLHAUSER. Mr. Speaker, the entire free world is shocked at the action of the Chinese Communist regime

in incarcerating Bishop James Edward Walsh.

We have made strong protests, including a statement by Secretary of State Herter, and I understand that our Government made the strongest possible protest to the Chinese Communist representative at the meeting of March 22 at Warsaw.

The Communist ideology does not permit any opposition. This brave and sincere disciple of the church, by remaining loyal to his flock, has become an inspiration to all who are true to their ideals. He is a man of the greatest integrity and has gained the widest recognition through his 30 years in China. He has become a symbol, because the citizens of the free world are being made increasingly aware of the Communist theory of destroying that with which they disagree.

It is my hope and prayer that his sacrifice of personal safety will not be in vain, and that he will be released in good health to continue his dedicated service.

American Farm Bureau Supports "Ike" on Farm Program

EXTENSION OF REMARKS
OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include an article taken from the Amboy News of Amboy, Ill., under date of March 24, 1960:

SHUMAN SAYS IKE'S GUIDELINES ARE CONSISTENT WITH FARM BUREAU POLICIES

Charles B. Shuman, president of the American Farm Bureau Federation, said last week that the "three guidelines for farm legislation set forth by President Eisenhower in his special farm message are consistent with policies developed by Farm Bureau members."

The head of the Nation's largest general farm organization—with 1,602,117 member families in 49 States and Puerto Rico—expressed gratification that "the President has slammed shut the door on Brannan-plan-type direct subsidy schemes and the various multiple-price proposals."

A multiple-price plan for wheat, Mr. Shuman noted, not only would be unworkable for wheat; it also would dump many of the wheat farmer's problems on the growers of corn and other feed grains as well as livestock, dairy, and poultry producers.

He said the President's comments on payments-in-kind as a part of the conservation reserve program are well considered.

"We, too, would have to oppose a payment-in-kind program that would depress market prices," he said.

"The President's recommendation that the program for corn and feed grains be continued is in line with the expressed wishes of Farm Bureau members. This program—which was passed by Congress with bipartisan support in 1958, and approved by corn farmers by a 3-to-1 vote in a referendum—is a big step in the right direction.

"We're happy to see the President reflect the views of a great majority of our members in stating that most farmers want fewer rather than more governmental restraints."

Splitting Atoms on the Farm: Jerome Spitzner, Nation's Top Young Scientist

EXTENSION OF REMARKS
OF

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. NELSEN. Mr. Speaker, we hear a lot these days about the revolution on the farm. A final touch has now been added. A young constituent of mine is splitting atoms on the farm.

This week, as thousands of delegates from around the Nation convene in Washington for the White House Conference on Children and Youth, it seems appropriate to review the story of Jerry Spitzner, the 17-year-old farm boy scientist from St. James, Minn.

A few weeks ago he won a \$7,500 scholarship and captured top honors as the 19th annual science talent search among 29,000 of the Nation's high school seniors culminated here in Washington.

It was my privilege and honor to meet Jerry at a dinner honoring the winners, and he is certainly one of the Nation's most promising young scientists.

In these critical days we hear much about the great contest that is being waged by our Communist adversary, and we realize more fully the value of young men and women who have, not only the natural ability, but the disposition to improve themselves. In the field of science, manpower can do much more than congressional investigations, and it will be young men such as Jerry Spitzner who will be the contributing factor in the supremacy of the free world's scientific achievement.

Jerry lives on a farm near St. James, Minn., in Watonwan County. He has learned to work, and to practice thrift and endeavor. His wholesome contributions to his church and school made a mark in his community, long before his name hit the headlines across the country.

I believe we can learn a great deal about the enduring values of this country by looking at the simple story of Jerry Spitzner and the factors in a rural community which shaped his life. For this reason—and to make a tribute to Jerry Spitzner a part of the Record of the Congress—I am inserting excerpts from newspaper accounts of Jerry, which I recommend to my colleagues for study.

The Mankato Free Press of March 8, 1960, in an article by Don Heinzman, described Jerry Spitzner's winning entry as follows:

A homemade atom-smasher fashioned from such materials as a Christmas tree bulb, refrigerator, and parts of a milking machine pump helped win the honor for young Spitzner.

He built his "spherical ion accelerator" in a "shack" laboratory on his father's farm during the summer.

His machine is an experimental device intended as a possible trailblazer in the discovery of new methods of producing nuclear power.

With it he is able to accelerate ions (electrically charged atoms) and to bombard them with other elements. His was the

only original entry in the 40-student field during the 5-day finals held at Washington, D.C.

Jerry explained he is able to accelerate ions between two concentric spheres, one being the Christmas tree bulb.

With the apparatus he is able to achieve processes which include antielectricity and antilight. One of his processes will even erase radio signals.

At Washington, D.C., Jerry demonstrated how his machine can heat a thin ribbon of hot gas to a million degrees in a conic chamber, which is actually two small aluminum funnels placed together.

He successfully did this experiment by fusing lithium and hydrogen ions, thus achieving the heat of the sun and using the same type of heat used in the explosion of a hydrogen bomb.

When informed he was the winner Jerry said: "It's been a great experience. It's hard to believe. I'm afraid it will all go away when I wake up tomorrow."

The honor student and senior class president, who is described as being as humble and sincere as a boy can be, first entered the contest by writing a paper on the results of using the spherical ion accelerator.

In addition to being an honor student and president of his class, he is an outstanding halfback on the St. James high school football team and a member of the wrestling team. He has had some athletic scholarship offers from major universities.

School officials said he has read all the books he can lay his hands on. He has read every book on science in the Traveling Science Library.

Each morning he studies physics and chemistry over television and Saturdays he attends a physics course at Gustavus Adolphus college.

At his farm home he has built and launched rockets with homemade fuel, designed an aerial camera that has a parachute release from the ground and is working on a digital computing machine.

He is also working on a sodium lox rocket and investigating low temperature fusion through antiparticles.

Jerry is described by his principal Richard Madison as "humble and as sincere as a boy can be."

Jerry's hometown paper, the St. James Plaindealer, published by Les Curtis, had the big story bannered on page 1 of its March 10 edition, and it provided valuable and penetrating detail on the makings of an outstanding young man.

Excerpts follow:

JERRY IS TOP FUTURE SCIENTIST

Jerome George Spitzner, 17-year-old St. James High School senior class president and sports star—better known as "Jerry" to his hundreds of acquaintances in southern Minnesota—became an important national personality Monday night.

His \$7,500 scholarship, awarded by Westinghouse Foundation, is symbolic of recognition of Jerry as the Nation's outstanding future scientist among the 1960 high school graduates.

A constant source of amazement and admiration for his friends, teachers, and especially his family, Ronnie and Lucille Spitzner and their four other bright children, Jerry won the top award of \$34,250 in scholarships presented at the climax of a 5-day science institute in the Nation's Capitol.

While the award climaxed the institute, it only turned the first rays of national limelight on the broad-shouldered St. James youth.

FUTURE PLANS

His winning the top award in the national science talent search, a \$7,500 grant from Westinghouse Foundation, also is expected to refresh activity in the field of college

scholarships, of which he had a wide assortment even before his recent national fame.

Jerry has indicated that he plans to attend the University of Minnesota. A strong influence in this direction, and an indication of the esteem and importance of the University of Minnesota, was the fact some of the Nation's top scientists in Washington, D.C., advised Jerry "don't overlook the University of Minnesota."

Easily embarrassed anyhow, and known by his classmates and instructors as "the politest guy we've ever known," Jerry apologized at a press conference for an error in spelling—an oversight through haste in preparation—on one of the signs identifying his exhibit. He had detected the error, omission of the letter "p" in the word "spherical," and kept it covered at the exhibit in Washington, but there it glared across the Nation when he and the exhibit were featured on the Dave Garraway TV show Wednesday morning.

LIKE A DREAM

Jerry admitted to a sinking feeling as the names of the prize winners were announced—very dramatically—at Washington, D.C., Monday night. He said he had hoped to win one of the big prizes, but felt disappointment when his name had not been called for fifth or fourth prize. Announcement of his name as the top prize winner left him stunned.

Reflecting on his trip east, his first trip to that region and first major trip away from Minnesota, Jerry said it left him with "a closed-in feeling." He explained that the East seems to be one big, sprawling city, with very little countryside of the kind most familiar to him.

Summing up his impressions of his hectic week in the national limelight and winning of the top prize competed for by more than 29,000 outstanding high school seniors, Jerry says:

"It's kind of like a dream; just fantastic enough to be believed."

HIRED MAN HAS ROUGH WEEK

Ronnie Spitzner, father of the now nationally famous St. James High School senior scientist, Jerry, admits his participation in the farming operation pretty well stopped Monday night when the news was received that Jerry had won the \$7,500 top award in the national science talent search.

"Our hired man, Leslie Anderson, is having a rough time of it, and it looks like he'll have at least a couple more days of it," Ronnie admitted to an invading newsmen between telephone interruptions in the modest farm home northwest of St. James Tuesday noon.

He said he'd tried to help with the farm chores Tuesday morning, but just couldn't get started before being called to the telephone repeatedly, and commented that he'd had to leave Anderson in a predicament with the cows being milked and water running in the stock supply system simultaneously.

SOLVES TUITION PROBLEM

Ronnie and Lucille Spitzner and their children are mighty proud of Jerry's latest achievement. They admit, too, that it is timely. Last year's corn crop wasn't too good, and it looked lean for Jerry's college planning, because a college education costs a lot of money, particularly the first year. The \$7,500 award solved that problem.

Mr. Spitzner may have feared his brilliant son would be a victim of economic circumstances, a situation he knows from experience. Mr. Spitzner finished eighth grade in the nearby District 28 school, and at that time farming wasn't having a good time of it.

"My dad gave me a choice, he'd sell the farm so I could go to school, or I could stay home and help on the farm. I stayed, and

later attended high school in St. James, taking bookkeeping and typing. That's about 20 years ago," Mr. Spitzner said.

Mrs. Spitzner, the former Lucille Lunz, grew up in the same neighborhood and attended the same school. She had the opportunity to complete high school, graduating from St. James in 1940.

FAMILY TRADITION

Both Jerry's parents agree they enjoyed mathematics while in school, and point out the mathematics and science courses offered them were far removed from the opportunities today's students have.

The senior member of the Spitzner clan is still active at age 73. He is George Spitzner, who left the farming enterprise to move to St. James a number of years ago.

The Spitzner mechanical aptitude was proven long before Jerry started experimenting with radio, rockets, electronics, his prize winning atom smasher, and currently a digital computer housed in an old dresser.

Grandpa Spitzner has always been handy with tools. Ronnie was one of the first young farmers to buy his own welding equipment.

DISTRICT 28 SCHOOL

The Spitzner family is native to the St. James community. Ronnie and Lucille grew up within 2 miles of their present farm 4 miles northwest of St. James, and both attended District 28 school. They were pupils, as their three elementary school age youngsters are now, and as Jerry was, of Miss Sigrid Larson. The Spitzners are proud of their relationship with Miss Larson, and rate her the foundation of the educational accomplishments of Jerry, with a special knack for putting across the basic education and going beyond, in guiding adept students to extra study in fields of interest. Extremely modest about her role, Miss Larson said she thinks publicity about her is sheer nonsense, and "I don't like it one bit."

She says the pupils in District 28 are quite outstanding, and very nice to work with, because they apply themselves very well. Miss Larson admits she enjoys teaching. Reflecting to the years when she had both of Jerry's parents, Ronnie and Lucille (Lunz) as students, she said both were good students. Like Jerry before them, the three Spitzner children currently attending District 28, Monica, 10, James, 9, and Richard, 7, are all "straight A" pupils.

Jerry is no problem at home. Mrs. Spitzner said he states his dislikes, and does a wonderful job of regulating his heavy schedule. Jerry has adopted a regular routine, and made it conform to training rules required for athletics, despite being up bright and early in the morning to take advanced college courses in television, and traveling to Gustavus Adolphus college every Saturday.

Mr. Speaker, Jerry Spitzner's achievement sparked hundreds of editorials in newspapers across the country. Here's an example from the March 8 edition of the Washington Daily News:

TOP SCIENTIST—AT 17

Our remarkable national shift to emphasis on science is neatly illustrated by the lad who won top prize in the \$34,500 Westinghouse scholarship competition, just completed here in Washington under supervision of Science Service.

Jerome G. Spitzner is a 17-year-old Minnesota farm boy, coming from a small high school. His prize-winning exhibit, judged first in an original field of 29,000 entries, was a homemade ion accelerator which he put together with such things as a Christmas tree ornament and a float from a pig watering trough.

Young Spitzner gained his distinction, naturally, by industry and brains. In addi-

tion to his high school training, he took television courses in chemistry and physics. But he is no mere double-dome. He was captain of his school football and wrestling teams and had time for a dip into dramatics. And he works on his dad's farm.

While he copped first prize, Jerry Spitzner was typical of the 40 other finalists who exhibited here. Each had distinguished himself (including the nine girl finalists) in several areas of science and also was normally active, or better, in other school affairs.

We are embarked on an explosive era of science, just ahead. These youngsters, and their counterparts around the Nation, will be the men and women who will lead the way.

Let's Not Strangle Our Poultrymen

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MILLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. MILLER of New York. Mr. Speaker, some 20 bills have been introduced in this House that would have the effect of strangling many of the poultrymen of my State and the rest of the country in a chicken-wire labyrinth of Government controls.

The sponsors call these bills the Family Farm Income Act of 1960 but I have a feeling their definition of income and the definition the free farmers of my State place on income are quite at variance.

Poultrymen have repeatedly resisted attempts to impose Government production control on their industry. These bills provide for such controls whether the poultrymen of my State want them or not. If two-thirds of the poultry producers in the Nation decided they wanted regimentation by government, it wouldn't matter what the local and regional wishes of large numbers of poultrymen, hatcherymen, feed suppliers, processors, marketing agencies and consumers thought was best.

For instance, the act specifies a price target for eggs. At present, in order to achieve this target, about 50 percent above current levels, egg production would have to be cut back 40 percent on a farm-by-farm, producer-by-producer basis.

The poultry industry, by resourcefulness and ingenuity, has greatly expanded its market. The industry has greatly increased the consumption of poultry meat and of eggs by putting on the market a high-quality product at a reasonable price. By so doing, the industry has greatly increased its own income and much improved the diet of the American consumer.

The proposal in the family farm income bill would turn back the clock and put this industry on the basis of scarcity rather than abundance. It would curtail the income of the industry, reduce the quality of the American diet, and increase the costs of doing business. All of this would be contrary to the often-stated preference of the people in the poultry industry themselves.

It is clear that those who framed the family farm income bill of 1960 were either unaware of the facts regarding this industry, or they have deliberately set about to regiment a group of people who have steadfastly adhered to the principle of freedom and responsibility.

Mission and Responsibilities of the U.S.

Army Command and General Staff College

EXTENSION OF REMARKS

OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks made by Maj. Gen. Lionel C. McGarr before the congressional command and operations group:

MISSION AND RESPONSIBILITIES OF THE U.S. ARMY COMMAND AND GENERAL STAFF COLLEGE

(Remarks by Maj. Gen. Lionel C. McGarr, commandant, U.S. Army Command and General Staff College, Fort Leavenworth, Kans., before the congressional command and operations group, March 29, 1960)

Members of the congressional command and operations group, gentlemen, I was both pleased and honored when Col. Bob Sikes, after attending our Senior Officers Nuclear Weapons Employment Course last November, felt it worthwhile to invite me to discuss with you the job we are doing at the U.S. Army Command and General Staff College, and its impact on the progress so vital to our Army's readiness and combat effectiveness.

As men who live and make history, I am sure you know that the historic Oregon and Santa Fe Trails—former lines of communications in our westward surge of exploration—converge at Fort Leavenworth. As military men, I am sure you are aware that today the USACGSC is a focal point where new ideas and concepts on the optimum tactical use of the weapons of this astounding technological age in which we live, meet, are evaluated, correlated, and built into forward-looking viable military doctrine—the blueprint for military operations on future battlefields. The college, charged with providing doctrine for the Army in the field and education for its officer corps, is dedicated to the precepts of service and sacrifice for our Army and our country in the defense of "our way" of life—a way founded on the simple truths our Saviour taught.

The grim, continuing struggle between opposing ideologies in this tension-laden, nuclear missile mach-speed era follows the historic Communist pattern of ruthless employment of varying types of force for objectives which have, so far, been carefully calculated to be short of those for which they feel we would risk all-out war. Fission and fusion have made absolute security impossible and along with missiles and space satellites, they have placed the military might of the aggressor within range of our heartland—while the ideological fallout from his cold war weapons systems has been falling on our very doorsteps for sometime. Equally important, the Soviets consider the conference table an extension of the battle-

field, with propaganda, concessions, and world opinion as the military objectives. This combination of hot and cold war weapons systems, to include subversion, penetration, and economic warfare, is the real stuff of which Soviet foreign policy is fashioned and which we must counter if our freedom is to survive. Regardless of reasons or consequences, our country has become the leader of the free peoples of the world and the hope of those who wish to be free. To cope with the complex and continuing nature of the threat, our military students and indeed our Nation as a whole must understand both the purpose and nature of international communism. We must out-perform this "ism" in both purpose and dedication. The required knowledge can come only through education and an understanding of the major components of international security—a composite of international relations, national morale, and balanced defense.

Within this context, I would now like to go into some detail on my job as Commandant of the USACGSC, show you how we mesh into the overall Army educational system, how we capitalize on innovation and technology in our work, and the factors and decisions behind our curriculum development and design.

Today's educators, both civilian and military, face a monumental problem. For education must be vital and aggressive in providing basic information, and it must be presented in such a way as to motivate the student to meet the inevitable challenge of change—while at the same time enlightening his mind and instilling mental discipline. Specifically, the challenge to the military educator is to stimulate and inspire the mental approach, and to develop the thought processes of our officer corps to keep it not only abreast but ahead of current developments. This requires discernment, objective thinking, toughness of mind, and mental discipline—not to mention "mental mobility" of the highest order—and it leaves no place for complacency.

Concurrent with my arrival at the college in 1956, a number of important events occurred which highlighted both the advisability and necessity for a complete modernization, reorganization, and rewrite of the entire college curriculum to ensure the required progress in adjusting to and moving forward to meet the requirements of the technological age. Even more important was the need to "build in" the growth potential so necessary for continued improvement in our fast-moving age—if the college were to remain the Army's "idea factory."

For example, both doctrinal and instructional improvement in the vital area of administrative support, which includes logistics, personnel, and civil affairs, was a major objective of our 1956 modernization program. This was because changing strategic and tactical conditions in modern war had significantly altered the traditional approach to both tactics and its supporting twin—logistics. As you know, future wide dispersal of units, together with the attendant aspects of rear area security and area damage control, has resulted in unprecedented and increasingly difficult problems in the development of adequate and realistic user-oriented logistical doctrine. In this respect, the college now develops doctrine and instruction in tactics and its supporting logistics as an entity—as they logically would unfold on the battlefield. We are convinced that tactical plans which do not adequately consider logistical support are as unsound as logistical plans which do not adequately support tactics.

Another major objective remains, the continuing development in our students of the traditionally high ethical and moral standards required of our future military leaders.

Even more important is instilling in them the balance, sense of duty, and moral courage to apply these high standards regardless of consequences. The higher the level of responsibility, the higher is the obligation of the leader in this respect. For war is not merely a science of inanimate patterns of mechanical, chemical, and nuclear forces and energies, but more especially of human beings. Certainly, we cannot afford to be more concerned about building accuracy, integrity, and reliability into our new weapons systems than about strengthening similar required qualifications in our leaders who will have the authority and responsibility for employing these weapons. Of course, the Army selection system insures high personal student standards. However, we are convinced that the student "integrity index" can be further developed and strengthened by practice, study, and examination—and this we accomplish by our problem design and instructional philosophy.

An additional area mandating modernization was that all the college problems in 1956 portrayed only general war set in Western Europe and in a basically World War II or pre-nuclear type environment. This, together with the change to pentomic divisions, required a rewrite of the great majority of our problems in order to modernize our instruction. Equally important, was bringing our operational concepts into consonance with the Chief of Staff's national military program—not only on forms of war but also on geographical locales for problem settings as well.

And finally, as a soldier who has seen too many white crosses planted in two wars, I have long been determined to improve our fighting organizations and procedures, to include the psychological conditioning of our officers, by drawing on my own experience as well as that of others, in educating and motivating the Army's future leaders entrusted to my care.

The shield, the chevron, and the eagle of the college coat of arms depict its martial character. The three lamps of learning represent the major components of our great "one Army" team—the Active Army, the Army National Guard, and the Army Reserves. They also symbolize the concept that no victory in American history has ever been won by a single arm, service, or military component. Victory in battle has always been won by the combined arms and services team of our Army functioning as an eminent member of the triservice defense team. Appropriately, our motto is "Prepare in peace for war."

The original Leavenworth Lamp was presented to the college by the Kansas City Chapter, Military Order of World Wars, and symbolizes the traditional "Lamp of Learning." The mailed fist clenching the sword, the rifle, and a guided missile connote the past, present, and future of military knowledge.

Here we have the overall Army educational system. During the first 8 years of commissioned service, our officers advance through a series of troop and branch school assignments. Following this, about 50 percent of the Army's officers are specially selected by the Department of the Army for attendance at the USACGSC—the keystone of the Army educational system. About 50 percent of Leavenworth graduates are later selected for the highest level of military schooling—the Armed Forces Staff College and the various war colleges. Thus, at Leavenworth and beyond, military schooling becomes wholly selective.

The overall scope of our instructional and doctrinal mission is division, corps, and field army to include their logistical systems, the theater army logistical command, and the theater army replacement and training command. The missions of the college are three-

fold (instruction, doctrine, support of training).

The very heart of our mission is the instruction of selected officers from all components of the Army for duty as commanders and general staff officers, plus the development of doctrine, both current and future. To insure that our instruction and its supporting doctrinal development are realistic and user-oriented, college personnel regularly participate—armywide—in command post exercises, field training exercises, and field tests. In addition, the college regularly exchanges visits with field agencies and tactical units.

The present college organization was preplanned and developed in consonance with the precepts of sound management procedures and is really nothing new or novel— weird or wondrous. Basically the organization is designed to provide:

- (1) Better management controls and more effective personnel utilization.
- (2) Functional organization of instructional departments.
- (3) A coordinating type staff with a principal staff officer for each major element of the college mission.
- (4) Decentralization to instructional department directors of responsibility and authority for development of both doctrine and instruction in their respective functional areas. Thus allowing each department director to plan, prepare, and present his specific course of study—and, even more important, to develop its doctrinal basis as a cohesive entity—under well-defined, overall college supervision and control.

This organization fully supports our present college curriculum and instructional philosophy which places primary emphasis on developing logical and original reasoning ability in the student—rather than on the merits of any single skill or solution.

As the proponent of the combined arms and services team approach, Fort Leavenworth is responsible that the various combat arms and the supporting services of the Army are taught to fight as a balanced, coordinated, cohesive battlefield team. In this way branch and service pride, as has always been so in wartime, is subordinated to the overall battlefield team effort. Thus, we teach our students to think objectively, decide logically, and operate effectively in applying the all-important military principles—rather than merely memorizing or learning by rote. In other words, we must produce military problem solvers and decisionmakers—not "rule of thumbs" and rationalizers.

In the highly important doctrinal phase of our mission, the college develops doctrine within concept guidance furnished by our boss, Gen. Bruce C. Clarke, the C.G., USCONARC. This college definition emphasizes that doctrine must not be allowed to become rigid dogma. We feel that doctrine—the lifeblood of instruction—must be dynamic and forward looking, while at the same time realistic and practical. In addition, it must be based on an accurate understanding of the broad spectrum of future warfare—both military and nonmilitary. With respect to improved doctrine, if has been truly said that we have over 2,000 years of recorded military history to prove that the only thing more difficult than getting a new idea into the human mind is getting an old one out. And let us remember that the tactical concepts which carried Guderian's Panzers from the Rhine to Dunkirk were developed, not in the crucible of war, but in peacetime general staff councils and the classrooms of the Kriegs Academy at Potsdam.

Now let us discuss a few of the purely military factors which, together with nonmilitary factors, must be considered in developing adequate, viable doctrine—doctrine

which becomes the very foundation of battlefield techniques and procedures.

Firepower plus mobility, plus communications (to include logistical support), over terrain, times leadership, equals critical force at the point of decision is a fair encapsulation of the art of war. So now let us examine the elements of this equation—both tangible and intangible.

First the tangibles. The recent quantum breakthrough in firepower which dwarfs that of the past 15 centuries needs no explanation to this group. The problem is to determine its optimum use and insure sufficient flexibility so that it can be used at the right time, in the proper volume, and wherever and however needed. In this respect, overemphasis or overdependence on nuclear firepower alone can result in an inadequate nonnuclear capability which might well face us with the unhappy choice of accepting defeat on a limited front of the enemy's choosing—or risking general war. As our mission is to train officers with equal facility in both nuclear or conventional type war; college instruction covers both types of actions to include variations thereof.

Little Phil Sheridan of Cavalry fame said of mobility: "If we can move—we can whip 'em." Basically, I feel that mobility is a state of mind and that "mental mobility" is all important—for men must first learn to think in new patterns before they can act in new patterns. Our national strategy and the tactics which implement that national strategy must insure the requisite built-in mobility. Of course, mobility of weapons and troops has been a military necessity down through the ages—today's fast-breaking changes make this flexibility doubly necessary. Also we should remember that while strategic mobility is important, tactical mobility is no less so—from the Army's air and ground vehicles to the "shank's mare" of the "doughfoot."

The role of communications is an indispensable factor in the equation. I am sure there are none here who do not have a problem in communications every day—actually communicating your thoughts and ideas to others. During the confusion and disorder naturally existing in the deadly business of kill or be killed, this problem from both the mechanical and human sides becomes increasingly difficult. In the conduct of modern battle, it may well be decisive, for only by timely communication of his directives to his fighting forces can the commander's will be brought to bear against the enemy. I might point out here, that one of our principal educational objectives is to turn out graduates who are trained in the art of personal communication by emphasizing effective speaking and writing throughout our instruction.

Terrain while not so directly affected by technology as the other elements continues to be of paramount importance and the countless variations of its effect on battle makes it an appropriate "denominator" in our equation. More than ever before, faulty choice, or enemy enforced acceptance of terrain for joining battle, as well as inadequate use of terrain features during the fighting, can be fatal.

The final element is an intangible—leadership. It is the most important because it is the measure of the commander's ability to get men to do what he wants done because they want to do it. The great captains of history have all had this ability as well as other well-known leadership qualities such as courage, knowledge, competence, integrity, and humility. These leaders who have stood on history's stricken fields—and won by the fighting fury of their troops in spite of seemingly insurmountable odds, because they had instilled their own unconquerable spirit into their men—were all men of great moral courage. This is because the

only motivation which can sustain men under great stress and responsibility is that of a spiritual or moral nature. Leaders such as these can be counted on the fingers of one hand—and, significantly, these leaders of moral courage have all had physical courage as well. Today's military leader faces a challenge significantly greater than those of yesterday. For today, his knowledge must transcend the former purely military facets of leadership. He must understand the political, economic, and psychological aspects of the world in which we live, as well as the newly evolving technological aspects of warfare.

Real leaders also understand that the mental and psychological motivation of men who fight is all important. The fine cutting edge of the great battlefield units of history has been a composite of knowledge and training, reinforced by that all important nebulous factor, morale—morale composed of individual and unit pride, pride of service, personal confidence, and faith in its commanders. This mental and psychological conditioning cannot be turned off and on like a water faucet. It must be developed and nurtured during the so-called peacetime years in military units and especially in the schools and colleges of the Army educational system so that it will always be combat ready. From time immemorial, military discipline and combat readiness have been built on mutual respect and confidence between the leader and the led. Anything which lessens this confidence and respect, decreases our all-important combat effectiveness. Impairment of esprit or pride of service impacts adversely on each loyal and dedicated fighting man and could well be detrimental to future commanders who must motivate and inspire men to fight and die for the Army's ideals of service and sacrifice. This is because the catalyst which makes the battlefield equation work—is the will and determination of the fighting man—backed by the faith of his country.

Now let us look at our equation in practice at division level. The division commander in the vast future battle arena operating under the concept of highly mobile, self-contained, hard-hitting units, must operate under the ever-present threat of enemy nuclear attack. His increased responsibility areawise over World War II, as a result of technological advances is shown here. Firepower available to a single future division commander will be greater than that available to all past division commanders, which of course, compounds the attendant problems related to mobility, communications, terrain, and leadership. More important, the terrific impact of nuclear weapons, as well as new type, conventional weapons, has reduced the all-important decision and reaction time of the commander to an absolute minimum. Therefore it follows that only the most highly motivated, dedicated, and well-trained officers can lead successfully on future battlefields.

I shall now discuss briefly the scope of our instructional mission. Our regular and associate classes are the foundation of our instruction. The regular course of 38 weeks has an annual student strength of 750 students, which this year includes 81 allied officers from 43 countries. This alltime high was made possible by the completion of J. Franklin Bell Hall, our new academic building—which was dedicated a year ago.

The associate course, of 16 weeks' duration, is presented twice each year, with each class numbering 400 officers. The present associate class, as did its counterpart last fall, contains about 45 National Guard and USAR officers on active duty for training status. The remaining officers, less 31 allied students from 10 countries, are career reservists and Regular Army.

Because of its higher age limitations and biannual presentation, the associate class

has proved to be extremely useful to all components are the Army in fulfilling military educational requirements. We consider it an excellent and necessary course, which neither competes with nor could replace the much longer regular course. Also graduation from either the regular or associate class is identical for assignment purposes, promotion, and subsequent higher schooling.

The special information course, hosted by the college for the first time last year, is a DA course sponsored by the Chief of Information. Each of these two courses provided approximately 50 selected reserve component officers with a wide variety of authoritative information concerning current and future U.S. Army trends and developments. Last year's courses were so successful that they are being continued again this year—as the "special orientation course"—a more descriptive title.

The college annually conducts separate 1-week refresher courses for principal officers of National Guard Divisions, Army Reserve Divisions and Maneuver Area Commands, and Logistical Commands. The far-reaching value of these courses is indicated by the fact that commanding generals and principal staff officers from an average of 21 National Guard Infantry Divisions, 6 National Guard Armored Divisions, 22 Army Reserve Infantry Divisions, 24 Army Reserve Logistical Commands, and 2 Maneuver Area Commands, receive instruction annually at Fort Leavenworth on the latest tactical and administrative support doctrine to include new organizations and new weapons systems.

The nuclear weapons employment course is a 5-week course which trains the "prefix 5," or nuclear weapons employment officer, for duty at general staff level. Additionally, this course provides a prototype course for the "prefix 5" instruction conducted by the Infantry, Artillery, Armor, Air Defense, Engineer, and Chemical Schools.

The SONWEC, or senior officers nuclear weapons employment course, is designed to provide instruction for senior commanders and their principal staff officers in the tactical and logistical doctrine, techniques, and procedures applicable in employing the Army's nuclear weapons—to include training in the technical considerations and operations involved. We believe this course also serves as an excellent advanced refresher course for senior personnel. Student reaction has been most gratifying, and I feel that this course is a valuable adjunct to any officer's military education.

The allied preparatory course is designed to assist allied officers ordered to the regular course by developing their proficiency in military English, oral comprehension, and reading. It also presents some basic military instruction and orients them on U.S. Army organization and doctrine.

The college started the fifth year of U.S. Army Reserve active duty for training at Fort Leavenworth, involving all six ZI armies, in 1958. This has given significant impetus to the U.S. Army Reserve school program as it affords additional classified instruction and also integrates the off-campus student body with the college itself. This brings these dedicated officers who are graduating from the U.S. Army Reserve command and staff courses to Fort Leavenworth for their fifth year of instruction and for their formal graduation.

These nine major resident courses of study will graduate about 4,300 students this school year—with a rank spread of captain to major general in the Reserve component refresher courses and lieutenant colonel to lieutenant general in our SONWEC.

We consider our allied officer program as one of our most important missions since it affords a golden opportunity not only to educate these allied officers in our military concepts but to further international un-

derstanding and good will by fostering allied contacts with the American way of life. Since 1908, 2,000 allied officers from 62 countries have attended the college. At present we have 112 allied students from 43 countries—51 of whom come from countries which border on the Sino-Soviet dominated bloc. It is also significant that allied students at the college this year represent countries with a collective population of a billion and a half people—about half the population of the world—while 64 of these students come from the so-called underdeveloped countries of the Middle East and Africa.

Now, in addition to our resident courses, our nonresident, or offcampus program, reaches over 15,000 students, most of whom come from that important element of our modern one army—the Reserve components. We take great pride in our close and continuous association with these dedicated Americans and feel that the significant, 100 percent, increase shown in the offcampus student enrollment is the result of our continuing curriculum modernization. We consider this area highly important as it concerns the professional education of the top levels of leadership of the National Guard and Army Reserves.

As you know, this nonresident mission is accomplished in several ways. For example, our extension course program which normally takes 5 to 6 years, has actually been completed in less than 12 months of concentrated work by several of our students.

The college also supports the U.S.A.R. schools with which you are familiar. This year 176 of these schools, covering the entire country, include command and general staff departments. These schools are staffed by Reserve officers not on active duty and supervised by appropriate corps commanders. The college provides all instructional material, grades examinations, maintains student academic records, and furnishes staff advice to the various corps commanders and to the school commandants. Students in these Reserve school courses, as in the extension courses, are drawn from graduates of branch advanced courses.

A refresher course has been prepared for nuclear weapons specialists and, in addition, staff training materials are made available to senior units of the Reserve components.

In 1958 we also instituted a new correspondence course—"the Leavenworth preparatory course"—to assist students in preparing for attendance at our resident courses. Although initially beamed towards Reserve component and technical and administrative service officers, it is interesting to note that the majority of this year's regular and associate students, to include allied officers, availed themselves of this course.

This year two new correspondence programs are being instituted. First, a "short refresher course" is being made available to all graduates of the college, including allies, for the purpose of keeping our alumni up to date on new organization and doctrine; and second, a "nuclear weapons employment correspondence course," which, when combined with a 2-week period of active duty for classified instruction, will train qualified nuclear weapons employment officers so urgently required by our Reserve components.

For both resident and nonresident instruction, the red dots indicate the worldwide problem coverage of our present curricula which familiarizes the student with actual worldwide locales in which he may some day have to fight. The reduction of problem settings in Western Europe from 89 percent for the 1956-57 course to 11 percent for the current course indicates the trend of our present day global interest.

We feel that this is a significant step in acquainting the student with the impact of

Global politico-military implications, which are responsive to the continuing machinations of international communism.

Note that the bar chart under "Forms of War" indicates a 4-year reduction from almost 100 percent to 35 percent which we consider a valid ratio of general war instruction for the present. Of course this has been accompanied by increased instruction in situations short of general war such as Korea and the situations short of actual war—such as Lebanon. Thus, although our instruction adequately emphasizes the employment of nuclear weapons, conventional warfare is also given appropriate emphasis.

In addition to insuring that our graduates are fully capable of doing their assigned duty upon graduation, we also must lay the foundation for their continuing future self-study and professional improvement. The long and tortuous path of military history is strewn with the bones of commanders who failed to keep abreast of their art—and it is an art, not an exact science. It is an art which requires mental mobility and the thinking direction of the commander—not a set of "pat" solutions for any eventuality neatly wrapped, tied with a blue ribbon, and stored in his personal "memory file" to be spewed out when a mental storage button is pushed.

The necessity for keeping up to date is emphasized by advances in technology which are so "shrinking" the world and "compressing" time that they place military tactics in the realm once occupied exclusively by military strategy. This is all important in curriculum design, especially as we are the Army's Senior Tactical School. Even though the Army officer does not engage in politics—and rightly so—he must understand the impact of political decisions on the overall practice of his art. For, more than ever, national policy decisions impact on the manner in which the tactical commander must eventually fight. For these reasons, it appears important that the thinking of military men be considered in the councils of decision, and conversely that military men in authoritative positions fully understand the overall political ramifications.

It is generally conceded that the greatest battle since the dawn of history is for the mind, the heart, and the soul of man. The college is convinced that its military contribution must be toward a better way to use man—man who is the one constant in the equation of battlefield success. This, as I have indicated previously, requires the continuing development of the moral as well as the mental, physical, and psychological aspects of the student.

In conclusion, history shows that most unsuccessful battles are first lost in the mind of the commander before the battle. In this respect, I feel we all agree that the Communists have made considerable progress in hawking their "ism" in the diplomatic, economic, military, and opinion-forming market places of the world. We must nurture and strengthen our dual capability to fight the "frigid or flaming" war in either a conventional or nuclear context—as dictated by the enemy's moves on the vast chessboard of power politics. The enemy remains the determinant. And although I am convinced that history is a guide—not a god, all recorded history proves that tensions can best be lessened by negotiating from a position of strength. We must be strong and confident in support of a national purpose in which we all believe—we must accentuate the positive. We must be willing to fight for the privileges of Americanism, lest we lose the understanding of their values and thus through "mental and moral erosion" lose the freedom we now enjoy. The road to the decline of a civilization starts in the mind and in the moral fiber of its people. It is as

unsound to overestimate our enemy as it is to underestimate him. We have the best "ism" in the world—Americanism—but it requires willing service and sacrifice together with a national determination to make it work. The citizen, particularly the soldier, must face the future with confidence—confidence born of belief in his own individual ability, the ability of his outfit, and the ability of his nation. Even more important, as individuals or as a nation, we cannot compromise with principle.

Those of us who are privileged, as members of the staff and faculty of the U.S. Army Command and General Staff College, with the awesome responsibility of molding the minds of our future leaders in the direction of progress feel not only a grave sense of duty, but a terrible sense of urgency as well. It is our sacred trust, our proud duty as soldiers, that the college—by the worth of its instruction, doctrine, and example—continue to furnish top battlefield leadership for our country. For as Carl Schurz has so truly said: "Ideals are like stars; you cannot reach out and touch them with your hands. But like the seafaring man on the desert of waters, you choose them as your guides, and in following them you reach your destiny." If, God forbid, we must fight again, both sides will have fulfilled their destiny, but only one, the most highly dedicated, the most highly motivated and the best led, will have won victory—this is the mission of the USACGSC.

Thank you.

Federal School Aid

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. HESS. Mr. Speaker, under leave to extend my remarks, I wish to include a very potent and thought-provoking editorial which appeared in the Western Hills Press, Cheviot, Cincinnati, Ohio, for March 24, 1960:

FEDERAL SCHOOL AID

We reported last week that Purcell Council, Knights of Columbus, had adopted a resolution opposing Federal school aid legislation pending in the House of Representatives on the grounds that it discriminated against parochial and private school citizens.

The bill in question proposed a Federal grant of \$20 per student per year for the purpose of school construction and teachers' salaries. The resolution suggested that "students attending parochial and private schools be excluded from the count and an income tax credit in like amount be given to persons who send their children to such schools."

We would carry the Knights of Columbus' suggestion a step further. Why not give all parents a \$20 income tax credit for each schoolchild on presentation of a receipt for that amount paid as a special tuition assessment to a local school system, public or private?

This would obviate the need for all Federal school aid as now proposed, thereby eliminating the threat of Federal controls of education while assuring the schools of receiving the full amount of payments without the customary shrinkage of tax dollars returned to local communities via Washington and State capitals.

Won't work, huh? Too simple and no provision for bureaucrats, who, after all, in our scheme of things, are more important than students, teachers, and taxpayers.

Yarborough Asks AEC To Come Clean

EXTENSION OF REMARKS

OF

HON. JACK BROOKS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. BROOKS of Texas. Mr. Speaker, we who are Members of the House who represent districts which border on the Atlantic seaboard and the gulf coast, together with Senators who represent Atlantic and Gulf Coast States, have become increasingly disturbed concerning proposals to dump radioactive waste close to our beaches in these areas.

Many of us have reported these proposals to our people back home and I for one have told my people that I will oppose any dumping of radioactive waste in our coastal waters until we can get unqualified assurance from the Atomic Energy Commission that this radioactive material will not adversely affect the marine life, marine environment or our people.

Senator RALPH YARBOROUGH, of Texas, has forthrightly gone on record by challenging the AEC to "prove beyond the shadow of a doubt" that dumping radioactive waste in the gulf would not be harmful. I believe that Senator YARBOROUGH has expressed the deepest feeling of the overwhelming majority of Texans living close to the gulf—the people who could be most directly affected by an irresponsible plan of disposal of radioactive waste.

The Beaumont (Tex.) Enterprise has heartily commended Senator YARBOROUGH for his challenge to the AEC and has taken a cue from the Senator in stating:

It's now time for the Commission to come clean with the public, even if such honesty involves a confession of ignorance.

I know the people of the Second Congressional District are pleased, as I am, that Senator YARBOROUGH is helping us lead this fight for the truth about disposal of radioactive waste material, and I would commend to the membership of the House the Beaumont Enterprise editorial of March 19, 1960, on this vitally important subject:

KEEP IT UP, SENATOR

Senator RALPH YARBOROUGH is fully justified in asking the Atomic Energy Commission to "prove beyond the shadow of a doubt" that dumping atomic wastes in the Gulf of Mexico would be unharmed.

And the millions of Texans he represents in the upper Chamber of the National Legislature insist that he keep on demanding this proof. If satisfactory assurance can't be provided, the whole idea should be abandoned.

YARBOROUGH said in a Senate speech that a study of atomic waste disposal at the AEC's Oak Ridge, Tenn., plant indicated the

wastes affect fish life and cause radioactive deposits in the bones of fish.
It's now time for the Commission to come clean with the public, even if such honesty involves a confession of ignorance.

Housing Future for the Aged

EXTENSION OF REMARKS

OF

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, Congress has amended the Housing Act to provide better housing for the elderly. I wish to include here an excellent first-hand account of what can be done under these laws by Mr. Carl T. Mitnick, president of the National Association of Home Builders.

This is the second in a series of articles written for Ray Henry, which appeared in more than a hundred newspapers throughout the country earlier this year. I commend it to the attention of the Members:

HOUSING FUTURE FOR THE AGED

(By Carl T. Mitnick, president, National Association of Home Builders)

One of the biggest developments in housing in the 1960's will be an increase in the production of homes for retired people. Home builders have barely scratched the surface in meeting the need for such housing.

We must, and I am convinced we will, build at least 100,000 more homes a year for older people during the next 10 years. This rock-bottom minimum of 1 million may well be exceeded.

For one thing, it is just good bread and butter business for a builder to construct homes for senior citizens. They are the best risks, as a group, in the world.

They know what their assets are, they know how to budget—and they know how to live within their means.

Today, we have a certain percentage of the elderly who do not have the means to be self-supporting and must have institutional or family care.

But, with social security benefits and the increasing trend toward pension plans, I believe that very soon the elderly person without the income to support himself will not exist.

The housing industry will do its part in building the homes the elderly need but the Government must provide some of the necessary vehicles. Above all, this means putting into effect title II of the 1959 Housing Act. This part of the law contains the provision on housing for the elderly—but they have never been implemented.

For instance, this unused section includes a program of FHA insurance for rental housing for retired persons. It does little good to have a law on which the "go" sign is withheld.

Congress raised from 60 to 62 the age at which an elderly person could qualify for this type of rental housing. To my mind, that was a mistake. I would like to see the age limit lowered to 60.

Home builders need, too, more statistics and research in the field if they are to plan wisely for housing older people. The Government could provide a helping hand here.

President Eisenhower has shown a special interest in this overall area by the appointment of an Advisory Committee on Housing the Elderly, of which I am proud to be a member, and the calling of a White House Conference on the Aging in January 1961.

I would expect the executive department to follow through with needed tools, or why set up the committees in the first place?

Up to now, most of the housing for the elderly has been single unit homes. They will continue to be built. But there will be a vast increase in multiunit dwellings for persons of 60 or over. There will be both high-rising apartment houses and garden type structures.

These multiunit structures will, for the most part, be built in the heart of cities, replacing blighted and slum areas. Some will be rental units.

One thing I have found in building for the elderly—they understandably like living where they have roots. They want to live, when possible, within easy reach of their children and grandchildren.

It is my experience also that the elderly do not want to be entirely segregated. They enjoy living in a community in which there are younger people.

At North Cape May, N.J., where I have built 1,550 homes, 925 of them are occupied by retired people. The seniors enjoy the younger families with children, with whom they strike up warm friendships. And I've noticed the elder women welcome a chance to do some babysitting again.

Although there will be a vast increase in senior housing in these next 10 years, the units themselves will not be too different from other homes. It is my experience that a retired person does not want a home that everyone can see from the front door has a stamp: "For the Older Person."

As to size, I believe apartments will range from efficiencies to one and two bedroom units. Single homes will run to two or three bedrooms, for all want a place for the children when they come to visit and many like a room that can double as a little den or a bedroom.

The big increase in elderly housing will come in low-cost units but there will be a selection to meet larger purses. I've said it is sound business for the builder to build for the elderly. Let me give you some figures to show why I say this.

I have studied the case histories of 393 retired persons over 60 who bought modest houses, ranging in price from \$5,490 to \$11,000 that I built.

Of these, 109 or 27.7 percent paid for their homes. Another 85 or 21.6 percent paid off their mortgage in 5 years or less. Ninety-six or 24.4 percent paid 40 percent down and took a conventional mortgage. Only 59 or 15 percent made a down payment as low as 10 percent and a mere 44, or 11.3 percent, had a maximum mortgage.

In the 393 cases, there was but one default—a relative broke a promise of financial help. In this case, we took back the property and returned the money. I believe the record explains why builders like doing business with senior citizens.

The evidence from NAHB clinics and regional conferences is that the increase in housing for the elderly will be nationwide in the sixties. Homebuilders in every part of the country will do their part. It is inconceivable to me that the Government would merely give lipservice to the challenge at hand.

The Late Honorable Russell V. Mack

SPEECH

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. EVINS. Mr. Speaker, with a heart filled with sadness, I with others join in paying a brief but sincere tribute

to our esteemed colleague and friend, the Honorable RUSSELL V. MACK of Washington. His passing was saddening and shocking to us all and evidence of the very transitory nature of life, indeed.

I admired RUSSELL MACK immensely and valued his friendship greatly. We came to the Congress together—both of us being Members of the class of the 80th Congress—and for a time our offices were adjoining. I learned to know RUSSELL MACK soon after coming to Congress and I always respected and admired him greatly. There was no more dedicated and devoted Member of the Congress than the gentleman from Washington. He was a conscientious and faithful representative of the people—of his district, State, and Nation.

Although we were of opposite political parties we cooperated on many matters, particularly in the area of public works—which he especially championed.

I know that my wife joins me in expressing sympathy to Mrs. Mack in her bereavement.

A High Price To Pay for Public Relations

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial which appeared in the Buffalo Courier-Express, Buffalo, N.Y., on March 21, 1960, regarding Representative KATHRYN E. GRANAHAN's protest to the two public relations jobs created by the Postmaster General in connection with the Department's drive to halt the use of the mails for sending obscene literature.

I am happy to comment that my colleague on the Post Office Committee, Mrs. GRANAHAN, is very active in behalf of postal and Federal employees. We are all aware of the great menace that has invaded our mails in the way of pornographic material, and she was selected to head the subcommittee which concerns itself with these matters.

Mrs. GRANAHAN is doing a superb job in this field as witnessed by the nationwide coverage she has received in recent months. I am sure she will leave no stone unturned in seeking to eradicate this menace from our mails.

The editorial follows:

A HIGH PRICE TO PAY FOR PUBLIC RELATIONS
Representative KATHRYN E. GRANAHAN, Pennsylvania Democrat, makes a pretty strong argument when she characterizes the hiring of two Republican women for two especially tailored jobs in the Post Office Department as "pure political patronage."

Her fire was directed at Postmaster General Arthur E. Summerfield for hiring Mrs. Mae Simpson, widow of a Republican Congressman, and Mrs. Carroll D. Kearns, wife of a Pennsylvania Republican Congressman, at \$50 a day to do work which easily could be handled by almost any employee in the Department.

Specifically the two women will speak before women's clubs seeking information on

the department's drive to halt the sending of obscene material through the mails.

In denouncing the hirings, Representative GRANAHAN said: "I am appalled that Postmaster General Summerfield, while seeking a postal rate increase and fighting for a small wage boost for rank-and-file post office workers, would put these women on the payroll."

Unquestionably the Postmaster General will find it difficult to convince Congress that he needs additional funds when he can afford to spend \$50 a day for the unneeded services of two novice employees.

Time for Action

EXTENSION OF REMARKS

OF

HON. RANDALL S. HARMON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. HARMON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

TIME FOR ACTION

There is no longer any question that the helicopter has finally achieved technical maturity and is ready to take its proper place as a strong, full-fledged member of the air-transport team. Development of turbine powerplants has produced substantial operating economies, boosted load capacity, and speed.

Operating expenses will be cut about in half. Today's largest piston transport helicopter can carry about 15 passengers at a cost of 20 cents a mile for each passenger. The turbine helicopter and other VTOL aircraft will be able to handle a minimum of 25 passengers at a cost of 10 cents a passenger mile or less.

The American Legion has a strong interest in the progress of the helicopter manufacturing and transport industry. One of the most important handicaps to bringing the advantages of the helicopters to full fruition is the lack of municipal planning for adequate landing areas—heliports and helistops.

During the 1958 convention in Chicago the Legion adopted a strong resolution. One clause stated:

"In some municipalities ordinances and regulations have been adopted in such a way as to prohibit the landing of helicopters within the municipal limits and prohibit the flight of helicopters beneath a certain minimum altitude while over municipal limits, thus depriving the citizens of those municipalities of the great benefits offered by the helicopters."

"The American Legion . . . does recommend that we nationally encourage our posts to support the adoption of only such ordinances and regulations as will give the helicopter freedom to serve our communities and as will not unduly restrict the establishment of heliports and the operation of helicopters."

Certainly these words can be repeated today, and much has been done to encourage helicopter operations.

The U.S. Senate last year unanimously passed a joint House and Senate resolution calling for a survey of the District of Columbia for the purpose of recommending sites for helicopters. The resolution has not yet come to a vote in the House, so nothing has been done about the study.

There is an imperative need that action be taken by the House so that this survey can get underway. Its usefulness goes far

beyond the needs of Washington, D.C. The Nation's Capital is typical of major metropolitan centers that need and eventually must have adequate helicopter service. The findings of the inexpensive survey could serve as a model for other cities.

The heliport problem has been studied by the Federal Aviation Agency in its Project Hummingbird. Lt. Col. Fred Goodwin, an Army helicopter expert on loan to FAA, states:

"The greatest problem is heliports or landing area complexes within the metropolitan areas. You can't build just one big heliport in the middle of the city, because if these commuter, interurban and short-haul or feeder line systems are all feeding into this area, they will soon saturate even the largest heliport conceivable."

"This then calls for some national standards and a complete nationwide education program covering the need for more liberal zoning laws. . . ."

The requirement for sound, forward-looking planning for helicopter service to our cities goes far beyond its primary impact as a prime transport tool. The civil defense uses of the helicopter are incalculable. This has been recognized by the Office of Civil and Defense Mobilization which offers State civil defense organizations the right to purchase a helicopter, with the Federal Government picking up half the cost.

Military experts have stated that only the helicopter can perform many of the emergency evacuation tasks if our cities should be attacked.

Finally, there has come strong support of helicopter landing facilities from Representative RANDALL S. HARMON of Indiana. Representative HARMON has introduced legislation in the House calling for the inclusion of a helicopter landing area on top of the new House Office Building now under construction. The Congressman said that the heliport would be invaluable for getting busy Congressmen to and from airports in the Washington area, particularly the Dulles International Airport in Virginia which is now under construction. And the Dulles airport designers have already made provision for the construction of four helicopter landing areas.

The tide is running swiftly in favor of appropriate legislation so that we can have the advantage of the helicopter. But time is running out equally swiftly. The time for action is now.

Forty-second Anniversary of the Independence of the Byelorussian Democratic Republic

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. STRATTON. Mr. Speaker, last Sunday, March 27, marked the 42d anniversary of the independence of the Byelorussian Democratic Republic. This occasion is important for many reasons, but especially because it serves to remind us once again, as we always need to be reminded, that the Soviet Union continues to hold in subjection millions on millions of people who deserve to be free and have a right to be free, and in whose freedom we in America have a deep and abiding stake.

Although the Soviet Union has paid lipservice to this burning desire for independence on the part of 10 million people of Byelorussia by incorporating them into the Soviet Union as a separate republic, no one of course is fooled into thinking that this procedure really represents anything but complete subjection to the Communist dictatorship.

Forty-two years ago, on March 25, 1918, the people of Byelorussia first tasted freedom after decades of oppression and tyranny under the czars. But this freedom was short lived. After 2 short years the flame of freedom was extinguished and the earlier tyranny of the czars was replaced by the darkness of an ever more vicious tyranny of Soviet communism.

Mr. Speaker, in spite of these unhappy events, the hope of freedom still lives on in the memory of the people of Byelorussia and I join with them today on this 42d anniversary in hoping that the day will not be far away when freedom will come again to the Byelorussian people.

Seventh President at Wyoming Seminary, Kingston, Pa.

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record, Friday, March 25, 1960:

SEMINARY INAUGURAL

This afternoon at 2:30, Benjamin Hopkins Moses will be inaugurated as seventh president of Wyoming Seminary at ceremonies in Kingston Methodist Church. When Mr. Moses accepts the badge of office from Z. Platt Bennett, president of the school's board of trustees, his name will be officially linked with those of a select company of administrators which the 115-year-old school has been fortunate to attract to its service.

The talent he has displayed as an administrator at Syracuse University, Harpur College, and Yale University indicates that Mr. Moses has those qualities of leadership demanded by the exacting task of educating American young people. In addition to his 25 years' administrative experience, Mr. Moses has another important quality which recommends him to the post. As a graduate of Wyoming Seminary, he is familiar with the history and traditions of the institution and can be depended upon to perpetuate those ideals which have helped raise it to the front rank of private secondary schools.

A native of the neighboring county of Lackawanna, Mr. Moses entered Wyoming Seminary during the presidency of the late Dr. Levi L. Sprague. As a student, he came to know both President Emeritus Wilbur H. Fleck, then dean, and his immediate successor, Ralph W. Decker, who also was a student in the school at that time.

With sincere wishes for a long and successful tenure, the community takes pleasure in welcoming Benjamin Hopkins Moses as seventh president of Wyoming Seminary.

U.S. War Heroes To Revisit French Battlefields

EXTENSION OF REMARKS OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. CURTIS of Massachusetts. Mr. Speaker, more than 200 members of the Army and Navy Legion of Valor, including wives and children, plan to leave Boston by plane on September 2, 1960, for visits to London, Paris, and the French battlefields—and perhaps also West Germany, Belgium, Italy, and Greece.

The Legion of Valor was formed in 1890 by Civil War Veterans who had been recipients of America's most honored military decoration, the Congressional Medal of Honor. Following World War I, its charter was amended to admit as members holders of the DSC and Navy Cross. Its present national commander is Col. Paul H. Hines of West Roxbury. The organization will hold its 70th national convention in Boston shortly before leaving for Europe on September 2.

I include as part of my remarks a statement by National Commander Paul H. Hines about this trip, which I feel sure will be of interest to Members of Congress and others:

STATEMENT BY PAUL H. HINES OF WEST ROXBURY, NATIONAL COMMANDER OF THE ARMY AND NAVY LEGION OF VALOR, REGARDING THE TRIP ABROAD NEXT SEPTEMBER BY MEMBERS OF THAT ORGANIZATION

The Army and Navy Legion of Valor has been invited by the Greek Government to visit Greece during its trip to Europe in September, according to an announcement by its national commander, Col. Paul Hines. The Legion of Valor is composed of holders of the Congressional Medal of Honor, Distinguished Service Cross, and the Navy Cross, the three highest American awards for valor in face of the enemy in time of war.

More than 200 members of the Legion of Valor, including wives and children, have already made reservations to make the European tour. According to its present schedule the delegation will leave Boston by plane on September 2 for a 2 weeks sojourn at London, Paris, and the French battlefields on which most of the members won their honors.

If the plans of the President's People-to-People Committee, sponsors of the tour, materialize the group will also visit West Germany, Belgium, and Italy and in view of the invitation received from the Greek Government will probably also journey to Athens, Greece.

The invitation to visit Greece, transmitted through Alexis S. Liatis, Ambassador of Greece at Washington, reads as follows: "This Royal Embassy has been informed that members of the Army and Navy Legion of Valor are planning a trip to Europe this forthcoming summer. Therefore, I have been requested to extend, on behalf of the General Staff of Greece, an invitation to the Army and Navy Legion of Valor to include Greece in the schedule of their proposed trip to Europe."

"May I suggest," says the letter to Commander Hines, "that you further contact directly Lt. Gen. A. Frondists, chief of the

general staff, through the U.S. Embassy in Athens, for all necessary arrangements and further details."

Hines also announced that the British Legion, the veteran servicemen's organization of Great Britain, has invited the Legion of Valor to partake of its hospitality during its stay in England. Among its members are the holders of the Victoria Cross, the highest military honor awarded by that nation.

High among the hopes of the leaders of the Legion of Valor is that Gen. Douglas MacArthur, its most famous member, now recuperating from an abdominal operation at a New York hospital, will have recovered sufficiently to make the trip. MacArthur is one of the few general officers holding the DSC, awarded to him during World War I for courage and bravery over and above the call of duty.

Prior to its "jump off" for Europe in September, the Legion of Valor will hold its 70th national 3-day convention in Boston. Members will be here from all sections of the Nation. The organization was formed in 1890 by Civil War holders of the Congressional Medal of Honor. Following World War I its charter was amended to admit as members holders of the DSC and Navy Cross.

Hon. Russell V. Mack

SPEECH

OF

HON. ROBERT E. JONES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. JONES of Alabama. Mr. Speaker, the death of my warm friend RUSSELL MACK of Washington has come as a great shock to me. RUSSELL MACK and I came to the 80th Congress together, and we became members of the House Public Works Committee at the same time in 1947. Throughout the years, we developed an intimate acquaintance.

RUSSELL MACK was a skillful legislator, patient and always objective. His reasoning was never disturbed by impulsiveness nor was it ever motivated from prejudice. He possessed the great attribute of leadership and was a man of refinement, poise and warm demeanor. He always had a well-founded knowledge of the legislative matters that he dealt with, and this fact accounted for his capable leadership and legislative skill.

As a member of the House Public Works Committee, RUSSELL MACK labored continuously in support of legislation which has brought about the multibillion dollar development of the great Columbia River Valley in the Northwest. This multipurpose program means so much to the people of that area in terms of flood control navigation, power development, and conservation of the soil and forests. He has also effectively supported legislative measures for needed development of the rivers and harbors throughout the Nation. All of these splendid contributions will stand as a monument to his long and distinguished service on our committee and in this House.

RUSSELL MACK's passing at this time is a source of profound shock, grief, and sorrow to all of us who knew him here.

Indeed, a great statesman has passed from this scene. At this time, we pay our personal tribute to RUSSELL MACK for his great legislative career, and we extend to his dear wife, Laura, our heartfelt sympathy and personally share with her in this great loss.

Foreign Bid for Electric Locomotives Contract for Panama Canal

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mrs. SULLIVAN. Mr. Speaker, under unanimous consent I submit for printing in the Appendix of the CONGRESSIONAL RECORD some self-explanatory material bearing on the award of a contract for electric mules for the locks of the Panama Canal.

I know nothing whatsoever about the American low bidder in this case but the telegram I received from the concern in question prompted my inquiry to the Secretary of the Army and I include that along with Mr. Brucker's reply.

I believe there will be widespread interest in this matter among those Members—and I believe there are many of them here in the House—who have had incidents of this nature affecting firms in their own districts.

As chairman of the Subcommittee on the Panama Canal, of the House Committee on Merchant Marine and Fisheries, I was, of course, very interested in the Ohio firm's protest and in getting the facts about it. I should point out, however, that I acted on this without consulting the other members of the subcommittee, so it should be clearly understood I did so in my capacity as Representative from a heavily industrialized congressional district and not as chairman of the subcommittee.

The correspondence referred to is as follows:

WASHINGTON, D.C., March 16, 1960.

Subject: Procurement of 39 towing locomotives by Panama Canal Company.

Hon. Mrs. JOHN B. SULLIVAN,
House of Representatives,
Washington, D.C.

Your assistance sought in communicating with Army Secretary Brucker and Panama Canal Company urging subject contract not be awarded to foreign bidder at the expense of American public interest.

We understand decision on this procurement imminent and feel it imperative that the Canal Company and its sole stockholder, Secretary Brucker, give full and proper consideration to all factors bearing on the public interest, which we believe dictates this procurement be awarded the lowest domestic bidder, Plymouth Locomotive Works of the Fate-Root-Heath Co., a small business.

To date the SBA, Commerce Department, and House Select Committee on Small Business have written Army Secretary Brucker, Army Assistant Secretary Roderick, and the Canal Company citing relevant portions Executive Order 10582 (Buy American Act) pertaining to preferential treatment for

small business and authority to reject foreign bids not consistent with the national interest.

To summarize pertinent arguments briefly:

In addition to Plymouth two major subcontractors are also small businesses: Culen-Friestadt Co., of Chicago, and Jackson Gear of Pittsburgh.

Most of the materials for Plymouth Locomotive will come from Critical surplus labor areas of Pittsburgh, Buffalo and Detroit.

This procurement would provide over 1 million direct manhours of employment for American labor.

Funds recaptured through Federal, State and local taxes alone will more than offset price differential between the bids of Plymouth and Mitsubishi of Japan.

Also consider it extremely important all concerned authorities recognize that Plymouth is the only remaining American company devoting its principal efforts to the design, engineering, and production of industrial locomotives of the size and type required in this procurement.

Plymouth has been building industrial locomotives since 1908 and has supplied over 1,000 to the U.S. Government, many of which are still in use today.

In recognition of Plymouth's specialized industrial capability, Army Transportation Corps has placed considerable dependence on Plymouth's facilities in its war mobilization plans.

The vital importance of the Canal Zone to U.C. commerce, shipping, and national defense certainly is of significant public interest, especially since these new towing locomotives are expected to have a useful life of nearly 40 years, therefore making access to an assured American source of supply for spare parts, maintenance and servicing, a most important consideration.

It has been repeatedly acknowledged by responsible Canal Company officials and the Army that the Plymouth proposal is the most acceptable and responsive to the needs of the canal operation.

Considering the above we believe you will agree that awarding of this procurement to Plymouth is the only decision consistent with the best public interest.

We respectfully request your expression of interest in this matter be directed to Secretary Brucker and the Panama Canal Company.

Mr. J. Lasplia, our Washington representative, may be called at Sterling 3-8555.

MILES CHRISTIAN,
Vice President, Plymouth Locomotive Works, Plymouth Ohio.

MARCH 17, 1960.

The Honorable WILBER M. BRUCKER,
Secretary of the Army,
Washington, D.C.

DEAR MR. BRUCKER: It has been called to my attention that a Japanese firm is the low bidder to the Panama Canal Company for 39 towing locomotives and 3 cranes to be used in locking ships through the canal. As chairman of the Subcommittee on the Panama Canal of the House Committee on Merchant Marine and Fisheries I am, of course, interested in seeing to it that the Canal Company operates efficiently and economically. However, as a Member of Congress who has had this same situation occur time after time to firms in my own district, I am deeply concerned over the practice of awarding multimillion dollar contracts by our Federal Government to foreign firms when domestic concerns and their employees can perform the same work at reasonable cost.

Can you tell me how far, if at all, the bid of the Plymouth Locomotive Works of \$4,741,867 exceeds the differential required

under the Buy-American Act? Are there other factors which should be taken into consideration, such as the availability of spare parts and the prospects for maintenance know-how over the many years that these electric mules could be expected to remain in use? It is my understanding that the Small Business Administration, the Department of Commerce and the House Select Committee on Small Business have all intervened in this matter on the side of the lowest responsible American bidder. Is that correct?

Could I have an early report on this matter so that if the subcommittee were to desire to take up this matter it could be done prior to the awarding of any contract?

With kindest regards, I am,

Sincerely yours,

LEONOR K. (Mrs. JOHN B.)

SULLIVAN,

Member of Congress, Third District of Missouri.

DEPARTMENT OF THE ARMY,
Washington, D.C., March 22, 1960.
The Honorable LEONOR K. SULLIVAN,
House of Representatives.

DEAR MRS. SULLIVAN: Your letter of March 17, 1960, to the Secretary of the Army in regard to the invitation for bids for towing locomotives and cranes to be used at the Panama Canal has been referred to me for reply.

An invitation for bids to supply 39 towing locomotives and 3 cranes was issued by the Panama Canal Company in December 1959. The low bid received was submitted by Mitsubishi Shoji Kaisha, Ltd., in the amount of \$3,829,900. The next low bidder was the Plymouth Locomotive Works in the amount of \$4,741,867. International General Electric was third bidding \$5,170,200 and Fairbanks Morse bid \$7,152,111.

This procurement is subject to the Buy American Act and the invitation for bids contained a provision that for evaluation purposes the following amounts would be added to bids proposing manufacture outside the United States: (a) \$115,000 to cover additional costs of inspection and increased administrative costs; (b) 10 percent to the total bid price; and (c) 6 percent of the total price if the lowest responsive bidder offering domestic materials will produce substantially all such materials in areas of substantial unemployment as determined by the Secretary of Labor.

The Plymouth Locomotive Works has advised since the opening of the bids that all component parts of the locomotives will be manufactured in areas of substantial unemployment. Applying all three additives specified in the invitation the evaluated bid of the Japanese firm would be \$4,557,684, or somewhat in excess of \$184,000 less than the Plymouth bid.

Detailed comparison and evaluation of the bids have not yet been completed by the Panama Canal Company. Concurrently careful study is being given to the terms of the Buy American Act and the implementing Executive order and regulations to determine whether there is any basis for award to the low domestic bidder notwithstanding the comparatively favorable price quoted by the foreign bidder. These studies include consideration whether award to the domestic bidder is necessary in the national interest from a security standpoint or whether such award would not be inconsistent with the public interest as that phrase is used in Executive Order No. 10582. I assure you that all relevant factors, including those discussed in your letter, will be carefully weighed before an award is made.

Sincerely yours,

GEORGE H. RODERICK,
Assistant Secretary of the Army (FM).

Fiscal Responsibility

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. HIESTAND. Mr. Speaker, the Economists' National Committee on Monetary Policy has just issued a statement signed by its 54 members, which I recommend for careful consideration by the Congress:

SUPPORT URGED FOR FEDERAL SURPLUS, DEBT REDUCTION, AND A FULL GOLD STANDARD

We, the undersigned, members of the Economists' National Committee on Monetary Policy, urge firm support for a program of Federal surplus and public debt reduction such as that proposed by the President in his budget message to Congress on January 18, 1960.

The President's call to financial responsibility, hopefully sounded for the fiscal year ending June 30, 1961, is already drawing fire, within and without Congress, both openly and directly as well as furtively and indirectly. There is acute danger that these recommended steps toward efficient management of the public purse may be further frustrated in the sectionalism, partisanship, and turmoil of an election year. For this reason, we believe it of paramount importance to understand, and to act in the light of, the following facts:

Our national debt has increased approximately 13 fold since abandonment of the gold standard in March 1933—from \$21.4 billion as of March 1933, to over \$291.5 billion as of January 28, 1960. During this time the population of the United States has risen by approximately 42.4 percent—from 125,690,000 in 1933 to 179,013,000 as of December 1959.

This accumulation of debt, resulting from deficit spending of the National Government, has been a potent cause of the loss approximating 58 percent in the purchasing power of the dollar since 1939, as measured by the index of wholesale prices.

Long continued living beyond its current means by our National Government is evidenced in part by the huge volume of Treasury securities held by Federal Reserve and commercial banks, and serving artificially to enhance bank reserves and lending potential in terms of depreciating money.

By stimulating lending and borrowing in this and other ways, without corresponding increase in the savings of the people, and, by competing with business for the use of these savings through its own extensive demands upon the capital market, the fiscal policy of our Government has contributed greatly to the present tightening of credit and the rise of interest rates.

This tightening of credit and higher cost of money, natural results of the demand for capital increasing faster than its supply through savings, very generally accompany rapid advances in prices and costs. These results cannot be legislated away, either for Government, or for businesses and individuals. In the long run they can be corrected only by reversing the above process—that is, by encouraging savings and by keeping governmental and nongovernmental demands upon the capital markets within the limits of these savings. Interest rates, like other prices, are subject to the forces of supply and demand.

It follows that strict control of the public debt, involving retirement when possible

from budgetary surpluses, is essential for protecting the purchasing power of the dollar, easing credit stringency, moderating interest rates, and permitting progress toward a sound monetary, credit, and fiscal structure at the base of which a full gold standard, at the present statutory rate, should be instituted and maintained.

The Late Honorable Russell V. Mack

SPEECH

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. YOUNGER. Mr. Speaker, in the passing of RUSSELL V. MACK we have lost a very companionable colleague and a

sincere, extremely capable legislator; and personally I have lost a close personal friend.

It has been my pleasure to have known RUSSELL MACK for many years. As a legislator he had the happy faculty of fighting hard for what he believed but never, even in the hottest debates, did he ever stoop to personal accusations.

He was a most unusual and extremely kind individual. In my legislative and social experience with him, I cannot recall ever hearing him pass an unkind remark about any individual. If he could not say something good about them, he kept his own counsel.

We are all saddened by this sudden taking of our colleague, and I wish to extend my personal sympathy to his bereaved wife, Laura.

Political Medicine Says AMA

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. FORAND. Mr. Speaker, under leave to extend my remarks I include the following editorial that appeared in the February 26, 1960, issue of "The People's Voice" of Helena, Mont.:

THIS TIME AMA IS CALLING IT "POLITICAL MEDICINE"

A decade ago the American Medical Association succeeded in killing prepaid national health insurance for all Americans by labelling the Murray-Wagner-Dingell enabling legislation as "socialized medicine".

That time, by a million-dollar Madison Avenue campaign of fear and smear, they delayed the day when the United States would join all other major nations of the world in providing its people with an insurance program to meet medical and hospital costs of illnesses. The fact that Murray-Wagner-Dingell was in no wise related to "socialized medicine" did not deter the AMA in its massive resistance. Facts went out the window in the brain-washing blitzkrieg AMA unleashed upon the American public.

Today another threat to the AMA's "all the patient can pay" philosophy looms in the Forand bill (H.R. 4700), to provide prepaid hospital, surgical, and convalescent home costs for Americans retired on Social Security.

The Forand bill, like Murray-Wagner-Dingell, like the National Tuberculosis Act, like Social Security itself, finds Mid-Victorian oriented AMA again mounting the hustings to spread far and wide dire predictions for the future should H.R. 4700 become law. This "Political Medicine Is Bad Medicine", a new pamphlet by the AMA pontificates. Furthermore, say the "bosses" of the "Doctors' Union", there's no need for the bill; America's aged are getting along very well under voluntary health payment plans (which, by the way, the AMA opposed bitterly just a few years ago. Blue Cross was, for example, castigated as "a half-baked scheme . . ."). Other such plans were blasted as "socialism, communism—inciting to revolution."

AMA also contends:

1. Over 60 percent of the Nation's aged have sufficient assets to meet a hospital or medical bill of \$500;

2. Hospitals would become overcrowded should H.R. 4700 become law;

3. The Government would interfere with "your relationship with your family physician";

4. The costs would be astronomical on the social security system.

AMA makes one further contention in its new pamphlet, a contention aimed at further confusing the issue, when it asks how "would the Forand bill help the indigent aged . . .?" and then answers its question by saying it "would not help the indigent" because most of them are not eligible for social security. These people, AMA says, are provided for through various welfare programs.

As for the above-mentioned voluntary insurance coverage, AMA asserts that currently 60 percent of the aged "needing and wanting health insurance" are thus protected.

This is an oversimplification. It is downright misleading. Of that 60 percent, few retired people are able to afford health insurance remotely resembling comprehensive coverage. According to the U.S. Department of Health, Education, and Welfare, three-fifths of the Nation's 15 million citizens over 65 have annual incomes of less than \$1,000.

The most nearly comprehensive coverage generally available to the aged is Blue Shield or Blue Cross. The cost of this for a couple averages over \$15 a month—or \$180 to \$200 a year—an amount entirely beyond the reach of most of the more than 9 million aged with incomes of less than \$1,000 a year.

Of the 60 percent AMA says are covered only a small fraction have the needed comprehensive coverage. For perhaps 90 percent of those covered, the insurance provides no protection against doctor's home and office calls, dental care, nursing home care, drugs and a host of other essential items which looms extraordinarily large in the medical cost budget of the elderly.

Looking at the other points raised by AMA:

1. "Sufficient assets to meet a bill of \$500." What does \$500 buy today in medical and hospital care? A semimajor operation, 1 week in the hospital, and a part payment on such extras as anesthetic, operating room, etc.?

A major operation and hospitalization for any person, not just those over 65, will cost \$500 or more. With the elderly, recuperation is a slower process, more postmedical care is required, and frequently several weeks in a convalescent home after hospitalization. Few of the elderly not provided for by welfare programs or private help, can ever hope to get out of debt from a major illness.

The Forand bill would provide, through social security, for surgical and hospital care up to 60 days, plus the cost of convalescent home care. This 60-day maximum is sufficient to cover all except the most extreme cases.

2. Overcrowding of hospitals: This AMA assertion in itself is an admission that presently many of our aged forego needed health care because they do not have the means with which to pay the bill. In effect, the AMA favors letting the aged die because of inadequate care rather than for the world's richest Nation to meet the overcrowding problem by building more hospitals. (In terms of education, a similar philosophy would advocate letting a sizable percentage of our children remain ignorant rather than build needed classrooms.)

3. The old bogey of interfering with the doctor-patient relationship has been used by the AMA in every instance over the past half century when efforts have been put forth to improve the public health, whether the Red Cross blood bank, TB control methods, or compulsory vaccination against contagious diseases. The AMA fought every

one of those programs as interfering with the doctor-patient relationship.

AMA notwithstanding, the Forand bill specifically provides that surgical operations performed in a hospital shall be by the patient's choice of surgeon.

4. That "cost" item. If medical and hospital costs for the aged were not soaring toward the moon faster than any American missile thus far developed, would there be the intensifying nationwide demand for the passage of the Forand bill?

Actually, the cost of providing the hospital-surgical service called for under H.R. 4700 would be only 25 cents a week per individual worker covered by social security. Financing the program would amount to an increase of one-fourth of 1 percent in the social security withholding against the first \$4,800 of an employee's annual income.

In total, the program would cost approximately \$1 billion per year—or one-fortieth of the military's annual "take" from the Federal budget.

The AMA's "red herring" about the Forand bill not helping the indigent aged is irrelevant. As the AMA admits, most of these people are taken care of under various welfare programs, whereas most social security recipients are not eligible for public assistance.

Here in Montana, the State board of health estimated, as of last July 1, that there were 65,000 people 65 years of age or older. According to information secured from the Helena social security office approximately 37,600 of that 65,000 total are drawing social security retirement benefits. Twenty thousand are covered by other pension plans or are self-sufficient. Seven thousand seven hundred draw public welfare payments. The average social security payment for those 37,500 Montanans is \$72 a month—or less than \$1,000 a year.

Each and every one of those 37,500 people are potential major surgery patients. Unlike the estimated 7,700 aged Montanans drawing public welfare and therefore eligible for medical and hospital care as "indigent aged," few of the 37,500 Montanans receiving social security have the financial means to meet the cost of prolonged recovery from major surgery. They either go without, or doctors and financially hard pressed hospitals do not get paid. The Forand bill, by broadening the scope of social security, would make it possible for social security retirees to receive hospital and surgical care at least equal to that we now provide elderly people who are on public welfare.—H.L.B.

Inspector Anthony Richitt, a Fearless Enforcement Officer, Is Retiring

EXTENSION OF REMARKS
OF

HON. ALFRED E. SANTANGELO
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1960

Mr. SANTANGELO. Mr. Speaker during my experiences as a member of the Appropriations Committee, Subcommittee on the District of Columbia, I have met many of the public officials of the District. In order to understand the problems, I have communicated with and had lengthy conversations with members of the police department and other agencies. One of the persons who has given me invaluable information as to

the problems of the police department in the District of Columbia and with whom I have become very friendly is Inspector Anthony Richitt. Mr. Richitt has served 35 years on the police department and his record for law enforcement is an outstanding one. His experiences are invaluable, and when I read of the proposed retirement from the police department of my friend, Inspector Richitt, I recognized that the District of Columbia was losing a valuable servant and a fine gentleman. I wish Mr. Richitt the greatest success in whatever endeavor he seeks to pursue, and I recognize industry's gain will be the District of Columbia Police Department's loss.

Mr. J. Theodore Crown, staff writer of the Washington Star, reported on the contemplated retirement of Mr. Richitt from the police department. This article sets forth some of the experiences of Mr. Richitt and some of the important roles that he has played during this 35 years of police service. The article by Mr. Crown follows:

COLORFUL CAREER ENDING FOR INSPECTOR
RICHITT

(By J. Theodore Crown)

Inspector Anthony Richitt, one of the most colorful and controversial members of the Metropolitan Police Department, today appeared before the Board of Police and Fire Surgeons.

Indications are that he will retire for physical disability by the end of April. He declined to disclose the nature of his disability.

In his 34-plus years as a policeman, Inspector Richitt has become well known to thousands of government officials and citizens, particularly because of his onetime command of the third, or "White House" precinct, and the circumstances growing out of his transfer.

He is a jovial ex-marine who made a name for himself as a daredevil motorcycle rider and stuntman during early years in the traffic division, and later as a suave, high-ranking officer in the uniformed force. He also is the only flying inspector in the department.

HEADS FIRST DISTRICT

His present command is inspector in charge of the first, or "downtown" district, comprising the first and second police precincts.

Inspector Richitt is known widely as "Tony" and his last name is mispronounced, sometimes even by himself, as "Ritchie." He was born in Grove City, Pa., 56 years ago and joined the Washington police in 1925 after a Marine Corps hitch.

His first assignment was as a foot patrolman in the fourth precinct, where he met the late Pvt. Joe Comiskey, who instilled in him a love of boating and water sports that has never flagged.

Soon the powers that be put the young policeman on a motorcycle, where he spent his active duty for the next 18 years. He was transferred to the Traffic Division in 1929 where—after being warned by the late Inspector Milton D. "Chinny" Smith for stunting risks on the motorcycle—he was placed in charge of the department's first stunt team.

Lieutenant Richitt became a captain in 1948, but he was swiftly transferred to the Third Precinct. Two years later he was the subject of one of the police department's biggest family fights. It started on March 2, 1950, when he was transferred from the coveted White House precinct to command of the outlying Eighth Precinct. The rea-

sons given were disrespect for superior officers and failure to carry out duties.

Captain Richitt, it was indicated, was hard to find at his desk. He has always felt he could accomplish more on the street than he could tied to a desk. Captain Richitt didn't take the transfer sitting down.

At the end of his first day in the Eighth Precinct, he called a press conference to give the real reason for his transfer. He said it was his private disclosure to a House District subcommittee investigating crime of certain matters concerning gambler Emmitt Warring and Police Chief Robert J. Barrett.

There was a good deal of commotion, including a recommendation by Special Assistant Corporation Counsel Daniel B. Maher that Captain Richitt face trial board charges. But the whole controversy ended in a huddle at Major Barrett's office with Captain Richitt stating, "I regret the incident ever occurred." Major Barrett said that was that, and everybody went back to work.

In 1951, he took up flying, largely because his son Donald, a Naval Academy graduate, had become a military aviator.

The veteran policeman was promoted to inspector in May 1953 and has been in charge of the first inspectorial district ever since. He and his wife, Juanita, live at 2500 Q Street NW.

Great Strides Made in Civil Defense Program in Luzerne County, Pa.

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. FLOOD. Mr. Speaker, in many parts of this Nation there is uncertainty and confusion regarding civil defense.

I am, therefore, delighted to announce that Luzerne County, which comprises my congressional district, clearly understands the importance of civil defense.

This program, Mr. Speaker, has become increasingly important because in hearings before my committee, the Department of Defense Subcommittee of the House Committee on Appropriations, experts have emphasized the fact that we have not perfected any antimissile defense. We have no defense at this time against intercontinental ballistic missile—ICBM—attack.

All of the experts have further testified in hearings before my committee that this being the case, then the emphasis for defense rests in the establishment of shelter programs since the civil defense program no longer calls for the evacuation of entire communities. It rests, moreover, on the efficient operation of local civil defense organizations such as that in Luzerne County.

I repeat, Mr. Speaker, I am very much gratified and delighted with the outstanding work being done in this vital field by the Luzerne County Commissioners and the entire civil defense organization in my county. My congratulations go also to the many thousands of men and women in my district who are giving of their time, efforts, and abilities to make the county organization the outstanding one that it is.

As an extension of these remarks, I include an article which appeared in the Wilkes-Barre Sunday Independent of March 27, 1960, in which this entire program as carried out in Luzerne County is explained in some detail:

COUNTY'S CIVIL DEFENSE ORGANIZATION OUTLINED BY COUNTY COMMISSIONER—GREAT STRIDES MADE

Majority County Commissioners Edmund J. McCullough and Jarrett W. Jennings released a detailed report yesterday showing the great strides that have been made in setting up a Luzerne County civil defense organization under the capable direction of Lt. Col. Frank Townsend.

Colonel Townsend has as his key assistants Herman A. Wagner as deputy director, Nicholas H. Souchik, administrator, and Mrs. Bowden W. Davis as secretary. In all there are approximately 29,000 volunteers enrolled in this vital program. These volunteers include 1,000 auxiliary police, 250 volunteer firemen, 750 radiological instrument readers. Women of 75 churches have been organized and trained in mass care service, and several thousand have received first-aid training.

At present Luzerne County has a director for civil defense in 72 of its 73 municipalities, the one exception being the city of Wilkes-Barre, which is in the process of appointing a director.

HAD DIFFICULTIES

The all-inclusive report of the county commissions on the civil defense setup in the county points out that its organization was not without difficulties since Colonel Townsend was appointed to the post by former Governor Leader on July 9, 1956.

The report points out that for 5 or 6 months Colonel Townsend attempted to set up a successful organization, but was unable to do so. The administrator, John Shively, either refused to cooperate or was not available to perform the duties expected of him. At this point Townsend requested the former county commissioners to allow him to appoint a civil defense administrator and a secretary, and asked that these people not be involved politically in any way.

In September of 1957, the report explains, Nicholas Souchik was appointed administrator at a salary of \$4,500 per year and Bronwen W. Davis was named secretary at a salary of \$2,700 a year.

MANY ACCOMPLISHMENTS

Since that time, Luzerne County Civil Defense has accomplished the following:

1. A council, comprising 22 civic and business leaders, was formed for the purpose of assisting in any disaster work.

2. A staff, numbering 40 volunteers, has been assigned to the various services of Civil Defense, to train and operate their particular service.

3. Seven 200-bed emergency hospitals have been stored throughout the county, each valued at \$36,000, at no cost to the county. These hospitals are stored at: City Hall Building at Hazleton, Pennhurst State School at White Haven, Retreat State Hospital at Retreat, Northwest Jointure School outside of Shickshinny, Nanticoke State Hospital at Nanticoke, The Elementary (Public) School at Noxen, and St. Michael's School for Boys at Hoban Heights.

4. Five emergency medical supply units, each valued at \$10,000, at no cost to the county, at the Red Cross Building, Wilkes-Barre; City Hall Building, Hazleton; Lehman Township High School, Lehman; Dallas Borough School, Dallas; Wright Township High School, Wright Township.

5. A radio net, operated by an amateur radio group of 50 volunteers, has been set

up with 27 radios located throughout the county. The county purchased eight of these at an approximate cost of \$1,800. This net is self-sustaining regardless of whether power is available.

CONNECTING LINES

6. A Conelrad line has been installed, connecting the courthouse with radio station WBRE, for use in the event of an emergency. The work was done by U.S. Air Force at no cost to the county. However, the county purchased microphones and accessories for the operation of this line at a cost of \$150. Four radio stations, WBRE, WBAX, WPTS, and WAZL, have been tied into a Conelrad cluster and, in time of emergency, will be broadcasting through these four stations from the courthouse.

7. Twelve telephones, six incoming and six outgoing, are installed in the Civil Defense Control Center at an optional rate from the Bell Telephone Co. This item is financed on a matching fund basis with the Federal Government so that the annual cost to the county is approximately \$248. These telephones are operated, during an alert—and will be in the event of an emergency—by 25 Civil Defense volunteers who are members of an organization known as The Insurance Women of Wilkes-Barre.

8. Luzerne County purchased 50 radiological instruments, at an approximate cost of \$250, and subsequently received 110 free instruments from the Federal Government, due to the activity of the local Civil Defense Organization. Fifty-four high schools throughout the county are in receipt of 11 instruments each. Because the science and physics teachers of these schools have been trained, by Col. Leon Beisel of the county organization, to operate these instruments—and they in turn have taught the operation to the students in their respective classes—the instruments were acquired without cost.

9. Luzerne County owns one rescue truck, purchased by the county. Recently three additional rescue trucks were received from the State Council of Civil Defense for the county's use. This is in recognition of the activities of the Civil Defense Rescue Service.

EQUIPMENT PURCHASED

10. Several items have been purchased through the Surplus Property Program, such as: A 5-ton tractor, one jeep, five 1-ton trailers, two van-type trailers, one generator, 83 hospital beds. The Red Cross purchased 106 hospital beds through the county Civil Defense organization. Throughout the county, many Civil Defense organizations, activated by this office, have participated in the Surplus Property Program and purchased a great deal of merchandise.

11. This office has also undertaken the preparation of all matching fund applications for all political subdivisions in Luzerne County. In this way there is no confusion and there has not been a single application rejected by the Federal Government on any matching fund request made. Items such as sirens, pumps, police equipment, rescue equipment, radiological instruments, radios and generators have been purchased by various municipalities for civil defense.

All communications sent to higher headquarters from local political subdivisions go through the County Civil Defense office, including requests for services, literature, surplus property and any general information. Thousands of copies of literature are distributed each year to residents of Luzerne County through the county office. One hundred thousand copies will be distributed this year at the Wyoming Valley Parade of Progress where we plan to have a shelter display, handled by volunteers.

TRAINING PROGRAM

During the past 2 years more than 1,000 auxiliary police throughout the county have been trained by Frank Flynn, 750 radiological instrument readers by Col. Leon Beisel and 250 volunteer firemen by Edward Jacobson. The women of 75 churches have been organized and trained for mass care service by Mrs. Gordon Bell. A year-round medical program is conducted by Dr. Gordon Bell and Mr. Souchik at each of the local hospitals.

Every Monday night during the year volunteers in the communications service both new and regular members, are given training in the operation of radio communications equipment for Luzerne County.

First-aid training has been given to several thousands of people through civil defense and the Red Cross within the past 2 years. This program has been accelerated to such a degree that classes must wait for instructors, although six additional instructors were trained last fall.

Meetings for sector and local directors are held at least once a year in their respective sectors. Each year a visit is made to each of the 73 political subdivisions in Luzerne County, to discuss civil defense with the proper officials, by either the county director, Colonel Townend, the deputy director, Herman Wagner, or the administrator, Mr. Souchik.

TWENTY-NINE THOUSAND ARE ENROLLED

At the present time there are approximately 29,000 volunteers enrolled in civil defense in Luzerne County.

This office handles all speaking engagements, which normally run about 100 annually.

When Colonel Townend was appointed county director, there were 23 political subdivisions with appointed directors. At the present time, Luzerne County has a director for civil defense in 72 of its 73 municipalities, the one exception being the city of Wilkes-Barre, which is in the process of appointing a director.

A survival plan and the evacuation complex have been prepared and distributed.

Each year two alerts are held by civil defense officials at the county control center in which approximately 75 people are involved. All phases of disaster work are covered during these tests.

Contact has been established and working agreements completed with the following:

All Wyoming Valley hospitals, American Red Cross chapters, Civil Aeronautics Administration, Civil Air Patrol, Federal Bureau of Investigation, Pennsylvania Bureau of Employment, Pennsylvania Department of Health, Pennsylvania National Guard, U.S. Army Reserve, U.S. Naval Reserve, U.S. post office.

CONTINUE PLANNING

Plans for 1960 include erecting evacuation signs on all evacuation routes, assignment of industry and transportation for disaster responsibilities, and establishment of survival officers and survival units.

Civil defense activities, under the present system, costs the county about \$10,000 per year.

Apparently this department has been well run, and an effort has been made to keep it clear of the control of the Republican party machine once Shively was deposed.

The County Director Townend and Deputy Wagner are appointed by the Governor on recommendation of the county commissioners. The administrator and secretary are hired by the county commissioners. The Civil Defense Council and county staff are appointed by the director.

A Golden Age Club for Your Community

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. PORTER. Mr. Speaker, Clayton E. Anderson, State director of recreation in Oregon, is a good friend of mine who used to live in Springfield, Oreg. When I saw him recently in Oregon he gave me a pamphlet entitled "A Golden Age Club for Your Community, Life More Abundant for the Senior Citizen."

It was so timely and so well done that I cannot resist making it available more widely through insertion in the Appendix. Under unanimous consent previously granted I am including the text of this pamphlet herewith.

A GOLDEN AGE CLUB FOR YOUR COMMUNITY—
LIFE MORE ABUNDANT FOR THE SENIOR
CITIZEN

FORWARD

A significant challenge and certainly one of the most worthwhile and satisfying opportunities for community service is the establishment of a senior citizens club for your community.

Because of the basic needs which the Golden Age Club program fulfills and because of the desire and need for participation, this activity is usually successful from the very beginning. Not only it is popular, it is one of the easiest programs to establish and administer. There are just three basic elements required—leadership, a meeting place and program. Every community can fill the bill on these necessities.

There are few experiences as rewarding as helping to form a Golden Age Club and later attend a meeting and see the results in terms of human happiness.

In this handbook we would propose to point out the way. (Clayton E. Anderson, State director of recreation.)

THE NEED

The age group over 65 years is increasing $4\frac{1}{2}$ times as fast as any other age group.

The need for providing interesting and enjoyable leisure time activities is more of a problem for the senior citizens because he has more spare time due to retirement, may never have learned to play or may have forgotten how, has reduced income because of retirement, family has grown up, is quite often alone.

The inactivity and lack of stimulation often results in all manner of physical, mental and social problems either real or imagined.

One of the greatest problems is that of loneliness.

Recreation—a Golden Age Club—can be a big help in providing the needed stimulation, activity and good fellowship which everyone needs.

THE BENEFITS

"The Golden Age Club is just wonderful. Now I have something to look forward to each week." (Mrs. Vaughn, Willamalane Golden Age Club.)

"Our Senior Citizens Club means a lot to me. Why? It has taken 10 to 15 years off my age." (Mrs. Susie Woolfolk, Grants Pass Senior Citizens Club.)

"Establishment of an active hobby and participation in active recreation, which adds breadth to life, is essential for rehabilitation. The Golden Age Club can make a valid contribution in this respect." (Arthur

C. Jones, M.D., director, Rehabilitation Institute of Portland.)

"Participation in the Golden Age Club dispels loneliness, promotes feelings of usefulness, and creates a favorable climate for good mental and emotional health of the senior citizens." (John Waterman, M.D., director, Mental Health Section Oregon State Board of Health.)

"I know the Golden Age Club program can be of real benefit to the individual in terms of enjoyable participation and companionship, but the community also benefits greatly. The senior citizen becomes an active participating force for community betterment and this interest and participation results in a high level of community spirit." (Edward C. Harms, Jr., mayor of Springfield, president, League of Oregon Cities.)

GETTING STARTED

The local recreation department can organize the club, but will need help and participation. The first step is to:

Call a meeting of interested and influential citizens.

Discuss the problem.

Decide on a course of action.

Appoint committees.

Secure a sponsoring group.

Sponsoring group

If there isn't a local recreation department to organize and give the necessary assistance and guidance, then you will probably need a sponsoring group.

This group will advise, assist in financing and offer volunteer assistance with transportation, refreshments, etc. The actual leadership should be left to the club members.

The sponsoring group will need to publicize the meeting, provide transportation, refreshments, and a meeting place. Once the project is successfully underway the sponsoring group should remain in the background and participate only as needed.

Sponsoring groups in other Oregon communities have been: City or county recreation departments, civic or service clubs, veterans organizations, lodge groups, YM or YWCA's, church groups.

The meeting place

The meeting place needs to be centrally located. There is always some place available: The community recreation building, lodge hall, veterans' building, union halls, Grange hall.

It is best to have the following: (a) Ground-floor location, (b) convenient to transportation, (c) kitchen available, (d) good lighting, heating, ventilation, (e) restrooms on same floor as meeting place.

Meetings

Most clubs meet once a week and the club members generally prefer meeting in the afternoon or starting at lunch time. Evening meetings are not as popular, but now and then one should be held to add variety.

Publicity

Publicize the organization and meeting in every possible way. Use radio, TV, newspaper, church bulletin. Talented members of the group might be used on radio or TV.

The most successful method of building interest is through personal contact with prospective members. Take the time necessary to invite those people who are eligible and once the club is underway the membership committee should continually be on the lookout for those who haven't heard of the Golden Age Club.

GOLDEN AGE CLUB ORGANIZATION

Keep the organization as friendly and informal as possible. Keep business and procedure to a minimum, and concentrate on fellowship and sociability. It may be well to run the program for several months on an informal basis with a temporary chairman selected by the group.

Leadership

Chairman: Elected by the group. It is his job to conduct the meetings. He needs to be a respected and experienced leader who can keep things going on an even keel.

Other officers: Of course you will want a vice president, secretary, and treasurer.

Program chairman: This is one of the most important positions—it is well to have the first one appointed and make certain this person can do a good job planning, recruiting, and conducting the program.

The terms of office should not be over 1 year and some clubs prefer a 6-month term. Some groups (Grants Pass) leave all business up to the executive committee composed of officers of the club and just get a short report from them on action taken or proposed. This eliminates the necessity of taking valuable fun meeting time for conducting business.

Be sure to avoid partisan politics, denominational religious activities, pressure groups, or any other matters of a controversial nature. The purpose of the Golden Age Club is fellowship, sociability, and community service.

Finances

The best plan is to have the club sponsored through the public recreation department. Actually not much of a budget is required. The major items are: Rental of hall (should be free of charge), refreshments (nearby grocery may be happy to supply coffee), secretarial supplies, name tags, U.S. flag, songbooks; and postage.

Expenses can be defrayed by passing a collection plate with the usual contribution set at 10 cents. Membership fees of 10 to 50 cents per month can be charged. Inability to pay this fee should not hinder one's membership. A small fee is desirable, and any major expenditure should be underwritten by the sponsoring agency. A large buildup of funds should be avoided. Some clubs set a maximum limit on the amount of money that can be attained.

Membership

Membership is open to any interested man or woman above the age of 60 in most clubs. If a man or woman qualifies, his spouse is also eligible.

In some groups 50 is the beginning age and in a few, membership starts at 65. The Willamalane Golden Age Club of Springfield set their minimum age at 60 so as not to let in a bunch of "half-baked kids."

It is especially important to invite the handicapped, the residents of homes for the aging—and ambulatory patients in nursing homes.

Committees

Here are some of the committees which have been appointed (by the chairman) in Oregon clubs:

Publicity: To tell the Golden Age story to press and radio.

Refreshment: To provide the goodies which add to the enjoyment of the meeting.

Membership: See that every eligible person in the community is invited to join.

Program: Develop an interesting and lively program for each meeting. Rely on talent from the club members.

Cleanup: So you will continue to get the hall rent free.

Good cheer: Maintain contact with and visit sick members.

Transportation: Coordinate transportation needs with members and sponsoring group.

The program

Most of the members of a Golden Age Club are interested in the same things and have the same abilities to a greater or lesser degree, as any other age group.

There is a need for variety which permits a wide freedom of choice. There is a need to provide useful things to do—a program full of creative opportunity.

The program at club meetings should be conducted by members of the group and as far as possible the program presented by members. There is generally a world of talent in this group—musicians, poets, humorists, and singers. It is the program chairman's job to uncover and encourage the talent.

During the year special activities should be encouraged—such as picnics, tours, community sings, concerts and hobby shows.

Then on days other than the regular meeting day, it might be well to have a craft session, a card playing day, a day each month to visit shut-ins, and perhaps some time to work on community service.

It should all add up to sociability and fellowship.

ADDITIONAL HELP

You will find that any of the many successful Golden Age Clubs in the State will be more than happy to give you the enthusiastic help you need to get underway.

A sample Golden Age Club constitution and other helpful material may be obtained from the following: State Council on Aging, Post Office Box 5197, Eugene, Ore.; State Director of Recreation, State Parks and Recreation Division, Highway Building, Salem, Ore.; Dave Talbot, recreation director, City Hall, Grants Pass, Ore.; Dorothea Lensch, Bureau of Parks and Recreation, Portland, Ore.

Address of Maj. Gen. A. J. Drexel Biddle at Pulaski Foundation Dinner

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I including the following address delivered by Maj. Gen. A. J. Drexel Biddle, the adjutant general of Pennsylvania, at the Pulaski Foundation dinner held Monday evening, March 28, 1960, at the Hotel Mayflower, Washington, D.C. I had the honor of serving as toastmaster for that affair and it gives me a great deal of personal pleasure to have General Biddle's fine address inserted in the RECORD so that it may receive the widest possible distribution that it indeed should have.

ADDRESS BY MAJ. GEN. A. J. DREXEL BIDDLE, THE ADJUTANT GENERAL OF PENNSYLVANIA, AT THE PULASKI FOUNDATION DINNER, WASHINGTON, D.C., MARCH 28, 1960

The privilege of addressing so distinguished a gathering is one of which I am humbly proud.

Out of Poland's past rise the illustrious names of her gallant sons and daughters, who sacrificed so much on the altar of freedom. In a number of cases, treasured mementos, and even the birthplaces of some of these patriots have been guarded.

Yet, those in search of the birthplace of Gen. Casimir Pulaski, the gallant hero of two continents, would find a gloomy, forsaken, even pathetic spectacle.

In the little town of Warka—not far from Poznan—the museum and other buildings at the site of the birthplace of this stalwart in the fights for Poland's and subsequently for our freedom are going to rack and ruin. They are in sad need of repairs.

I believe most of us are aware that, when General Pulaski came to these shores, and offered his services, he was given the rank of general by the Continental Congress, but no money to equip his cavalry corps. He consequently devoted some \$50,000 of his own funds toward outfitting his command.

It is, therefore, with enthusiasm that I greet the proposal that the people of the United States express their appreciation of General Pulaski's contribution of life and fortune in our cause, by erecting a useful memorial at his birthplace in Poland. The proposal is a worthy one, for it envisages the establishment of a combined medical, educational, and civic center, and a home for the aged and an orphanage in Warka.

A memorial consisting of these things, that are so sorely needed by the war-weary, but valiant Polish people would, indeed, be a fitting way to render tribute to their indomitable spirit, as well as to express our thanks to them for Pulaski's valued aid to us, in time of need.

These are tangible things that would serve as a significant and effective reminder of our continuing interest in them, and in their welfare.

And remote from the West, as they are, they urgently need to be reminded of our faith in their spirit and fortitude in their dedication to the things that ennoble human life.

This is the kind of encouragement required to help them survive their present ordeal.

The ideals, for which they fought so courageously are anathema to any who would venture to repress what is finest in the Polish people, and to subvert the Polish nation to their own purposes.

In light of the grim hardships they have sustained, it would be understandable, if Polish hearts were gripped with despair.

Yet, it is part of the noble heritage of mankind, that the human spirit can conquer over almost insuperable odds, and that the human yearnings for freedom can never be completely extinguished.

The history of Poland offers excellent testimony to this truth.

In modern history no other great nation has been so torn and rendered, by warlike neighbors, nor has any been subjected to so many alien conquerors.

From these experiences the Polish people have derived a deep and passionate love of freedom. They realize, as few peoples do, that freedom is not something that is ours by luck or circumstances, or by some magic gift of fate. It is a prize dearly won and vigorously defended by generations of brave men.

Spiritually and culturally, Poland is a western window looking east.

In large degree, it is to the valiant role of the Polish mothers, as well as of the wholesome influence of the church, that the spirit and devotion to a free Poland is attributable.

For, as in the days of Poland's partition of more than 150 years under the Austrians, Germans, and Russians, the mothers of our time teach their children, as they say their prayers in the evening at their mothers' knees, the word of God, the spirit of the family, the love of country, the respect for Polish traditions—and thus instill in them that sense of indomitable Polish nationhood.

All, and there have been many, who have tried to crush that spirit, have failed.

As Ambassador to Poland several years prior to the outbreak of war, and during the war in Poland, and later to the Polish Government established first, in France and subsequently in London, I shared the pride of both Americans and Poles in the achievements of the free Poles, who refused to give up the fight.

My continued assignment at the side of

the Polish Government, when it moved its seat from Poland to France, and later to London, was in the nature of a salute by the United States to the Polish people in occupied Poland—people who had thus been deprived of the ability to act on their own behalf. It was, in effect, an indication to them that we considered their cause not a lost one, but one in abeyance.

At the close of the Polish-German conflict, many thousands of Poles found their way to France to reconstitute the Polish Army, and to carry on the fight from there.

When France was defeated in the battle of 1940, again thousands of these Poles reassembled in England. Polish divisions distinguished themselves in the fighting in World War II in various parts of the world. Polish airborne and armored units were in action in Europe. Polish pilots achieved an outstanding record in the RAF, as did Polish naval units at sea.

The battle cry of those fighting Poles was the motto of the Polish uprising of 1830, "For your freedom and ours." This motto is particularly meaningful to us Americans. We realize full well that, if freedom is attacked anywhere, it is threatened everywhere. This has never been truer than today, nor so clearly understood by the American people.

The strength of America, as a hope for the free world, lies not only in our having a convincing unchallengeable military capability, and the will to use it, if need be, but in our devotion to freedom, in our respect for the inherent dignity of man, and our belief in the right of every man to worship God freely, to work out his own destiny in his own way, so long as he does not infringe upon the rights of his neighbors.

It would seem appropriate at this point, I believe, if we were to let our thoughts revert for a moment to that dauntless Pole, whose memory is revered both by the Polish and by the American people.

General Pulaski's life ended in a blaze of glory before he could fulfill his vast potential, but he left behind him a legacy of honor and courage that will never fail to be a source of inspiration to the two great nations he served so well.

If one were to search the annals of history for a hero who combined nobility of character, rare personal courage, and a true, profound love of freedom, one could not fail to consider Casimir Pulaski, fighter for freedom on two continents, a commander in chief of Polish patriot forces, and a general officer in the services of the United States—all before completing his 32d year of life. What makes his life particularly noteworthy is that he fought against what was hopeless odds, and never saw his cause triumphant. Yet, he fought willingly, uncompromisingly, and unflinchingly.

In 1768 he joined with his father and brothers in forming the Confederation of Bar, to drive the Russians from Poland, and to restore to Poland her independence. Although he was only 20 years old, he threw himself with all the ardor at his command, into the struggle against the potentially overwhelming power of Russia, and of the forces of the Polish King they controlled.

In the years of warfare that ensued, he became a national hero, and a world famous soldier.

By the time he was 21 he had defeated the Russians in several battles, and at 24 his name was famous throughout Europe.

I may add that a technique that has importantly, indeed, significantly figured, as a part of Russian foreign policy and strategy, since the time of Peter the Great, has been the employment of an ideology for the promotion of power politics.

To return to Pulaski's career, when he heard the electrifying news from America of the Declaration of Independence, and of the

struggle for liberty that was being waged on the other side of the Atlantic, he saw an opportunity in the New World to contribute toward the cause of freedom, that was denied him in the Old.

Once again the struggle seemed one against hopeless odds—in the early days of the Revolutionary War—but his fearless and adventurous spirit rose to the challenge.

He devoted to the cause of the Americans his undoubted skill and military capability, and his unquenchable love for freedom.

From 1777 until his death on October 11, 1779, he achieved an outstanding record of pure valor.
